## Interference Notices.

U. S. PATENT OFFICE, *Washington, Sept. 11, 1925.*

*Importers Coffee Co., Ltd., its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Frank C. Weber & Company, of West 63d Street and Lowe Avenue, Chicago, Ill., for registration of a trade-mark and trade-mark registered August 4, 1908, No. 70,163, to Importers Coffee Co., Ltd. Tchoupitoulis Street, New Orleans, La., and a notice of such declaration sent by registered mail to said Importers Coffee Co., Ltd., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Importers Coffee Co., Ltd., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

---

U. S. PATENT OFFICE, *Washington, Sept. 16, 1925.*

*C. T. Keally Co., their assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Palo Alto Orchards Company, of South Easton, Mass., for registration of a trade-mark and trade-mark registered May 23, 1911, No. 82,000, to C. T. Keally Co., Pennsylvania Lumber Product Building, Twenty-first Street, Pittsburgh, Pa., and the Office having been unable to obtain proper service upon said C. T. Keally Co., notice is hereby given that unless said C. T. Keally Co., their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

## Disclaimer.

1,476,729.—*Montagne H. Roberts*, Englewood, N. J. APPARATUS FOR OPERATING BOOSTER SUPPLEMENTED LOCOMOTIVES. Patent dated December 11, 1923. Disclaimer filed September 19, 1925, by the patentee, the assignee *Franklin Railway Supply Company*, consenting.

Hereby enters this disclaimer to that part of the claim in said specification which is in the following words, to wit, claim 1:

1. A controlling device for booster motors for locomotives comprising a moving part in the controlling mechanism for the main locomotive, a valve juxtaposed to the path of movement of said moving part, and a member adapted to maintain the valve in open position in certain predetermined positions of the moving part including a position in which steam in the main cylinders of the locomotive has begun to work expansively.

## ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,522,879, L. G. Gregory, Knob attachment for steering wheels, decided August 7, 1925, claims 1, 2, 4, and 5.

Pat. 1,533,385, L. R. N. Carvalho, Receptacle closure, decided August 21, 1925, claims 1, 2, 3, 4, 9, 10, 11, and 12.

Final decisions in interferences have been rendered against the following registered trade-marks:

T. M. 36,803, Pickles or preserves, W. Hunt, Seattle, Wash. Registered July 23, 1901. Decided August 1, 1925.

T. M. 74,592, Dress shields, The Kora Co., New York, N. Y. Registered July 27, 1909. Decided August 27, 1925.

T. M. 123,867, Face powder, Dr. P. Sylvestre, New York, N. Y. Registered December 10, 1918. Decided August 28, 1925.

T. M. 136,651, Dress shields, J. Stein, New York, N. Y. Registered November 2, 1920. Decided July 2, 1920.

T. M. 146,360, Prepared cloths for use on windshields of vehicles and other transparencies to prevent the accumulation of rain and moisture. Registered November 15, 1921. Decided August 18, 1925.

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Court of Appeals of the District of Columbia.

MELLING *v.* GORDON AND REDLIN.

*No. 1,727. Decided April 6, 1925.*

1. OPERATIVENESS—COMMERCIAL PRACTICABILITY.

Where G. and R. manufactured and sold a number of machines in accordance with the disclosure of their application at $5,000 each, and the machines were put in operation by various manufacturers, *Held* that if the machines would turn out from 80 to 90% of commercially usable cam shafts this fact indicates strongly that the machines were operative although possibly not commercially practicable on the type of cams being used.

2. SAME—SAME.

Neither the fact that M. may be able to manufacture shafts with less waste than G. and R. nor that his machine may have a wider range of utility is sufficient to deprive G. and R. of making the counts of the interference.

APPEAL from Patent Office. Affirmed.

*Mr. Fred L. Chappell* and *Mr. Otis A. Hart* for Melling.

*Mr. W. G. Henderson, Mr. E. H. Bottum,* and *Mr. J. W. Michael* for Gordon and Redlin.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

VAN ORSDEL, *J.:*

This appeal is from the decision of the Commissioner of Patents, awarding priority of invention to appellees, Gordon and Redlin.

The issue is in three counts described in the opinion of the Examiner in Chief, as follows:

The subject matter of the interference is a lathe for turning irregular forms specifically the cam shafts of automobile engines. In the embodiment of invention disclosed in the Melling application involved in interference the cutter is carried by a swinging lever mounted on a reciprocating carriage movable in a plane transverse to the longitudinal axis of the work holder. This movement is controlled by a pattern cam which is a replica of the cam to be formed by the cutter both as to size and outline. The movement of the cutter carrying lever is controlled by an additional cam. In the Gordon and Redlin machine disclosed in the application involved in interference the main cutter carrying member is a swinging cam controlled lever. The cam which moves the lever towards the work is not a replica of the cam to be formed. The movement of the cutter carrier proper is controlled by a second cam actuated lever having a segmental rack engaging teeth on the cutter carrier and moving the cutter in an arc as the formation of the cam progresses.

The testimony discloses that there is no case of priority of invention here presented. Melling admits that he took no steps toward making the invention until after he had seen, at the factory of the Jackson Motor Shaft Company, in Jackson, Michigan, a Gordon and Redlin machine which was constructed in accordance with the disclosure of their application involved in this interference. Indeed Melling admits that all dates named in his preliminary statement are subsequent to the time when he saw the Gordon and Redlin machine.

Melling, however, moved to dissolve the interference on two grounds: First, that Gordon and Redlin had no right to make the counts of the interference; second, on the ground that the issue is unpatentable in view of the prior art. On these issues Melling was defeated in all the tribunals of the Patent Office. We will not stop here to consider the question of patentability in the light of the prior art. That matter is not for our consideration in an interference proceeding. This narrows the case, therefore, to the question of the right of Gordon and Redlin to make the counts of the interference. The issue is stated in three counts. Count 1 was formulated by the Examiner and based upon a claim originally appearing in the Melling application. Counts 2 and 3 are claims originally made by Gordon and Redlin.

On the question of inoperativeness the evidence discloses that Gordon and Redlin manufactured and sold quite a number of machines in accordance with the disclosure of their application. The price of the machines was $5,000 each. The expense of producing the machines, and the fact that a number of machines were sold and put into operation by various automobile manufacturers, is significant as bearing upon the question of operativeness.

[1] The record discloses that Gordon and Redlin encountered difficulty in making their machines operate satisfactorily from a commercial standpoint, in that only from 80 to 90% of the cam shafts turned out were commercially usable. It further appears that there was excessive waste or scrap in the manufacture of the machines. The scrap, as one witness testified, amounted to from 10 to 12%, and another witness estimated as high as 20%. By scrap was meant that this percentage of shafts were not turned out with sufficient accuracy to be used commercially. We, however, agree with the Board of Examiners in Chief, that if the Gordon and Redlin machine would turn out from 80 to 90% of commercially usable cam shafts we think this fact indicates strongly that the machine was operative although possibly not commercially practicable on the type of cams being turned. There is a clearly recognized distinction between inoperativeness and commercial impracticability

This defect, however, was largely overcome by a second machine constructed by Gordon and Redlin.

[2] Melling's whole case resolves itself into an attempt to secure an award of priority on the alleged superiority of his invention over that of Gordon and Redlin, but neither the fact that Melling may be able to manufacture shafts with less waste than Gordon and Redlin, or that his machine may have a wider range of utility, are sufficient to deprive Gordon and Redlin of making the counts of the interference. Neither wider range of utility nor better work are sufficient to deprive Gordon and Redlin of their right to the claims in issue.

The tribunals of the Patent Office were unanimous in sustaining the operativeness of the Gordon and Redlin machine, and with their reasoning and conclusions, we fully agree.

The decision of the Commissioner of Patents is affirmed.

## Court of Appeals of the District of Columbia.

LINDSEY v. BERGNER.

*No. 1,732. Decided June 1, 1925.*

INTERFERENCE—PRIORITY—REDUCTION TO PRACTICE—DILIGENCE.

Where the witnesses for L., the junior party, are practical men and their testimony leaves no room for doubt that they not only understood the disclosures made to them before B. entered the field, but that they were familiar with the development of L.'s early conception, and where the testimony is reasonable and consistent and bears all the earmarks of verity, L. should not be deprived of his reward as the prior inventor unless chargeable with unreasonable delay in perfecting the invention.

APPEAL from Patent Office. Reversed.

*Mr. W. S. Graham* and *Mr. Harry F. Riley* for Lindsey.

*Mr. Frank B. Fox* for Bergner.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

ROBB, *J.*:

Appeal from the decision of an Assistant Commissioner of Patents in an interference proceeding awarding priority to the party Bergner, the Examiner of Interference and the Board of Examiners in Chief having awarded priority to the party Lindsey.

The invention is an appliance for frying doughnuts, consisting of a shallow pan containing a spiral channel. This pan is supplied with oil heated to the proper temperature. The raw doughnut is placed in the center of the pan, quickly comes to the surface, and is carried by the current through the spiral channel to the outside of the pan. At a predetermined point it is turned, that it may be fried on the other side. The operation is so timed that the doughnut is supposed to be completely cooked when it reaches the outside of the pan, at which point there is an ejector device. As long, therefore, as uncooked doughnuts are supplied at the center and the machine properly functions, the process will be continuous.

It appears from the testimony that it was the intent of each party to develop a window display machine. The issue is expressed in three counts, of which the first, here reproduced, is sufficiently illustrative:

1. In apparatus for cooking free articles in hot fluid the combination of a receptacle for the fluid; and means for circulating the fluid and for progressing the articles over a gyratory course in the receptacle, under propulsion by the fluid, including a guide extending spirally outward from the center of the receptacle to its periphery.

Bergner's application was filed July 10, 1919, and Lindsey's on October 7, 1919. Bergner is a draftsman and specification writer in a patent-law office and, so far as this record discloses, has no practical knowledge of the art. He conceived the invention May 6, 1919, and soon thereafter prepared drawings and filed his application. The record does not disclose that he ever marketed a machine.

Lindsey was thoroughly skilled in this field, having been engaged in the manufacture and sale of window display devices in the bakery art. We will here briefly review the evidence introduced in support of his case:

A Mr. Patrick J. Shortt, an expert baker, testified that shortly before Christmas of 1918, in a conversation he had with him, Mr. Lindsey told him—

he had an idea of an automatic doughnut machine, and he asked me questions * * * pertaining to the manufacture of doughnuts; after he elicited the information he said the reason he asked the information was because he had an idea of a doughnut machine where the doughnuts were carried in a current of fat—around through the grease, and were carried automatically to the delivery.

In cross-examination this witness was asked what he knew about doughnuts, and replied:

What did I know about cooking doughnuts? I spent 25 years—or 20 years or 23 years at that time in the manufacturing of doughnuts and all lines of bakery goods.

Mr. Daniel Beck, a graduate of Cornell with an A. M. E. degree, had known Mr. Lindsey since the fall of 1914. He was shown a drawing of the Lindsey application and asked whether he ever discussed such a machine with Lindsey. He replied that he had in the early part of April, 1919. He had been told that Lindsey was at work on such a machine and said to him, "I hear you have a doughnut machine in mind" and Lindsey "said 'Yes' and he immediately began to tell me some of the details." The witness was then asked to describe the details, and replied:

As near as I remember, he said that the doughnuts were to be formed in a hopper or depositor of some sort, and were to be deposited in a hot stream of oil. This oil was to be maintained in a channel, the oil to be—of course, started at the source, and was to be returned to the source—he did not say by a pump, but I imagine there was to be a pumping proposition, and some time during the course of the stream of oil the doughnut was to be automatically turned, so it would fry on the other side; as to the exact details he did not go into those. * * * At the end of the channel the doughnut was to be taken from the oil by some kind of a conveyor.

When asked how he fixed the date of the discussion, witness said:

I went to Chicago about the latter part of April, I think it was the 26th of April, and it was before I left for Chicago, if I remember distinctly, it was several weeks before I left.

The cross-examination of this witness strengthened rather than weakened his testimony.

Mr. C. F. Switzer, who at the time of the occurrences about which he testified was sales manager for the Johns-Manville Co., located across the street from the shop in which the Lindsey experiments were being conducted, testified that he had access to this shop as he sold materials to Mr. Lindsey's company and in April of 1919 saw "this spiral pan arrangement" and later—

saw one of the gem machines in there (shop), and from time to time I used to try some of the Bake-Rite doughnuts that had been made in there.

It may be noted here that Mr. Lindsey was president of the Bake-Rite Oven Mfg. Co.

Mr. J. Sank had been intimately acquainted with Mr. Lindsey since 1915, through association with him in various projects, but when he testified was not connected with Mr. Lindsey or his company in any way. This witness testified that he served in the Army and was located at Angel Island from the 3d of October to the 11th of December, 1918, and during that time, while on leave, he visited Mr. Lindsey at his place of business. He was shown a copy of the Lindsey drawing and asked whether he recognized what it indicated. Answering in the affirmative, he then was asked, "What is it?" He replied, "That is a cooker—this is his doughnut machine." He then was asked whether he had discussed it with Mr. Lindsey, and answered: "Yes, lots of times"; that the first time was while he was in the Army and that the conversation occurred in Lindsey's office. Asked to state the circumstances of the conversation, witness said:

Well, he drew on the back of an envelope a spiral and told me that that was a cooker for his doughnut machine, and the doughnuts were to be dropped in the center of it, and at some point they were to be turned over and removed from the oil.

Witness further stated that he was employed by the Bake-Rite Co., from about March 1, 1919, until Christmas of that year, with the exception of a few weeks in August, and that he did shop work on Lindsey's doughnut machine. On cross-examination he was asked what he meant by "doughnut machine," and replied:

Why, Mr. Lindsey's doughnut machine, this machine—this one. That this is a part of a drawing of.

In answer to the question "When you say 'this one, that this is a part of a drawing of,' what do you refer to?" witness answered:

I mean—there is still a cutter that belongs to that machine that is not shown in the drawing.

(The "cutter" is not one of the elements of the counts here.) Asked how long he worked on this machine at the Bake-Rite shop, witness replied that sometimes he worked on it for three or four days at a time and then again for one day or less. In response to a question as to whether he recalled any date when he saw the machine cook doughnuts, witness stated:

Well, in the summer of 1919—maybe it was before August or after August, I cannot say.

that the cooking was done in the shop of the Bake-Rite factory.

Mr. S. A. Kitchener, an officer of the Bake-Rite Co., testified in considerable detail as to disclosures of the invention made to him by Lindsey in December of 1918 and as to the subsequent development of the invention. Mr. Lindsey, in his testimony, stated in detail his activities in developing this invention.

All this testimony is reasonable and consistent and bears all the earmarks of verity. As we perceive no ground for discrediting either Mr. Lindsey or his witnesses, we must find, as did the Examiner of Interferences and the Board of Examiners in Chief, that Lindsey had conceived this invention long before Bergner's entry into the field and that Lindsey was reasonably diligent early in May of 1919, when Bergner's activities commenced. Lindsey undoubtedly had practically perfected a machine embodying the counts of this issue prior to Bergner's entry into the field and therefore might have applied for a patent thereon, but such a machine was not considered practical by either party. What each desired was a complete machine, including a depositor. As soon as this was constructed and the efficiency of the machine demonstrated, the application was filed. Indeed, instructions to file were given some time in advance of the actual filing date, which, as we have seen, was less than three months later than the filing date of Bergner.

Lindsey's witnesses were practical men and their testimony leaves no room for doubt that they not only understood the disclosures made to them but that they were familiar with the development of Lindsey's early conception. In such a situation, the prior inventor should not be deprived of the fruits of his invention unless chargeable with unreasonable delay in perfecting it, which is not the case here. That the Assistant Commissioner entertained some doubt as to the equity of his decision is apparent, for he says:

It is regrettable that one who first began to produce a valuable invention should fail to secure the benefits of his labor, but it is impossible to make a clear case for Lindsey without reading between the lines to an unwarranted extent.

We are unable to follow the Assistant Commissioner in his suggestion that it is necessary to read between the lines in order to find for Lindsey, since it seems clear to us that the testimony we have reviewed demonstrates beyond a doubt that Lindsey was the prior inventor. On the question of diligence, see *Courson* v. *O'Connor*, 181 O. G. 544; 1912 C. D. 540; 38 App. D. C. 484; 227 Fed. 890.

The decision is reversed and priority awarded to the party Lindsey.

Reversed.

## Court of Appeals of the District of Columbia.

IN RE HENRY.

*No. 1,733. Decided June 1, 1925.*

ANTICIPATION—SOLUTION OF REAL PROBLEM—COMBINATION OF REFERENCES—REMOTELY-RELATED ARTS—PREVIOUS FAILURE.

Where the applicant was concerned with a real problem which he solved through a very ingenious combination of old elements, some of which were taken from unrelated, or at least remotely related, arts, *Held* that to deny him protection on the theory that anyone could have accomplished the same result, although the experts in the art had failed to do so, would be violative of the spirit and purpose of the patent law.

APPEAL from Patent Office. Reversed in part.

*Mr. Melville Church*, *Mr. H. E. Stouffer*, and *Mr. C. B. Des Jardines* for Henry.

*Mr. T. A. Hostetler* for the Commissioner of Patents.

Before MARTIN, C J., ROBB, J., and VAN ORSDEL, J.

ROBB, *J.*:

Appeal from a Patent Office decision rejecting claims Nos. 1, 7, 10, 11, and 14 of appellant's application. Claim 10 is reproduced as most representative of the group:

10. The process of reproducing the grain of wood on a solid surface, which consists in producing a photographic negative of the wood to be simulated; producing from the negative a grained plate, the masses (it is agreed that the word should be "recesses" instead of "masses") produced by the graining varying in depth with the shade to be produced and arranged to simulate the graining of the original material; filling the plate with coloring matter; withdrawing the coloring matter from the recesses of the grained plates by

means of an elastic roller to which the coloring matter adheres; transferring the coloring matter from the elastic roller to the surface to be grained; merging the masses one into the other so as to obliterate the lines of union.

Appellant is an employee of The National Cash Register Company, manufacturers of cash registers inclosed within steel casings or cabinets. There came to be a demand for the finishing of these cabinets or casings in imitation wood grain, to correspond to the natural wood finishing of the stores in which the cash registers were to be used. The problem of evolving a process for accomplishing this was intrusted to Henry. His prior knowledge of the art, supplemented by a further investigation, disclosed no satisfactory process by which the desired result could be accomplished. The only prior patent in this particular art was that to Herzog, No. 700,498, dated May 20, 1902. In his specification Herzog says that his invention relates to painting machines for imitating the grain of wood by transferring its design from one surface to another. He proposed to accomplish this result by first selecting a model or master board, spreading a stain or color evenly over this board, scraping or wiping the surface clean of any surplus of color, passing a roller over it and thereby transferring to the soft surface of the roller an impression of the grain marks of the model board. The impression on the roller is then transferred to the surface to be treated or "painted." Herzog neither contemplated nor suggested removing pith from the pores of the master board so as to reproduce the irregularities of the surface and thus make a contrasting color pattern which might be transferred to the surface to be finished. In other words, Herzog had no conception of producing an etched master board. Herzog's process was found by appellant to be incapable of producing the desired result, and it is not contended by the Patent Office that, in and of itself, this process anticipates that of appellant. It is significant that, although Herzog's patent was more than 20 years old when appellant entered the field, the process there disclosed had not been adopted by manufacturers of cash registers.

Henry conceived the idea of photographing a piece of natural wood and preparing therefrom an etched metal plate of varying depth, corresponding to the color shades or tones upon the original wood. This idea he obtained from the Rembrandt photogravure process. Having prepared this etched or master plate, Henry then employed the roller disclosed by Herzog, the result of which was something far in advance of anything theretofore achieved. Samples of cash registers finished under this process and submitted to the court on hearing disclosed that the imitation of natural wood graining was so close as to render it difficult to distinguish the real from the artificial. The process was immediately adopted and has been received with great favor by the public.

We start with two outstanding facts: First, appellant has made a distinct and valuable contribution to the art, and, second, his application has been rejected not upon any one patent but upon several. In other words, now that a new result has been achieved, it is contended that any one skilled in the art, at any time during the many years that have intervened between the dates of issuance of the various patents relied upon and appellant's achievement, without the exercise of anything more than mechanical skill might have produced the same result. We have frequently suggested that it is much easier to follow a blazed trail than to make it. After a problem has been solved its former difficulties are not so apparent and it is not hard to find those persons who confidently assert that their failure to solve the problem is due solely to the fact that it has not received their attention. The object of the patent law is to reward those who do successfully give these problems their attention and who make real contributions to the useful arts. *Carnegie Steel Co.* v. *Cambria Iron Co.*, 99 O. G. 1866; 1902 C. D. 592; 185 U. S. 403.

The Herzog reference already has been discussed. The second reference was the patent to Saalburg, No. 923,799, dated June 1, 1909. That patent was for "a certain new and useful improvement in processes of making pictures", an unrelated art, and may be dismissed with the observation that Henry does not claim to have invented the method of making an etched plate. His conception was the idea that he might use such a plate in the wood-graining art and thus eliminate the defects resulting from the use of the master board disclosed by Herzog. What we have said as to the Herzog patent applies with equal force to the British patent to Leicester, No. 13,987, dated in 1914.

We come now to the last reference, an article in the London Times under date of September 10, 1912, bearing the heading "Rembrandt photogravure". This article relates to the art of printing photographs, not to the wood-graining art, and in our view contains no information that is not to be found in the patents to Saalburg and Leicester. Appellant's problem went beyond the mere printing of a picture. His task was to transfer to a more or less irregular metal surface a facsimile of the intricate grains of wood. As already indicated, he conceived the idea of employing this etched plate in combination with the Herzog roller and thus produced a new and useful result. The following suggestions of the Court in the *Carnegie Steel Co. Case* (185 U. S. 403) are apposite here:

> Some of the expressions, taken by themselves, seem to foreshadow the Jones idea; but there was nothing to any of these discussions that filled the requirements of the law (Rev. Stat. Sec. 4886) of a description in a publication sufficient to anticipate the patent.

Moreover, it is the policy of this court, even in doubtful cases, to resolve the doubt in favor of the applicant. *In re Eastwood*, 144 O. G. 819; 1909 C. D. 413; 33 App. D. C. 291; *Re Herbeck*, 191 O. G. 586; 1913 C. D. 405; 39 App. D. C. 535. Here appellant was concerned with a real problem which he has solved through a very ingenious combination of old elements, some of which were taken from unrelated, or at most remotely related, arts. To deny him protection on the theory that any one could have accomplished the same result, although the experts in the art had failed to do so, would be violative of the spirit and purpose of the patent law.

The decision is reversed as to claim 10, which, as we have indicated, will sufficiently protect appellant's invention. Reversed as to claim 10.

## ADJUDICATED PATENTS.

(D. C. N. Y.) The Shryock patent, No. 1,172,173, for timer for internal-combustion engines, *Held* valid, but not infringed. *Turner* v. *Spinner*, 6 F. (2d) 172.

(C. C. A. Pa.) The Clark patent, No. 1,345,073, for automobile headlight lens, *Held* not to involve invention. *Columbia Lens Co.* v. *L. E. Smith Glass Co.*, 6 F. (2d) 97.

*Claims use* since January, 1924.

Ser. No. 214,087. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ERCOLE H. LOCATELLI, doing business as Mattia Locatelli, New York, N. Y. Filed May 9, 1925.

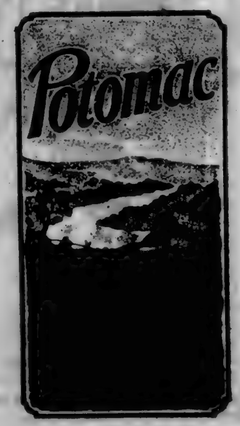
The word "Grated" and the name "Locatelli's" are disclaimed apart from the mark shown. The lining of drawing is intended to indicate red color.
*Particular description of goods.*—Grated Cheese.
*Claims use* since Jan. 1, 1925.

Ser. No. 214,177. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) CHARLES PETERSON, Duluth, Minn. Filed May 11, 1925.

Rednum-Line

*Particular description of goods.*—Dry-Cleaning Composition.
*Claims use* since Nov. 28, 1922.

Ser. No. 214,295. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOHN H. WILKINS CO., Washington, D. C. Filed May 13, 1925.



*Particular description of goods.*—Coffee.
*Claims use* since May 1, 1925.

Ser. No. 214,296. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOHN H. WILKINS CO., Washington, D. C. Filed May 13, 1925.

*Particular description of goods.*—Coffee.
*Claims use* since May 1, 1925.

Ser. No. 214,297. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOHN H. WILKINS CO., Washington, D. C. Filed May 13, 1925.

No claim is made to the color lined on the drawing.
*Particular description of goods.*—Coffee.
*Claims use* since May 1, 1925.

---

Ser. No. 214,406. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ORRIN O. BATON, Watsonville, Calif. Filed May 13, 1925.

EATONIA

*Particular description of goods.*—Fresh Fruits and Vegetables.
*Claims use* since June, 1921.

---

Ser. No. 214,407. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE GANDY BELTING COMPANY, Baltimore, Md. Filed May 16, 1925. Under ten-year proviso.

THERMO-GANDY

*Particular description of goods.*—Stitched Canvas and Solid Woven Belting for Power Transmission, Elevating and Conveying, and Thrasher Belt.
*Claims use* since May 16, 1921.

---

Ser. No. 214,466. (CLASS 31. FILTERS AND REFRIGERATORS.) DEXTER RESEARCH LABORATORIES, INC., Toledo, Ohio. Filed May 13, 1925.

Dextrite

*Particular description of goods.*—Vegetable Filtering Material.
*Claims use* since 1916.

Ser. No. 214,480. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSHUA HOLLAND, Chicago, Ill. Filed May 18, 1925.

HOLLAND'S
DIT
Digest-It
Tablets

No claim is made to the words "Holland's Digest-It Tablets" apart from the mark shown.
*Particular description of goods.*—Digestive Remedy.
*Claims use* since Sept. 1, 1924.

---

Ser. No. 214,489. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) WALTER S. LEFEBRE, doing business as American Radio Sales Company, Newark, N. J. Filed May 18, 1925.

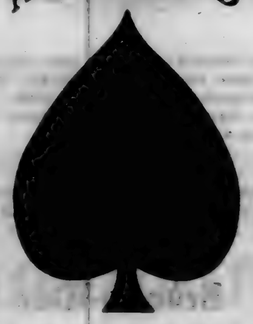
ARSCo

*Particular description of goods.*—Radio Vacuum Tube.
*Claims use* since May 1, 1925.

---

Ser. No. 214,499. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) HENRY POLLAK, INC., New York, N. Y. Filed May 18, 1925.

ACE BRAND



Exclusive use of the word "Brand" is disclaimed.
*Particular description of goods.*—Plaits Formed of Straw and Other Fibrous Materials Designed for the Manufacture of Hats.
*Claims use* since about September, 1924.

Ser. No. 214,500. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) HENRY POLLAK, INC., New York, N. Y. Filed May 18, 1925.

ACE HIGH

*Particular description of goods.*—Plaits Formed of Straw and Other Fibrous Material Designed for the Manufacture of Hats.
*Claims use* since about September, 1924.

---

Ser. No. 214,501. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) HENRY POLLAK, INC., New York, N. Y. Filed May 18, 1925.

Ace High

*Particular description of goods.*—Plaits Formed of Straw and Other Fibrous Material Designed for the Manufacture of Hats.
*Claims use* since about September, 1924.

---

Ser. No. 214,512. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) STANDARD OIL COMPANY (NEW JERSEY), Bayonne, N. J. Filed May 18, 1925.

*Particular description of goods.*—Liquid Gloss and Floor Dressing.
*Claims use* since Jan. 14, 1925.

---

Ser. No. 214,668. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HARRY DALE KUHN, doing business as H. Dale Kuhn, H. Dale Kuhn Manufacturing Pharmacist, Kuhn Drug Company and H. Dale Kuhn Laboratory, Shelby, Ohio. Filed May 21, 1925.

Ep-sum-pil
THE ORIGINAL

Applicant disclaims the words "Pill" and "The Original" apart from the mark as shown.
*Particular description of goods.*—Laxative in Pill Form.
*Claims use* since Jan. 1, 1924.

Ser. No. 214,684. (CLASS 39. CLOTHING.) PETER SCOTT & CO., LIMITED, Hawick, Scotland. Filed May 21, 1925.

Pesco

*Particular description of goods.*—Knitted Underwear of Wool and Silk and Wool; Knitted Hosiery of Wool, Worsted, and Silk and Wool; Woolen, Worsted, or Silk and Wool Knitted Sports Coats; Knitted Sports Suits, Knitted Jumpers, Knitted Pull-overs, Knitted Cardigans, Knitted Shirts, Knitted Sweaters, Knitted Waistcoats, Knitted Scarfs, Knitted Jerseys, Knitted Frocks, Knitted Caps, Knitted Boleros, Knitted Vests, Knitted House Coats, Knitted Shoulder Wraps, Knitted Opera Cloaks, Knitted Wraps, and Knitted Jersey Suits, for Use by Men, Women, and Children.

TRAIN

*Particular description of goods.*—Varnish, Drier, Japans, Prepared Shellac, Turpentine, Wood Filler, Stains, Polishes in the Nature of Varnish and Automobile Polish, Putty; Paints, Dry, Paste, and Ready Mixed; and Paint Enamels.
*Claims use* since about Jan. 1, 1907.

---

Ser. No. 214,846. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BRETWOOD, LTD., London, England. Filed May 25, 1925.

BRETWOOD

*Particular description of goods.*—Apparatus for Use in Wireless Telegraphy and Telephony, said Apparatus Comprising: Valve Holders, Grid Leaks, Fixed Condensers, Variable Condensers, Accumulators, Dry Cells, Induction Coils, Coil Holders, Coil Plugs, Variometers, Electric Resistances, Bursers, Switchboards, Switches, Rheostats, Vacuum or Electron Tubes or Lamps, Detectors, Loud Speakers, Wireless Receiving Sets, Head Phones, Transformers, and Terminals.
*Claims use* since Jan. 1, 1924.

Ser. No. 214,939. (CLASS 38. PRINTS AND PUBLICATIONS.) THE AMERICAN FEDERATION OF ARTS, INC., Washington, D. C. Filed May 27, 1925.

THE AMERICAN MAGAZINE OF ART

*Particular description of goods.*—Title of Monthly Magazine.
*Claims use* since 1916.

---

Ser. No. 214,981. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) TRIMM RADIO MANUFACTURING CO., Chicago, Ill., Filed May 27, 1925.

TRIMM
RADIO MANUFACTURING COMPANY
CHICAGO

No claim is made herein to the words "Trimm Radio Manufacturing Company Chicago", apart from the mark shown in the drawing.
*Particular description of goods.*—Radio Supplies—Namely, Telephone Head Sets, Loud Speakers, Loudspeaker Units to be Used as Attachments to Amplifying Horns (for Example the Horns of Talking Machines), and Parts Thereof.
*Claims use* since Aug. 1, 1922.

---

Ser. No. 215,007. (CLASS 6. CHEMICAL, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GULF STATES MEDICINE COMPANY, Pascagoula, Miss. Filed May 28, 1925.

Gray's Antiseptic

No claim is made to the words "Gray's Antiseptic" appearing in the drawing apart from the mark shown.
*Particular description of goods.*—Antiseptic Medicinal Preparation for Wounds, Sores, Sprains, Strains, Erysipelas, Etc.
*Claims use* since Jan. 1, 1925.

Ser. No. 215,075. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) LOS ANGELES SOAP COMPANY, Los Angeles, Calif. Filed May 29, 1925.

MISSION BELL

*Particular description of goods.*—Soap.
*Claims use* since Mar. 5, 1924.

---

Ser. No. 215,106. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) SUOMEN OSUUSKAUPPOJEN KESKUSKUNTA, R. L., Helsingfors, Finland. Filed May 29, 1925.

No claim is made to the representation of matches apart from the mark shown. The words "Impregnated Safety Matches," "Made in Finland," "Superior Quality," and "Average 60 Matches" are disclaimed apart from the mark shown.
*Particular description of goods.*—Safety Matches.
*Claims use* since Feb. 15, 1925.

---

Ser. No. 215,129. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) THE BOSSTONE COMPANY, Boston and East Boston, Mass. Filed June 1, 1925.

Ukelin

*Particular description of goods.*—Musical Instruments of the Zither Type Having One or More Bow-Played Strings and Also One or More Strings Sounded by Plucking.
*Claims use* since on or about May 21, 1925.

Ser. No. 215,141. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE DAYTON FAN AND MOTOR COMPANY, Dayton, Ohio. Filed June 1, 1925.

Day-Fan

*Particular description of goods.*—Electric Fans, Electric Motors and Parts Thereof and Radio Receiving Sets and Loud Speakers and Parts, Comprising Condensers, Transformers, Switches, Sockets, and Panels.
*Claims use* since July, 1924.

---

Ser. No. 215,246. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) VALENTINO GIATTI, doing business as Italograppo Importing Co., New York, N. Y. Filed June 3, 1925.

No claim is made to the use of the representation of the bunches of grapes apart from the mark as shown in the drawing.
*Particular description of goods.*—Concentrated Italian Grapes for Grape Jelly.
*Claims use* since May 1, 1925.

---

Ser. No. 215,298. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PURITY COSMETIC CO., Bemidji, Minn. Filed June 4, 1925.

Sanafax

*Particular description of goods.*—Dental Cream.
*Claims use* since February, 1925.

---

Ser. No. 215,317. (CLASS 38. PRINTS AND PUBLICATIONS.) SPORTLIFE PUBLISHING CORPORATION, New York, N. Y. Filed June 4, 1925.

Sportlife

*Particular description of goods.*—Monthly Magazine.
*Claims use* since June 2, 1925.

Ser. No. 215,500. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE BEST FOODS, INC., New York, N. Y. Filed June 9, 1925.

The lining on the drawing is intended to denote that the outer oval is blue and the inner oval is buff. No claim is made to the words "Best Foods" or to the word "Shortening" apart from the mark shown.
*Particular description of goods.*—Shortening.
*Claims use* since May 29, 1925.

---

Ser. No. 215,677. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALBERT D. BARR, doing business as Davis Laboratory, Los Angeles, Calif. Filed June 12, 1925.

Vado

*Particular description of goods.*—Antiseptic and Germicidal Preparations.
*Claims use* since June 1, 1925.

---

Ser. No. 215,768. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) EDWARD L. BEARD, Kansas City, Mo. Filed June 15, 1925.

*Particular description of goods.*—Muffler Attachment for Telephone Transmitters.
*Claims use* since May 15, 1925.

---

Ser. No. 215,847. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH E. CARTER, doing business as Carter's Laboratories, Fargo, N. Dak. Filed June 16, 1925.

Jos. E. Carter

The name "Jos. E. Carter" is disclaimed except when used in the manner shown. The trade-mark consists of a facsimile of applicant's signature.
*Particular description of goods.*—Hair Color Restorer.
*Claims use* since December, 1924.

Ser. No. 215,876. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RHENANIA VEREIN CHEMISCHER FABRIKEN AKTIEN-GESELLSCHAFT, Colonia, Germany. Filed June 16, 1925.

Mucidan

Trade-mark consists of the word "Mucidan."
*Particular description of goods.*—Antiseptic.
*Claims use* since Jan. 1, 1925.

---

Ser. No. 215,897. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE EGYPTIAN LACQUER MANUFACTURING COMPANY, New York, N. Y. Filed June 17, 1925. Under ten-year proviso.

ALBALINE

*Particular description of goods.*—Lacquer.
*Claims use* since about July, 1892.

---

Ser. No. 216,019. (CLASS 39. CLOTHING.) COOPER UNDERWEAR COMPANY, Kenosha, Wis. Filed June 19, 1925.

Coopers
XTRA-TUF PLY
HEEL & TOE

No claim is made to any right of registration under the statute of the words "Cooper's Xtra Tuf 4Ply Heel & Toe" excepting in the form and in connection with the mark as shown.
*Particular description of goods.*—Hosiery.
*Claims use* since May 20, 1925.

---

Ser. No. 216,020. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) COTY, INC., Wilmington, Del., and New York, N. Y. Filed June 19, 1925.

BRUGNON

*Particular description of goods.*—Rouge.
*Claims use* since Mar. 9, 1925.

---

Ser. No. 216,021. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) COTY, INC., Wilmington, Del., and New York, N. Y. Filed June 19, 1925.

PAVIE

*Particular description of goods.*—Rouge.
*Claims use* since Mar. 2, 1925.

Ser. No. 216,027. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) WILLIAM W. DOOLITTLE, doing business as Royal Maize Co., Coulmbus, Ohio. Filed June 19, 1925.

"EASE-ON"

*Particular description of goods.*—Cleaning Preparation Both in Liquid and Wet Paste Form for Use on All Kinds of Silk Except Solid White.
*Claims use* since about May 7, 1925.

---

Ser. No. 216,111. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE MATTHEWS DAIRIES COMPANY, Cincinnati, Ohio. Filed June 20, 1925.

CREAMED COTTAGE CHEESE

No claim is made to the words "Creamed Cottage Cheese" apart from the mark as shown in the drawing.
*Particular description of goods.*—Cottage Cheese.
*Claims use* since Feb. 15, 1924.

---

Ser. No. 216,246. (CLASS 38. PRINTS AND PUBLICATIONS.) WILLARD STORAGE BATTERY COMPANY, Cleveland, Ohio. Filed June 22, 1925.

The Connector

*Particular description of goods.*—Publication Issued Monthly.
*Claims use* since January, 1918.

---

Ser. No. 216,251. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) AUTODEX COMPANY, Waynesboro, Pa. Filed June 23, 1925.

Autodex

*Particular description of goods.*—Indexing Machines.
*Claims use* since Feb. 29, 1924.

Ser. No. 216,346. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) JAMES S. KIRK & COMPANY, Chicago, Ill. Filed June 24, 1925.

LITE

*Particular description of goods.*—Soap.
*Claims use* since Jan. 1, 1922.

---

Ser. No. 216,387. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) HARRY M. FREEDMAN, Los Angeles, Calif. Filed June 25, 1925.

MAGIC

*Particular description of goods.*—Tire Holders.
*Claims use* since June 6, 1925.

---

Ser. No. 216,393. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MRS. J. E. HUTCHESON & MISS MILLER HUTCHESON, Beaumont, Tex. Filed June 25, 1925.

I-Kur-Burns

The shading beneath the words "I-Kur-Burns" indicates a red coloration intended to simulate fire, while the shading above the fire indicates no particular color, being intended to represent clouds of smoke.
*Particular description of goods.*—Salve for the Treatment of Minor Burns, Chronic Sores, Eczema, Carbuncles, Sunburn, Chapped Hands, and Similar Skin Affections.

---

Ser. No. 216,636. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) S. S. PIERCE CO., Boston, Mass. Filed June 29, 1925.

LIONCEAU

*Particular description of goods.*—Soaps.
*Claims use* since Oct. 1, 1920.

---

Ser. No. 216,639. (CLASS 38. PRINTS AND PUBLICATIONS.) ENID SCOTT RANKIN, doing business as The National Women's Press, New York, N. Y. Filed June 29, 1925.

The NewCentury

*Particular description of goods.*—Periodical Publication.
*Claims use* since June 23, 1925.

---

Ser. No. 216,670. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EHRO-SULFUR LABORATORIES INC., New York, N. Y. Filed June 30, 1925.

EHRO-SULFUR

Applicant disclaims exclusive right to the use of the word "Sulfur" except in combination with the other features of the mark as shown in drawing.
*Particular description of goods.*—Medicinal Preparation.
*Claims use* since June 17, 1925.

---

Ser. No. 216,711. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) CLEANSER PRODUCTS COMPANY, Freedom, Pa. Filed July 1, 1925.

REN

Applicant disclaims the right to the exclusive use of the words "Renovates" and "Renews" apart from the other features of the mark.
*Particular description of goods.*—Preparation Used as a Cleaner for Painted or Varnished Surfaces.
*Claims use* since Mar. 15, 1925.

Ser. No. 216,740. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MOTHERSILL REMEDY COMPANY, LIMITED, Montreal, Canada, and New York, N. Y. Filed July 1, 1925.

MOTHERSILL'S SEASICK REMEDY

No claim is made to the exclusive use of the words "Mothersill's" and "Seasick Remedy" apart from the mark shown in the drawing. The color red shown by the lines on the drawing being claimed as a feature of the mark.
*Particular description of goods.*—Remedy for Seasickness.
*Claims use* since June, 1908.

---

Ser. No. 216,749. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STRAHL & PITSCH, New York, N. Y. Filed July 1, 1925.

S & P BRAND

No claim is made to the word "Brand" apart from the mark shown in the drawing.
*Particular description of goods.*—Beeswax, Paraffin Wax, Carnauba Wax, Carnaumontine Wax, Shellac Wax, Spermaceti, Stearic Acid, Gum Tragacanth, Ceresine Waxes, Montan Waxes, Japan Wax, Palm Wax, Bayberry Wax, Candelilla Wax, and Ozokerite Wax.
*Claims use* since Jan. 1, 1906.

---

Ser. No. 216,750. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GRATZ A. TRUE, New Orleans, La. Filed July 1, 1925.

Transphy

*Particular description of goods.*—Antiseptic and Astringent Medicinal Preparation for the Treatment of the Skin.
*Claims use* since June 16, 1925.

---

Ser. No. 216,752. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) UNITED STATES FARM SALES COMPANY, Salina, Kans. Filed July 1, 1925.

FARCO

*Particular description of goods.*—Automobile Tire Casings and Tubes.
*Claims use* since Feb. 19, 1925.

---

Ser. No. 216,792. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) M. T. E. V. RADEMAKER'S KON. CACAO & CHOCOLADE FABRIEKEN, The Hague, Netherlands. Filed July 2, 1925.

PRIORA

Trade-mark consists of the word "Priora."
*Particular description of goods.*—Chocolates, Candy, Biscuits, and Cocoa.
*Claims use* since Sept. 8, 1924.

---

Ser. No. 216,797. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SETHNESS COMPANY, Chicago, Ill. Filed July 2, 1925.

LOLLIE

*Particular description of goods.*—Frozen Water Ice on a Stick.
*Claims use* since Oct. 29, 1924.

---

Ser. No. 216,836. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) INNIS, SPEIDEN & CO., INC., New York, N. Y. Filed July 3, 1925.

TA-TO-LAC

*Particular description of goods.*—Chemical Preparation Suitable for Improving the Yield, Taste, and Keeping Qualities of Bread, Cake, and the Like.
*Claims use* since Oct. 31, 1924.

---

Ser. No. 216,847. (CLASS 39. CLOTHING.) ERNEST L. RHODES COMPANY, Atlanta, Ga. Filed July 3, 1925.

ERR The Rhodes Hat

Applicant disclaims exclusive right to the use of the phrase "The Rhodes Hat" except in the particular connection and association in which it appears with the rest of the trade-mark as presented on the drawing.

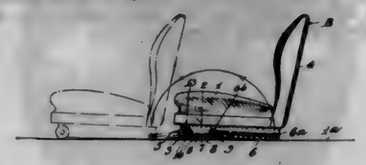
# REISSUES

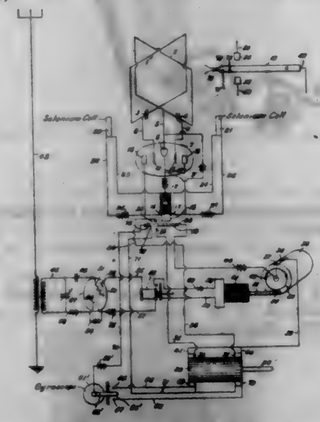
## OCTOBER 6, 1925.

16,180. MOVABLE SEAT FOR VEHICLES AND THE LIKE. ARTHUR WILLIAM CHAPMAN and FRANK GUY LANG BIDDLECOMBE, London, England. Filed Jan. 20, 1925. Serial No. 3,704. Original No. 1,444,660, dated Feb. 6, 1923, Serial No. 580,295, filed Aug. 7, 1922. 7 Claims. (Cl. 155—14.)



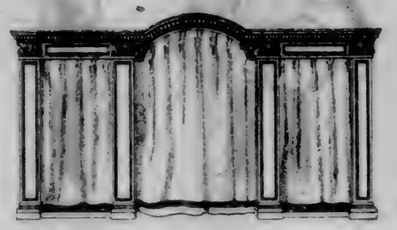
1. A vehicle or other seat including a base member therefor adapted to rest upon a support in an operative position and to be moved bodily upon said support to another position thereon, and a member pivotally connected at one end to one extremity of said base member and at its opposite end to said support on which said base member is adapted to travel; said pivoted member, when said seat is at rest in said operative position, extending substantially horizontally to maintain said seat in said operative position against movement bodily horizontally relative to said support, and, when said seat is in either of said positions, serving to facilitate the movement of said seat to the other of said positions when the seat is titited; and the opposite extremity of said base member constituting an axis about which said seat is tiltable to permit of the movement thereof from each of said positions to the other, and by which said support is continuously engaged during the movement of said seat back and forth between said positions.

16,181. SYSTEM FOR CONTROL OF MOVING BODIES BY RADIANT ENERGY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Aug. 4, 1925. Serial No. 48,132. Original application filed June 6, 1914, Serial No. 843,562. Renewed July 24, 1923. Original No. 1,513,108, dated Oct. 28, 1924. 40 Claims. (Cl. 114—21.)



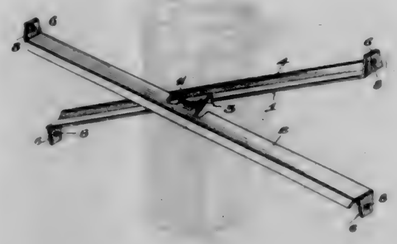
1. A system for the control of moving bodies at a distance by radiant energy, comprising in combination, a body having means to maintain a predetermined or definite direction of bodily movement thereof, and also having means for directing said body toward a source of interfering radiant energy, means for automatically terminating the control of said body by first mentioned means upon energization of said second mentioned means, and means responsive to radiant energy to terminate the movement of said body toward said source of interfering radiant energy.

16,182. DESIGN FOR A SCREEN. MOSES HIRAM HARRIS, New York, N. Y. Filed Nov. 25, 1924. Serial No. 11,470. Term of patent 14 years. Original No. 65,186, dated July 15, 1924, Serial No. 459,168, filed Apr. 6, 1921, for 3½ years.



The ornamental design for a screen, as shown.

16,183. JOIST BRIDGING. WILLIAM C. BURRELL, Kankakee, Ill., assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Mar. 14, 1925. Serial No. 15,655. Original No. 1,514,577, dated Nov. 4, 1924, Serial No. 606,077, filed Dec. 11, 1922. 9 Claims. (Cl. 20—9.)



1. As a new article of manufacture, two elongated members which cross at their mid portions and a bridging piece uniting said members where they cross and formed integrally therewith out of a piece of sheet metal, there being transverse slits margining the bridging piece to bring said members closer together, said members being bent along longitudinal lines to make them angular in cross section and on transverse lines near their ends to constitute ears.

# DESIGNS

## OCTOBER 6, 1925.

68,367. DOLL. ELIZABETH G. ADRIAN, New York, N. Y. Filed July 13, 1925. Serial No. 14,075. Term of patent 7 years.

The ornamental design for a doll, as shown.

---

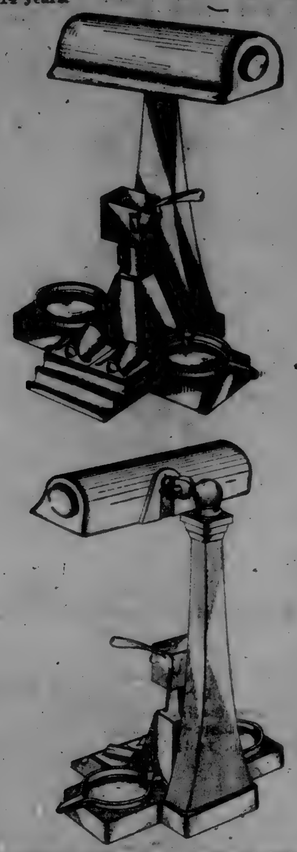
The ornamental design for a finger ring as shown.

---

68,376. FINGER RING. SAMUEL GROSSMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners trading under the firm name of Klebanoff and Grossman, New York, N. Y. Filed Aug. 15, 1925. Serial No. 14,440. Term of patent 3½ years.

The ornamental design for a finger ring as shown.

68,377. COMBINED DESK LAMP, CIGAR LIGHTER, AND INKSTAND. SAMUEL E. GUINN, Johnson City, Tenn. Filed Feb. 3, 1925. Serial No. 12,248. Term of patent 14 years.



The ornamental design for a combined desk lamp, cigar lighter, and inkstand, as shown.

68,378. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 11, 1925. Serial No. 13,737. Term of patent 7 years.

The ornamental design for a ring, substantially as shown.

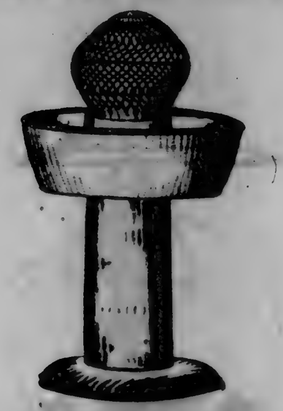
68,379. FINGER RING. SOL KAUFMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners trading under the firm name of Klebanoff and Grossman, New York, N. Y. Filed Aug. 15, 1925. Serial No. 14,441. Term of patent 3½ years.

The ornamental design for a finger ring as shown.

68,380. LOCK. CLIVE W. LANPHEAR, New York, N. Y. Filed Mar. 10, 1924. Serial No. 8,887. Term of patent 3½ years.

The ornamental design for a lock, as shown.

68,381. FERNERY LAMP. LEWIS LARSEN, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed May 8, 1925. Serial No. 13,873. Term of patent 14 years.



The ornamental design for a fernery lamp, substantially as shown.

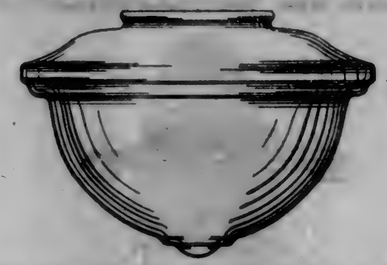
68,382. VANITY CASE. WILLIAM H. LESTER, Elgin, Ill., assignor to Elgin American Manufacturing Co., Elgin, Ill., a Corporation of Illinois. Filed Aug. 13, 1925. Serial No. 14,411. Term of patent 3½ years.

The ornamental design for a vanity case, substantially as shown.

68,383. LAMP SHADE, GEORGE A. LIPPINCOTT, Philadelphia, Pa. Filed May 2, 1925. Serial No. 13,308. Term of patent 3½ years.

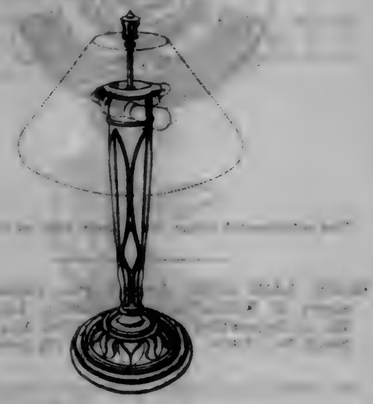
The ornamental design for a lamp shade, as shown.

68,384. LIGHTING BOWL. CHARLES BRYANT MACDOUGALL, Seattle, Wash. Filed Feb. 18, 1923. Serial No. 5,163. Term of patent 3½ years.



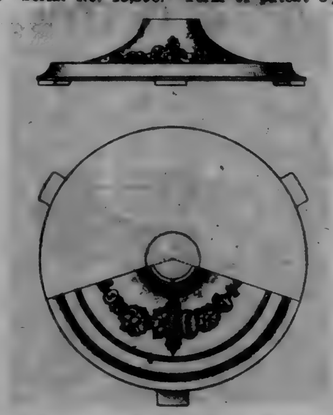
The ornamental design for a lighting bowl, as shown.

68,385. COMBINED RADIO LOUD SPEAKER AND LAMP SUPPORT. HARRY C. MAIBOHM, Sandusky, Ohio. Filed June 25, 1925. Serial No. 13,888. Term of patent 3½ years.



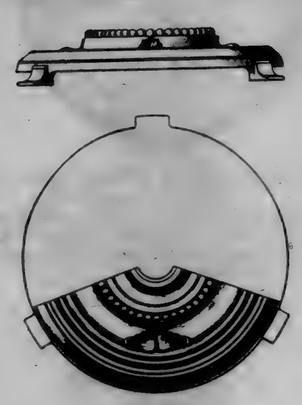
The ornamental design for a combined radio loud speaker and lamp support, as shown.

68,386. LAMP BASE. JACOB MANDEL, Chicago, Ill., assignor to Wellington-Stone Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 11, 1925. Serial No. 13,398. Term of patent 3½ years.



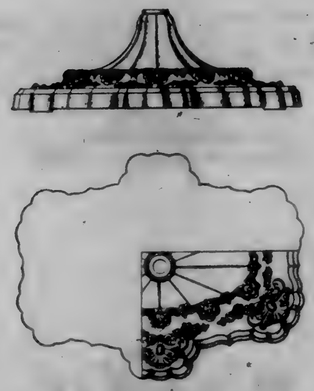
The ornamental design for a lamp base as shown.

68,387. LAMP BASE. JACOB MANDEL, Chicago, Ill., assignor to Wellington-Stone Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 11, 1925. Serial No. 13,399. Term of patent 3½ years.



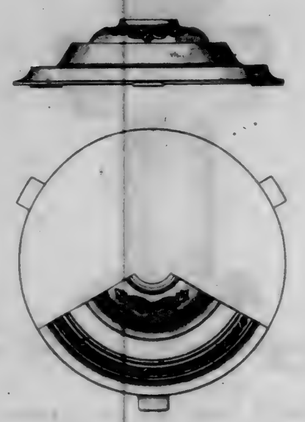
The ornamental design for a lamp base as shown.

68,388. LAMP BASE. JACOB MANDEL, Chicago, Ill., assignor to Wellington-Stone Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 11, 1925. Serial No. 13,400. Term of patent 3½ years.



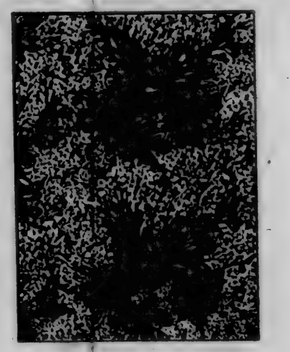
The ornamental design for a lamp base as shown.

68,389. LAMP BASE. JACOB MANDEL, Chicago, Ill., assignor to Wellington-Stone Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 11, 1925. Serial No. 13,401. Term of patent 3½ years.



The ornamental design for a lamp base as shown.

68,390. PAPER. RICHARD L. MARWEDE, New York, N. Y., assignor to Hampden Glazed Paper & Gard Company, a Corporation of Massachusetts. Filed July 31, 1925. Serial No. 14,282. Term of patent 14 years.

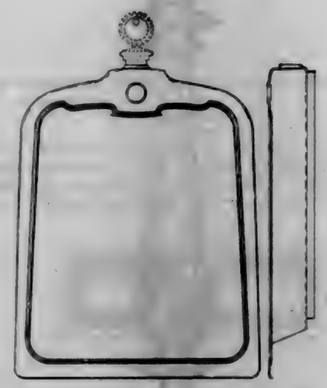


The ornamental design for paper as shown.

68,391. AUTOMOBILE RADIATOR-CAP FIXTURE. SOMMERFIELD EVANS MILLER, Chicago, Ill. Filed May 18, 1925. Serial No. 13,484. Term of patent 14 years.

The ornamental design for an automobile radiator cap fixture, as shown.

68,392. RADIATOR SHELL FOR MOTOR VEHICLES. WILFRED R. MILNER, Cleveland Heights, Ohio, assignor to The Peerless Motor Car Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 31, 1924. Serial No. 10,827. Term of patent 7 years.

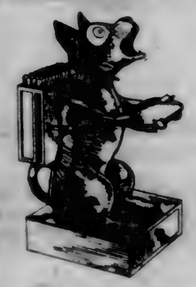


The ornamental design for a radiator shell for motor vehicles substantially as shown.

68,393. RUBBER SOLE FOR SHOES. ALBERT LINN MURRAY, Auburn, Ind., assignor to Auburn Rubber Co., Auburn, Ind. Filed Nov. 19, 1924. Serial No. 11,408. Term of patent 3½ years.

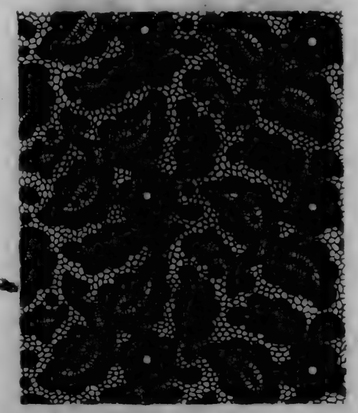
The ornamental design for a rubber sole for shoes, as shown.

68,394. COMBINED ASH RECEIVER AND MATCH HOLDER. JAMES A. NICOLETTI, Brooklyn, N. Y. Filed Jan. 2, 1925. Serial No. 11,857. Term of patent 7 years.



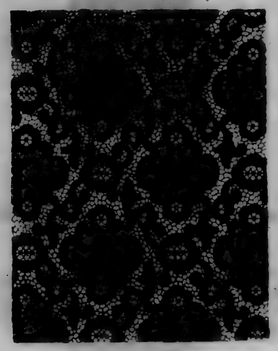
The ornamental design for a combined ash receiver and match holder as shown.

68,395. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 29, 1925. Serial No. 14,254. Term of patent 14 years.



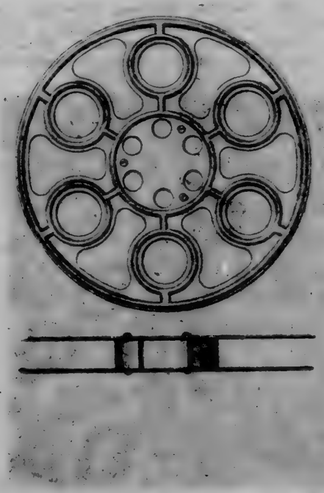
The ornamental design for lace substantially as shown.

68,396. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 3, 1925. Serial No. 14,299. Term of patent 14 years.



The ornamental design for lace substantially as shown.

68,397. FILM REEL. BENJAMIN PETROWSKY, New York, N. Y., assignor to Paragon Auto Parts Mfg. Co., Inc., New York, N. Y., a Corporation of New York. Filed May 18, 1925. Serial No. 13,477. Term of patent 7 years.

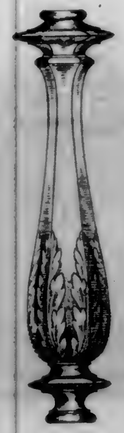


The ornamental design for a film reel as shown.

68,398. COLUMN FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. FREDERICK MAX POERTS, New York, N. Y., assignor to Artistic Brass & Bronze Wks. Inc., a Corporation of New York. Filed July 20, 1925. Serial No. 14,151. Term of patent 3½ years.

The ornamental design for a column for lighting fixtures or similar articles, as shown.

68,399. COLUMN FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. FREDERICK MAX POERTS, New York, N. Y., assignor to Artistic Brass & Bronze Wks. Inc., a Corporation of New York. Filed July 20, 1925. Serial No. 14,152. Term of patent 3½ years.

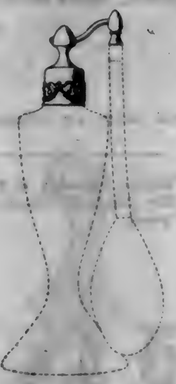


The ornamental design for a column for lighting fixtures or similar articles, as shown.

68,400. FRATERNITY PIN. CRAIG H. RICHEY, Birmingham, Mich. Filed May 5, 1924. Serial No. 9,487. Term of patent 3½ years.

The ornamental design for a fraternity pin, as shown.

68,401. ATOMIZER HEAD. EDWARD A. ROSENBERG, New York, N. Y. Filed May 21, 1925. Serial No. 13,529. Term of patent 14 years.



The ornamental design for an atomizer head, substantially as shown.

68,402. PLANE. EDMUND A. SCHADE, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed May 5, 1924. Serial No. 9,485. Term of patent 14 years.

The ornamental design for a plane, as shown.

68,403. TRUCK TIRE. MARK SCHNEIDERMAN, New York, N. Y. Filed June 24, 1925. Serial No. 13,883. Term of patent 7 years.

The ornamental design for a truck tire as shown.

68,404. CHILD'S COAT. MAUDE SIEGEL, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 13, 1925. Serial No. 14,419. Term of patent 3½ years.

The ornamental design for a child's coat, as shown.

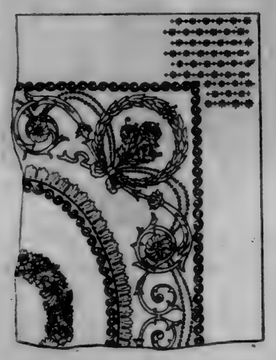
The ornamental design for a dress, as shown.

68,406. RING FOR PERSONAL WEAR. ALFRED SPEAR and LOUIS SUSSKIND, Providence, R. I. Filed May 29, 1925. Serial No. 13,590. Term of patent 3½ years.

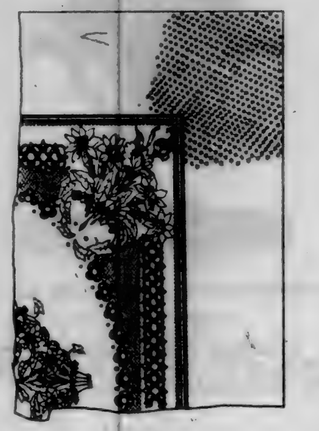
The ornamental design for a ring for personal wear, substantially as shown.

68,407. BEDSPREAD. EDWARD B. TENNEY, Claremont, N. H. Filed May 16, 1925. Serial No. 13,463. Term of patent 3½ years.



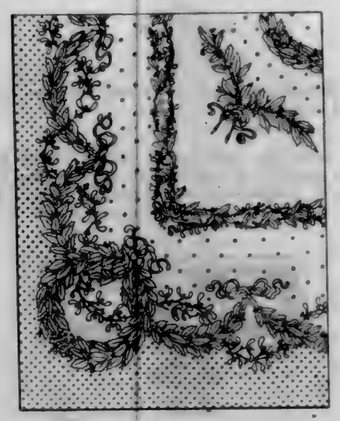
The ornamental design for bedspread as shown and described.

68,408. BEDSPREAD. EDWARD B. TENNEY, Claremont, N. H. Filed May 20, 1925. Serial No. 13,506. Term of patent 3½ years.



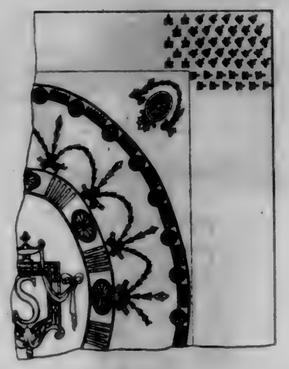
The ornamental design for bedspread as shown and described.

68,409. BEDSPREAD. EDWARD B. TENNEY, Claremont, N. H. Filed May 20, 1925. Serial No. 13,507. Term of patent 3½ years.



The ornamental design for bedspread as shown and described.

68,410. BEDSPREAD. EDWARD B. TENNEY, Claremont, N. H. Filed May 20, 1925. Serial No. 13,508. Term of patent 3½ years.



The ornamental design for bedspread as shown and described.

68,411. ARM FOR LIGHTING FIXTURES. HARRY TEPPER, Brooklyn, N. Y., assignor to Apex Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed June 25, 1925. Serial No. 13,894. Term of patent 3½ years.

The ornamental design for an arm for lighting fixtures, as shown.

68,412. ENGAGEMENT RING. LEO G. THEURIET and CARL M. JOHNSON, San Francisco, Calif. Filed Aug. 8, 1925. Serial No. 14,357. Term of patent 7 years.

The ornamental design for an engagement ring, as shown.

68,413. SODA-WATER BOTTLE. CHARLES H. THOM, Los Angeles, Calif. Filed Sept. 22, 1924. Serial No. 10,875. Term of patent 7 years.

The ornamental design for a soda-water bottle, as shown.

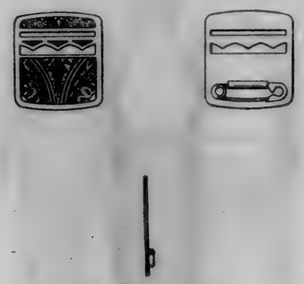
68,414. SLIPPER. SEYMOUR TROY, New York, N. Y. Filed Jan. 8, 1925. Serial No. 11,961. Term of patent 3½ years.

The ornamental design for a slipper as shown.

68,415. SLIPPER. SEYMOUR TROY, New York, N. Y. Filed Jan. 8, 1925. Serial No. 11,962. Term of patent 3½ years.

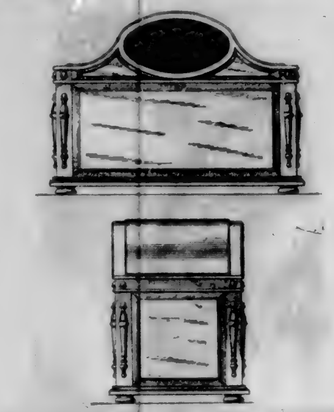
The ornamental design for a slipper as shown.

68,416. BUCKLE OR SIMILAR ARTICLE. DELMAR A. WALSH, Kansas City, Mo. Filed June 29, 1923. Serial No. 13,953. Term of patent 7 years.



The ornamental design for a buckle or similar article, as shown.

68,417. CABINET FOR RADIO RECEIVING SETS. HENRY WATERSON, New York, N. Y., assignor to David Grimes Inc., Jersey City, N. J., a Corporation of New York. Filed July 25, 1925. Serial No. 14,227. Term of patent 7 years.



The ornamental design for a cabinet for radio receiving sets as shown.

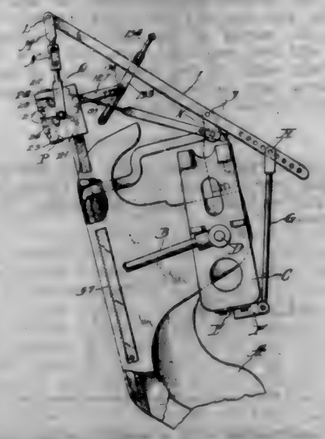
# PATENTS

## GRANTED OCTOBER 6, 1925.

1,555,811. FISHING TOOL FOR WELLS. JAMES S. ABERCROMBIE and HARRY S. CAMERON, Houston, Tex. Filed Jan. 13, 1923. Serial No. 612,495. 6 Claims. (Cl. 294—102.)

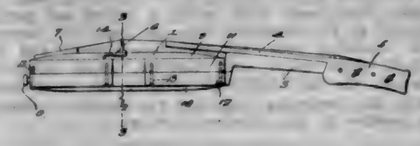
1. In a fishing tool for wells, a head, a barrel thereon having a downwardly tapered seat at the lower end, gripping jaws tapered to fit said seat and adapted to move vertically therein, a pin connected with said jaws and slidable vertically in said head, a nut screwed on said pin and having a slidable but non-rotatable fit in said head and means to rotate said pin comprising a collar above said head and rotatably connected therewith.

1,555,812. PRINTING-PRESS ATTACHMENT. HERMAN A. AGRICOLA, Jr., Atlanta, Ga., assignor of forty-nine one-hundredths to Joseph E. Lane, Atlanta, Ga. Filed May 3, 1923. Serial No. 636,371. 13 Claims. (Cl. 101—195.)



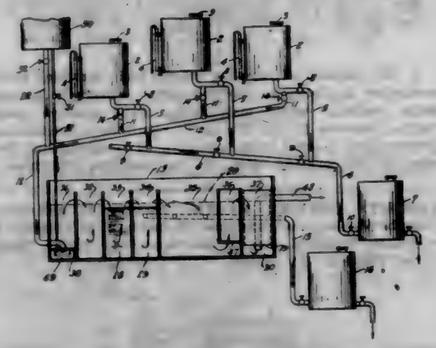
1. The combination with a printing press having a carriage and a form, one movable with respect to the other, of a duplex roller system mounted on the carriage, the two components of the system being adapted for independent swinging movement about a common axis, means for supplying ink to one component of the roller system, and, at times, for transferring the ink therefrom to the other component of the roller system, and a printing roller included in the latter system adapted to deliver the ink to the form, substantially as described.

1,555,813. VIOLIN. HOP W. ALLISON, Hurley, N. Mex. Filed Apr. 29, 1924. Serial No. 709,839. 1 Claim. (Cl. 84—275.)



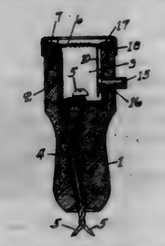
A violin body including a back section, a belly section, a rim formed on and integral with the belly section, another rim formed on and integral with the back section, the edges of said rims adapted to abut each other, and detachable fastening elements piercing the back section, the rim thereon, and extending into the rim of the belly section.

1,555,814. OIL-SALVAGING MEANS. DANIEL ASPINALL, Los Angeles, Calif., assignor of one-tenth to Robert D. Pearson and two-thirds to Jessie Linson, both of Los Angeles, Calif. Filed Mar. 11, 1924. Serial No. 698,574. 5 Claims. (Cl. 220—88.)



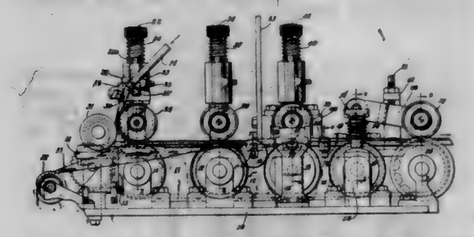
1. A means for salvaging oil or the like from any one of a series of storage tanks when the same is threatened by fire, said means comprising a salvaging tank remote from the storage tank, a second salvaging tank adjacent the quenching tank, means for delivering the contents of any one of the storage tanks through running water into the first named salvaging tank, means for controlling such delivery into the first salvaging tank for delivering the residual contents of any of the storage tanks into the quenching tank, means for discharging the overflow oil from the quenching tank, and means for delivering the residue oil of the quenching tank into the second salvage tank.

1,555,815. ELECTRIC CIGAR LIGHTER. HERBERT M. ALLEMEIER and GEORGE R. MORRIS, Maumee, Ohio. Filed Jan. 7, 1924. Serial No. 684,797. 2 Claims. (Cl. 219—32.)



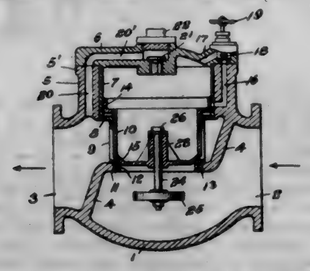
1. In a cigar lighter, a chambered member, an insulating body located on the end of the chambered member, a resistance element wound on the insulating body, an elastic sheet metal strip having a turned end portion located on the insulating body, an eyelet for securing the insulating body, the resistance element and the elastic sheet metal strip together, means extending through the said eyelet for securing the sheet metal strip, the insulating body and the resistance element in position in the chambered member.

1,555,816. METHOD AND MACHINE FOR COVERING STRIP MATERIAL. ROBERT R. AMBLER and PAUL R. ROHRBACHER, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 7, 1922. Serial No. 573,442. 31 Claims. (Cl. 154—41.)



1. The method of covering elastic strip material which comprises applying a covering strip adhesively to said strip material while maintaining such relative longitudinal stresses in the two as to result in a longitudinal compression in said strip material, balanced against tension of the covering strip, in the resulting structure.

1,555,817. CONTROL VALVE. EDWARD V. ANDERSON, Belle Vernon, Pa., assignor of one-half to Charles E. Golden, Crafton, Pa. Filed Sept. 20, 1924. Serial No. 738,845. 11 Claims. (Cl. 137—139.)

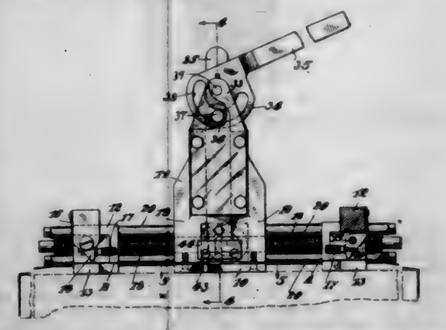


3. A valve comprising a casing provided with a passage therethrough, a valve head opening in the direction of normal flow through the casing adapted to close said passage and an impact disk slidingly mounted on but spaced from said valve head, said disk being so disposed as to move in the path of travel of the fluid through the valve.

1,555,818. PROCESS FOR TREATING PETROLEUM EMULSIONS. WILLIAM S. BARNICKEL, St. Louis, Mo.; Sears Lehmann and John S. Lehmann executors of the said William S. Barnickel, deceased. Filed Apr. 23, 1923. Serial No. 634,184. 6 Claims. (Cl. 196—4.)

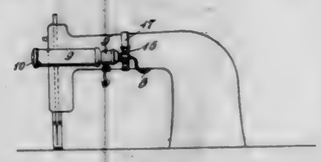
1. In a process for treating petroleum emulsions the step of subjecting the emulsion to the action of a derivative of a resin in which substitution or addition occurs in the hydrocarbon radical, to break the emulsion.

1,555,819. DEVICE FOR TIGHTENING AND FASTENING BALE BANDS. SAMUEL BARUCH, New York, N. Y. Filed May 18, 1922. Serial No. 561,991. 2 Claims. (Cl. 100—15.)



1. An apparatus for tightening stay strips, including a rotatable shaft having right and left hand threaded portions, means for rotating said shaft, and a pair of gripping devices engaging with said threaded portions, each gripping device including a body portion having a base adapted to support the stay strip, a pivoted member having portions extending in directions at right angles to each other from the pivotal support of said member, one of said portions having an edge adapted to engage with the stay strip, and the other of said portions also having an edge and a leaf spring acting against said last mentioned edge, and in a direction substantially radial to the pivotal center of said member, whereby said member may be held in operative or inoperative position by said spring.

1,555,820. PORTABLE LAMP FOR SEWING MACHINES, ETC. FRANK E. BECKA, Cleveland, Ohio. Filed July 16, 1924. Serial No. 726,350. 2 Claims. (Cl. 240—2.)

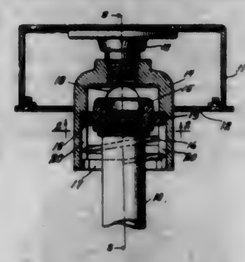


1. The combination with a sewing machine head of a substantially U-shaped clip engageable with the head, said clip having a flat apertured arm between its ends, a socket, a neck carried by said socket, a sleeve rotatably mounted on said neck, a stud carried by said sleeve and projecting through the apertures, means for locking the arm in an adjusted position with respect to the neck, an elongated tubular shield carried by the socket and having an opening in one side, and an electric lamp arranged in said shield and connected to the socket.

1,555,821. FIXTURE-SUPPORTING DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 4, 1921. Serial No. 512,767. 3 Claims. (Cl. 240—90.)

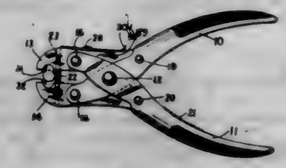
1. The combination with a fixture stem exteriorly threaded at its upper end of a nut into which the upper end of the stem is threaded, a housing for the upper end of the stem and the nut, and vertically yieldable means for supporting said fixture stem for limited universal movement comprising an annular support surrounding said stem and acting between said housing and nut, said nut and housing being provided with a tongue and groove to prevent relative rotation therebetween and to permit relative vertical movement therebetween.

1,555,822. FIXTURE-SUPPORTING DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 4, 1924. Serial No. 704,128. 1 Claim. (Cl. 240—90.)



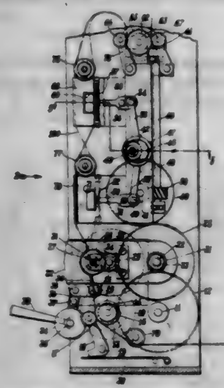
The combination with a fixture stud and a fixture stem, of vertically yieldable means for supporting said fixture stem from said stud for limited universal swinging movement, comprising an inverted cup member screwed onto said stud and provided with a pair of oppositely disposed vertical guides and a vertical slidable fulcrum member secured to the upper end of said stem, a coil spring surrounding said stem and pressing upwardly on said slidable fulcrum member, said slidable member having a pair of oppositely disposed slidable devices engaging said guides, whereby the stem can tilt and yield vertically and whereby rotation of the stem is prevented and lateral movement of said vertically slidable fulcrum member is prevented, said cup member having a shoulder for supporting the lower end of said coil spring the opening in the lower end of the cup member being of sufficient size to permit the insertion of a spring therethrough past said shoulder into said cup member.

1,555,823. HAND TOOL. WILLIAM A. BERNARD, New Haven, Conn., assignor to The William Schollhorn Company, New Haven, Conn. Filed Apr. 4, 1921. Serial No. 458,224. 18 Claims. (Cl. 86—22.)



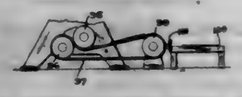
1. The method of crimping a tubular casing about a fuse or the like, which comprises inserting the casing with the fuse therein between a pair of parallel jaw members having complemental recesses formed therein to receive the casing and simultaneously exerting pressure upon the upper and lower portions of the casing in directly opposite directions by moving said jaws bodily toward each other to cause the excess material of the casing to be pressed out evenly on both sides of the fuse in the form of plaits.

1,555,824. MOTION-PICTURE DEVICE. GEORGE W. BINGHAM, Newark, N. J., assignor to Widescope Camera Co., Newark, N. J., a Corporation of New Jersey. Filed May 7, 1921. Serial No. 467,636. 16 Claims. (Cl. 88—16.6.)



1. A motion picture device comprising a plurality of lenses having their optical centers in vertical alignment, the optical axes of the lenses diverging outwardly from each other in such positions that they will cover abutting non-overlapping panoramic views, a stationary film frame for each lens, means whereby a film will be conducted into each film frame in a plane parallel to the plane of the frame and means for intermittently and simultaneously exposing the lenses.

1,555,825. MACHINE FOR TREATING RUBBER AND SIMILAR MATERIAL. DAVID REES BOWEN, Ansonia, and CARL F. SCHNUCK, New Haven, Conn., assignors to Farrel Foundry & Machine Company, Ansonia, Conn. Filed Jan. 6, 1921. Serial No. 435,485. 12 Claims. (Cl. 18—2.)

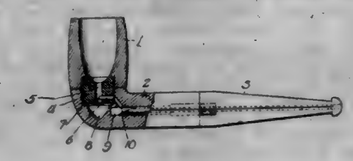


1. A rubber working machine having a chamber, a rotor therein, a shaft for driving the rotor, sheeting rolls disposed below the chamber and adapted to be

driven from the rotor shaft, said chamber being provided with a movable section to enable the material to be discharged therefrom, means to latch said section in closed position, and means to automatically set said sheeting rolls in operation prior to the unlatching of said discharge section.

---

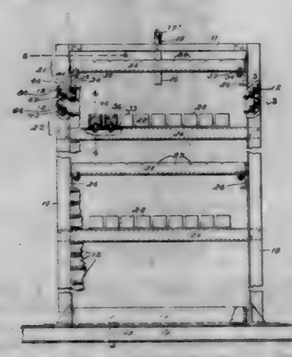
1,555,826. SMOKING PIPE. JACOB D. BURGER, New York, N. Y., and RUDOLPH HIRSCH, West New York, N. J., assignors to Reiss-Premier Pipe Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1921. Serial No. 510,942. 9 Claims. (Cl. 131—12.)



1. In a smoking pipe, a bowl of suitable material, a screw of different material on the bottom of said bowl, a base having a socket formed to engage the screw to removably hold said bowl in position, and a stump integral with said base, the bottom of the bowl engaging the base, forming a joint between them below the well of the bowl.

---

1,555,827. COOLING TOWER. EDWIN BURHORN, Hoboken, N. J. Filed July 7, 1921. Serial No. 483,111. 5 Claims. (Cl. 261—114.)

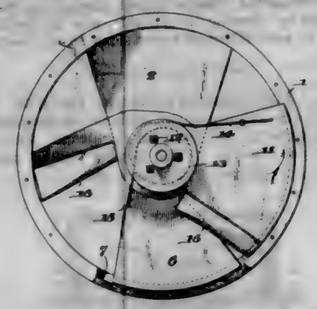


4. A cooling tower comprising an iron frame having uprights, and iron members thereon for supporting a series of superposed water distributing decks, and such decks, each comprising a plurality of distributing members of non-rusting metal, insulating pieces interposed between said distributing members and said iron supporting members, and securing bolts rigidly interconnecting the distributing members, the insulating pieces and the supporting members, a warm water connection to the upper part of the tower, and a receiving vessel at the bottom.

---

1,555,828. MOVING-PICTURE MACHINE. HARRY F. BURK and GUSTAF W. GUSTAFSON, Burlington, Iowa. Filed Nov. 14, 1928. Serial No. 674,693. 5 Claims. (Cl. 88—19.3.)

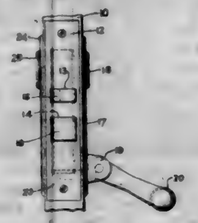
1. A shutter adapted to be mounted upon a shaft, consisting of an annular rim, a fixed blade carried by said rim provided with a hub centrally of said rim, a blade movable about its axis mounted upon the hub of the first mentioned blade, a blade movable about its axis mounted on the opposite side of the hub of the



first mentioned blade provided with air deflectors and a tension spring secured to said blade adapted to resist the action of said air deflectors.

---

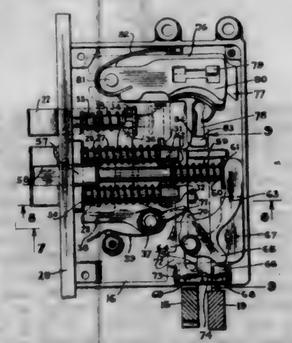
1,555,829. LOCK. WILLIAM J. CARROLL, West Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed Nov. 7, 1921. Serial No. 513,401. 32 Claims. (Cl. 70—29.)



1. In combination, a lock case, a latch bolt slidably mounted therein, said bolt also having a pivotal connection with the case, a stem connected to the bolt and slidably mounted in the case to control both the slidable and pivotal movements of the bolt.

---

1,555,830. LOCK. WILLIAM J. CARROLL, West Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed Nov. 23, 1921. Serial No. 517,419. 42 Claims. (Cl. 70—29.)

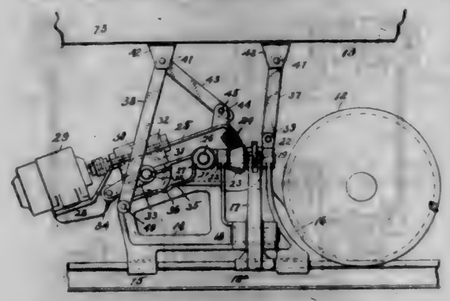


1. In a door lock, a strike plate, a keeper member movably mounted thereon, said strike plate having a bolt opening formed therein, and means accessible for operation through said opening to limit movement of the keeper.

27. In combination, a door frame having a strike provided with a bolt opening, a movable keeper forming one side of said opening, a keeper dogging member having a portion accessible through said opening, a door carrying a lock provided with a bolt extending into said opening, and means in addition to said bolt protractable into said opening to engage said dogging member and release the keeper.

---

1,555,831. SAFETY STOP FOR TRAVELING STRUCTURES. ARTHUR F. CASE, Cleveland, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 17, 1922. Serial No. 554,080. 48 Claims. (Cl. 188—36.)



1. A safety stop for traveling structures movable along a trackway, comprising a wedge adapted to be inserted between a wheel of the structure and a rail, movable means associated with the wedge and engageable with a portion of the trackway for preventing the wedge sliding along the rail, and means for actuating the first mentioned means and for shifting the wedge.

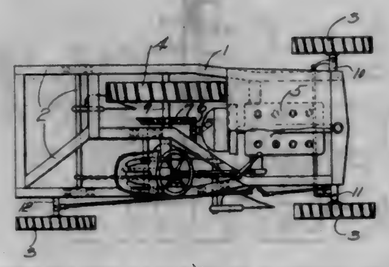
11. A safety stop for traveling structures movable along a trackway comprising a movable member having a wheel blocking wedge, and a motor mounted on said movable member for actuating said member.

---

1,555,832. DRILLING MECHANISM. HOMER P. CHANDLER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 12, 1922. Serial No. 581,318. 9 Claims. (Cl. 255—46.)

1. A drilling mechanism having in combination a support, a feed member arranged to operate a drill bit, mechanism for rotating the feed member, a feed nut mounted upon the feed member and having a threaded engagement therewith and rotatable relative thereto and having free longitudinal movement in one direction.

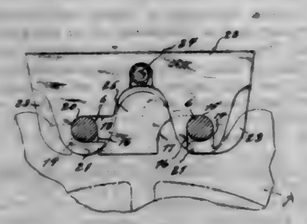
1,555,833. SIMPLEX TRACTOR PLOW. THOMAS B. CONRADT, Lometa, Tex. Filed Oct. 14, 1920. Serial No. 416,794. 1 Claim. (Cl. 280—91.)



In a tractor steering mechanism the combination with front and rear pivoted knuckles of a steering post having a worm, front and rear intermeshing gears, one of the gears also meshing with the worm of the steering post, crank elements carried by the gears and simultaneously movable in opposite directions when the gears are rotated by the worm and front and rear rods connecting the crank elements with the front and rear steering knuckles.

---

1,555,834. CHAIN GRATE. ANDREW B. COX, Bayonne, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Nov. 3, 1923. Serial No. 672,498. 7 Claims. (Cl. 110—40.)



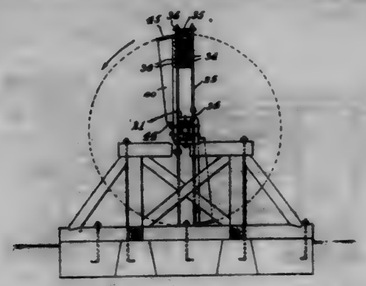
1. In a chain grate, a link comprising a pair of plates, each having a chain rod recess at either end thereof extending inwardly from the bottom of the plate and at least as wide as the diameter of the chain rod, the first of said recesses in each plate extending substantially perpendicularly to the top of the link and the second of said recesses extending at an angle to the top of the link and said plates being located side by side with their tops in alignment and with the inner edges of the first recess of one plate in alignment with the inner edges of the second recess of the other plate, and means to fasten the plates together detachably.

---

1,555,835. LUMBER DRIER. JAMES A. CRAIG, New Orleans, La., assignor, by mesne assignments, of one-half to Alexander T. McCurdie, Hattiesburg, Miss. Filed Aug. 10, 1920. Serial No. 402,614. 24 Claims. (Cl. 34—28.)

1. In a drier, a rotatable shaft; a carrier rotatable with said shaft and adapted for retaining therein for

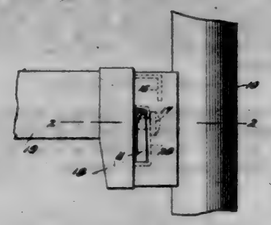
rotating therewith piles of spaced pieces of lumber; and air compressors open forwardly and rearwardly and supported forwardly of the forward planes of said piles



in close proximity to the faces of the piles and rotatable with said carrier for forcing air directly through the spaces of the piles.

---

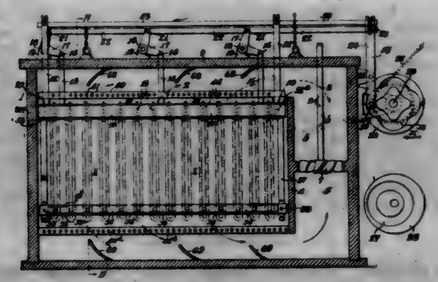
1,555,836. CORNER LOCK FOR METAL BEDS. HENRY DIERKES, Glenfield, Pa. Filed Dec. 19, 1924. Serial No. 756,919. 3 Claims. (Cl. 5—299.)



3. In a metal bed-stead, a corner lock comprising a female locking member consisting of an integral strip of metal bent into substantially rectangular form with opposite side portions thereof pressed inwardly to form a vertical slot and inner surfaces at the sides of the slot which are located in a plane inclined upwardly and outwardly.

---

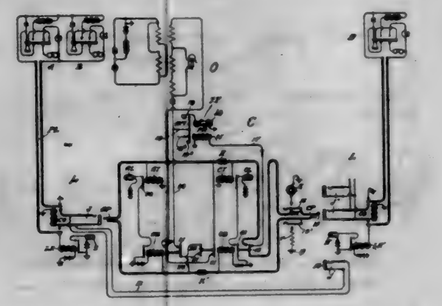
1,555,837. APPARATUS FOR DYEING, SCOURING, OR OTHERWISE TREATING YARN AND OTHER FIBERS IN THE HANK OR SKEIN. HOWARD M. DUDLEY, Philadelphia, Pa., assignor, by mesne assignments, to The Fifth Avenue Bank of New York, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1924. Serial No. 494,913. 29 Claims. (Cl. 8—19.)



17. In fiber treating apparatus, in combination, a tank for containing a body of treating liquid, a supporting rail, yarn sticks mounted on said rail for supporting hanks or skeins of material in the liquid, driving means and connections thereto for continuously reciprocating said yarn sticks within said treating liquid, means operatively connected to said driving means for turning said yarn sticks simultaneously with reciprocation thereof and additional yarn sticks for said hanks or skeins adapted to cooperate therewith at points spaced from said first mentioned yarn sticks and being reciprocable with the latter.

---

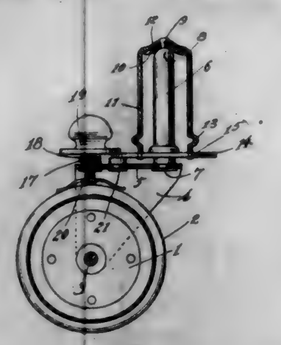
1,555,838. TELEPHONE SYSTEM. GEORGE R. EATON, Oak Park, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 19, 1921. Serial No. 446,241. 13 Claims. (Cl. 179—35.)



1. A telephone system including a calling line and a link circuit connected thereto at one end, and having at the other end a test terminal adapted to be applied to said line to test it, and reverting test means including a high resistance relay winding energized on such application, a low resistance relay winding cut in responsive to such energization, to shunt and oppose said high winding, to produce a characteristic busy tone.

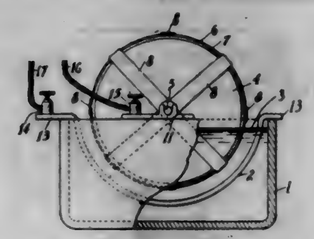
---

1,555,839. BED CASTER AND THE LIKE. ROBERT G. FRIES and JOHN J. JONES, Cincinnati, Ohio, assignors to The Surgeon's Specialty Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 29, 1921. Serial No. 518,664. 4 Claims. (Cl. 16—35.)



1. A caster wheel device comprising a member to be inserted into the leg of a piece of furniture, a circular plate at the lower end of said member, a caster wheel support mounted to rotate with relation to the plate and member, and a clamp on the caster support to engage said plate to hold the caster wheel support against rotation said caster wheel support having a projection to engage the under side of the said plate.

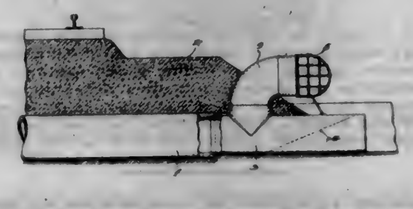
1,555,840. FLEXIBLE BAND OR BELT AND THE PRODUCTION THEREOF. JOHN A. HANLEY, Irvington, N. J. Filed June 18, 1923. Serial No. 646,025. 12 Claims. (Cl. 204—6.)



1. A strong tough endless flexible metallic belt having a high degree of coherence and free from seams or joints.

---

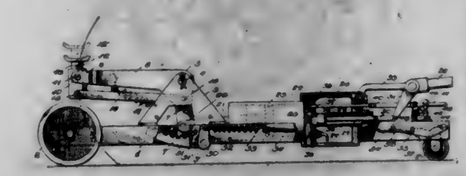
1,555,841. CULVERT PIPE. ALEXANDER B. B. HARRIS, Chicago, Ill. Filed May 22, 1922. Serial No. 562,682. 2 Claims. (Cl. 72—52.)



1. A culvert pipe having at one end a detachable section forming the inlet and longer than the distance to which in service will penetrate a mass of débris which chokes the inlet end of the pipe, and a secondary inlet device associated with said detachable section and opening into the latter near the inner end.

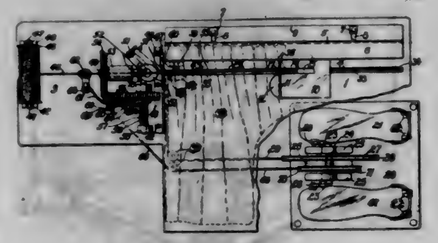
---

1,555,842. LIFTING JACK. CARLTON G. HARRIS, Denver, Colo., assignor of one-third to Jerry R. Rathburn, Denver, Colo. Filed Mar. 18, 1925. Serial No. 15,244. 8 Claims. (Cl. 254—102.)



8. A lifting jack comprising a supporting frame, a bell-crank lever having a forwardly extending load arm and a downwardly extending power arm pivoted on a horizontal axis on said frame, a load engaging shoe pivotally supported on the load arm of said lever, a cylinder in the rear of said lever, a piston in said cylinder, a rod connecting the other arm of said lever with the piston, a pressure reservoir to the rear of the cylinder, a pump extending longitudinally through said reservoir, valved passages from the pump to the cylinder and from the reservoir to the pump, an exhaust passage from the cylinder to the reservoir, a valve controlling the exhaust passage, a handle supported on the reservoir for operating the pump, and a lever adjacent the pump handle for operating the exhaust valve.

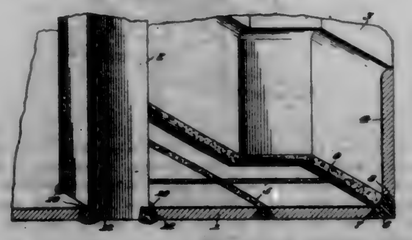
1,555,843. SACK-TYING MACHINE. GEORGE M. HASEN, St. Louis, Mo. Filed Feb. 4, 1924. Serial No. 690,549. 1 Claim. (Cl. 140—93.)



A sack-tying machine having a longitudinally-slotted table; a reciprocating tucker arranged to move above the slot in said table; an arm depending from said tucker through said slot and carrying a roller on its lower portion; a guide-shank also depending from said tucker through said table-slot; another roller mounted on said tucker above said roller carried by said depending arm; a vertical tucking-arm rising from said tucker a distance above the top of said table, and having a curved overhanging flange for confining the bag during the tucking-operation; a suitable spring-member connected to said tucker and adapted to return same to normal retracted position; a sack-gage and guard adjustably mounted on said table at one side of said table-slot and having an overhanging flange beneath which the open end of the flat bag is placed and confined during the tucking-operation; a vertical bag-stop against which the bag is tucked by said vertical tucking-arm upon the actuation of said tucker, said bag-stop being located at the tying-end of said sack-gage and guard, in the path of said tucking-arm, so that the tucked neck of the bag will be confined between said bag-stop and said tucking-arm; means for passing a wire around the tucked neck of the bag while same is thus confined; means for twisting the wire to tie the same, after it has been looped around said bag-neck; means for cutting off the looped wire from a coiled supply of wire; after the loop has been tied around the bag-neck; and suitable means for driving said wire-twisting and cutting-off means, and for reciprocating said tucker.

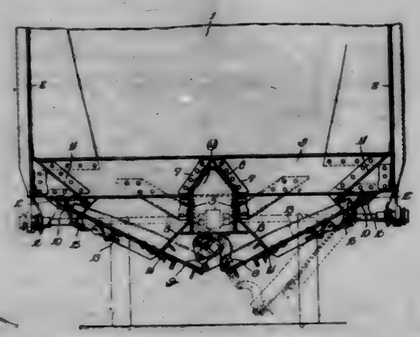
---

1,555,844. EXPANSION JOINT FOR COMPOSITION FLOORING. EDWARD AUSTIN HEER, Philadelphia, Pa. Filed Apr. 2, 1924. Serial No. 703,654. 5 Claims. (Cl. 94—18.)



2. A resilient device for use in composition surfaces, said device having the form of a button or disk with a segment removed therefrom.

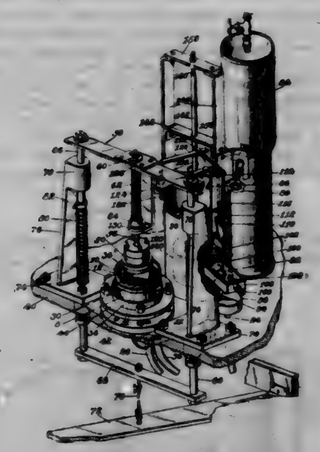
1,555,845. CAR CONSTRUCTION. DAVID HINDAHL, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 26, 1923. Serial No. 670,817. 6 Claims. (Cl. 105—251.)



1. Dump car construction comprising longitudinally extending strengthening means, a cross tie mounted above said strengthening means and cope means mounted above said strengthening means and abutting said cross tie on the two sides thereof for causing the shedding of lading laterally of said strengthening means.

---

1,555,846. MOISTENING APPARATUS. EDWARD F. HODGKINS, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 18, 1920. Serial No. 417,813. 19 Claims. (Cl. 91—4.7.)



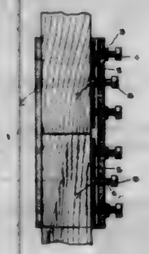
5. In an apparatus of the class described, a pair of spaced walls forming a fluid holding recess and a support for a piece of work, a moistening pad secured between the walls to contact with the work, and means for forcing the fluid in the recess against the pad to supply moisture to the work.

11. In an apparatus of the class described, a member having a recess for liquid, means to clamp a piece of work to the member, and mechanism actuated by the clamping means to raise the level of the liquid in the recess to moisten the work.

16. In an apparatus of the class described, a work supporting member having a fluid holding recess, a clamp plate to hold the work against the supporting member, and a universal mounting for the clamp plate to insure uniform pressure on the work.

---

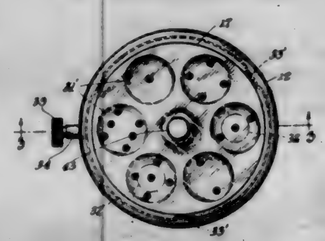
1,555,847. SCAFFOLDING CLAMP. SIDNEY GEORGE HUDSON, Detroit, Mich. Filed Mar. 17, 1924. Serial No. 699,726. 3 Claims. (Cl. 304—40.)



1. A clamp for end-wise adjoining members comprising a sleeve adapted to embrace the ends of the adjoined members, clamping screws carried by said sleeve for securing it to said members, a clamping plate arranged to transmit the thrust of one of said screws to one of said adjoining members, and means other than said clamping screws permanently securing said plate to said sleeve.

---

1,555,848. ROULETTE TOY. ADOLPH HUNAU and PAUL HAMMALIAN, New York, N. Y., assignors to H. & H. Calculating Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 19, 1923. Serial No. 633,072. 7 Claims. (Cl. 273—110.)

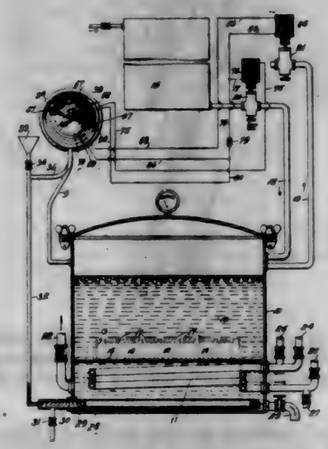


1. A game comprising a circular casing having rounded side walls, a transparent cover, a disc revoluble in said casing, means for manually rotating said disc, a ball bearing for said disc, a pair of balls loosely contained in said casing between the cover and said disc, said balls being acted upon by centrifugal force upon the rapid rotation of the disc, ball retaining depressions in said disc, and means on said disc for diverting the balls into the circle of depressions.

---

1,555,849. PRESSURE-CONTROL SYSTEM FOR STERILIZING AND PROCESSING APPARATUS. HARRY INGRAM, Brooklyn, N. Y. Filed Sept. 18, 1923. Serial No. 663,339. 19 Claims. (Cl. 99—2.)

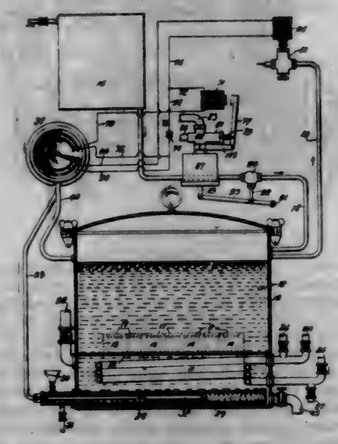
1. In apparatus of the character described, pressure gauge mechanism responsive to temperature changes within the retort for admitting fluid pressure to the retort on increases of temperature therein and pressure gauge mechanism responsive to the external pressure



within the retort for cutting off the supply of fluid pressure when the requisite amount thereof has entered the retort.

---

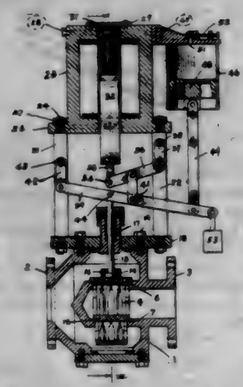
1,555,850. PRESSURE-CONTROL SYSTEM FOR STERILIZING AND PROCESSING APPARATUS. HARRY INGRAM, Brooklyn, N. Y. Filed Sept. 21, 1923. Serial No. 663,957. 16 Claims. (Cl. 99—2.)



1. In apparatus of the character described comprising means for supplying fluid pressure to the retort to act externally against the caps to counter the internal pressure generated within the receptacles thereinstatic pressure gauge mechanism comprising a system entirely filled with liquid and having a Bourdon tube at one end and exposed at the other end to retort temperatures.

---

1,555,851. VALVE. BURTON C. VAN EMON, San Francisco, Calif. Filed July 2, 1923. Serial No. 648,970. 6 Claims. (Cl. 138—14.)



1. A liquid flow controlling mechanism, a conducting line, adapted to convey liquid to and from said mechanism, a valve on said line adapted to control the movement of said liquid, an electric solenoid for opening and closing said valve, and toggle mechanism for increasing the movement of said solenoid with reference to said valve, and means directly connected to said valve to assist in restoration of said valve to closed position.

---

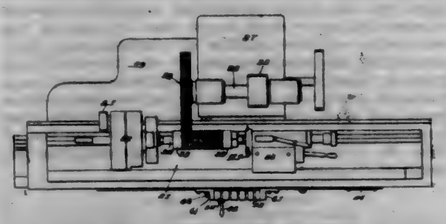
1,555,852. DROP-DISPERSING AGENT. OTTO HEIDEMANN and MAX JOHN, Bochum, Germany. Filed Aug. 18, 1921. Serial No. 493,493. 3 Claims. (Cl. 134—27.)

1. The process of preventing the formation of rain drops on a glass surface consisting of applying to such surface a drop dispersing agent comprising a mixture of a liquid, a basic substance capable of beng converted into a slime, and soda.

3. The process of preventing the formation of rain drops on a glass surface, consisting in applying to such surface a drop dispersing agent comprising a mixture of clay, water, and about 10% of soda.

---

1,555,853. METHOD OF GROOVING PISTON RINGS AND THE LIKE. GEORGE H. HIGGINS, Rockford, Ill., assignor to Burd High Compression Ring Company, Rockford, Ill., a Corporation of Illinois. Filed Mar. 25, 1921. Serial No. 455,690. 3 Claims. (Cl. 51—278.)

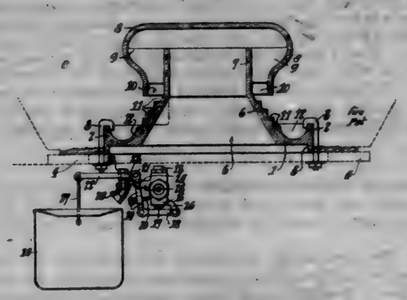


1. The method of peripherally grooving piston rings, consisting in mounting plural series of rings on an arbor, and successively positioning the different series of rings in predetermined alignment with a grinder profiled according to a standard dimension and grinding the series successively.

1,555,854. BUSHING. GLEN R. HILL, Ramer, Ala. Filed Mar. 30, 1923, Serial No. 628,773. Renewed May 2, 1925. 1 Claim. (Cl. 102—14.)

In combination with the barrel of a shot gun, a cylindrical two-piece bushing adapted to be inserted therein for lessening the bore of the shot gun barrel, said bushing comprising a pair of similar longitudinal half-sections that are flanged upon their inner ends for engagement upon the usual shell retaining shoulder of the shotgun barrel, the contiguous longitudinal edges of said sections being entirely smooth and flat and devoid of projections and depressions.

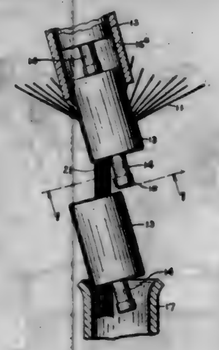
1,555,855. OIL BURNER. FRANK HENNEBÖHLE, Chicago, Ill. Filed Sept. 23, 1924. Serial No. 739,378. 5 Claims. (Cl. 158—91.)



5. A device of the class described comprising a base having an upwardly extending annular flange confining an oil overflow groove and a depending flange providing a larger air space beneath the base, hook bolts for hooking over the annular flange and passing through the openings in a grate when the device is mounted in a fire pot for use, a frusto-coniform throat extending upward from the base, and having a series of relatively shallow annularly stepped oil grooves in the outer surface thereof, a cylindrical neck extending upwardly from the throat and forming a restricted air duct, a heating and expanding crown cap supported by the neck and into which the neck discharges and having a flat top spaced above but in close relation to said neck and the edge thereof extended out and curved downwardly inwardly to provide an expanding space much larger than the area of the neck and a restricted annular air discharge throatway surrounding the outer surface of the frusto-coniform throat in close relation thereto, and terminating on a horizontal plane with the juncture of the neck and the throat just above the uppermost oil groove, means passing through the throat wall for directing a thin film of oil to the outer throat surface by discharging into the uppermost oil groove.

1,555,856. METHOD OF COVERING DRY-CELL CARTRIDGES AND THE LIKE. ARTHUR C. JEWETT, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn. Filed July 1, 1920. Serial No. 393,336. 1 Claim. (Cl. 96—3.)

The method of covering a compact body of depolarizing material, having a carbon electrode projecting therefrom, which comprises introducing the same endwise into the generating tubular fabric with the axis thereof disposed



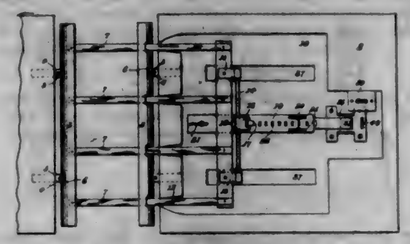
obliquely to the axis of the generating fabric, and with the projecting end of the electrode protruding from the tube being formed so that this end remains uncovered.

1,555,857. CARTON-BLANK-FEEDING MACHINE. EMIL G. JURGENS and H KIRKE BECKER, Chicago, Ill., assignors to Peters Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 22, 1924. Serial No. 757,421. 6 Claims. (Cl. 271—41.)

1. A paper or card-board feeding mechanism of the class described comprising a frame, said frame being provided with a vertical guideway for a stack of card-board blanks, a plurality of rotary separators located near the lower end of said guideway in the position to support a stack of carton blanks, said separators being arranged for rotation on vertical axes and being provided with means for engaging the lowermost carton blank and moving it downwardly away from the remainder of the stack, said separators being each provided with a radially extending blade located above the normal horizontal plane of the separator.

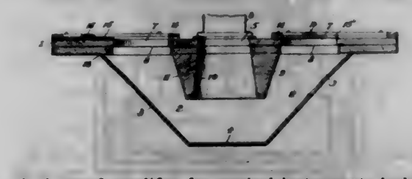
1,555,858. LOOSE-LEAF BINDER. FREDERICK B. A. KIRCHNER, Mason City, Iowa. Filed Aug. 5, 1924. Serial No. 730,313. 6 Claims. (Cl. 129—41.)

4. A loose leaf binder comprising a cover section, a back section, clamping bars connected to the respective sections, thongs connected to one of said bars and extending through the other, a bar having a limited sliding movement in the back section, means for operating said bar throughout such sliding movement, and a finger



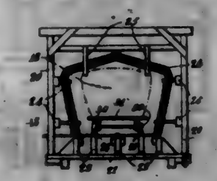
piece connected to said thongs and being adapted to engage with said bar in any one of a plurality of positions longitudinally of said bar.

1,555,859. SOUND AMPLIFIER. JOHN C. KLACZYNSKI, Chicago, Ill. Filed June 6, 1922. Serial No. 566,256. 2 Claims. (Cl. 274—2.)



1. A sound amplifier for musical instruments including a top supporting plate having a sound inlet opening and a sound outlet opening on each side thereof, a depending housing secured to the top plate, said housing having a flat bottom, straight sides and inclined ends, and a depending member surrounding the sound inlet opening and extending into the housing, said depending member being spaced from the flat bottom of the housing and the ends thereof but engaging the sides.

1,555,860. METHOD OF AND APPARATUS FOR BAKING COATINGS ON METALLIC BODIES. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 19, 1921. Serial No. 446,375. 25 Claims. (Cl. 219—47.)



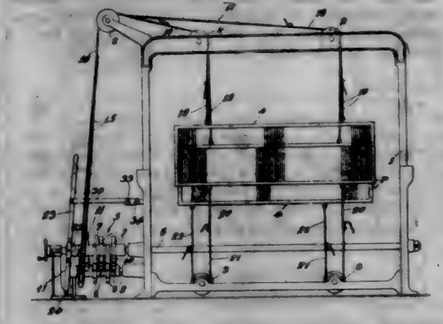
1. The method of baking a coating on a body comprising conducting material which consists in inducing electric heating currents within the conducting material of such body.

1,555,861. CHANGEABLE EXHIBITOR. CLINTON ADAM LIVINGSTON, Long Beach, Calif. Filed Feb. 26, 1924. Serial No. 695,256. 1 Claim. (Cl. 40—86.)

A changeable sign exhibitor comprising a rectangular body which is open at one side, a pair of rollers journaled in the end walls of the body, a legend carrying and display strip arranged to wind upon the rollers, a cover having a flange adapted to fit over the open side of the body, the cover being provided with openings, the side edges of which are located at equal distances beyond the opposite sides of the axes of the rollers when the cover is in position upon the body, the outer edges of

the openings being spaced at equal distance from the adjacent edges of the cover whereby the cover may be reversed in its position upon the body, the cover being provided with guides disposed along the edges of one of the openings, and a slide adapted to enter the guides and close said opening.

1,555,862. HEDDLE-DISCONNECTING MEANS FOR PLUSH LOOMS. LOUIS J. LUDWIG, Philadelphia, Pa. Filed July 10, 1924. Serial No. 725,141. 3 Claims. (Cl. 139—56.)



1. In a loom having pile heddles and backing heddles, a driving shaft, pile cams loosely mounted on said shaft and operatively connected with the pile heddles, other cams fixedly mounted on said shaft and operatively connected with the backing heddles, a clutching member on the pile cams, another clutching member slidably mounted on the shaft to rotate therewith, and a hand operated lever engaging said slidable clutching member for moving it at will into and out of clutching engagement with the member on the cams.

1,555,868. MECHANISM FOR MOVING THE LAY AND RELEASING THE PRESSURE ON THE BINDERS. LOUIS J. LUDWIG, Philadelphia, Pa. Filed July 29, 1924. Serial No. 728,844. 10 Claims. (Cl. 139—187.)

1. In a loom having a frame, a shuttle, a shuttle box, a binder, a protecting finger in engagement with the binder, a lay and a crank; a bell crank lever having one arm directly connected to the crank; connections

being formed with an opening therethrough, and an embossing extending outwardly adjacent said opening, said embossing at the upper end of each ear having spaced apart outwardly extending portions, and a hook adapted to pass through the openings in said ears having opposite sides seated between said outwardly projecting portions whereby a permanent connection is made between the hook and the ears and the hook is held against movement with respect to said ears.

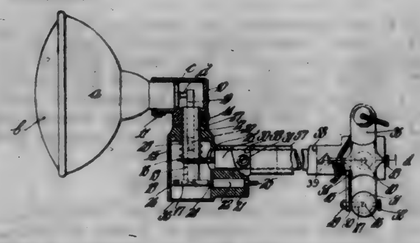
---

1,555,873. KNITTED STOCKING. WILLIAM S. PARKER, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Sept. 1, 1922. Serial No. 585,708. 5 Claims. (Cl. 66—4.)

1. A knitted stocking provided with a longitudinally extending mock seam comprising a cord attached to the stocking web between floating yarns and opposed loops.

---

1,555,874. DIRIGIBLE LAMP HOLDER. EDWARD S. PARMENTER, Longmeadow, Mass., assignor to Ray E. Parmenter, Longmeadow, Mass. Filed May 16, 1923. Serial No. 639,422. 6 Claims. (Cl. 240—61.)



1. In combination, a supporting bracket including a hollow casing open at its lower end, a tube rotatably mounted in said bracket and extending outwardly therefrom, an arm on said tube extending out of said casing through said open end, a slidable rod operatively engaged with said arm and adapted to swing said tube relatively to said bracket, a second hollow casing fixed to said tube, a lamp holder rotatably mounted in the second casing, and means including an endless flexible member extending through said tube for rotating the lamp holder.

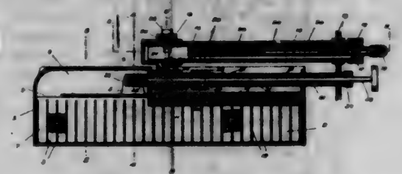
---

1,555,875. TELEGRAPH MEASURING SYSTEM. RALPH E. PIERCE, Larchmont, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 20, 1924. Serial No. 751,144. 5 Claims. (Cl. 178—69.)

1. In a system for measuring the margin of operation of a telegraph system, the combination with a line circuit of a terminal circuit having an artificial line, bridge arms, a transmitter connected with the midpoint thereof, and a receiving relay connected across the extremities thereof, and means connected with the receiving relay to indicate the range of interfering current throughout which the receiving relay will continue to receive signals.

---

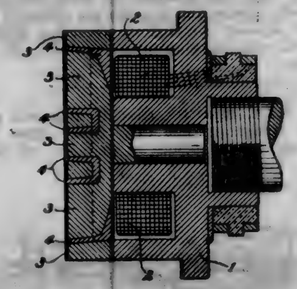
1,555,876. OIL BURNER. KENNETH L. RILEY, Ludlow, Mass., assignor to Rile-Ezene Burner and Manufacturing Company, Ludlow, Mass., a Corporation of Massachusetts. Filed May 31, 1924. Serial No. 717,039. 3 Claims. (Cl. 158—65.)



3. An oil burner provided with a casing; flues in the outer side walls of said casing; flame openings in the walls between said flues; a mixing chamber; longitudinal and transverse passages connecting said flues with said mixing chamber, and so arranged that air is drawn through said flues and connecting passages into said mixing chamber.

---

1,555,877. ELECTROMAGNETIC CHUCK. ALEXANDER G. RIPPERGER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed June 5, 1922. Serial No. 566,115. 1 Claim. (Cl. 175—367.)



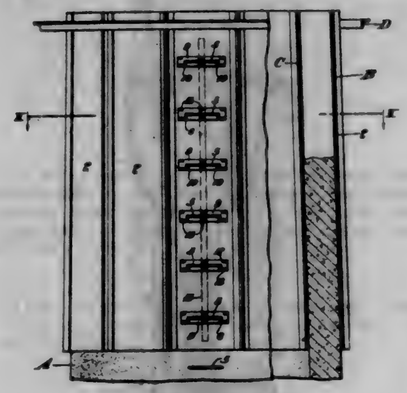
An electromagnetic chuck having a face plate whose work engaging surface is case-hardened.

---

1,555,878. MOLD. ELLSWORTH MARSHALL RUST, Washington, D. C., assignor to The Rust Engineering Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 25, 1925. Serial No. 11,509. 6 Claims. (Cl. 25—124.)

1. In a sectional mold composed of a plurality of sections and used in building concrete chimneys and similar monolithic concrete structures, a section provided with a plurality of openings adapted to permit

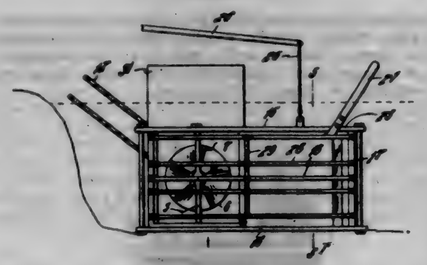
the mounting of step irons so that portions of said irons project into said mold, to be surrounded by and embedded in the concrete put in the mold, and other



portions project outwardly from said mold to form step portions, and means for supporting said irons in position while said mold is being filled with concrete.

---

1,555,879. MOTOR. FRANK RUBICKA, Battle Creek, Nebr. Filed Dec. 12, 1924. Serial No. 755,530. 3 Claims. (Cl. 120—130.)

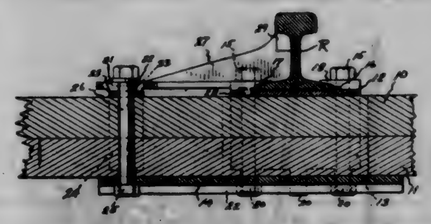


3. A motor designed to be operated by the water of a flowing stream, including a casing having open ends and having spiders at said ends, a water wheel carrying a shaft journaled in the spiders, said casing having its front end provided with a laterally extending frame, an outer door pivoted in the frame and susceptible to swinging to close the casing, a second door to the rear of the first mentioned door, and vertically slidable in the frame, means for operating both of said doors, an angular deflector plate on the casing over the inlet end thereof, brace means therefor, a guard which is V-shaped in plan and which is made up of spaced rods secured to the frame, and a door closing the top of the casing, all as and for the purpose set forth.

---

1,555,880. RAILROAD-TRACK CONSTRUCTION. SAMUEL COFFMAN SAMUELS, San Francisco, Calif. Filed Mar. 12, 1923. Serial No. 624,350. 10 Claims. (Cl. 238—292.)

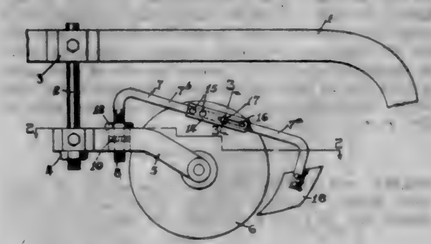
1. In combination, a wooden tie, a rail plate extending crosswise of the top of the tie and beyond the side edges thereof, a supporting plate on the bottom of the tie and extending beyond the side edges of the tie and blocks of wood between the extended portions of



said rail plate and said supporting plate, each block having its grain vertical and adapted to transmit pressure from the rail plate to the supporting plate.

---

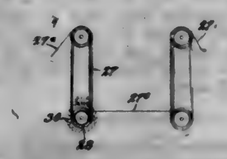
1,555,881. COLTER AND JOINTER ATTACHMENT. JOHN SCHARDT, Toledo, Ohio. Filed May 11, 1925. Serial No. 29,296. 3 Claims. (Cl. 97—210.)



1. The combination with a supporting arm, of a rolling colter on said arm, a second arm on said supporting arm and extending rearwardly thereof transversely of said colter, a jointer carried by said second arm and arranged rearwardly thereof and in line with said colter, means including telescoping members for permitting length adjustment of said jointer arm, and means including intermeshing toothed members for permitting lateral adjustment of the jointer relatively to said colter.

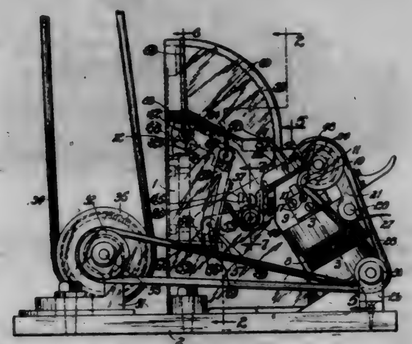
---

1,555,882. LIFEBOAT TACKLE. ANE P. SCHAT, The Hague, Netherlands. Filed Jan. 4, 1921. Serial No. 434,950. 9 Claims. (Cl. 9—22.)



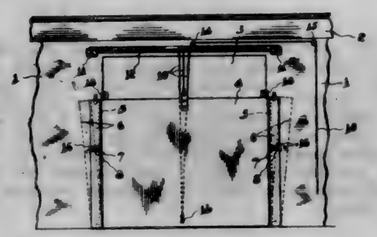
1. In means for lowering loads suspended from two spaced tackles, having their falls formed of a single rope, the combination with the running block pulleys of one of the tackles, of a compensating drum carried by said running block for receiving the standing end of the tackle rope from said pulleys, said rope leading from said drum to one of the blocks of the other tackle.

1,555,882. GAUGING MACHINE. OSWALD SCHLAUPITZ, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 9, 1923. Serial No. 656,492. 8 Claims. (Cl. 33—148.)



1. A machine for gauging rollers comprising a support for a roller, means for rotating a roller on said support, a pair of spaced independent contact levers, means for supporting said levers relatively to said support for engaging the roller, separate indicating pointers, means for operatively connecting one of said pointers with one of said contact levers and means for operatively connecting the other of said pointers with the other of said contact levers.

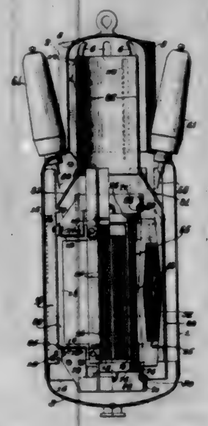
1,555,884. GRAIN-CAR DOOR. RICHARD J. N. SIMPSON, Sarnia, Ontario, Canada. Filed Apr. 11, 1925. Serial No. 22,471. 6 Claims. (Cl. 20—27.)



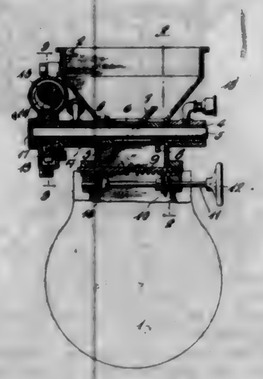
1. A car having a door opening; a securing guide at each side of said opening; a door vertically slidable in said guides; a pair of spaced tracks secured to the underside of the roof of the car; a member supported by and extending from track to track and movable longitudinally thereon, the upper part of said door being adapted to engage and be carried by said member as the latter moves along the tracks; and means for actuating said door.

1,555,885. ELECTRIC TRANSFORMER. FRANKLIN S. SMITH, Philadelphia, Pa., assignor to The Products Protection Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 12, 1921. Serial No. 521,777. 17 Claims. (Cl. 175—361.)

1. In a transformer structure, the combination of the transformer, means situated at intervals for supporting the high voltage winding thereof, the portions of the wire of said winding intermediate said supports being bare on all sides and spaced from each other whereby the cooling medium within the transformer casing may impinge upon all parts of the surfaces of the said portions of wire, a hermetically sealed casing for the transformer, and means associated with the transformer and within the casing for providing passageways through which there is a continuous circulation of the cooling medium upwardly adjacent to the parts of the transformer and downwardly upon the outside of the said transformer and within the said casing.

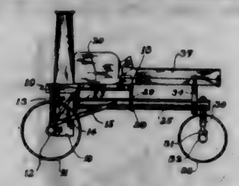


1,555,886. FEED-REGULATING DEVICE FOR GRINDING MILLS. SIMON SNYDER, Muncy, Pa., assignor to Sprout, Waldron & Co., Muncy, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1922. Serial No. 602,391. 8 Claims. (Cl. 83—44.)



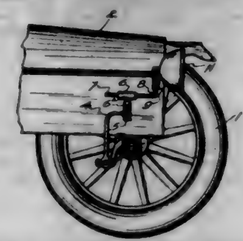
1. The combination, in a feed regulating device for grinding mills, of a hopper having a depending restricted passage, a shaft extending through said passage, and an agitating device on said shaft extending across said passage approximately the full width thereof from a point above the shaft at one side of said passage to a point on the other side thereof below the shaft; said device being of elliptical form and obliquely arranged on said shaft and revolubly therewith, and means for rotating said shaft.

1,555,887. ENSILAGE CUTTER. HERBERT B. SPERRY, Chicago, Ill., assignor to Appleton Manufacturing Company, a Corporation of Illinois. Filed Apr. 20, 1923. Serial No. 633,891. 8 Claims. (Cl. 198—233.)



1. A frame construction for an ensilage cutter comprising a main frame member, supporting wheels therefor, a tubular frame member secured to said main frame member, and a conveyor trough adjustably secured to and positioned to one side of said tubular member.

1,555,888. HEADLIGHT FOR AUTOMOBILES. JOHN A. SKOGLUND, Detroit, Mich. Filed July 2, 1924. Serial No. 723,847. 1 Claim. (Cl. 240—62.)

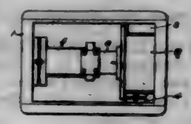


In headlights for automobiles, the combination with a steering rod, of a vertically arranged bracket secured thereto, the upper end of said bracket being curved and disposed in a horizontal plane, a horizontally disposed sleeve carried by the end of said bracket in swivelled connection therewith, a rod slidably disposed in said sleeve, a bracket on the automobile body and extending laterally thereof, a vertically arranged sleeve carried by said last named bracket, a rod slidably disposed in said vertically arranged sleeve, pivotal connections between said rods, and a lamp carried by the last named rod and supported on the upper end of said last named sleeve.

1,555,889. MANUFACTURE OF WALL PAPER. EDMUND G. STAUNTON, Toronto, Ontario, Canada. Filed May 20, 1925. Serial No. 31,722. 4 Claims. (Cl. 101—426.)

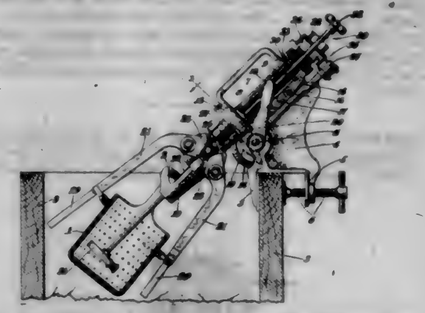
1. A process of manufacturing a strip of wall paper which consists in printing the strip with a printing roller having its printing surface wider than the exposed width of the strip of paper when hung, but less than the total width of the strip and producing a line of weakness adjacent each margin of the strip, said lines of weakness being spaced apart a distance equal to the desired exposed width of paper when hung.

1,555,890. LOCKUP DEVICE. SAMUEL STEPHENS, Somerville, Mass., assignor to Samuel Stephens and Wickersham Quoin Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1924. Serial No. 745,797. 4 Claims. (Cl. 101—40.)



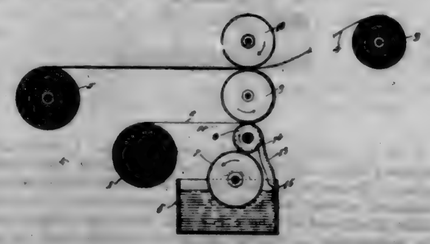
1. In a printer's lockup device comprising a pair of relatively longitudinally movable members, one adapted to receive the other within it, a longitudinal series of ratchet teeth upon one member, a cooperating pawl having correspondingly shaped teeth, a pawl carrier mounted for sliding movement across one face of the other member, and spring means acting upon said carrier normally maintain said pawl in locking position, whereby said pawl may be moved into and out of locking position along a straight path substantially at right angles to the path of relative movement of said movable members.

1,555,891. HOLDER FOR ARTICLES TO BE ELECTROPLATED. FLOYD T. TAYLOR, Matawan, N. J., assignor to A. P. Munning & Co., New York, N. Y., a Corporation of New Jersey. Filed July 7, 1923. Serial No. 650,017. 26 Claims. (Cl. 204—11.)



1. A tumbling apparatus of the class described comprising a rotatable work holder, a work-receiving basket hung therefrom, means for supporting said work holder in position over a tank, and means whereby said basket may be detached from said holder while the latter is in operative position relative to its supporting means.

1,555,892. PAPER-PASTING MACHINE. WILLIAM L. TAYLOR, Cincinnati, Ohio. Filed Aug. 7, 1922. Serial No. 580,056. 3 Claims. (Cl. 91—12.)

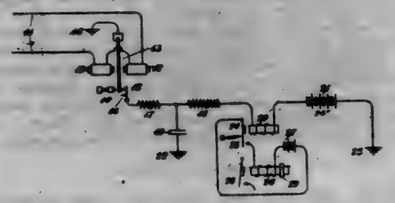


1. A mechanism for coating paper or the like with asphalt or the like, comprising a tank for asphalt, a roll revoluble in a position to dip into said tank, and at least one additional roll wiping said first mentioned roll,

and adapted to engage a traveling paper web, said roll having peripheral grooves so as to form non-asphalted lines on the paper, and means for wiping the margins of said grooves, and means for wiping the entire grooves so as to prevent accumulation of asphalt therein.

---

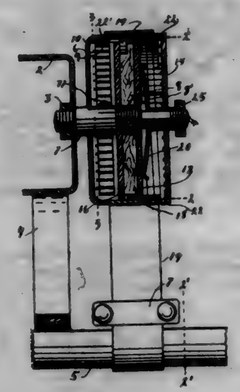
1,555,893. ALTERNATING-CURRENT RELAY. ELMER O. THOMPSON, Tompkinsville, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 29, 1921. Serial No. 525,727. 12 Claims. (Cl. 175—320.)



1. In combination, a tuned reed polarized relay, a single contact on one side of the reed and normally spaced therefrom, a battery and a condenser in series in a circuit, a shunt path around said condenser adapted to be closed by the engagement of said reed with said contact, and a device to be actuated by the condenser current.

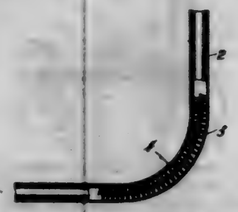
---

1,555,894. REBOUND CHECK FOR AUTOMOBILES. MORTON VAN METER, Cadillac, Mich. Filed Oct. 2, 1924. Serial No. 741,119. 4 Claims. (Cl. 267—10.)



1. In a rebound check for automobiles, a revoluble inclosing case, means for securely connecting said case upon the frame of the automobile, a flexible tension strap connected at one end with the revoluble case of the rebound check and at the other end with the axletree of the automobile, a spring mounted in said case in a manner to form a frictional clutch in connection with the inner periphery of the case, and means for revolving the case to take up the slack of the tension strap upon the downward movements of the frame of the automobile.

1,555,895. METHOD OF BENDING SHEET-METAL BLANKS HAVING A ROLLED EDGE. JOHN WEBER, Toledo, Ohio, assignor to The American-National Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 3, 1924. Serial No. 747,413. 2 Claims. (Cl. 153—63.)



1. The method substantially as described which consists in providing a sheet metal blank having a roll at its edge, inserting a helically coiled wire core into the roll, and transversely bending the sheet metal blank with its roll and core.

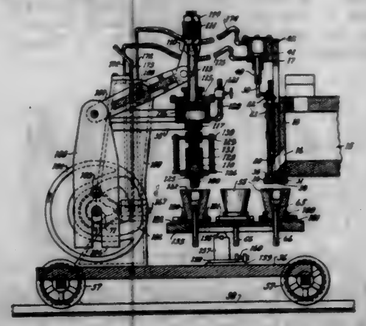
---

1,555,896. SUPPORTING MEANS. BENJAMIN C. WEBSTER, Southport, Conn., assignor, by mesne assignments, to Columbia Phonograph Company, Inc., a Corporation of New York. Filed June 25, 1923. Serial No. 647,498. 12 Claims. (Cl. 16—191.)

6. A means of preventing a door or lid from slamming closed, including a friction brake means operable during the closing movement of the door or lid, said brake means being non-operable when the door or lid is open, said means comprising a pair of laterally-extending resilient arms adapted to come into frictional contact when the door is moved closed, one of the arms being arcuate and offering increasing resistance to the closing movement of the door.

---

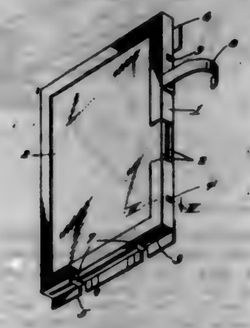
1,555,897. GLASS-MOLDING MACHINE. SAMUEL EBEN WINDER and HENRY COTTON DAUBENSPECK, London, England. Filed Oct. 4, 1920. Serial No. 414,622. 6 Claims. (Cl. 49—38.)



6. In a glass working machine, the combination with a mold, of a pressure plunger adapted to co-operate with said mold, reciprocating means, means comprising a cylinder and piston connection operatively connecting said reciprocating means and said plunger, means for supplying fluid pressure between the cylinder and piston, and adjustable means in said fluid pressure supplying means for checking back flow from said cylinder, whereby an adjustable pressure greater than the supply pressure may be intermittently built up.

---

1,555,898. CAR-IDENTIFYING MEANS. STRAUD K. WOOD, Hutchinson, Kans. Filed July 7, 1923. Serial No. 650,101. 3 Claims. (Cl. 40—16.)



1. A card display frame having a slot at one end, a backing member in said frame, a transparent front member therefor, means spacing said back and front members from each other, and a securing flange projecting from the end of said frame adjacent said slot.

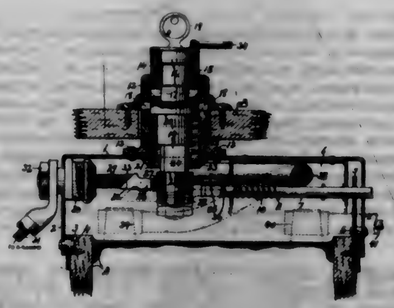
---

1,555,899. OIL COMPOSITION. JOSEPH ALEXANDER YOUNG, Bellevue, Pa. Filed May 6, 1922. Serial No. 559,053. 4 Claims. (Cl. 87—9.)

1. As a new article of manufacture, an oil composition comprising a solution of camphor in an oil consisting of a mixture of a lubricating oil with crude petroleum.

---

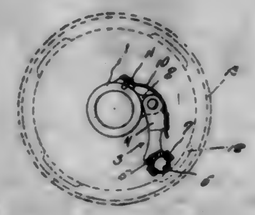
1,555,900. SAFETY DEVICE FOR MOTOR VEHICLES. FRED M. BLAKE, Fulton, N. Y. Filed Nov. 22, 1921. Serial No. 517,096. 8 Claims. (Cl. 200—50.)



1. In a fire and theft safety device for motor vehicles having a storage battery and electric translating devices to be energized thereby, a cover plate for said battery, a movable member for locking the cover plate to the battery, an electric switch within the cover plate and electrically connected in one side of the battery circuit, said switch having its movable member movable into and out of registration with said locking member so said switch member is opened and closed to hold said locking member against unlocking when the switch is opened, and means operable at will for opening the switch.

---

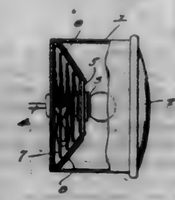
1,555,901. TIMER BRUSH. GILBERT V. BLACKFORD, Independence, Kans. Filed May 7, 1925. Serial No. 28,671. 3 Claims. (Cl. 200—26.)



1. A timer brush comprising an arm provided at its inner end with spaced attaching ears, the opposite end of the arm being formed with a ball socket, a rolling ball contact seated in said socket, said arm being externally screw threaded at its outer end, and a retaining cap for said ball embodying a screw threaded flange connected to the threaded portion of said arm, said cap being formed with an opening through which a portion of said ball projects.

---

1,555,902. SHOCK ABSORBER FOR VEHICLE LAMPS. CLAUDE H. BRADY, Neodesha, Kans. Filed Oct. 31, 1924. Serial No. 747,058. 2 Claims. (Cl. 240—90.)



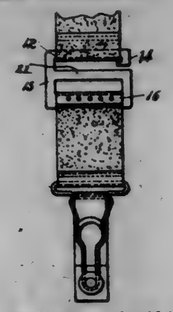
1. A shock absorber for tail lights comprising in combination with a casing, and an electric lamp disposed therein, of a disc carried by the base of the electric lamp, a volute spring secured at its smaller end to said disc, the larger end of the spring engaging the rear wall of the casing, and a plurality of coil springs secured at their forward ends to the disc at spaced intervals, the outer ends of said coil springs being fastened to the outermost convolutions of said volute springs.

---

1,555,903. DETACHABLE CONNECTING DEVICE FOR HOSE SUPPORTERS. ARNOLD V. BROWN, Worcester, Mass., assignor to American Narrow Fabric Company, a Corporation of Massachusetts. Filed July 22, 1922. Serial No. 576,782. 4 Claims. (Cl. 24—195.)

1. As an article of manufacture, a connecting device for a hose supporter consisting of a pair of parallel bars located at a distance from each other and integrally connected with each other at one end, said bars

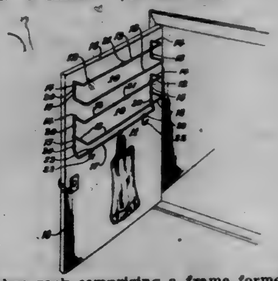
and connection at the end being of the same thickness and width throughout, each of said bars having a hook on the opposite end, said hooks projecting toward each other for detachable attachment to a sewed loop in the



end of a tape or the like, one of said bars having a strip of metal along the edge thereof bent over into a plane substantially parallel with it and provided with teeth transverse to the plane of the bars for engaging the end of a tape and holding it against said bar.

---

1,555,904. SHOE RACK. RANDOLPH BRUNSON, East Orange, N. J. Filed Apr. 25, 1924. Serial No. 709,022. 3 Claims. (Cl. 211—14.)

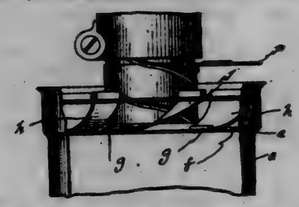


1. A shoe rack comprising a frame formed of a single length of material bent to form a pair of horizontally disposed rods for spaced relation upon a support, the uppermost rod adapted to extend further from the support than the lower rod, a U-shaped bracket supported by said length of material, said uppermost rod co-acting with said U-shaped bracket to support a plurality of shoes thereon.

---

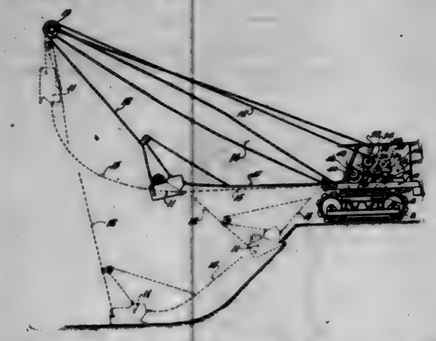
1,555,905. AIR CLEANER. [illegible], Detroit, Mich. Filed Aug. 4, 1923. Serial No. 729,866. 13 Claims. (Cl. 183—86.)

WITHDRAWN



1. In an air cleaner, the combination of a shell having a closed bottom raised in the center but provided at the corners with discharge ports, said shell provided with a connection with a source of suction, and means at the top of the shell for giving the incoming air a swirling action, whereby the suspended matter may be separated and discharged through the port at the bottom.

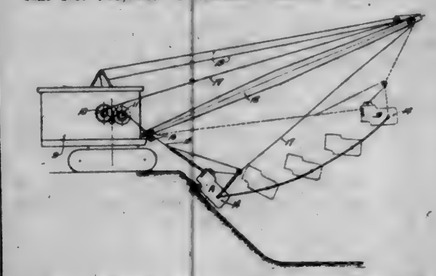
1,555,906. DRAG-LINE EXCAVATOR. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a Corporation of Wisconsin. Filed May 15, 1924. Serial No. 713,476. 12 Claims. (Cl. 37—116.)



1. In a drag line excavator, the combination with the power plant and the bucket-operating mechanism including the drag line and hoisting line, of means for converting the force produced by the tensioning of the drag line by the bucket into energy delivered back to the power plant without operating said hoisting line.

---

1,555,907. REGENERATIVE DRAG-LINE EXCAVATOR. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Nov. 10, 1924. Serial No. 748,990. 5 Claims. (Cl. 37—116.)



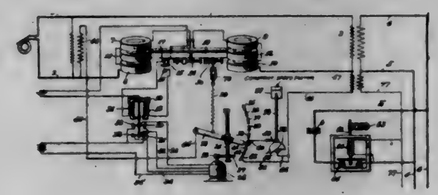
1. In a drag-line excavator, the combination, with the bucket, of a hoist drum, a hoisting cable for the bucket associated with said drum, a drag drum, a drag cable for the bucket associated with said drag drum, a power system including a source of power, means for connecting said drag drum to said source of power for driving it in a direction to wind in said cable, and means for connecting said drag drum with said power system to deliver energy thereto, under the influence of the drag cable tensioned by the bucket and its load and the hoisting cable, at a speed relatively greater than that used in hauling in the drag-line.

---

1,555,908. APPARATUS FOR MEASURING POWER FOR ELECTRICAL CIRCUITS. PAUL H. BURKHART, Henry, Ill. Filed Dec. 8, 1920. Serial No. 429,135. 6 Claims. (Cl. 171—268.)

1. A system for variably measuring the energy consumed in electrical circuits, comprising a power circuit, an energy measuring and registering device in each consumer's branch of the power circuit, a current balance connected in the power circuit, an auxiliary circuit derived from said power circuit, a switch in said auxiliary circuit for controlling the operation of the energy measuring and registering devices, a plurality of contacts for

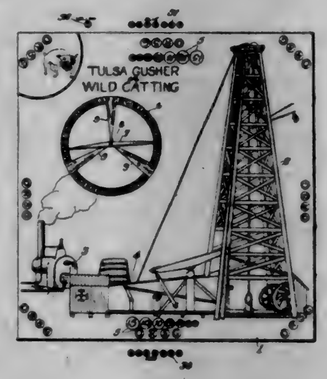
said switch, a calibrated spring connecting said switch with the movable element of said current balance, and a motor controlled by said movable element for shift-



ing said switch, said spring operating through the shift of said switch to bring said movable element to neutral or equilibrium, thereby stopping said motor.

---

1,555,909. GAME. THURMAN A. CARSON, Jennings, Okla. Filed May 22, 1924. Serial No. 715,141. 2 Claims. (Cl. 273—135.)

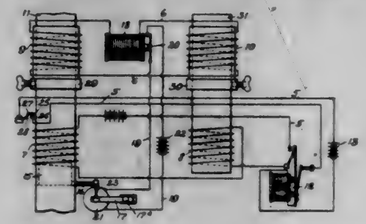


2. In a game apparatus of the character described, an indicator comprising a frame having a top and a pair of sides, said top having two parallel transversely extending slots in said top, a pair of rotatable reels supported between said sides of the frame, an elongated record strip threaded through said slots in the top and having the opposite ends thereof wound about the respective reels, said strip having a scale thereon extending longitudinally thereof and comprising characters representing depths of a well bore in feet, said strip also having other indicia thereon related in position on the strip and in value to the characters of said first named scale.

---

1,555,910. COIN DETECTOR. FRANK R. CHESTER, Asbury Park, N. J. Filed Nov. 29, 1922. Serial No. 604,047. 17 Claims. (Cl. 83—92.)

4. In an electric coin-detector system, the combination of a primary circuit including in series a first coil and a second coil, a secondary circuit including in series a first coil and a second coil, said two first coils being in inductive relation and said two second coils being in inductive relation, the two coils in one of said circuits being in balanced relation in said circuit, a coin chute for guiding a coin into inductive relation to one of the sets of inductively related coils, one of said circuits being normally open, switch means actuated by the coin during passage through a predetermined length of such chute to close the circuit last mentioned, and



means automatically restoring the circuit last mentioned to open condition after the coin passes beyond said switch means.

---

1,555,911. OIL-CAN OPERATOR. JOHN H. COCKRELL, Shevlin, Minn. Filed May 26, 1925. Serial No. 32,981. 5 Claims. (Cl. 221—54.)

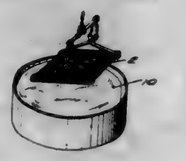
1. An oiling device comprising a rod having a laterally extending pivoted can holder, means for engaging the bottom of the can when in operative position in said holder, and means for actuating said can engaging means for starting the flow of oil from the can, said means being also operable to swing the can holder whereby the spout of the can is elevated to prevent the oil flowing out when not in use.

---

1,555,912. TOY PISTOL. WILLIAM R. DAVIS, Wallace, Idaho. Filed May 27, 1925. Serial No. 33,225. 7 Claims. (Cl. 273—107.)

2. A toy pistol comprising a projecting spring of coil form, a contact member at one end of said projecting spring, a pellet impelling member at the opposite end of said projecting spring, said contact member and said pellet impelling member being offset with respect to the projecting spring, the pellet impelling member being located substantially in line with the contact member.

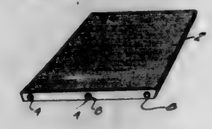
1,555,913. FLOOR AND PROCESS OF MAKING THE SAME. ANSEL C. DENNING, Johnson City, N. Y.; Workers Trust Company, administrator of said Ansel C. Denning, deceased, assignor to Endicott Johnson Corporation, Endicott, N. Y., a Corporation of New York. Filed Aug 9, 1922. Serial No. 580,654. 16 Claims. (Cl. 94—13.)



1. The process of making flooring which consists in assembling upon rods in loose abutting relation, edge up, strips of fibrous sheet material and then immersing the flooring block thus formed in a liquid water-proofing compound adapted to penertate said strips from all faces.

---

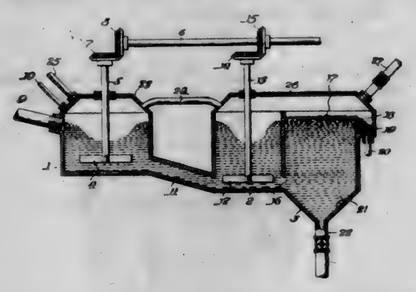
1,555,914. FLOOR AND PROCESS OF LAYING FLOOR. ANSEL C. DENNING, Johnson City, N. Y.; Workers Trust Company, administrator of said Ansel C. Denning, deceased, assignor to Endicott Johnson Corporation, Endicott, N. Y., a Corporation of New York. Filed June 18, 1921. Serial No. 478,623. 13 Claims. (Cl. 20—6.)



1. Flooring comprising strips of fibrous material standing in abutting relation, edge up but unattached to each other, rods passing freely through said strips and substantially confining them against displacement in the strip plane, said flooring being substantially free to expand lengthwise of said rods and transverse to the strip plane when laid.

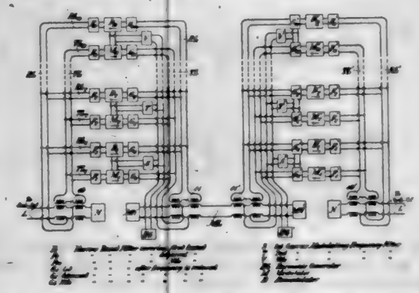
---

1,555,915. SEPARATING PROCESS. RIDSDALE ELLIS, Oak Park, Ill. Filed Mar. 9, 1925. Serial No. 14,209. 10 Claims. (Cl. 83—85.)



1. The process of concentrating ores by flotation which includes mixing the ore pulp with a modifying agent, aerating the pulp to form a froth and separating the froth from the remainder by flotation, and which further includes the use of an externally prepared gas containing more than 25% free oxygen by volume for aiding in the formation of the froth.

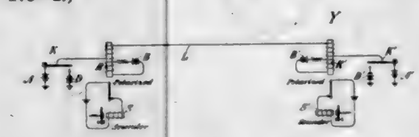
1,555,916. FREQUENCY-TRANSLATING SYSTEM. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 25, 1922. Serial No. 596,833. 9 Claims. (Cl. 178—44.)



2. The method of transmitting the essential elements of a broad band of waves over a circuit having a practical transmission range of more limited extent than said band which comprises selecting the essential elements of said band, producing therefrom a continuous band of an extent lying within the transmission range of said circuit, transmitting said continuous band over said circuit and restoring each of the elements thereof to its original frequency position.

---

1,555,917. TELEGRAPHY. JOHN M. FELL, Hackensack, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 29, 1920. Serial No. 392,724. 7 Claims. (Cl. 178—2.)



1. In a telegraph system, a plurality of polarized relays, a line circuit for associating said relays, said circuit comprising transmitting devices, one adjacent to each relay said devices having four different relative positions, a source of positive and a source of negative potential associated with each of said transmitting devices and arranged to cause flow of current in said line circuit in one direction for the first relative position of said devices, in the opposite direction for the second relative position of said devices, and to prevent the flow of current in said circuit for the remaining two relative positions of said devices; line windings for said relays included in said line circuit and arranged to cause magneto-motive forces of one direction or the other, according to the direction of flow of current in the line circuit; local windings for said relays for creating in each a local magneto-motive force the effective value of which is substantially half that of the line magneto-motive force, and the direction of which, in one relay, is in opposition to that of the line magneto-motive force and in the other relay in conjunction therewith, when the said transmitting devices are in one of the said relative positions, and signaling devices governed by said relays.

---

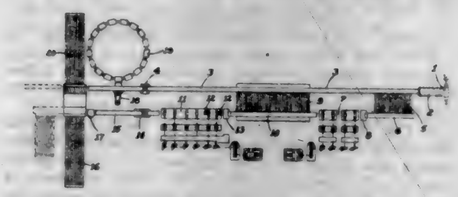
1,555,918. ARTESIAN-WELL TOOL. CORNELIUS K. FRIESEN, Steinbach, Manitoba, Canada. Filed Oct. 8, 1923. Serial No. 667,399. Renewed Mar. 6, 1925. 1 Claim. (Cl. 166—10.)

An artesian well tool comprising a lower interiorly screw threaded sleeve, an upper sleeve having a contracted screw threaded end adapted to screw thread into the lower sleeve and provided with a coned face opposing the upper end of the lower sleeve, an expansible gasket surrounding the tool and positioned between the upper end of the lower sleeve and the coned face of the

upper sleeve, spring anchoring arms extending downwardly from the lower end of the lower sleeve, and a service pipe screw threading into the upper end of the upper sleeve.

---

1,555,919. ROLLING MILL. JEROME R. GEORGE and JOHN W. SHEPERDSON, Worcester, Mass., assignors to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 27, 1922. Serial No. 556,666. 8 Claims. (Cl. 80—31.1.)



1. In apparatus of the class described, the combination with longitudinal conveying means for the product of a blooming mill, of a plurality of independent reducing roll trains parallel to but out of line with said conveying means, and means selectively operable to procure the further reduction of said blooming mill product by either of said roll trains, or both of them.

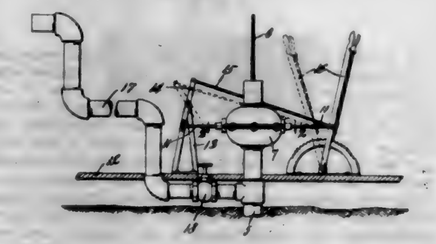
---

1,555,920. FENDER GUARD. LEWIS P. HALLADAY, Decatur, Ill., assignor to L. P. Halladay Company, Decatur, Ill., a Corporation of Delaware. Filed Oct. 8, 1924. Serial No. 742,309. 5 Claims. (Cl. 293—55.)

1. A fender guard comprising a plurality of bars vertically spaced apart at one end, and overlapping at the other, the vertically spaced ends being rearwardly and inwardly curved to lie behind the relatively broad contacting surface formed by the forward portion of said vertically spaced bars, the overlapping portions of said bars being rearwardly turned.

---

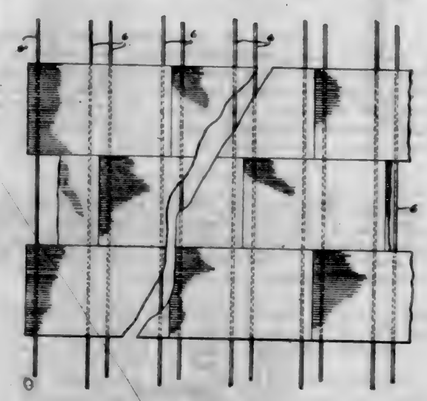
1,555,921. CHOKE VALVE. CHRISTOPHER C. HARRIS, Bowling Green, Ky. Filed July 5, 1921. Serial No. 482,407. 1 Claim. (Cl. 166—15.)



A well drilling apparatus comprising a casing embodying separable solid sections, said sections having threaded openings to receive the ends of pipes, said sections being cut away throughout portions of their lengths and throughout portions of their adjacent faces, sliding valve members movable within the cut out portions of the sections, said valve members having offset end portions adapted to overlap to provide a tight connection, and the adjacent edges of the offset end portions being formed of semi-circular openings adapted to register to accommodate a well cable.

---

1,555,922. FLOORING AND PROCESS OF MAKING THE SAME. CHARLES FRED JOHNSON, Johnson City, N. Y., assignor to Endicott-Johnson Corporation, Endicott, N. Y., a Corporation of New York. Filed Sept. 8, 1924. Serial No. 736,540. 9 Claims. (Cl. 94—22.)



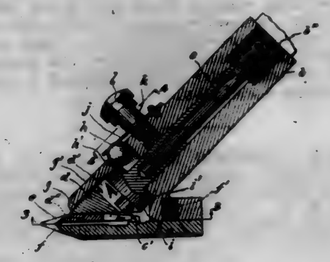
1. The process of making a flooring block which consists in threading upon rods strips of sheet material of a width corresponding to the desired thickness of the block and provided with rod receiving openings, said strips being coated upon their abutting faces with adhesive, pressing the strips into intimate contact and, after the adhesive has set, removing the rods and then cutting the block to the desired contour and size.

1,555,923. DRILLING OR FISHING JAR AND METHOD OF MANUFACTURING THE SAME. WILLEM KÖLLE, Jr., Haarlem, Netherlands, assignor, by mesne assignments, to Spang and Company, Butler Pa., a Corporation of Pennsylvania. Filed Feb. 17, 1921. Serial No. 445,794. 6 Claims. (76—101.)

1. A method of producing a jar for drills consisting in forming two overlapping substantially U-shaped slots in planes at right angles to each other in a bar of cruciform section to form links having oppositely directed pointed members, removing the part connecting the links so formed, shaping the opposite walls of said slots and the opposite sides of said pointed members, and compressing the links transversely in such manner as to cause the shaped walls of said slots to slidably engage the shaped sides of said pointed members throughout substantially the entire length of said pointed members.

---

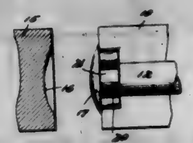
1,555,924. HAIR CLIPPER. ELMER R. KRUSEMK, Cleveland, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 14, 1920. Serial No. 416,957. 5 Claims. (Cl. 30—1.)



1. In a hair clipper the combination with a casing, of operative parts positioned therein and including a slotted actuating block d equilaterally triangular in cross section wedgingly engaged beneath the casing, tensioning means for said block and blade, a reciprocated clipper blade associated therewith and its coating stationary clipper blade, substantially as set forth.

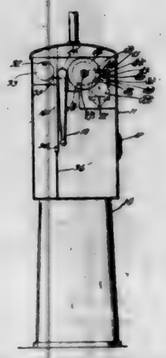
---

1,555,925. METHOD OF MANUFACTURING BOLTS. WILLIAM G. MAURER, Lebanon, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed June 19, 1923. Serial No. 646,460. 6 Claims. (Cl. 10—27.)



1. The method of forming polygonal heads on bolts consisting in first forming by an upsetting operation a head having its flat faces substantially finished in part and with excess material at the corners, and in then removing the excess material at the corners by a trimming operation.

1,555,926. INDICATOR FOR MEASURING PUMPS. CLARENCE W. MENSING, Fort Wayne, Ind., assignor to S. F. Bowser & Co., Inc., a Corporation of Indiana. Filed Dec. 17, 1921. Serial No. 523,076. 4 Claims. (Cl. 116—67.)



3. A liquid dispensing and measuring device having a reciprocating rack bar for actuating the device, studs carried by the rack bar, a bracket carried by the device and adjacent the rack bar, a gong carried by the bracket, a striker arm made of spring metal and pivotally mounted in said bracket in operable relation to the gong, said striker arm terminating in a projecting portion and in the path of movement of the studs, a tractile spring affixed at one of its ends to the bracket and engaging the extended portion of the striker arm with its opposite end, and a stud carried by the bracket intermediate the pivotal point of the striker arm and the gong in such position as to normally hold the striker arm in spaced relation to the gong.

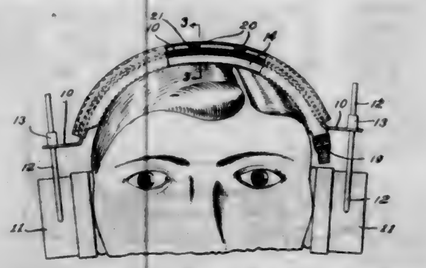
---

1,555,927. COATING FOR THE PREVENTION OF RUST OR THE LIKE. EDGAR FORD MORRIS, Manchester, England, assignor of one-half to James Anderson Morrice, Glasgow, Scotland. Filed Oct. 7, 1924. Serial No. 742,267. 2 Claims. (Cl. 91—68.)

1. The process for preventing the formation of rust on iron or other ferrous metals which consists in first coating the metal with an aqueous emulsion prepared from a paint containing zinc yellow (basic chromate of zinc) to which has been added an emulsifying agent dissolved in water and a volatile thinner and allowing said coating to dry and then applying a second coating consisting of a paint containing zinc yellow.

---

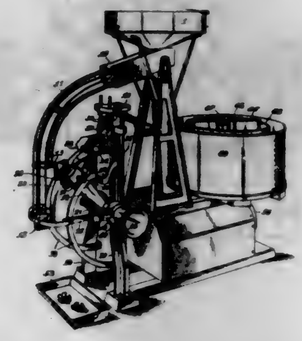
1,555,928. CUSHION FOR HEADPIECES OF RADIO APPARATUS. TIMOTHY F. MORRISSEY, New York, N. Y. Filed Oct. 20, 1923. Serial No. 669,734. 4 Claims. (Cl. 179—156.)



1. The combination with a head band of a telephone head set of a pneumatic cushion member adapted to be disposed beneath said head band in conformity therewith, means for inflating said tube and means carried by said tube for functioning engagement over the upper portion of said head band.

---

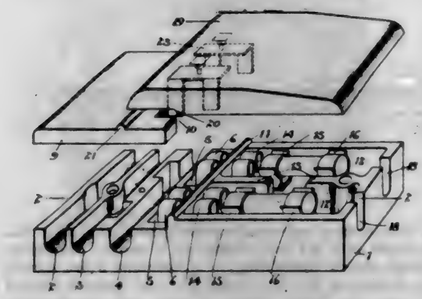
1,555,929. MACHINE FOR CUTTING AND PRESSING FRUIT AND FOR MIXING JUICES. JAMES E. ALLAN, Detroit, Mich. Filed Nov. 8, 1920. Serial No. 422,424. 13 Claims. (Cl. 100—44.)



1. A juice extracting machine comprising a blade having a cutting edge, a carrier for fruit having a path of movement which brings the fruit into contact with the cutting edge and lengthwise thereof to sever the fruit into halves, means for positioning a cut half with its cut face in contact with a surface adapted for juice extraction, and means for forcing the fruit half section into contact with the surface to extract the juice.

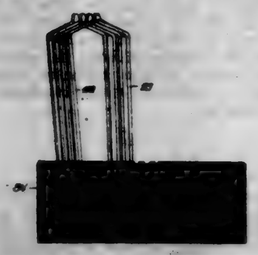
---

1,555,930. FUSE BLOCK. JOHN H. ALLEN, London, Ontario, Canada, assignor to The McClary Manufacturing Company, London, Ontario, Canada. Filed Sept. 17, 1923. Serial No. 668,264. 3 Claims. (Cl. 200—133.)



1. A fuse block having recesses spaced apart by a dividing wall, live electric contacts arranged one side of the wall, line wires connected with said contacts, a cover closing in the line wire connections to said contacts, fuse contacts arranged the other side of said wall, and a cover having bridged contacts to engage the aforesaid contacts and to straddle the wall and engage and cover said fuse contacts.

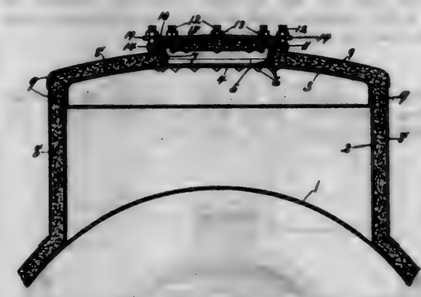
1,555,931. METHOD OF BUILDING ARMATURES. VINCENT G. APPLE, Dayton, Ohio. Filed Oct. 11, 1920. Serial No. 416,307. 1 Claim. (Cl. 171—206.)



Steps in the method of making a dynamo electric machine element which consist in providing a core having a series of longitudinally extending openings to receive conductor bars; providing a plurality of conductor loops, each loop having two conductor bars; entering the ends of the loops in the openings; leaning the closed ends outwardly from the axis of the core, as they are entered; moving the closed ends inwardly until the bars of the loops are in line with the openings in the core; then simultaneously pushing all of the conductor bars thru the core.

---

1,555,932. TANK-DOME CLOSURE. WILLIAM K. AUCHINCLOSS, New York, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 16, 1923. Serial No. 657,749. 7 Claims. (Cl. 220—55.)



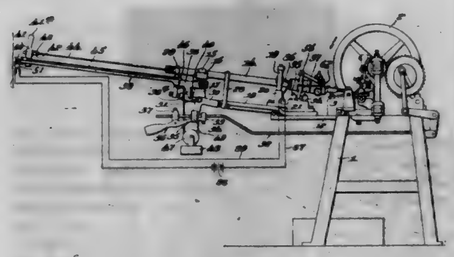
1. A tank dome closure comprising a dome ring secured to the dome head, a collar carried by said ring, a cover secured to said collar and means on said cover interlocking with said ring beneath a portion of the cover.

---

1,555,933. TACK MACHINE. GEORGE B. BAKER, HERBERT B. BAKER, and EDWARD C. BAKER, Brockton, Mass. Filed Aug. 8, 1923. Serial No. 656,411. 32 Claims. (Cl. 10—172.)

7. A tack machine comprising a blank presenting barrel, means for inserting a reserve blank into the barrel, a releasable retaining device normally preventing operation of the inserting means, electro-magnetic means for rendering the retaining device inoperative, a bodily movable feed roll supported by the barrel, a contact element movable with the feed roll, and a second contact element engageable by the first upon failure of the roll to engage a blank, engagement of said contact elements completing an electrical circuit to energize the electro-magnetic means.

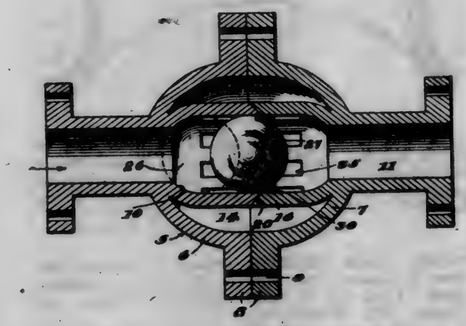
16. A tack machine comprising an anvil, an oscillating barrel provided at one end with a nose piece normally resting upon the barrel the opposite end of the barrel being supported by a ball and cup bearing, parallel posts disposed upon opposite sides of the barrel intermediate its ends, a cross bar removably secured to the upper ends of the posts, a yoke guided for vertical movement by engagement with the posts and having a concave under surface normally bearing upon the barrel, and a compression spring interposed between the yoke and cross bar.



24. A tack machine having blank feeding means comprising an oscillating barrel, a pair of feed rolls supported thereby, a lever device carried by the barrel arranged to rock about an axis transverse to that of the barrel, a member projecting from the lever device at either end thereof, the respective members being disposed at opposite sides of the lever, a pair of spaced rolls mounted upon a fixed support, each roll lying in the path of one of said projecting members as the barrel oscillates, and means for transmitting movement from the lever to the feed rolls.

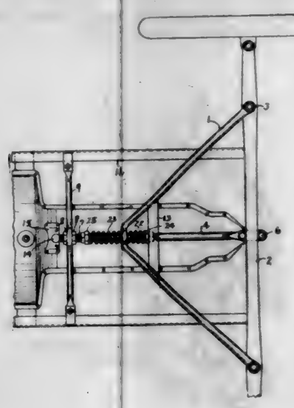
---

1,555,934. ONE-WAY VALVE. CAULEY M. BARKER, Cross City, Fla. Filed Mar. 26, 1925. Serial No. 18,583. 3 Claims. (Cl. 251—121.)



1. A one way valve comprising a pair of semi-bulbous sections having internal slotted cages of tubular formation arranged in end to end relation and having their inner ends beveled in opposite directions and in contact with each other whereby the cages are held in alignment, one of said cages being reduced internally at one end to form an annular seat, and a ball valve positioned within said cages and adapted for engaging said seat.

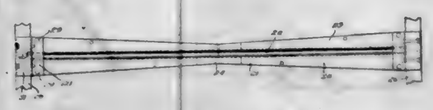
1,555,935. SHOCK-ABSORBING DEVICE FOR MOTOR VEHICLES. SAMUEL F. BASHARA, Houston, Tex. Filed June 11, 1923. Serial No. 644,622. 4 Claims. (Cl. 267—67.)



1. In a device of the character described, the combination of a Ford car frame, a front radius rod having a bearing opening at its apex, a tie rod secured to the forward end of said car frame said radius rod being slidable yieldably on said tie rod opening, and a support for the rear end of said tie rod comprising a bracket on said tie rod and an attaching means on the crank case of said car cooperating with said bracket for the purpose described.

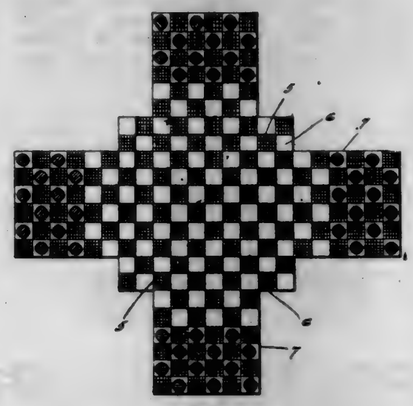
---

1,555,936. CARLINE CONSTRUCTION. JOHN W. BRENBAUM, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Wilmington, Del., a Corporation of Delaware. Filed June 1, 1920. Serial No. 385,460. 2 Claims. (Cl. 108—56.)



1. In a carline construction, the combination with the side plates of a car roof frame; of a carline embodying a trough shaped rigidifying rib of constant width having sides decreasing in depth from the ridge portion toward each end, the upper edges of said sides terminating in outwardly extending lateral flanges increasing in width as the sides decrease in depth, and flanges at each end of the carline being downturned from said outwardly extending lateral flanges and outwardly turned from the sides of said trough shaped rigidifying rib and engaging and secured to the side plates below the top faces of the latter; and reinforcing plates overlying and secured to the outwardly extending lateral flanges of the trough shaped rigidifying rib and bent upwardly and engaging over the top faces of the side plates.

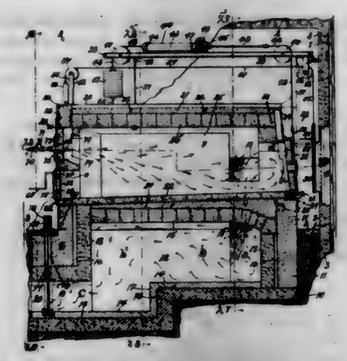
1,555,937. CHECKER BOARD. JESSE B. BILLMAN, Gunsight, Tex. Filed Mar. 21, 1925. Serial No. 17,257. 1 Claim. (Cl. 273—131.)



In a checker board, a square area, a plurality of rectangular areas one on each side of the square area, said areas having a checker board arrangement of playing spaces thereon, rectangularly disposed lines provided on the square area within the confines of the edge rows of its playing spaces.

---

1,555,938. MORTUARY FURNACE. HENRY E. BRETT, Los Angeles, Calif. Filed Apr. 18, 1922. Serial No. 554,422. 16 Claims. (Cl. 110—8.)



1. The mortuary furnace set forth comprising a retort formed with a crypt in said retort; said crypt having a receiving end and a discharge end; a smooth floor having its top surface inclined downwardly from the receiving to the discharge end; and extending the full length of said crypt doors for opening and closing the ends of said crypt, side walls continuous with said floor, said walls and doors fitted to said floor to retain the ashes from a human body thereon until cremation of said body is completed.

1,555,939. YIELDING FRICTION DRIVE. ODILON BRISBOIS, Chicago, Ill. Filed Feb. 6, 1922. Serial No. 534,361. 1 Claim. (Cl. 192—45.)

In a one-way clutch, an outer member, an inner member, a rolling element between said members and operatively contacting therewith upon points separated by an arc of substantially 170 degrees circumferentially of said rolling element.

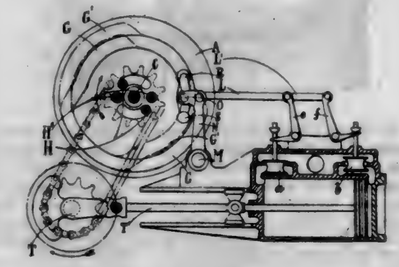
---

1,555,940. PROCESS OF MAKING INSULATORS. AUGUST BÜLTEMANN, Dresden, Germany. Filed Jan. 2, 1924. Serial No. 684,072. 6 Claims. (Cl. 18—47.5.)

1. The method of making composite electric insulators which consists in cementing the several parts of the insulator by means of a hydraulic binder to which a water repelling substance and a solvent for same has been admixed.

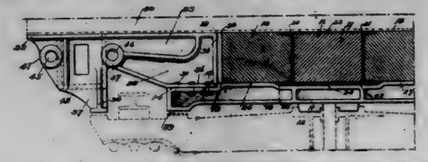
---

1,555,941. VALVE GEAR FOR ELASTIC-FLUID ENGINES. ARTURO CAPROTTI, Milan, Italy. Filed July 14, 1920. Serial No. 396,278. 6 Claims. (Cl. 121—127.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. Valve gear for elastic fluid engines comprising an actuating shaft driven by the engine, two cams on said shaft both of which are angularly adjustable to take up different positions relative to the shaft, a rocking beam, one end of which is controlled by one cam and the other end by the other cam, the active contour of each cam consisting of two arcs of different radii but with the same centre on the axis of the actuating shaft, with suitable sloping lines connecting said two arcs, a valve which is caused to open when an intermediate point of the rocking beam moves from its central position to one of its extreme positions, but remains closed when said intermediate point moves from said central position to the opposite extreme position, a single controlling shaft adapted to be operated by the engine driver, and to simultaneously control the positions of both cams in such a way that, for forward motion of the engine, the time of opening of the valve varies only with the position of one of the cams, while the time of closing varies only with the position of the second cam, while on the engine reversing its motion, the time of opening of the valve varies only with the position of the second cam, and the time of closing with the position of the first cam.

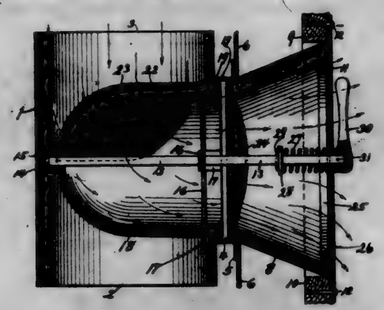
1,555,942. BOLSTER CONSTRUCTION. ROY E. CARTDAFNER, Passaic, N. J. Filed Jan. 7, 1924. Serial No. 684,725. 28 Claims. (Cl. 105—160.)



1. In a car underframe, the combination of a car body bolster, a center sill supported centrally thereon, brackets carried at opposite ends of the bolster, a bunk supported on the center sill and brackets, said brackets being in spaced relation to, and independent of, the center sill and said center sill substantially filling the space between the brackets and coacting with the brackets to provide a substantially continuous support for the bunk.

---

1,555,943. CAR VENTILATOR. ALLEN W. CLARKE, Jeffersonville, Ind., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 15, 1924. Serial No. 692,950. 5 Claims. (Cl. 98—22.)



1. In a car ventilator, a tubular member horizontally mounted on the car, a tubular deflector rotatably mounted in said tubular member and having openings communicating with said tubular member and the interior of the car, an outlet member communicating with said deflector, a register, a shutter controlling the openings in said register and operating means for said shutter adapted to operate said deflector.

---

1,555,944. PROCESS OF MANUFACTURE OF CYANIDES AND THEIR DERIVATIVES FROM THE ALKALI-EARTH-METAL CYANAMIDES. PAUL COMMENT and DANIEL HATT, Thann, France, assignors to Fabriques de Produits Chimiques de Thann et de Mulhouse, Thann, Haut-Rhin, France. Filed Jan. 25, 1924. Serial No. 688,618. 2 Claims. (Cl. 23—79.)

1. A process of manufacture of cyanides of the alkali metals which consists in mixing calcium cyanamide, calcium carbide and a carbonate of an alkali metal, in the proportions given by the equations:

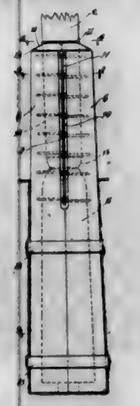
$$CaCN_2+2CaC_2+Na_2CO_3 \rightarrow Ca(CN)_2+2CaO+Na_2O+4C$$
$$Ca(CN)_2+2CaO+Na_2O+4C \rightleftharpoons 2NaCN+3CaO+4C$$

and, in heating the mixture in such manner that the quantitative yield of cyanide according to the equations will be approximately attained.

---

1,555,945. POLE SUPPORT. FRANCIS CUTTLE and HENRY E. DE NYSE, Riverside, Calif. Filed Dec. 8, 1923. Serial No. 679,332. 5 Claims. (Cl. 72—84.)

1. A pole support comprising a tubular cementitious member having a corrugated pole seat, the corrugations extending from end to end of the seat to form drain and ventilation ducts, there being a longitudinally extending channel opening from the seat to the outer face of said member and there being transversely extending ducts connecting the first ducts and the channel.



---

1,555,946. TEE DEVICE. ULRIC C. DEIKE, Washington, D. C. Filed Oct. 29, 1923. Serial No. 671,563. 3 Claims. (Cl. 273—33.)

1. A tee forming device comprising a mold, a handle for said mold and an integral spring tongue carried by the device for contact with a relatively stationary object to remove the contents of the mold.

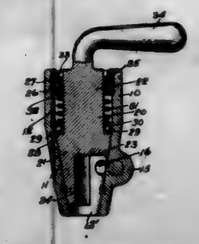
---

1,555,947. PROCESS OF MAKING ISOBORNYL ESTERS. JOSEPH EGGERT, Hillside, N. J., assignor of one-third to John C. Dehls, Newark, N. J., and one-third to Leo Stein, East Orange, N. J. Filed May 18, 1920, Serial No. 380,953. Renewed Feb. 19, 1925. 9 Claims. (Cl. 260—99.)

1. The process of making isobornylesters which consists in heating a mixture of pinene hydrochloride and dipentene hydrochlorides, and fatty acid in the presence of a deacidifying agent and a metamerising metal.

---

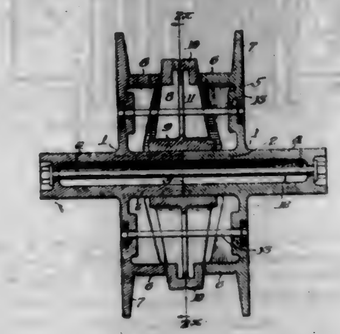
1,555,948. MIXING FAUCET. ABRAHAM ENGEL, New York, N. Y. Filed Aug. 13, 1924. Serial No. 731,772. 6 Claims. (Cl. 251—106.)



1. A device for controlling and regulating the flows of fluids from different sources comprising a casing having a plurality of inlets and an outlet, a plug movably mounted in said casing, and an extension on said plug for controlling said inlets simultaneously, said extension and a portion of the wall of said casing forming a passage between said inlets and said outlet.

---

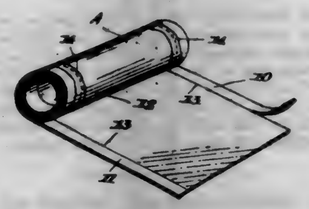
1,555,949. TUMBLER FOR ENDLESS-CHAIN MACHINES. ALFRED H. HERTON, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Aug. 21, 1922. Serial No. 583,439. 4 Claims. (Cl. 64—17.)



1. A tumbler of the character described, composed of an intermediate member which comprises a central sleeve and a rim portion supported upon said sleeve, and a pair of main members on opposite sides of said intermediate member constructed with axially aligned hub portions fitting within said sleeve, radial portions carried by said hub portions, rim portions carried by said radial portions, and tie rods passing through the radial portions of the main members holding the hub portions together within the sleeve.

---

1,555,950. WALL-PAPER ROLL. HENRY ANDREW FAUTEUX, Ottawa, Ontario, Canada. Filed Sept. 8, 1924. Serial No. 736,647. 2 Claims. (Cl. 206—59.)



1. A roll of paper of the character described having selvages almost but not completely severed therefrom and provided with a light coating of adhesive on the back adapted to dry quickly and, when moistened, to permit the separation of the selvages completely from the roll.

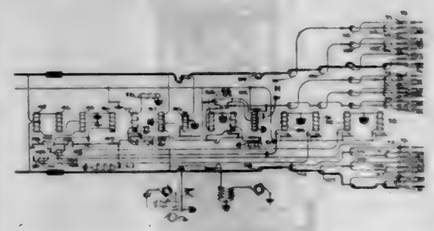
---

1,555,951. INSECTICIDE. WILLIAM LUDWELL OWEN, New Orleans, La. Filed Oct. 4, 1923. Serial No. 666,620. 4 Claims. (Cl. 167—6.)

1. An insecticide in jelly form consisting of agar and a poison.

---

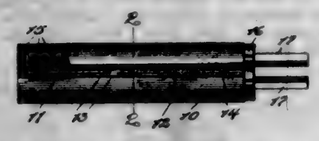
1,555,952. AUTOMATIC TELEPHONE SYSTEM. WILLIAM WALTER OWEN, Oak Park, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1918, Serial No. 239,504. Renewed July 19, 1924. 25 Claims. (Cl. 179—18.)



23. In a telephone system, a calling line, a switch for said line having a plurality of wipers, lines accessible to each wiper, means for operating said switch in response to two digits of a called number to extend a connection over one of said wipers to a called one of said lines, a plurality of relays for switching the calling line into connection with any of said wipers, any of said relays operable automatically either before the first of said digits or after the first one of said digits.

---

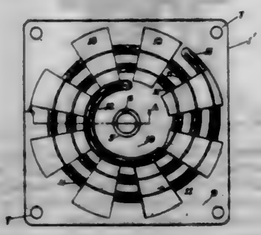
1,555,953. ELECTRICAL HEATING UNIT AND METHOD OF MAKING SAME. MAURICE SIMON, St. Louis, Mo. Filed Apr. 25, 1921. Serial No. 464,201. 9 Claims. (Cl. 201—67.)



3. An electrical heating unit comprising an electrical resistor, and a casing of flexible, heat conducting material having the form of a double walled open seam cylinder.

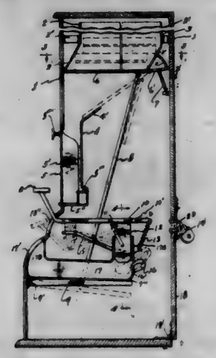
---

1,555,954. INSULATED SUPPORT FOR ELECTRICAL CONDUCTORS. LOUIS STEINBERGER, Brooklyn, N. Y., and GUY HILL, Washington, D. C. Filed Apr. 26, 1922. Serial No. 556,641. 8 Claims. (Cl. 175—359.)



1. In a device of the kind described, a spiral inductance coil and an insulating support for said coil comprising a raised spiral portion of insulating material in which said coil is partially embedded to permit its upper and lower edges to be exposed the path through the insulation between each turn being substantially greater than the actual distance between the same turns.

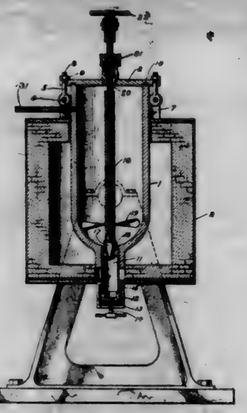
1,555,955. SANDWICH-VENDING MACHINE. WILLIS A. WEAVER, Detroit, Mich. Filed Nov. 20, 1922. Serial No. 602,226. 4 Claims. (Cl. 194—79.)



1. In a coin controlled mechanism, a coin channel member having bottom and end outlets, and also provided with a plunger guide above the bottom outlet; a plunger mounted in said plunger guide, an operating lever connected to said plunger, a second lever operatively connected to the said first lever, a magnet carried by the said second lever and normally located at the end opening, and a member below said bottom opening adapted to operate a vending machine.

---

1,555,956. MELTING AND POURING MAGNESIUM. HERMAN E. BAKKEN, Niagara Falls, N. Y., assignor to American Magnesium Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed July 24, 1923. Serial No. 653,520. 6 Claims. (Cl. 75—1.)

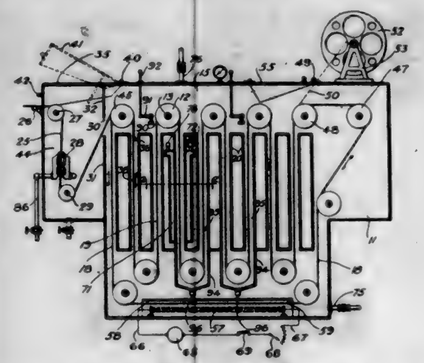


1. The process of treating magnesium and its alloys comprising melting the metal in a container in the substantial absence of reactive gases and during the pouring operation, protecting the molten metal by introducing glycerine into the said container.

---

1,555,957. DEVICE FOR TREATING MOTION-PICTURE FILMS. VINCENT C. DE YBARRONDO, Los Angeles, Calif. Filed Jan. 30, 1922. Serial No. 532,918. 10 Claims. (Cl. 34—48.)

9. In apparatus for treating motion picture film, the combination of: a box-like member; a continuous traveling belt within said member; means for attaching film to said belt; an exhaust nozzle for removing water from said film before said film comes in contact with said belt; a heat dispersing element for heating said belt before said film comes into contact therewith; and means for



heating the interior of said box-like member to assist in the vaporization from said film of the moisture remaining thereupon after the subjection thereof to the action of said exhaust nozzle.

---

1,555,958. METAL WHEEL AND METHOD OF MAKING SAME. ALBERT M. FORD, Geneva, Ohio, assignor to The Geneva Metal Wheel Company. Filed June 18, 1921. Serial No. 477,019. 1 Claim. (Cl. 301—65.)

A metal wheel comprising a rim, spokes secured at their outer ends thereto, a central hub member in the form of a box internally machined to receive a bearing, a seat comprising a circumferential groove formed externally of said box, a radial projection in said groove, an annular body of cast metal seated in said groove and embracing said radial projection, said annular body firmly engaging the inner ends of said spokes.

---

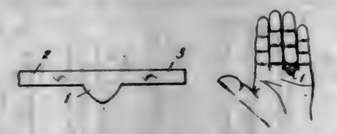
1,555,959. LIGHT ALLOY AND PROCESS OF MANUFACTURE OF THE SAME. ANDRÉ ANGELO FRESNEAU, Aubervilliers, France. Filed Mar. 6, 1924. Serial No. 697,395. 5 Claims. (Cl. 75—1.)

1. A metal alloy the composition whereof is substantially: aluminium 93.3, copper 3.4, nickel 1, zinc 1.8 and magnesium 0.5.

---

1,555,960. SANITARY PROTECTOR. CLARENCE W. FULLER, Yonkers, N. Y. Filed Nov. 10, 1924. Serial No. 748,848. 6 Claims. (Cl. 128—155.)

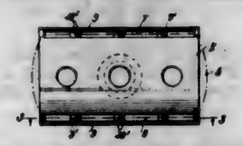
1. A sanitary protector of the type described, comprising a thin flexible shielding member, and a retaining strip connected to said member near one edge thereof, the said member projecting out on one side of said strip to a considerable extent and being substantially flush with the other side thereof, whereby the projecting portion of said member is adapted to fit snugly over



and conform to the contour of the palm of the hand at the base of a finger, and the retaining strip is adapted to be wrapped about the base of the finger.

---

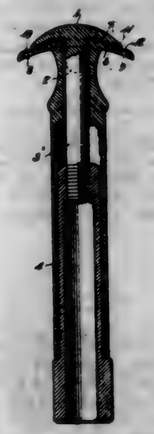
1,555,961. SAFETY RAZOR. MOTT G. GILLETTE, Garden City, N. Y. Filed May 12, 1923. Serial No. 638,594. 2 Claims. (Cl. 30—12.)



1. A razor having a backing, a blade adapted to be seated thereon, a guard disposed over said blade, a handle for the razor, said guard having a longitudinal slot therein near one edge, widely separated supporting partitions in said slot of substantially V-shaped cross section, the apex of the partition being disposed adjacent the lower surface of the blade and forming a support for said blade, said partitions gradually widening toward the lower surface of the guard.

---

1,555,962. SAFETY RAZOR. MOTT G. GILLETTE, Garden City, N. Y. Filed June 12, 1923, Serial No. 644,876. Renewed Feb. 27, 1925. 4 Claims. (Cl. 30—12.)



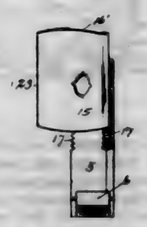
1. In a razor, the combination with a backing, a flexible blade carried thereby, a guard for the blade, said guard being formed with undercut recesses adjacent the cutting edges of the blade a handle for flexing said blade, said handle being adjustable and when moved in one direction being adapted to flex the cutting edges of the blade into said undercut recesses to protect said cutting edges said blade being adapted to be released from said recesses upon a different adjustment of said handle to permit its cutting edges to be exposed.

1,555,963. AUTOMATIC MECHANISM FOR RAISING LIQUIDS. SAMUEL M. GREENIDGE, Washington, D. C. Filed Dec. 24, 1921. Serial No. 524,602. 15 Claims. (Cl. 162—3.)

1. An automatic mechanism for raising liquids from a well, including a pressure supply pipe, an eduction pipe, and a liquid supply pipe, a valve for controlling communication between the three pipes, and means for controlling said valve in accordance with the level of the liquid in the well

---

1,555,964. BLADE FOR ASPHALT AND THE LIKE MIXERS. LOUIS A. GUEDEL, Indianapolis, Ind., assignor to Hetherington and Berner, Indianapolis, Ind., a Corporation of Indiana. Filed Jan. 3, 1925. Serial No. 440. 4 Claims. (Cl. 88—11.)



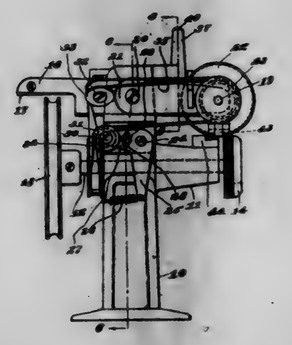
1. The combination with a mixer blade, of a separate outer end member therefor having a channel with outwardly oblique sides in which the blade is received said blade having beveled corners to fit the oblique sides of the channel, a bolt seated in one of the members and passing through a slot in the other and means on the bolt to draw the oblique portions into wedging engagement.

---

1,555,965. RUBBING-OUT MACHINE. WILLIAM C. HAKE, St. Louis, Mo. Filed June 27, 1922. Serial No. 571,326. 5 Claims. (Cl. 12—55.)

1. In a rubbing out machine of the class described, the combination with a feed wheel arranged to rotate in a vertical plane and having a circumferential feed sur-

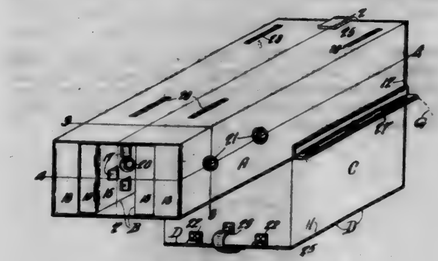
face for feeding the work, of a rubbing wheel arranged to rotate in a vertical plane substantially at right angles to the plane of rotation of said feed wheel, whereby the



circumferential surface of said rubbing wheel passes across the feeding surface of said feed wheel, and means for rotating said wheels in unison.

---

1,555,966. ANIMAL TRAP. AKOS J. HALL, Cleveland, Ohio. Filed Nov. 2, 1923. Serial No. 672,265. 7 Claims. (Cl. 43—65.)

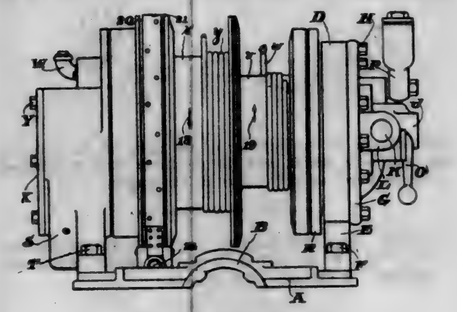


4. An animal trap, comprising a housing composed of an entrance portion and an exit portion; a pair of aligned walls movable in said entrance portion and provided with inwardly and rearwardly projecting teeth, a pair of springs between each of said walls and the corresponding wall of said entrance portion to normally hold said walls in spaced relation to each other but permit said movable walls to be moved away from each other, a bait shelf at one end of said exit portion, a pair of trap doors hinged to said exit portion intermediate said entrance portion and said bait shelf normally closed and adapted to be opened by the movement of an animal in said trap to drop the same therethrough, and springs between said doors and said exit portion to normally hold said doors closed.

---

1,555,967. SLIP-DRUM HOIST. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 10, 1923. Serial No. 661,949. 3 Claims. (Cl. 254—185.)

1. In a hoist, the combination of a frame, a driving shaft, two drums rotatable about the driving shaft, a motor connected to operate the driving shaft, opposed drivers carried by said drums, and a pair of pawls having engaging devices so connected that when one pawl



rocks in one direction and automatically connects one drum to the driving shaft, the other pawl is rocked in the opposite direction and assumes an inoperative position.

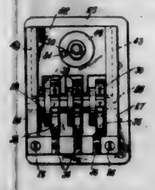
---

1,555,968. BRAKE RIGGING. SOREN HANSSON, Butler, Pa., assignor of one-half to Harry T. Anderson, Butler, Pa. Filed July 24, 1923. Serial No. 653,579. 4 Claims. (Cl. 188—209.)

3. A brake rigging member comprising a U-shaped body member formed of a single piece of flat metal and having opposed openings formed near its ends and also having flanges tapering from said openings toward the mid-portion of said U-shaped member, the edges of said flanges being bent outwardly into engagement with each other to form a bearing portion of reduced cross sectional area at said mid portion.

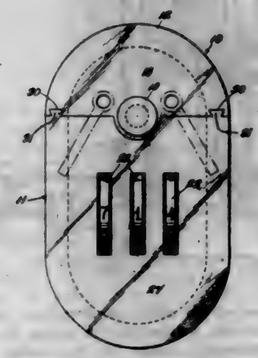
---

1,555,969. KEYLESS LOCK. ALEXANDER GILCHRIST HATCH, Honolulu, Territory of Hawaii, assignor, by direct and mesne assignments, to W-H Keyless Lock Company, Limited. Filed Mar. 12, 1924. Serial No. 698,718. 9 Claims. (Cl. 70—53.)



1. In a keyless lock, a slidably mounted locking bolt having a plurality of spaced legs each provided with an angularly extending toe, and a plurality of axially aligned solid discs co-operatively rotatably mounted relative to said bolt, each having an annular rib on one face, said ribs being provided with a cut-away portion to permit the passage of said toes therethrough, said bolt being slidable transversely of the axis of said discs.

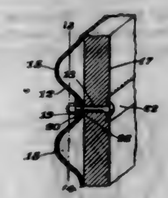
1,555,970. CASING FOR KEYLESS LOCKS. ALEXANDER GILCHRIST HATCH, Honolulu, Territory of Hawaii, assignor, by direct and mesne assignments, to W-H Keyless Lock Company, Limited. Filed Mar. 20, 1924. Serial No. 700,686. 8 Claims. (Cl. 70—53.)



1. In a lock, a casing member comprising a back wall and a top portion having dovetail grooves; a second casing member comprising front, bottom and side walls, the latter being provided with complementary tongues for engaging said grooves; and a lock member carried by each of said casing members, said lock members being adapted when engaged to prevent relative movement of said casing members.

---

1,555,971. END STRUCTURE FOR RAILWAY CARS. ROBERT D. HAWKINS, Wilmington, N. C. Filed Mar. 2, 1923. Serial No. 622,304. 2 Claims. (Cl. 105—410.)

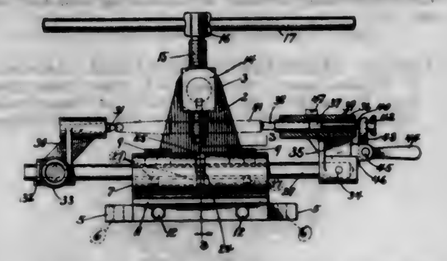


1. An end for a railway car comprising a metallic panel with inwardly and outwardly projecting parallel corrugations formed therein, a wooden lining having contact with the apices of the inwardly projecting corrugations, bolts passing through said apices to hold said lining in contact with said panel, and bearing washers for said bolts fitting the contour of said corrugations.

---

1,555,972. DRILL-STRAIGHTENING DEVICE. RICHARD HERVIG, Chicago, Ill., assignor to American Car and Foundry Company, St. Louis, Mo., a Corporation of New Jersey. Filed Jan. 11, 1921. Serial No. 436,506. 11 Claims. (Cl. 153—52.)

1. In a work straightening device, a work holding device adapted to support the work for rotation about the axis of the work and to rotate the work about an axis offset from the axis of the work, and means adapted to



exert pressure on the work, said pressure means being bodily movable to permit rotation of said work holding device and work.

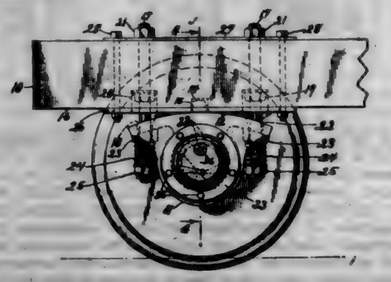
---

1,555,973. MANICURE DEVICE. SMITH A. HOOS, Rices Landing, Pa. Filed Dec. 13, 1924. Serial No. 755,633. 2 Claims. (Cl. 30—23.)

1. In combination, a device for the purpose set forth comprising a flat elongated body portion having its forward end formed to provide a clipping jaw, a lever pivotally connected to said body portion and having its forward end formed to provie a clipping jaw, said lever shiftable to actuate the said jaw carried thereby to provide a shearing action in conjunction with the jaw carried by said body portion, a cutting blade pivotally connected to the rear end of said body portion, a spring element connected to said body portion, one end of said spring element engaging said lever for normally maintaining the said jaws in the open position and the other end of said spring member engaging said cutting blade for maintaining the latter in either the open or closed position, and a file member pivotally connected with the rear end of said body portion and shiftable to overlap said lever for maintaining the device in the closed position.

---

1,555,974. JOURNAL-BOX ASSEMBLY. MARION W. HOLLINGSWORTH, Terre Haute, Ind., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 6, 1923. Serial No. 655,864. 6 Claims. (Cl. 295—42.)

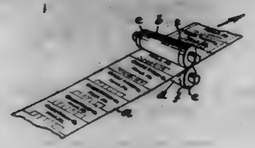


1. In a journal box assembly for cars, the combination comprising a rockable journal box having a relatively wide longitudinally curved car engaging face, box and

car interlocking portions rising from said face intermediate its length, and resilient means on opposite sides of said interlocking portions for connecting said box and car.

---

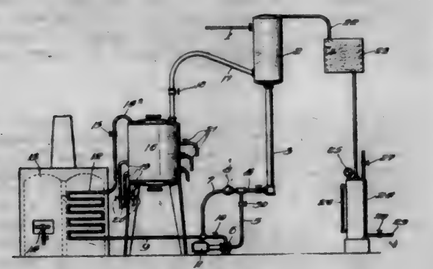
1,555,975. STRIP-FEEDING MECHANISM. ARCHIBALD B. HUBARD, Ogonts, Pa., assignor to Globe Ticket Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 26, 1923. Serial No. 653,904. 3 Claims. (Cl. 271—2.4.)



1. Strip feeding means comprising two feed rolls between which the strip is confined, means yieldingly pressing the rolls toward each other to increase the gripping of the strip by the rolls, means by which the rolls are turnable at equal peripheral speeds, one of the rolls having a circumferential groove, and a strip feeder having a series of perforating teeth fixedly carried by the other roll and projecting beyond the periphery of said roll and registering with and projecting into said groove of the other roll, whereby the paper is perforated in a continuous manner as it is fed by the rolls, said teeth being so close to each other that at least one of the teeth will be in engagement with the portion of the strip between the rolls.

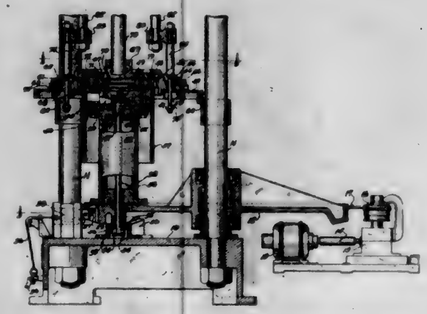
---

1,555,976. APPARATUS FOR TREATING OIL. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 14, 1923. Serial No. 632,019. 3 Claims. (Cl. 196—99.)



1. In an apparatus for treating oil, the combination with a heating coil through which a stream of oil is passed to be heated to a cracking temperature, an enlarged conversion chamber receiving said highly heated oil and in which chamber a substantial portion thereof vaporizes, of a dephlegmating means connected to the conversion chamber, a recycling line for returning the reflux condensate to the heating means for retreating, a pump interposed in said line, a by-pass around the pump and a check valve in said by-pass whereby the recirculation continues automatically with the failure of the pump by head pressure.

1,555,977. PRESS. EDWIN F. HULBERT, Milwaukee, Wis., assignor to The Master Package Corporation, Owen, Wis., a Corporation of Wisconsin. Filed Dec. 15, 1924. Serial No. 755,993. 11 Claims. (Cl. 93—55.)



1. In a press of the character described, the combination of an internal holder for the siding to be headed, an external clamping means for the siding, a plunger having a head-clamping part and a forming part movable relative to said head-clamping part, means for operating said plunger to move said head-clamping part to clamp the head between it and said internal holder and thereafter move said forming part to its work, and means for operating said external clamping means before said plunger comes into operation.

---

1,555,978. METAL STOCK. ANDREW M. HUNT, Niagara Falls, N. Y., assignor to American Magnesium Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Aug. 26, 1920. Serial No. 406,219. 8 Claims. (Cl. 75—1.)

1. As a composition of matter, a mechanical mixture of metals in the form of compressed coherent mass and comprising disseminated magnesium.

---

1,555,979. DOLL'S EYES. WILLIAM CROSBY HUNTER and FREDERICK WALTER SIMS, Southampton, England. Filed Feb. 27, 1923. Serial No. 621,641. 4 Claims. (Cl. 46—10.)

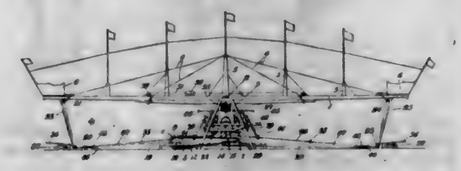
1. The combination of a hollow doll's head having eye holes, eyeballs fixed together, pivotally mounted, and having irises for registering with said holes, an arm associated with the eyeballs, a weight on the arm, a releasable retaining catch for retaining the eyeballs against pivotal movement when the head is moved to a reclining position, a supporting surface within the head for a loose member, and a loose member movable freely in any direction on said supporting surface, said retaining catch having a portion which is adjacent said surface, said surface extending across the head and permitting of movement of said member laterally with respect to the head, whereby chance operation or release of said catch by the loose member, takes place upon rocking and like movement being imparted to the head.

1,555,980. SPELLING PUZZLE OR GAME. GEORGE HARRISON JOHNSON, Tottenville, N. Y. Filed July 11, 1923. Serial No. 650,963. 1 Claim. (Cl. 273—132.)

A puzzle or game comprising a container and a plurality of blocks having raised letters and colored differently on each side to designate proper names, said blocks being movable one at a time to different arbitrary positions within the said container to complete the spelling of the proper name.

---

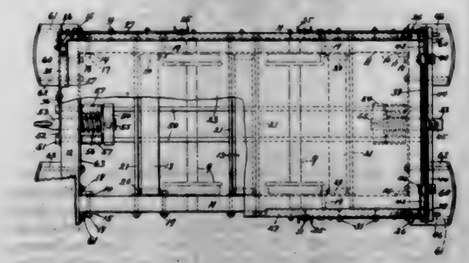
1,555,981. AMUSEMENT DEVICE. JUSTIN B. JOHNSON, Nahant, Mass. Filed May 16, 1922. Serial No. 561,284. 19 Claims. (Cl. 272—54.)



15. In a device of the class described, a main member pivoted for oscillation, means for applying force to said member to effect oscillation thereof, means other than said first-named means for bringing said main member to rest, and means co-ordinating the force applying means and the arresting means to bring the main member to rest after motion in one direction before the application of force to move the main member in the opposite direction.

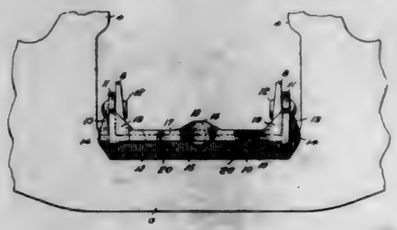
---

1,555,982. MINE CAR. WARREN V. JOHNSON, Bloomsburg, Pa., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 8, 1923. Serial No. 656,372. 9 Claims. (Cl. 105—364.)



1. A car structure comprising an underframe having side and end sills, a flooring mounted upon said sills and extending outwardly beyond the side sills, side walls secured to said flooring and at one end of the car resting upon an end sill, an end wall connected with the side walls and supported by the end sill at the said end of the car, a gate at the opposite end of the car, and mounting means for the gate connected with the side walls and retaining the side walls in predetermined spaced relation.

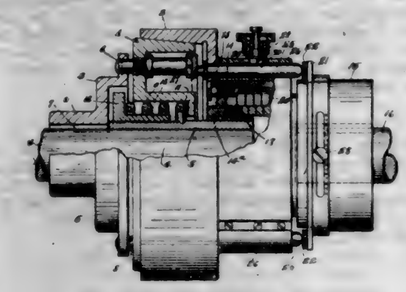
1,555,983. SPRING PLANK FOR RAILWAY-CAR TRUCKS. BYRON W. KADEL, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Sept. 7, 1923. Serial No. 661,470. 20 Claims. (Cl. 105—208.)



1. The combination with a car truck side frame, of a spring plank and a seat member having a body portion providing a seating surface for said plank, said body portion being formed with longitudinally disposed ribs arranged to embrace the side frame and upstanding transversely disposed ribs bridging the longitudinal ribs and connected to the spring plank.

---

1,555,984. AUTOMATIC CLUTCH RELEASE MECHANISM. MAXWELL R. KARGE and FERNAN O. CONILL, Phoenix, N. Y. Filed Nov. 27, 1920. Serial No. 426,844. 2 Claims. (Cl. 192—56.)



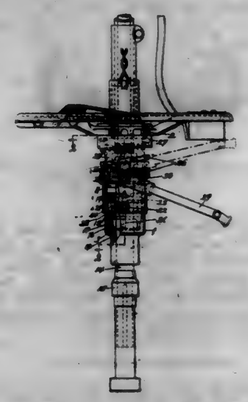
1. In an automatic clutch release, the combination of driving and driven clutch sections, one being shiftable relatively to the other, a driven shaft, headers mounted respectively on the driven clutch section and on the driven shaft, a coiled torsion spring connecting the headers, means for moving the shiftable clutch section toward the other clutch section and cam means mounted on the header on the shaft, a shifter carried by the other header and arranged in the path of said cam means to be actuated by such means upon a predetermined relative turning movement of the headers whereby when the spring is subjected to a predetermined torque movement the shifter is actuated to release the clutch, substantially as and for the purpose described.

---

1,555,985. CLUTCH AND BRAKE STRUCTURE. THEODORE C. KASMAUSKI, Granite City, Ill., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 14, 1925. Serial No. 9,266. 9 Claims. (Cl. 192—18.)

1. In a clutch and brake structure, a casing, a drive shaft extending into said casing through one end and rotating therein, a socket extending into said casing

through its other end and rotating therein, a stationary brake member in said casing about said socket, and a collar slidable upon said socket between the stationary brake member and inner end of said drive shaft and held against rotation upon said socket, one end of said collar having a grip portion for engaging said stationary brake



member and checking rotation of said socket when the collar is moved longitudinally upon the socket in one direction, the other end of said collar and the inner end of said drive shaft having cooperating clutch portions engaging when the collar is moved in a direction opposite to its first movement and causing rotation of the socket with the drive shaft.

---

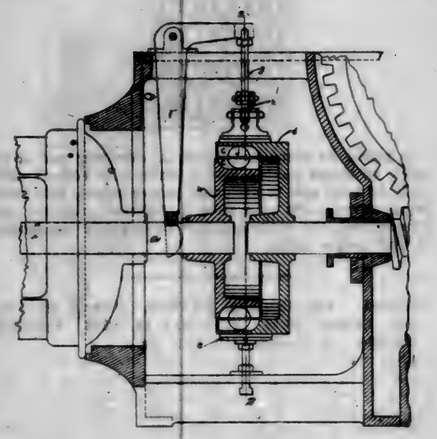
1,555,986. TUNING DEVICE. BRUA C. KEEFER, Jr., and EUGENE W. GALETTI, Williamsport, Pa., assignors to Brua C. Keefer Manufacturing Company, Williamsport, Pa., a Corporation of Pennsylvania. Filed May 29, 1923. Serial No. 642,279. 4 Claims. (Cl. 84—396.)

1. In a tuning device for slide trombones and the like, the combination of a tuning member mounted on the ends of the sliding tubes thereof and slidable therewith, a cross brace on the tuning member having a bearing sleeve therein, a cross brace on the sliding tubes having a threaded sleeve therein, an adjusting screw swivelly mounted and removably secured in said bearing sleeve and threaded through said threaded sleeve, manipulating means on the screw between said cross braces and stops for limiting the movement of said tuning member in both directions.

---

1,555,987. BRAKE FOR ELEVATORS. CHARLES E. KIMBALL, Council Bluffs, Iowa. Filed Jan. 31, 1922. Serial No. 533,060½. 3 Claims. (Cl. 188—156.)

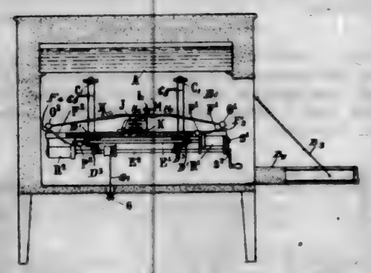
1. The combination of a motor having an armature adapted to move endwise under the influence of the magnetic fields of the motor; an elevator member driven by said motor; a brake on said driven member adapted to be operated by the endwise movement of said armature; V-shaped race ways in said driven member and a projection on said armature engaging said race ways



and adapted to allow the armature to rotate in either direction and move endwise a limited distance before moving the driven mechanism.

---

1,555,988. INCUBATOR. ALADÁR LEDÁCS KISS, Budapest, Hungary, assignor of one-half to George Molnar, Budapest, Hungary. Filed Jan. 15, 1924. Serial No. 686,447. 10 Claims. (Cl. 119—41.)



10. An incubator having in combination an egg chamber, a hot water container located above the egg chamber, an egg tray in the egg chamber, means comprising a raising shaft rotatably mounted on the egg tray for automatically raising the egg tray toward the hot water container, a weight for rotating said shaft, a brake for maintaining the raising shaft inoperative, means comprising a lowering shaft rotatably mounted on the egg tray for automatically lowering the egg tray away from the hot water container, said lowering shaft being intended to be rotated by the effective weight of the egg tray, a brake for maintaining said lowering shaft inoperative, pulleys mounted in the egg chamber, cords for suspending the egg tray, each of said cords straddling one of said pulleys and having its one end coiled round the raising shaft so as to be wound up thereon during the rotation of the raising shaft, and having its other end coiled round the lowering shaft so as to be wound up thereon during the rotation of the lowering shaft and a thermostat for releasing the brake on the raising shaft on the temperature in the egg chamber falling and releasing the brake on the lowering shaft on the temperature in the egg chamber rising, as set forth.

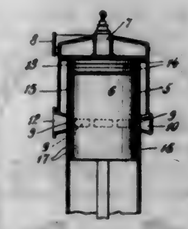
---

1,555,989. REENFORCEMENT SYSTEM FOR CONCRETE STRUCTURES. KONRAD KISSE, Berlin, Germany. Filed Aug. 26, 1922. Serial No. 584,528. 1 Claim. (Cl. 72—76.)

A structure suitable for a pole or the like with several interconnected polygonal sections comprising a number of primary longitudinal reenforcing members equal in number to the corners of the polygonal sections, a single secondary tie member in each polygonal section extending spirally around the primary members in the respective section and a connecting tie member extending around adjacent primary members of different polygonal sections.

---

1,555,990. PISTON FOR INTERNAL-COMBUSTION ENGINES. SAMUEL LIPPINCOTT GRISWOLD KNOX, New York, N. Y. Filed May 24, 1922. Serial No. 563,275. 4 Claims. (Cl. 74—108.)



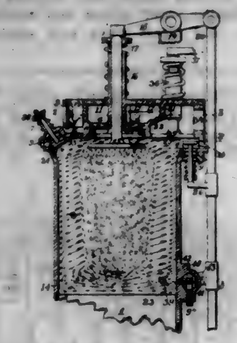
1. In combination, a piston, an engine cylinder having a port near its outer end which is controlled by the piston, the piston being provided with a relatively short sealing portion of full diameter and a skirt portion reduced in diameter sufficiently to break the oil film between it and the cylinder walls but without providing a chamber therebetween, and a relatively short circumferential section on the cylinder, below the ports, adapted to coact with the said skirt portion to form sealing means therewith.

---

1,555,991. FOUR-CYCLE GAS ENGINE. JOHN KOSAR, Chicago, Ill. Filed Mar. 18, 1922. Serial No. 544,935. 7 Claims. (Cl. 123—75.)

1. In a four-cycle gas engine in combination, a cylinder, a movable piston therein, a cylinder head having an overhead throat with a combined fuel passage and intake

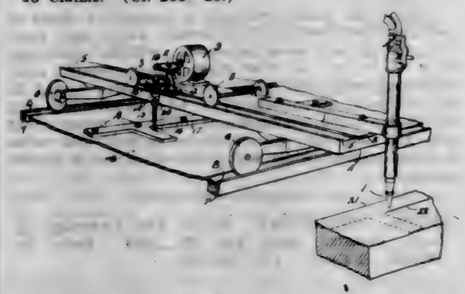
therein, an annular vent below said intake and closed by a poppet intake valve opening inwardly into said



cylinder, and a plurality of helically slanting screw blades located in said annular vent and thereby placed near the intake valve to absorb heat therefrom.

---

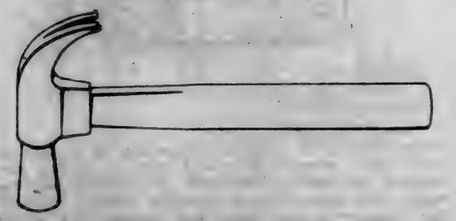
1,555,992. METAL-CUTTING MACHINE. ADOLF KREBS, Boston, Mass. Filed Apr. 11, 1924. Serial No. 705,838. 15 Claims. (Cl. 266—23.)



1. In a machine of the class described, in which a template following element engages a fixed template, the method of operation which comprises rotating the template following element, and manually pressing its periphery into contact with the template, whereby the follower is guided along the contour of the template.

---

1,555,993. NAIL-DRIVING TOY. HARRY W. LARSON, Pingree, N. Dak. Filed Feb. 11, 1924. Serial No. 692,099. 4 Claims. (Cl. 46—37.)

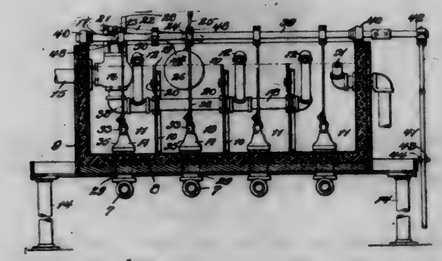


1. In a nail driving toy, a block composed of sections secured together and having aligning holes and a recess between the holes, a nail slidable in said holes and projecting from one of said sections to be driven into the block by a hammer, a collar secured on said nail within the recess to seat against one end of the recess when the nail is projected, a member seated

against the opposite end of the recess and through which the nail is slidable, and a coiled spring surrounding the nail in said recess and confined between said collar and member, said spring and member being removable from said recess when said sections are separated.

---

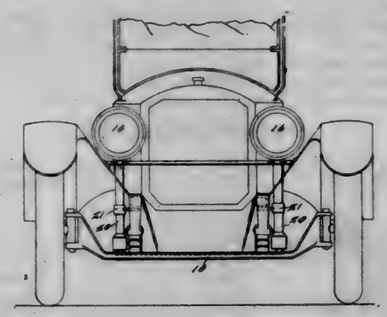
1,555,994. CAN-FILLING APPARATUS. STEWART E. LAUER, St. Louis, Mo., assignor to York Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 5, 1923. Serial No. 649,503. 2 Claims. (Cl. 226—105.)



1. In a can filling apparatus, a housing; a series of vertical walls forming compartments within said housing, each of said walls having a vertically adjustable flange at its top; an inlet pipe; a float-operated valve controlling said inlet pipe; an outlet-valve seated in each of said compartments; a lever controlling said outlet-valves; and locking means interposed between said lever and said float-operated valve to hold said valve in closed position while said outlet-valves are in opened position.

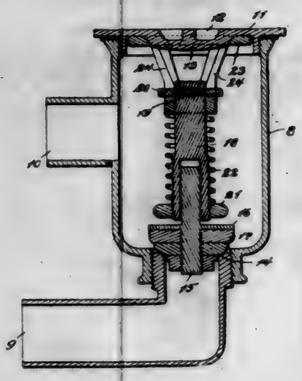
---

1,555,995. HEADLIGHT. ELLING LEE, Carstairs, Alberta, Canada. Filed Apr. 25, 1924. Serial No. 709,042. 1 Claim. (Cl. 240—62.)



The combination with an automobile, of a pair of posts, lamps mounted upon said posts, a housing surrounding and spaced from each post, spaced bearings within the housing, post receiving sleeves rotatable with respect to said posts and engaging the spaced bearings, arms connected to the sleeves, means operatively connecting the arms and steering mechanism of the automobile to move the arms, means connecting the posts and sleeves to rotate one of the posts when the sleeves are rotated in an opposite direction and springs connecting the posts and arms for returning the posts to normal position.

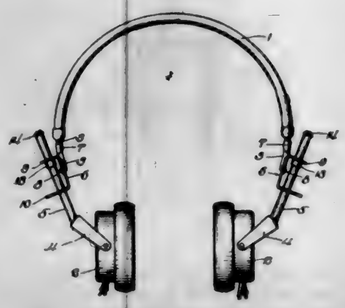
1,555,996. TEST PLUG. WESLEY LEVERICH, Ferguson, Mo., assignor of one-half to John Coleman Ferguson, Mo. Filed Sept. 11, 1924. Serial No. 737,095. 2 Claims. (Cl. 137—77.)



1. A test plug comprising a plug and a plug stem, said plug secured to said plug stem, a spring sleeve, said spring sleeve secured to said plug stem, a coiled spring and a cage, said cage secured to said spring sleeve, said coiled spring secured around said spring sleeve between said cage and a spring support positioned on said spring sleeve.

---

1,555,997. TELEPHONE HEAD SET. TIODOLF LIDBERG, Chicago, Ill., assignor to Chicago Surgical & Electrical Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 22, 1922. Serial No. 602,566. 2 Claims. (Cl. 179—156.)



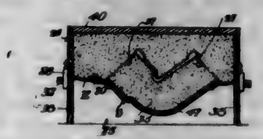
1. A telephone head set comprising a head band, a bracket secured to one end of the head band and having a pair of substantially parallel laterally extending perforated ears, the axes of the perforations being slightly out of alignment, a sleeve forming part of one ear of the pair and normally out of axial alignment with the perforation through the other ear, a receiver support having a post which passes through the sleeve and perforations in both ears of the pair and frictionally held in any adjusted longitudinal position by the cooperation of the sleeve and the rim of the perforation in the sleeveless ear, and a receiver pivotally carried by the support.

1,555,998. GRAIN CARRIER. NAPOLEON LOISELLE, South Fork, Saskatchewan, Canada. Filed June 16, 1924. Serial No. 720,399. 2 Claims. (Cl. 56—479.)

1. A grain carrier of the character described, comprising a receptacle having side walls, and an end wall, the other end being open, a bottom formed in two pivotally mounted portions, a crank lever, a chain extending from the crank lever to the said portions, and means for operating the crank member.

---

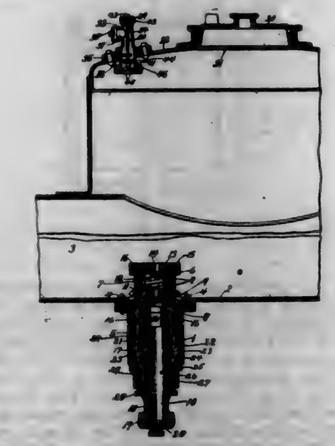
1,555,999. METHOD OF AND PATTERN FOR CASTING METAL PIPE ELBOWS. CHARLES L. LOVELESS, Los Angeles, Calif. Filed May 22, 1923. Serial No. 640,694. 4 Claims. (Cl. 22—161.)



1. A pattern for forming elbow casting molds, comprising a pattern formed into the configuration of an elbow joint, said pattern being split longitudinally to form two complemental members, one of said members having a flat match plate formed integrally therewith.

---

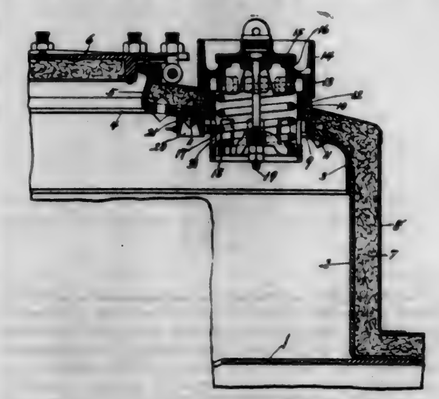
1,556,000. DISCHARGE VALVE FOR TANKS. JOHN J. MCBRIDE, Bayonne, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed June 9, 1922. Serial No. 567,045. 7 Claims. (Cl. 137—21.)



2. In a tank discharge valve, a casing adapted to be secured to the tank, a valve cage having a valve seat carried by said casing, a valve adapted to engage said seat, a discharge outlet carried by said valve and means engaging said outlet and casing adapted to raise said valve from its seat upon rotation of said valve.

---

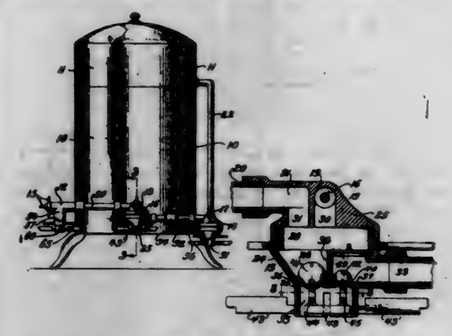
1,556,001. LOCK FOR TANK-CAR SAFETY VALVES. JOHN J. MCBRIDE, Bayonne, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 16, 1923. Serial No. 657,752. 5 Claims. (Cl. 220—55.)



1. The combination of a car tank dome having a manhole and an outlet for fluid under pressure to one side of the manhole, a safety valve secured in the fluid outlet, means for locking the safety valve in place engaging the inner end portion of the safety valve and normally preventing removal of the safety valve, said locking means being disposed entirely beyond the periphery of the manhole but accessible for releasing through the manhole.

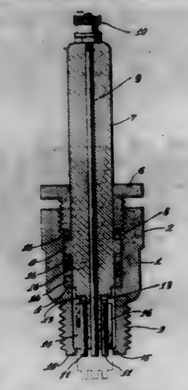
---

1,556,002. DISPENSING APPARATUS. BENJAMIN H. MCDUFFIE, Brooklyn, N. Y. Filed Mar. 7, 1924. Serial No. 697,662. 2 Claims. (Cl. 225—21.)



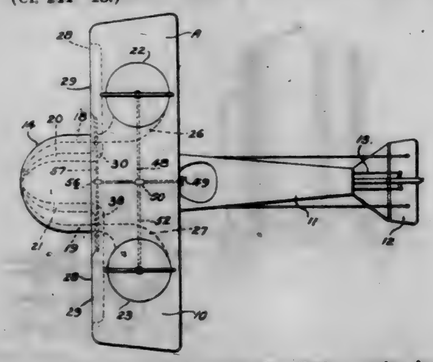
1. An apparatus of the character described comprising a plurality of associated liquid containers, pipes extending from each of the liquid containers, a faucet casing for each pipe, means of communication between each faucet casing, a pair of valve members controlling one faucet casing and the means of communication respectively, a valve member controlling the other faucet casing and said pipes being associated with the faucet casings in a manner whereby one liquid may be dispensed at one casing and a mixture of said liquid with another liquid at the other casing.

1,556,003. SPARK PLUG. WILLIAM MCELROY, Brooklyn, N. Y., assignor of one-third to William McElroy, jr., one-third to Mitchell McElroy, and one-third to William Wolf, all of Brooklyn, N. Y. Filed May 24, 1922. Serial No. 563,329. 1 Claim. (Cl. 123—169.)



A spark plug embodying a shell, an insulating element, means for supporting the insulating element for adjustment longitudinally of the shell, a central electrode carried by the insulating element, a supplementary electrode also carried by the insulating element and extending longitudinally thereof in spaced relation to the central electrode and to the shell, said supplementary electrode being housed within a channel in the insulating element and a channel having an opening to the periphery of the insulating element, whereby electric current passed through the plug may jump the gap from the central electrode to the supplementary electrode, and from the supplementary electrode to the shell in any of the positions of adjustment of the insulating element relative to the shell.

1,556,004. SUCTION PROPELLING MEANS. MAX EMILIUS MILLWOOD, Edmonton, Alberta, Canada. Filed July 22, 1924. Serial No. 727,507. 13 Claims. (Cl. 244—18.)



1. In means of the character described, a casing having air intakes and discharge openings and formed with air channels, power generating means within the casing, a driving shaft for the power means, pairs of propellers keyed on said shaft and in spaced relationship to one another, a baffle member rigidly mounted in the casing between the pairs of propellers, a hub for the baffle member adapted to operatively engage with said shaft, a plurality of blades forming the baffle member, a hinged rim for said blades and a space between said blades corresponding to the width of a blade.

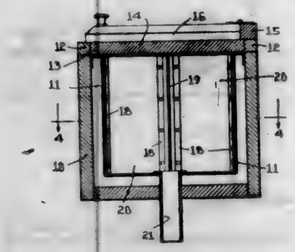
1,556,005. EMULSION AND PROCESS OF MAKING SAME. JACQUE C. MORRELL, Oak Park, Ill. Filed May 18, 1923. Serial No. 639,978. 3 Claims. (Cl. 252—6.)

1. A process for varying the fluidity of the dispersed phase of emulsions consisting in combining emulsions of substances of relatively different fluidity contained in vehicles and producing an emulsion with internal phase having a fluidity substantially intermediate the two combining emulsions, the viscosity of the external phase remaining substantially the same.

1,556,006. BLINDSTITCH-SEWING MACHINE. HARLEY C. MOULTON, Maplewood, Mo., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo., a Corporation of Maine. Filed July 10, 1924. Serial No. 725,136. 17 Claims. (Cl. 112—178.)

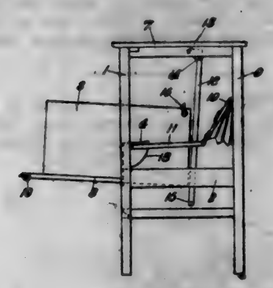
7. A blind stitch sewing machine for sewing the edge portion of a superimposed layer upon a base layer of material comprising a needle reciprocable in the general direction of the line of feed, a presser foot having a major toe portion to engage the base layer and a minor toe portion rigidly secured to said presser foot and provided with a convexedly curved surface converging rearwardly toward the needle path to engage the upturned edge of the superimposed layer, a resilient gauge mounted upon said minor toe portion having means to embrace the edge of the superimposed layer at the stitching point, means for adjusting the minor toe transversely relatively to the needle path and means for adjusting said resilient gauge upon said minor toe relatively to the needle path.

1,556,007. REFRIGERATOR. JAMES R. MURPHY and WILLIAM R. STREB, Grand Junction, Colo. Filed Dec. 5, 1923. Serial No. 678,679. 1 Claim. (Cl. 45—71.)



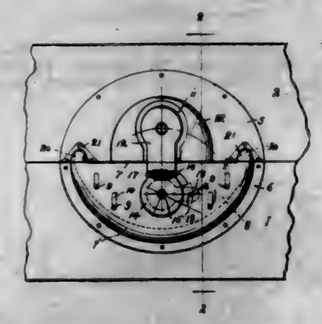
In a refrigerator and in combination with the usual box structure, a plurality of removable plates subdividing the interior of the structure into compartments including a main division plate extending entirely across the refrigerator, a door frame secured to the open side of the box structure, doors pivoted to the frame, the outer face of the frame in alignment with the adjacent edges of the doors being notched, the frame including a loose removable frame piece having its ends seated in said notches and readily disengageable therefrom, said frame piece receiving adjacent edges of the doors when in closed position and retaining said main partition plate in position within the refrigerator.

1,556,008. CABINET. GEOFFREY MAXWELL BOUMPHREY, Lymm, England. Filed Mar. 22, 1923. Serial No. 626,960. 3 Claims. (Cl. 211—16.)



1. In gramophone and like cabinets, a stand, a pivotally mounted container therein, a lid for the container hingedly suspended from the stand top in a vertical position, the container having an open side arranged in a vertical plane when in a closed position against the lid, the said side being uppermost when the said container is open or in a horizontal position, the said container being also supported by the stand when in an open position, means for effecting a combined pivotal and rolling movement of the container away from and towards said lid when being moved to a horizontal or to a vertical position respectively, and interlocking means mounted on said container and lid for retaining said parts together when in a closed position.

1,556,009. TRUNK LOCK. ROBERT J. CHEUDEN, Duluth, Minn. Filed Oct. 31, 1924. Serial No. 746,972. 2 Claims. (Cl. 70—115.)

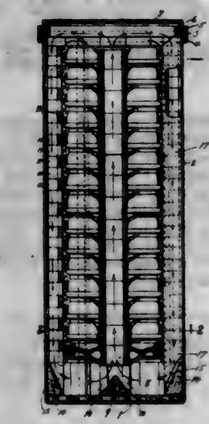


1. A lock of the character described comprising two cooperative housing members, one of said members comprising a lock housing and dowel housings spaced from said lock housing, the other of said members carrying a dowel housing, a slidable dowel segment mounted within the last mentioned housing, a hasp pivotally mounted within the dowel segment housing, and means whereby rotation of the hasp will withdraw or extend the dowels for the purpose described.

1,556,010. HOLDER FOR MINIATURE LOUD SPEAKERS. IRVING H. FISHBLOY, Chicago, Ill. Filed May 4, 1925. Serial No. 27,962. 4 Claims. (Cl. 46—40.)

1. A holder for a miniature loud speaker comprising a support, a flexible sheet carried thereby and having a representation of a living being thereon, said sheet having an opening in the mouth portion of the figure arranged to receive the bell of the miniature loud speaker, whereby the bell simulates the mouth of the figure.

1,556,011. WHEEL PIT. JOHN FREDERICK FISHER, St. Louis, Mo., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 12, 1924. Serial No. 755,488. 11 Claims. (Cl. 263—4.)

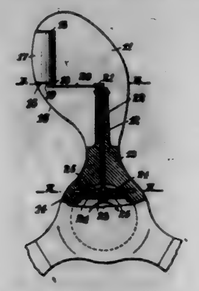


7. A wheel cooling pit having a bottom, an enclosing wall, and a cover for closing the pit at its upper end and shutting off communication with the outer atmosphere, said wall having vertically disposed air ducts open at their upper and lower ends for communication with the upper and lower end portions of the pit, and means for supporting a stack of wheels in the pit in spaced relation to the top and bottom of the pit and permitting air to pass through the hub portions of wheels stacked in the pit.

1,556,012. PROPELLER. ANTON FLETTNER, Berlin, Germany. Filed Feb. 28, 1922. Serial No. 540,008. 24 Claims. (Cl. 170—162.)

1. A rotor comprising in combination a blade loosely movable about an axis extending at an angle to the rotor axis and a governing surface movably connected with such blade for adjusting the blade under the action of current pressure.

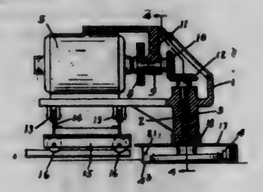
2. A rotor comprising in combination a blade loosely movable about an axis extending at an angle to the rotor



axis and a governing surface pivotally connected with such blade for adjusting the blade under the action of current pressure.

---

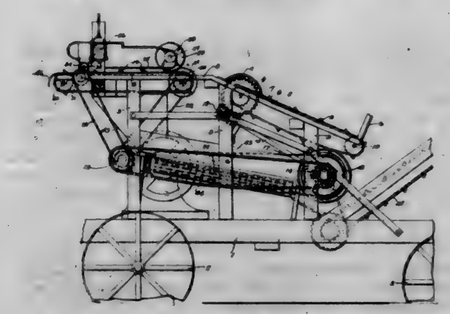
1,556,013. BLOCK-TRIMMING MACHINE. CHARLES S. HEATH, Petoskey, Mich. Filed Aug. 17, 1921. Serial No. 493,043. 1 Claim. (Cl. 144—2.)



In a block surfacing machine a portable track, a truck carriage movable along said track, a track on the truck at an angle to the first named track, a carriage movable on the second track, a surfacing tool at the front end of the carriage having its working edge below the level of the first named track, an inclined shaft supporting the tool in inclined relation to the work, a pair of horizontal shafts geared to the inclined shaft and independent motors driving respective horizontal shafts, substantially as set forth.

---

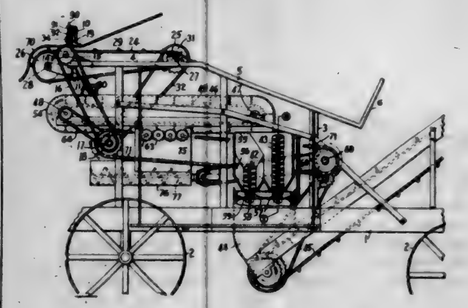
1,556,014. EAR-REMOVING DEVICE. SAMUEL E. MORRAL and WILLIAM W. MORRAL, Morral, Ohio. Filed Nov. 12, 1920. Serial No. 423,507. 37 Claims. (Cl. 130—5.)



1. In a machine of the character described, a supporting structure, a pair of snapping rollers carried by said structure, said structure and said rollers being arranged to permit a stalk of corn to pass between said rollers in a position substantially parallel therewith and to prevent the passage of an ear on said stalk, means to actuate said snapping rollers, said rollers having ear removing portions of less length than said rollers and also having other means to engage said ear and move said stalk lengthwise of said rollers to bring the ear into engagement with the ear removing portions of said rollers.

---

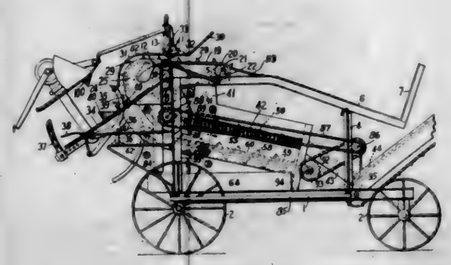
1,556,015. HUSKING MACHINE. SAMUEL E. MORRAL and WILLIAM W. MORRAL, Morral, Ohio. Filed Nov. 16, 1922. Serial No. 601,219. 29 Claims. (Cl. 130—5.)



1. In a machine of the character described, a pair of snapping rollers, means for feeding a stalk of corn between said rollers, and a guard arranged lengthwise of and extending partially about one of said rollers and having one edge provided with pointed teeth and arranged adjacent to the surface of said roller to prevent the corn stalks and the leaves thereon from wrapping about said roller.

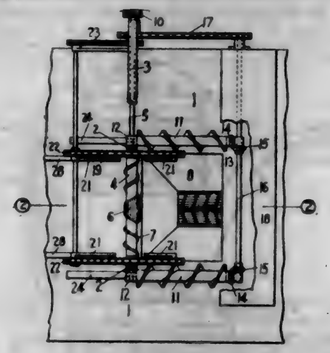
---

1,556,016. CORN-HUSKING MACHINE. SAMUEL E. MORRAL and WILLIAM W. MORRAL, Morral, Ohio. Filed Apr. 11, 1923. Serial No. 631,385. 28 Claims. (Cl. 130—5.)



1. In a machine of the character described, ear removing devices, means for moving a stalk of corn between said ear removing devices, husking devices to receive the ears from said ear removing devices, a binding table to receive the stalks from said ear removing devices, said table having an opening therein, a conveyor arranged to receive the husks from said husking devices and to discharge the same through the opening in said binding table onto the upper surface thereof, and means to gather said stalks and husks into a bundle and bind the same.

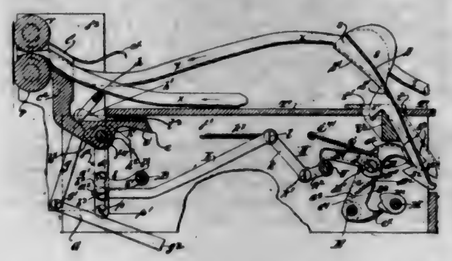
1,556,017. EAR-REMOVING DEVICE. SAMUEL E. MORRAL and WILLIAM W. MORRAL, Morral, Ohio. Filed June 4, 1924. Serial No. 717,721. 18 Claims. (Cl. 130—5.)



1. In a device of the character described, a pair of snapping rollers, and a spiral conveyor rotatable about an axis extending transversely to said snapping rollers and arranged to present a stalk of corn to said snapping rollers in a position substantially parallel therewith.

---

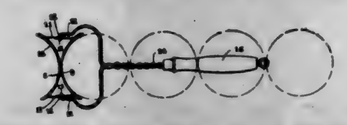
1,556,018. SLIVER-REPLACEMENT MECHANISM FOR TEXTILE MACHINERY. ROBERT E. NAUMBURG, New York, N. Y. Filed Mar. 10, 1921. Serial No. 451,383. 54 Claims. (Cl. 19—157.)



13. In textile machinery, means for guiding a plurality of traveling strands, means for holding another strand in reserve, and means operative upon the breakage or exhaustion of any one of said traveling strands or automatically substituting said reserve strand therefor.

---

1,556,019. COOKY CUTTER. GERTRUDE H. NEWMAN and FREDERICK HILLS NEWMAN, Milwaukee, Wis., assignors to American Cutter Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 9, 1922. Serial No. 605,996. 3 Claims. (Cl. 107—51.)



1. The combination with a handle, of a pair of curved cutting plates having flanged cutting edges, and means extending rearwardly from said plates rotatably receiving said handle, said plates being held together with their convex sides adjacent each other solely by said handle.

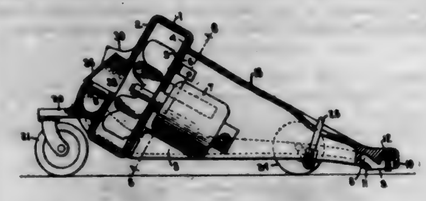
---

1,556,020. REMOVABLE CLOSURE FOR RECEPTACLES. JOHN J. NOLL, Wheeling, W. Va., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 28, 1922. Serial No. 578,042. 2 Claims. (Cl. 215—44.)

1. A closure for receptacles comprising a metal cap having an uninterrupted top surface and a depending annular flange, projections on the lower edge of said flange arranged to be bent inwardly and upwardly against the interior of said flange, and ribs on said projections forming threads for engaging resiliently threads on the receptacle, the projections having bearings against the inner face of said flange above and below said ribs whereby the said projections and ribs are held tightly against the threads of the receptacle by said flange.

---

1,556,021. SUCTION CLEANER. WILLIAM V. ORR, Cleveland, Ohio. Filed Jan. 30, 1922. Serial No. 532,828. 5 Claims. (Cl. 15—16.)



1. In a suction cleaner, a rigid structure comprising a nozzle, a motor frame, and a fan chamber arranged in the order named from front to rear, the axis of the fan chamber being downwardly and forwardly inclined, the motor and nozzle being located on the same side of the fan chamber and the inlet of the fan chamber being on the opposite side from the nozzle, said fan chamber having an outlet neck at the side opposite said nozzle adapted for the attachment of a dust bag.

---

1,556,022. ALUMINUM SOLDER. ARON L. PENNER, Winnipeg, Manitoba, Canada, assignor of one-half to Jacob F. Froese and one-half to John F. Froese, both of Reinland, Manitoba, Canada. Filed July 21, 1924. Serial No. 727,322. 1 Claim. (Cl. 75—1.)

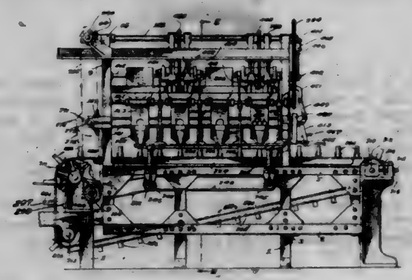
An aluminum solder comprising the following metals in substantially the following relative parts by weight, respectively: lead, 13 parts, tin, 11 parts, zinc, 4 parts, aluminum, ¼ part, antimony, 1 part.

---

1,556,023. PACKAGING MECHANISM. JONATHAN PETERSON, Brooklyn, N. Y., and JAMES C. THOM, Chicago, Ill., assignors to Combination Machine Company, New York, N. Y., a Corporation of Delaware. Original application filed Feb. 28, 1921, Serial No. 447,151. Divided and this application filed Jan. 19, 1923. Serial No. 613,684. 4 Claims. (Cl. 226—61.)

1. In mechanism for filling pouches with tobacco or similar commodities, in which successive open topped pouches are presented for filling, a plurality of filling devices, a conveyor having a series or spaced pouch holders, means for moving the conveyor intermittently, a plurality of charging devices located at different pouch holder positions, each device including a filling spout, and a vertically movable support for the spouts serving to insert them simultaneously in the corresponding pouches.

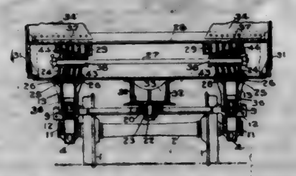
3. Mechanism for filling pouches with tobacco or similar commodities, comprising means for supporting and advancing along a substantially straight course a spaced series of flexible pouches with their mouths open for filling, a series of equally spaced filling spouts, means for raising and lowering the spouts simultaneously to



insert the spout mouths in the pouches and withdraw them, a hopper, and a pocketed delivery wheel co-operating with the hopper to discharge a measured amount of material from the hopper into the spout at each filling location of the pouches said filling devices being located along said straight course of pouch advance.

---

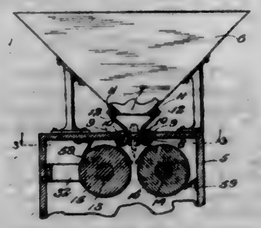
1,556,024. CAR TRUCK. JOHN A. PILCHER, Roanoke, Va. Continuation of application Serial No. 444,168, filed Feb. 11, 1921. This application filed Aug. 11, 1922. Serial No. 581,074. 5 Claims. (Cl. 308—224.)



1. In car construction, a car body, a supporting truck, and rockers interposed between the body and the center of the truck at opposite sides thereof through which all of the load of the car body is transferred to the truck, the said rockers being of conical form and arranged with the truck bearing faces thereof horizontal and the body bearing faces inclined.

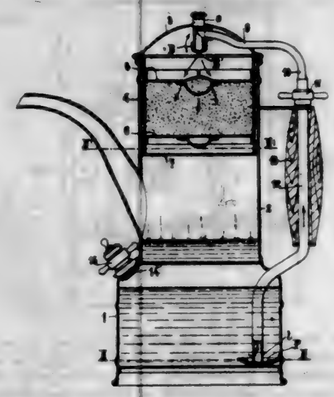
---

1,556,025. MACHINE FOR REMOVING SKINS OF NUTS. JOSEPH D. PIETLE, Chicago, Ill. Filed May 14, 1920. Serial No. 381,254. 10 Claims. (Cl. 146—11.)



9. In mechanism for blanching almonds or the like, the combination of a pair of resiliently surfaced rolls, means for imparting rotation to said rolls, and means for reciprocating one of said rolls in the direction of its axis, during its rotation; the rotary speed of the reciprocated roll being substantially greater than of the roll with which it co-acts.

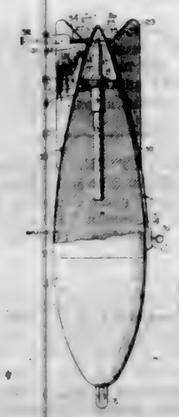
1,556,026. APPARATUS FOR USE IN MAKING EXTRACTS, INFUSIONS, DECOCTIONS, AND THE LIKE. LOUIS MARCEL POUGET, Valliere, France. Filed June 30, 1923. Serial No. 648,756. 1 Claim. (Cl. 53—3.)



A boiler, a receptacle detachably mounted therein, a filtering receptacle in the first named receptacle and having a cover which also forms the cover of said first named receptacle, a tube comprising two members, one leading from the bottom of the boiler and the other leading from the first to the upper portion of the filtering receptacle and including a portion arranged without the boiler and first named receptacle and also including a coupling joint, the said members being respectively attached to the boiler and to the first named receptacle, and a handle having a bore through which that portion of the first named tubular member which is arranged with the boiler extends.

---

1,556,027. REAR-FIRING MECHANISM FOR HIGH-CAPACITY DROP BOMBS. EARL J. W. RAGSDALE, U. S. Army. Filed Feb. 4, 1919. Serial No. 275,025. 10 Claims. (Cl. 102—2.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



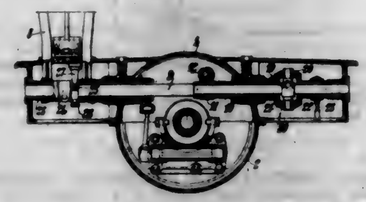
4. In fire bomb, the combination with a forward casing having an explosive chamber open at the rear end of a ring for closing the rear end having a peripheral flange

adapted to encircle the rear end of the casing and to be bound thereto, a rear casing secured to the ring, and a fuse carried by the ring.

10. A fuse embodying a member adapted to slide within a fuse body and firing elements carried by the member and normally movable therewith, one of said elements free to move with respect to the member under the force of inertia to engage the other element and fire the fuse.

---

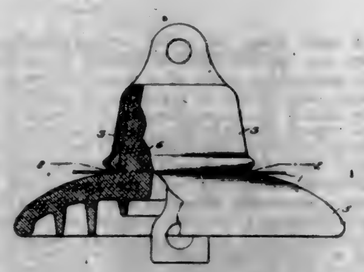
1,556,028. CONSTRUCTION OF MOTOR VEHICLES. LOUIS RAPHAEL RAVEL, Besancon, France. Filed May 12, 1923. Serial No. 638,614. 4 Claims. (Cl. 188—140.)



1. In a motor vehicle, an upper casing forming the upper part of the crank case and transmission case, a lever operated shaft journaled in said casing, a transmission mechanism provided with a transmission brake, means for actuating the brake from said shaft, a front wheel brake actuating member, and a differential mechanism between said member and the transmission brake, whereby when the lever is actuated the transmission brake will be applied with greater force than that of the front wheel brake.

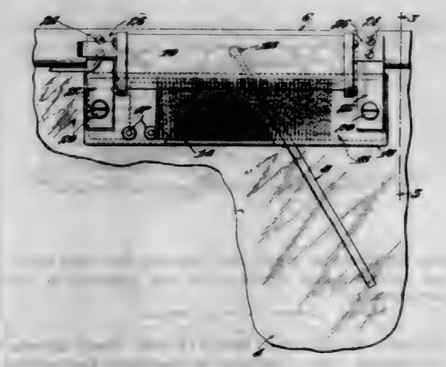
---

1,556,029. METHOD OF CONNECTING INSULATOR UNITS. FRANK H. REAGAN, Rochester, N. Y., assignor, by mesne assignments, to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Mar. 10, 1921. Serial No. 451,210. 2 Claims. (Cl. 18—47.5.)



1. The method of connecting the parts of an insulator unit of the type in which the insulating element is provided with a portion adapted to have a socketed fit within a recess in a metallic cap, said method involving mounting upon the said portion of the insulating element an expanded packing ring prior to the assembly of said element and cap, and subsequently contracting said packing.

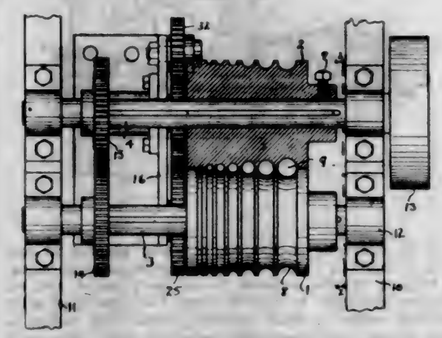
1,556,030. WINDSHIELD CLEANER AND HEATER. JOSEPH G. RENSHAW, Lynn, Mass. Filed Oct. 1, 1924. Serial No. 741,086. 6 Claims. (Cl. 219—19.)



1. The combination with a window, of means for heating the window to soften hardened aqueous matter upon the window, and means for wiping the window to easily remove the softened matter.

---

1,556,031. HEADER FOR COMPRESSING PACKING. HAMPTON P. RHODES, Houston, Tex. Filed Mar. 31, 1924. Serial No. 703,132. 4 Claims. (Cl. 80—35.)



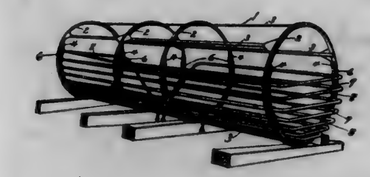
2. In a device of the character described, an upper set of rotatable compressing rolls, a plurality of cable receiving grooves of different gauge in the peripheries of said rolls, a plurality of receiving rolls below said upper set of rolls, guide plates between adjacent set of rolls, one of which is adjustable and means permitting the movement of said upper set of rolls longitudinally upon their shafts for the purpose described.

---

1,556,032. METHOD OF MAKING HEATING COILS FOR CAR TANKS. LEROY F. RITTER, Milton, Pa., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 12, 1922. Serial No. 594,218. 4 Claims. (Cl. 29—157.)

1. The method of constructing and installing heating coils for car tanks consisting of providing a cylindrical skeleton frame having an inner diameter corresponding to that of a tank cylinder, removably mounting coil

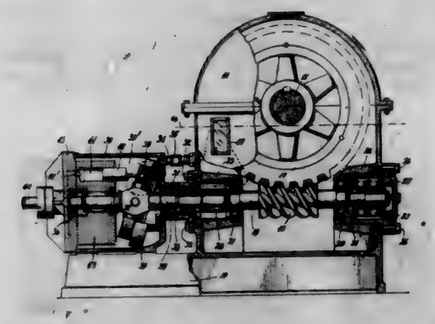
supports in said frame, constructing a coil of connected pipe sections in the frame and securing pipes of the coil to the coil supports, removing the coil and supports



from the frame as a unit and inserting the same into a tank cylinder, and securing the coil supports to the tank cylinder.

---

1,556,033. HYDRAULIC MECHANISM. JOHN ROBSON, Waterbury, Conn., assignor to Universal Engineering Corporation, Montreal, Canada, a Corporation of Canada. Filed Mar. 8, 1922. Serial No. 541,902. 3 Claims. (Cl. 60—53.)

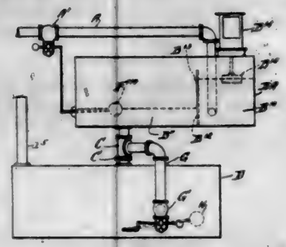


1. In hydraulic mechanism, a casing adapted to contain a liquid, a rotary hydraulic device in said casing, a housing likewise adapted to contain a liquid, and extending upwardly to a level above the uppermost point of said casing, a shaft extending from said casing to said housing and operatively connected with said rotary device, gearing in said housing, connected with said shaft and extending upwardly to a level above the uppermost point of said casing, a connection of tubular character, co-axial with said shaft, through which said casing communicates with said housing, at about the level of mesh of said gearing, and a second connection, located at a higher level, leading from said casing to said housing.

---

1,556,034. LIQUID-TREATING SYSTEM. VICTOR A. ROHLIN, Philadelphia, Pa., assignor to Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 25, 1923. Serial No. 614,843. 2 Claims. (Cl. 137—78.)

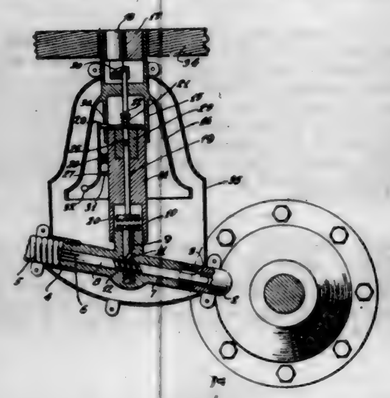
1. In apparatus comprising a liquid supply system including a liquid treating vessel and a liquid distributing system including a storage reservoir, the improvement which consists in a connection of definitely restricted flow capacity between said vessel and reservoir through which liquid normally passes from the supply system to the distributing system, the flow capacity of said connection being sufficient to supply the average demand but insufficient to supply an occasional excess demand of said distributing system and other provisions for passing liquid from said system to said distributing system comprising a normally closed



bypass about said connection and means responsive to the accumulation of liquid in said reservoir for opening said bypass during periods in which said accumulation falls below a predetermined minimum.

---

1,556,035. THEFT ALARM FOR MOTOR VEHICLES. HENRI SCHAEFER, New York, N. Y. Filed Jan. 13, 1925. Serial No. 2,143. 5 Claims. (Cl. 716—33.)



4. A theft alarm for motor vehicles embodying a bracket, one end of which is adapted to be secured to the speedometer nipple of a motor car chassis and the other end of which is adapted to be secured to the flexible conduit of the speedometer drive shaft of such vehicle, a shaft carried by the bracket, one end of which is adapted to be operatively connected to the speedometer shaft and the other end of which is adapted to be operatively connected with the speedometer drive element, a stub shaft geared to said shaft and having a clutch member, a standard mounted on the bracket, a spindle journalled for rotation in the standard and having a clutch member normally free from engagement with the clutch member of the stub shaft, a bell mounted on the standard and having a hollow hub, a clapper cooperable with the bell, a spring for normally impelling the clapper in one direction, clapper operated means rotatable by the spindle for moving the clapper in the other direction, a lock mounted in the hub of the bell and comprising a rotatable barrel, means operable through rotation of the barrel to effect the longitudinal shifting of the spindle for the purpose of engaging or disengaging the clutch members, and a casing enclosing the bell to preclude unauthorized persons from tampering with the bell.

1,556,036. DEHYDRATED LIGNITE. EUGENE P. SCHOCH, Austin, Tex. Original application filed July 17, 1922, Serial No. 575,656. Divided and this application filed Aug. 18, 1924. Serial No. 732,781. 6 Claims. (Cl. 44—1.)

1. The herein described new article of manufacture comprising lumps of raw dehydrated lignite impregnated with a hydrocarbon oil, substantially as described.

---

1,556,037. FREE-BURNING SULPHUR. JAMES W. SCHWAB, Gulf, Tex., assignor to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Aug. 18, 1923. Serial No. 658,044. 18 Claims. (Cl. 23—179.)

1. As a new composition of matter a product consisting principally of sulphur and containing also an organic compound soluble in molten sulphur.

---

1,556,038. PROCESS FOR THE USE OF MIXTURES OF ALUMINOUS CEMENTS WITH ORDINARY CEMENTS. SPERANZA SÉAILLES, née CALOGÉROPOULOS, and JEAN SÉAILLES, Paris, France, assignors to SOCIÉTÉ ANONYME "L A P," Paris, France. Filed Mar. 23, 1925. Serial No. 17,773. 4 Claims. (Cl. 18—59.)

1. A process for the use of aluminous cements in connection or in mixture with the ordinary hydraulic cements, which consists in placing in position a layer of aluminous cement and immediately afterwards a layer of ordinary cement.

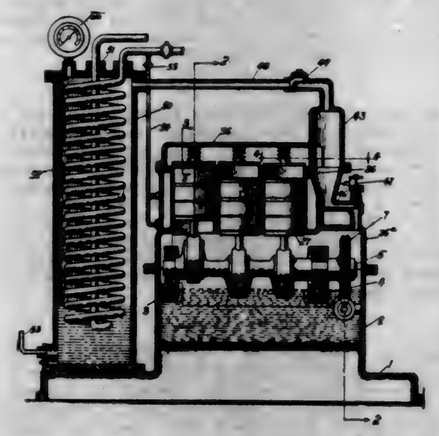
---

1,556,039. DECOLORIZING CARBON AND PROCESS OF PRODUCING THE SAME. HERBERT M. SHILSTONE, New Orleans, La. Filed May 31, 1917. Serial No. 172,123. 14 Claims. (Cl. 252—3.)

1. The process of producing a carbonaceous material for decolorizing liquids which consists in partially burning to a charred mass fibrous rice material containing silica, treating the charred material after cooling with an alkali under such conditions as will produce a porous mass, and removing the residual alkali from the mass, such charring and treatment with alkali being so conducted as to leave a final product substantially free of resinous substances.

---

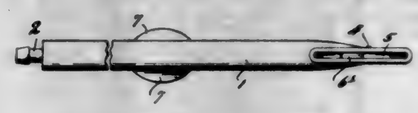
1,556,040. COMPRESSOR FOR REFRIGERATING APPARATUS. JOHN J. SHIVELY, Brookville, Pa. Filed Jan. 31, 1924. Serial No. 689,710. 5 Claims. (Cl. 230—6.)



1. In a refrigerating device a pump, a crank case therefor, and means connected with the intake for the pump for maintaining the crank case under reduced pressure, said means comprising an enlarged duct communicating with the crank case and a restricted orifice at the upper end of said duct.

---

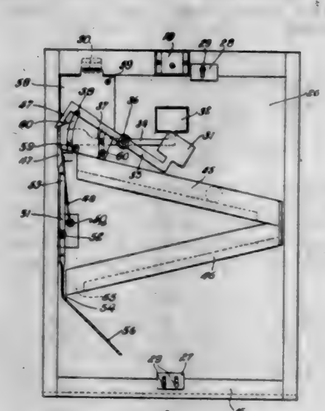
1,556,041. SYRINGE NOZZLE. EUGENE B. SIMPSON, Gray Court, S. C. Filed Apr. 23, 1925. Serial No. 25,381. 1 Claim. (Cl. 128—239.)



As a new article of manufacture, a syringe nozzle comprising an elongated tubular member provided with a laterally disposed head, the outer face of said head being provided with a trough, the bore of the elongated member communicating with said trough, said head being relatively narrow with its major axis extending in a direction lengthwise of the elongated member.

---

1,556,042. COIN-OPERATED MACHINE. PERCY C. SMITH, Chicago, Ill., assignor to John F. Meyer, Chicago, Ill. Filed June 2, 1922. Serial No. 565,291. 5 Claims. (Cl. 194—95.)



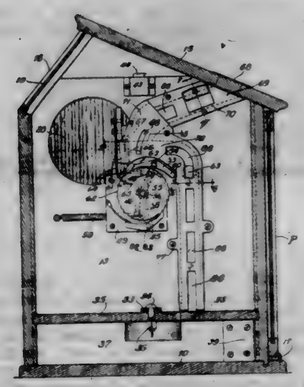
4. A coin operated machine comprising a lever, means to operate said lever by a coin, a latch on said lever, a detent adapted to engage said latch to hold it in position after said operation, and a releasing means for said detent comprising a second lever adapted to contact with said detent and to be operated by said coin.

---

1,556,043. COIN-CONTROLLED MACHINE. PERCY C. SMITH, Chicago, Ill., assignor to John F. Meyer, Chicago, Ill. Filed June 2, 1922. Serial No. 565,292. 11 Claims. (Cl. 144—78.)

1. In a picture exhibiting machine, a rotatable reel carrying pictures, means for rotating said reel comprising a pair of driving elements normally disengaged,

but adapted to be brought into engagement by a coin, means for directing a coin into position to cause said



engagement of said driving elements, and means for displacing said coin and operated by said rotating means.

---

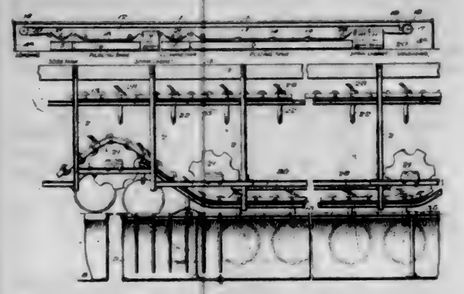
1,556,044. AUTOMATIC CLUTCH LOCK. RUSSELL C. STEVENSON, Oakland, Oreg. Filed Apr. 2, 1924. Serial No. 703,686. 2 Claims. (Cl. 74—81.)

1. In a clutch locking device, the combination of a spring steel hook, a bar to which said hook is attached, and a latch secured to said hook, said latch being so shaped as to automatically raise up and drop over the end of said bar as said hook is moved to inactive position.

---

1,556,045. MECHANICAL PLATING APPARATUS. JOSEPH G. SWAIN and MAX H. PADE, Akron, Ohio, assignors to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 25, 1922. Serial No. 584,211. 20 Claims. (Cl. 204—11.)

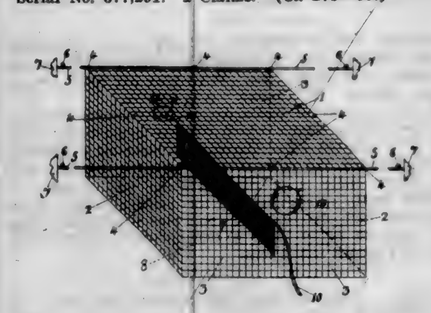
1. Apparatus for use in electroplating annular objects comprising, in combination, a tank, a traveling conveyor adapted to transport the articles through the tank, a sloping runway in the tank and means for lifting the



objects onto the runway and permitting them to roll down the same without becoming permanently disengaged from the conveyor.

---

1,556,046. GAME. ROBERT ARTHUR MUIR TAYLOR, Melbourne, Victoria, Australia. Filed Nov. 27, 1923. Serial No. 677,291. 2 Claims. (Cl. 273—95.)



1. A game apparatus comprising a buoyant element, a net providing a playing space and confining said element, and a net extending across said space about middle way its length, said buoyant element being adapted to be hit by the players across said net.

---

1,556,047. PROCESS FOR THE PREPARATION OF A CARBURETING FUEL MIXTURE FOR INTERNAL-COMBUSTION ENGINES. HENRI TERRISSE, Geneva, Switzerland, assignor to Prodor Fabrique de Produits Organiques S. A., Geneva, Canton of Geneva, Switzerland, a Company of Switzerland. Filed Mar. 28, 1923. Serial No. 628,357. 14 Claims. (Cl. 44—9.)

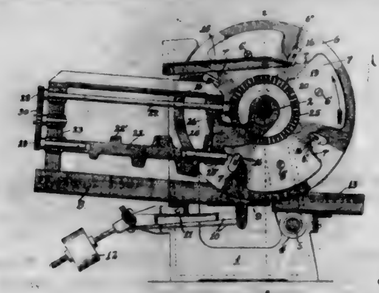
1. A process for the preparation of carbureting substances for internal combustion engines, consisting in adding ethylic alcohol and acetaldehyde to hydrocarbons heavier than ordinary petrol.

---

1,556,048. SEPARATING PACKAGED GOODS ACCORDING TO WEIGHT DIFFERENCE. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed June 2, 1924. Serial No. 717,804. 13 Claims. (Cl. 83—92.)

1. An apparatus for separating packaged goods according to weight difference, comprising a depressible member adapted to differentially yield under the im-

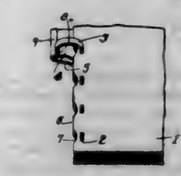
position of the packages; a movable member adapted to engage the packages while upon the depressible member



and to remove them therefrom; and supplementary package-engaging devices carried by the movable member for selectively segregating the lighter packages.

---

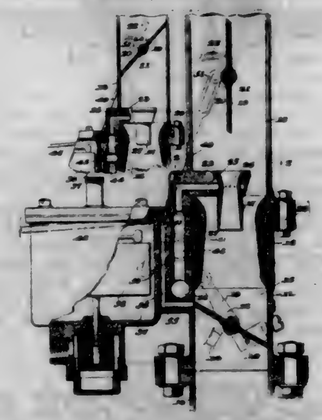
1,556,049. LOOSE LEAF OR REFILL BOOK. EMORY A. TRUSSELL, Richmond Hill, N. Y., assignor of one-third to Clarence D. Trussell, Poughkeepsie, N. Y. Filed Nov. 28, 1923. Serial No. 677,539. 6 Claims. (Cl. 129—1.)



4. The combination with a binder having rings of rectangular cross-section, of leaves having rectangular perforations near their inner edges embracing said rings and having curved recesses at their inner edges opposite said perforations.

---

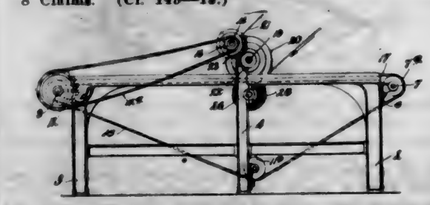
1,556,050. CARBURETOR FOR HYDROCARBON ENGINES. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 29, 1919. Serial No. 348,114. 2 Claims. (Cl. 261—41.)



1. In a carburetor, the combination of a mixing chamber, a mixture tube arranged therein and having a supply passage, a float chamber, a main fuel supply tube connected with said float chamber and having an outlet to said supply passage, a compensating well connected with said float chamber and having an outlet connection with said main fuel supply tube, adjacent air supply conduits of different cross sectional areas connected to said supply passage and to said compensating well, and single means for simultaneously controlling said air supply conduits in proportion to their respective cross sectional areas.

---

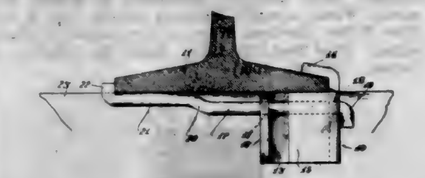
1,556,051. LEATHER-WORKING MACHINE. JOSEPH H. WALCOTT, Salem, Mass., assignor to Helburn Thompson Company, Salem, Mass., a Corporation of Massachusetts. Filed June 3, 1924. Serial No. 717,582. 8 Claims. (Cl. 149—19.)



1. A machine for polishing leather comprising a rubbing appliance, means for feeding the leather to the rubbing appliance, and a resilient support for pressing the leather against the rubbing appliance.

---

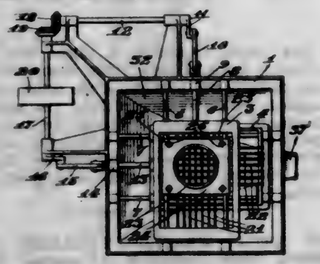
1,556,052. RAIL ANCHOR. HAROLD G. WARE, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 1, 1924. Serial No. 753,257. 16 Claims. (Cl. 238—329.)



1. A rail anchor comprising a rail base engaging member adapted to be driven into engagement with one flange of the rail base and means for retaining said base engaging member in its operative position comprising a spring member adapted to snap over the opposite edge of the rail base.

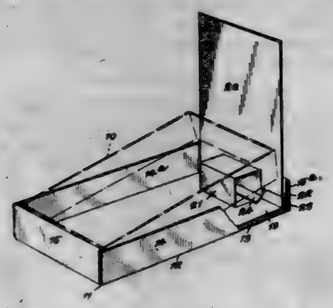
---

1,556,053. MACHINE FOR CUTTING AND SORTING PINEAPPLES AND THE LIKE. ROY P. WARREN, HARVEY E. ESSMANN, and CHARLES D. NITCHMAN, St. Louis, Mo. Filed Jan. 31, 1925. Serial No. 5,976. 6 Claims. (Cl. 146—6.)



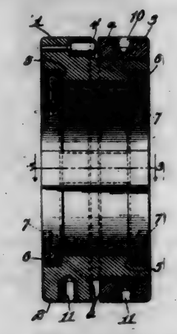
1. In a machine for cutting pineapple and the like, means for cutting the substance into cubic pieces, and a correlated sorting device arranged to receive and separate cubes of certain predetermined formation from the others.

1,556,054. FOLDABLE BOX. NATHAN WARSHAW, New York, N. Y. Filed June 11, 1924. Serial No. 719,849. 7 Claims. (Cl. 206—44.)



5. In a box with a body, a separate cover cut and folded from a single blank, comprising a substantially rectangular body with a top plate, side walls and end walls, one end wall having folded inwardly of the body a section with a protruding locking tongue, and the other end wall having a flap section lying upon the underside of the top plate and having a display card section disposed in upstanding position above said tongue, said locking tongue detachably engaging the flap section.

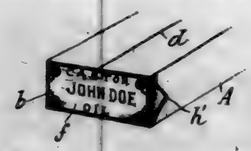
1,556,055. SAW MOUNT. FREDERICK J. WEBER, Hoquiam, Wash., assignor to Grays Harbor Iron & Machine Works, Aberdeen, Wash., a Corporation of Washington. Filed Sept. 23, 1924. Serial No. 739,361. 2 Claims. (Cl. 143—155.)



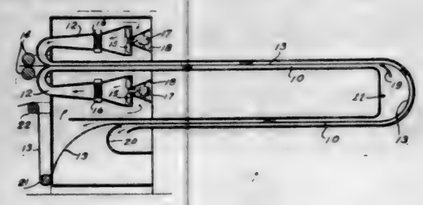
1. A saw mount comprising a collar, saw engaging means carried thereby, liner rings removably engaged within the opposite end portions of the collar, said rings, when applied, extending inwardly of the wall of the nave opening of the collar, a wall of the nave opening being provided therealong with a groove, and a key engageable within said groove, the key and rings coacting to hold the key, when the rings are applied, in working position.

1,556,056. ART OF WRAPPING PACKAGES. CHARLES S. WEEKS, South Orange, N. J., assignor to Weeks Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 21, 1920. Serial No. 482,168. 9 Claims. (Cl. 229—87.)

1. A package wrapper of tubular form having an undivided external end closure integral therewith and covering substantially the entire end of the package, said end closure having reinforcing flaps of plural thickness extending therefrom and folded toward the adjacent exterior sides of the package.

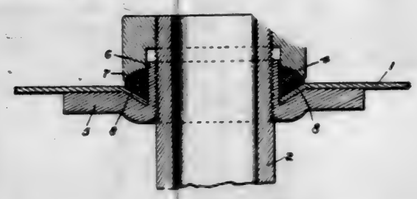


1,556,057. TEXTILE DRIER. HARRY S. WHEELER, Elizabeth, N. J. Filed June 11, 1923. Serial No. 644,524. 5 Claims. (Cl. 34—48.)



1. A textile drier comprising an elongated flattened tube having a receiving and a delivery end; means for introducing within said tube at the receiving end thereof air currents for supporting and conveying textile within said tube and for varying air pressure at either side of said fabric to maintain the level of the fabric in said tube.

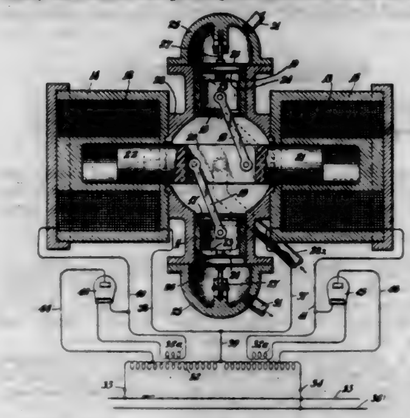
1,556,058. PIPE CONNECTION. FRED E. WHITE, Gardner, Mass., assignor to Florence Stove Company, Gardner, Mass., a Corporation of Massachusetts. Filed Aug. 2, 1924. Serial No. 729,828. 1 Claim. (Cl. 285—51.)



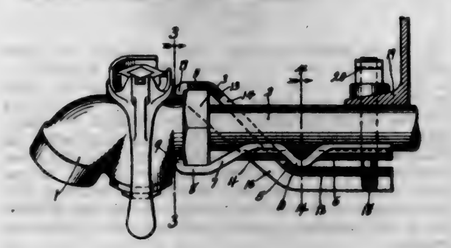
In combination, a reservoir having a plane bottom, an aperture therein, a screw threaded cylindrical feed pipe extending into said aperture on each side of the plane bottom of the reservoir, a member threaded to said feed pipe and having a plane surface abutting the under side of the plane bottom of the reservoir, and a nut threaded to that part of the feed pipe above the plane bottom of the reservoir, said nut being cut away on its under side, and packing between said nut and said plane bottom of the reservoir and filling the cut away portion of the nut.

1,556,059. RECIPROCATING COMPRESSOR. EDWARD T. WILLIAMS, Brooklyn, N. Y. Filed Dec. 1, 1923. Serial No. 677,926. 7 Claims. (Cl. 230—27.)

1. In a compressor, in combination, a pair of compression cylinders, reciprocating pistons therein, a pair of solenoids, reciprocating cores actuated by the solenoids and connected to the pistons to reciprocate the same, and means for passing the positive waves of alternating current predominantly through one solenoid and the negative waves predominantly through the other, whereby the solenoids are activated alternately.



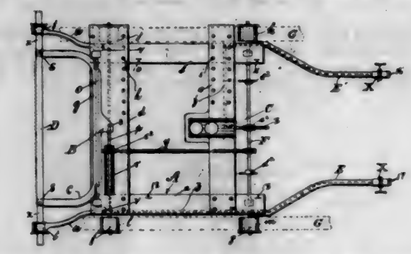
1,556,060. ANGLE-COCK HOLDER. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 23, 1924. Serial No. 757,699. 5 Claims. (Cl. 248—31.)



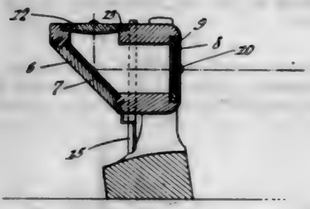
5. A clamp of the character described comprising a gripping member for extending in longitudinal contact with a train pipe and having a fulcrum intermediate its length and an angle cock engaging jaw at its forward end, a second gripping member of greater width than the first gripping member and having a rear handle forming portion, an upwardly and forwardly inclined intermediate portion slotted to receive a train pipe and the first mentioned gripping member, and a forward angle cock engaging portion, the angle cock engaging portion being provided at its forward end with a depending lip and side flanges being provided along the sides of the gripping member with their forward portions disposed at a transverse incline for gripping engagement with the angle cock, and a U-shaped fastener projecting through the handle portion of the second gripping member and upon opposite sides of the first gripping member for extending upon opposite sides of a train pipe and firmly holding the gripping members in place with the second gripping member rocked upon its fulcrum and the angle cock tightly gripped between the jaw portions at the forward ends of the gripping members.

1,556,061. SAWING MACHINE. JOHN P. BALL, Chicago, Ill. Filed Dec. 18, 1922. Serial No. 607,665. 4 Claims. (Cl. 143—68.)

1. In a machine of the character described, a carriage, a bracket pivotally mounted at one end of the carriage so as to swing upwardly onto the carriage, said bracket being adapted to reciprocate transversely of the carriage, a saw-blade carried by said bracket to be reciprocated thereby, guide means for the outer ends of the bracket and the saw, power operated means mounted on the carriage for reciprocating said bracket, power operated means for propelling said carriage, and means whereby the carriage may be guided, said means including hand-grips for separately controlling the power-imparting medium for both of said power operated means.

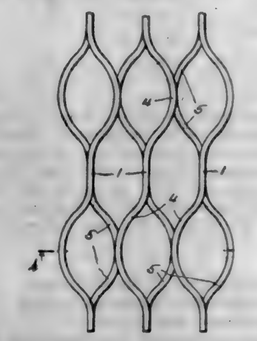


1,556,062. RANGE FINDER FOR GOLF CLUBS. LUTHER A. BAUGH, Garden City, Kans. Filed June 7, 1924. Serial No. 718,676. 2 Claims. (Cl. 88—2.3.)



1. A finder for use with golf clubs, comprising a body portion, said body portion having a lens forming its front wall, the lens having hair-lines formed thereon, a reflector disposed at an oblique angle with respect to the upper surface of the body, and a lens having hair-lines, positioned in the upper surface of the body, the first mentioned lens being disposed at a point adjacent to the striking face of the club.

1,556,063. GRATING. AXEL BECKER, Chicago, Ill., assignor to Dauchy Iron Works, Chicago, Ill., a Corporation of Illinois. Filed Dec. 24, 1921. Serial No. 524,801. 7 Claims. (Cl. 189—82.)



1. A reticulated grating comprising a plurality of bars arranged on edge said bars being slit at intervals along their lengths and each bar having portions thereof adjacent to said slits bodily offset in opposite directions

from the normal plane of the intermediate unslit part of the respective bar, the offset portions of one bar being rigidly secured to the adjacent bars whereby said bars are retained in uniformly spaced parallel relation.

---

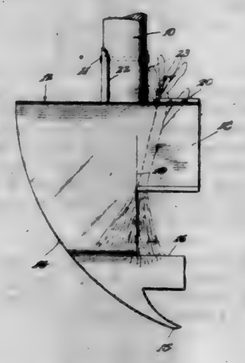
1,556,064. BILLIARD-CUE-CHALKING DEVICE. WILLIAM B. BECKER and ORLANDO C. MORNINGSTAR, San Diego, Calif. Filed Apr. 11, 1923. Serial No. 631,282. 9 Claims. (Cl. 273—18.)

1. In a billiard cue chalking device, a base member and a plurality of superimposed, side wall, section members, adhesively secured together and to said base member.

5. In a billiard cue chalking device, a cylindrically shaped chalk member of substantially the diameter of a billiard cue tip, and a reducible casing for said chalk members.

---

1,556,065. PLANT-SETTING IMPLEMENT. GEORGE J. BECKERMAN, Crichton, Ala. Filed May 8, 1923. Serial No. 637,530. 5 Claims. (Cl. 111—4.)



5. A plant-setting implement comprising a handle, a hollow integral rigid head carried by the handle, said head having downwardly converging sides terminating in contacting forwardly projecting spurs constituting a ground-penetrating point, soil-packing wings diverging downwardly from the top of the head on the sides thereof, and root-supporting claws on the front of the head below said wings and over the spurs, the head being provided in its top between said wings with a plant-receiving recess alined with the space between the spurs.

---

1,556,066. CONCRETE CONSTRUCTION. HARRY E. BELL, Sawtelle, Calif. Filed July 1, 1924. Serial No. 723,488. 3 Claims. (Cl. 72—44.)

1. A partition construction embodying two oppositely disposed walls, each wall being made up of pre-formed concrete slabs arranged end to end, certain of the opposing ends being provided with recesses extending longitudinally into the slabs, and means adapted to hold said walls in predetermined spaced relation, said means including shanks anchored at one end in the slabs of one wall at points intermediate said opposing ends, and

angular projections at the other ends of the shanks and adapted to be entered in the recesses in the slabs of the other wall by relative endwise movement of the slabs.

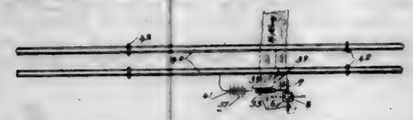
---

1,556,067. PURIFICATION OF BUTYRIC ALDEHYDE. CHARLES BOGIN, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a Corporation of Maryland. Filed May 12, 1924. Serial No. 712,888. 7 Claims. (Cl. 260—138.)

1. A process for the purification of butyric aldehyde consisting in distilling the aldehyde in the presence of sufficient water to form a constant-boiling mixture with the aldehyde.

---

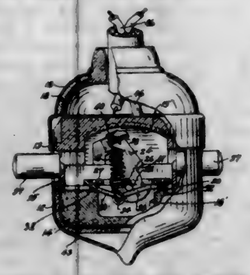
1,556,068. RAILWAY-CROSSING SIGNAL. EVERETT M. BOCK, Elkhart, Ill. Filed Sept. 10, 1923. Serial No. 661,746. 4 Claims. (Cl. 246—129.)



2. In an apparatus of the class described, the combination of a rigid stationary, vertical standard; a staff rotative on the upper end of the standard; filler blocks closing the lower end of the staff and having recesses united to form a circular chamber; a coiled spring connected with one filler block and with the standard and stressed upon rotation of the staff in one direction and acting to effect reverse rotation of the staff; and a pin extending through the standard and projecting into the chamber formed by the united filler blocks and preventing upward sliding of the staff on the standard.

---

1,556,069. PUSH-BUTTON SWITCH. TONJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 14, 1922. Serial No. 581,566. 15 Claims. (Cl. 200—72.)



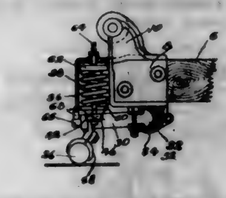
1. In a device of the character described, a support comprising a substantially flat plate, a switch element pivoted on said plate, and means for operating the switch element including a spring, said element being provided with spaced stop shoulders arranged to coact with the opposite sides of the plate to limit the movement of the element in either direction.

1,556,070. CIRCUIT CLOSER FOR RAILROAD-CROSSING SIGNALS. GEORGE M. BRANT, Hamilton, Ill. Filed Oct. 12, 1922. Serial No. 594,057. 6 Claims. (Cl. 246—251.)

5. A circuit closer comprising a stationary contact, an elastic member carrying intermediate of its ends a contact located so as to engage said stationary contact when said elastic member vibrates, a supporting member on which said stationary contact is mounted and to which the ends of said elastic member are secured, and means for adjusting said stationary contact towards and away from the normal position of said other contact.

---

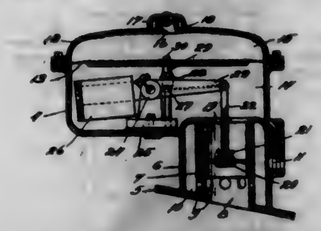
1,556,071. GLAZING MACHINE FOR OPERATING ON LEATHER, HIDES, AND THE LIKE. AUGUST C. BRILL, Oberursel, near Frankfort-on-the-Main, Germany, assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Mar. 9, 1925. Serial No. 14,267. 12 Claims. (Cl. 149—18.)



1. In a machine for treating hides, skins and leather, an operating member, a work-treating tool, means for connecting the tool with the member constructed to provide for up and down movements of the tool and also for tipping movements of the tool in planes extending transversely of the path of the work-treating movement of the tool, and means for preventing movement of translation of the tool in a direction transverse of its path on the work.

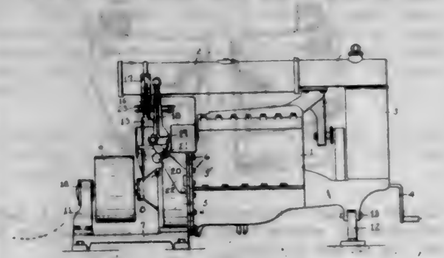
---

1,556,072. AUTOMATIC VACUUM CONTROL APPARATUS. CHARLES P. BUCK, Topeka, Kans. Filed July 18, 1921. Serial No. 485,779. 7 Claims. (Cl. 137—153.)



6. The combination in a vacuum control device of a casing a diaphragm in said casing, a stem fixed at one of its ends to said diaphragm and having sliding engagement at its other end with a portion of said casing, a pivoted rock arm in said casing, a valve operatively connected to said rock arm, and a sleeve on said stem and in abutment with said rock arm for the operation thereof.

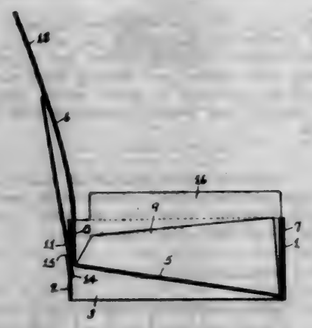
1,556,073. ATTACHMENT FOR TRACTORS. CHARLES S. BUSH, Kalamazoo, Mich., assignor to Dearborn Equipment Company, Kalamazoo, Mich. Filed Dec. 17, 1923. Serial No. 681,298. 4 Claims. (Cl. 74—56.)



4. An attachment for a Fordson tractor power plant, with its fly wheel, gear clutch and casing, with projecting propeller shaft, comprising clutch and fly wheel casing attachment, an extension of the propeller shaft, a driving pulley thereon, and suitable journal bearing and support for supporting the outer end of the same, coacting as specified.

---

1,556,074. DISPLAY BOX. JOHN F. BYRNE, Kalamazoo, Mich., assignor to Standard Paper Company, Kalamazoo, Mich. Filed Oct. 17, 1924. Serial No. 744,158. 6 Claims. (Cl. 206—44.)



4. A display box comprising a body member having front, rear and end walls, a bottom having a front wall section secured on the inner side of said front wall and a rear wall section adapted to telescope within said rear wall, said rear wall section having ears at the ends thereof adapted to be engaged over the end walls for supporting the bottom in a forwardly inclined position, and a cover integral with said rear wall section

---

1,556,075. COMBINATION GARMENT. IVA CADIEUX, Long Beach, Calif. Filed May 29, 1924. Serial No. 716,568. 1 Claim. (Cl. 2—73.)

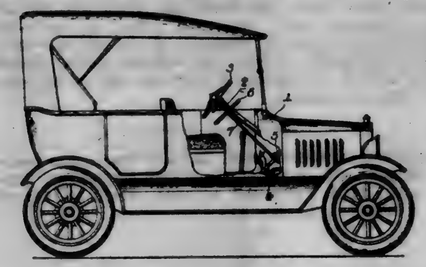
A combination under garment comprising a brassière and chemise connected together at their tops, and each having an opening therein, said opening in the brassière extending vertically from the top to the bottom and

the opening in the chemise extending vertically from the top to below the waist line when the garment is on the wearer, said openings being in register; fastening means

at said openings, the top fastener being common to both brassière and chemise; and shoulder straps secured to the top of the garment.

---

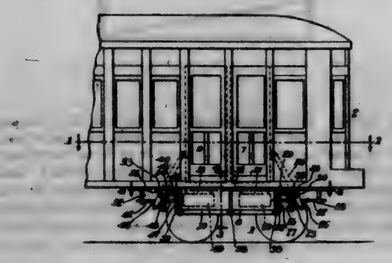
1,556,076. STEERING-WHEEL TOY. ARNETT B. CHAMBERS, Waterloo, Iowa. Filed July 5, 1923. Serial No. 649,437. 4 Claims. (Cl. 46—48.)



2. A motor car, the operating steering wheel thereof, a bracket attached to said motor car, and toy steering mechanism mounted in said bracket for rotation relative thereto, said bracket and steering mechanism being constructed and arranged to permit ready adjustability of said steering mechanism axially of said steering mechanism.

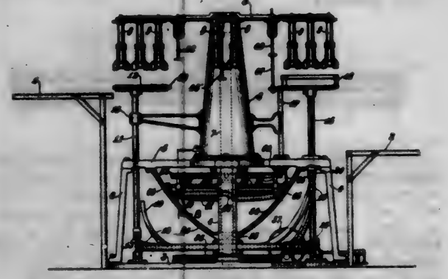
---

1,556,077. COMBINATION RAILWAY CAR. RAY A. CLAFF, Los Angeles, Calif., assignor of one-half to Robert D. Pearson. Filed Oct. 27, 1924. Serial No. 746,130. 12 Claims. (Cl. 105—341.)



1. In a one-man-operated car, a car body, a control station comprising a power controlling means and door controlling means located in the front right hand corner of said body, a door in the car body at the rear of said control station, and door operating apparatus controlled by said door controlling means for opening and closing said door.

1,556,078. CAN-LOADING MACHINE. CHARLES L. CLYMME, St. Louis, Mo. Filed May 28, 1921. Serial No. 471,790. 12 Claims. (Cl. 226—16.)

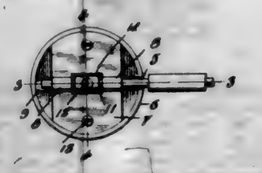


1. In a can loading device, a series of holders each adapted upon engagement therewith to grasp and hold an article, means for locking said holders, a carrier for said holders adapted to move the same to delivery position, and means for releasing the articles.

12. In a can loading device, means adapted to grasp and hold a plurality of the articles, means for moving said holding means to delivery position, and receiving means at the delivery position operating in timed relation with said moving means and adapted for cooperation with said holding means to effect delivery of the articles in successive layers.

---

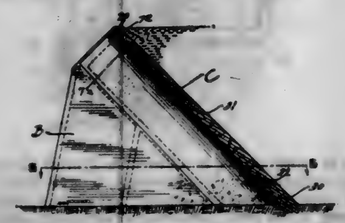
1,556,079. TRUSS PAD. ALFRED L. COBB, Long Beach, Calif. Filed Nov. 12, 1923. Serial No. 674,350. 1 Claim. (Cl. 128—124.)



A truss pad including a body portion, said body portion having a groove extending transversely thereof throughout the width of the body portion, a plate having a central offset portion overlying the groove, said plate having a central cut out portion, a supporting rod adjustably mounted in the groove, a collar mounted on the rod and disposed in the cut out portion, and adjustable means for securing the collar in position, and said collar adapted to limit the longitudinal and rotational movement of the pad with respect to the supporting rod.

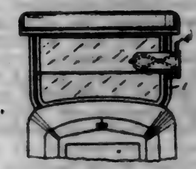
---

1,556,080. DAM CONSTRUCTION. VICTOR HUGO COCHRANE, Tulsa, Okla. Filed Feb. 2, 1923. Serial No. 616,531. 28 Claims. (Cl. 61—30.)



1. An arch for dam constructions provided with a substantially transverse waterproof joint to permit portions on opposite sides of said joint to move relative to each other.

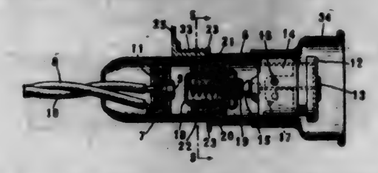
1,556,081. LIGHT SHIELD. DANIEL E. COOT, League City, Tex. Filed Apr. 15, 1924. Serial No. 706,678. 3 Claims. (Cl. 296—97.)



1. A light shield including a bracket, a supporting bar upstanding therefrom, a bracket attached to said bar, a curtain roller mounted on said last named bracket, a curtain wound on said roller, an extensible frame mounted on said bar, and supporting the free end of the curtain, manual means for extending and collapsing said frame, and means for locking said manual means to hold the frame in either position, said means including a slidably mounted rotatable rod and an actuating arm attached to the rod.

---

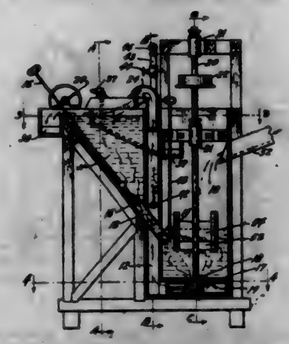
1,556,082. CIGAR LIGHTER. CHARLES H. CUNO and FREDERICK L. WOOD, Meriden, Conn., assignors to The Cuno Engineering Corporation, Meriden, Conn., a Corporation of Connecticut. Filed Feb. 6, 1925. Serial No. 7,257. 9 Claims. (Cl. 219—32.)



7. In a cigar lighter, a holder, an igniter element in the front end thereof, a stationary contact in rear thereof, a contact electrically connected to said igniter element and movable longitudinally in said holder toward and from said stationary contact, a sleeve adapted to receive said holder, and a member secured to said movable contact and projecting from said holder to engage said sleeve and keep said contacts separated while said holder is in said sleeve.

---

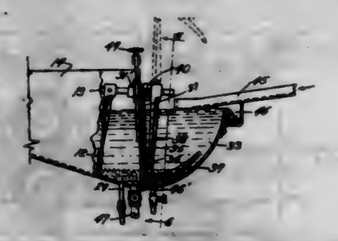
1,556,083. FLOTATION MACHINE. ARTHUR C. DAMAN, Denver, Colo. Filed Oct. 18, 1923. Serial No. 669,326. 5 Claims. (Cl. 83—85.)



1. A flotation machine comprising in combination a feed chamber; a froth chamber, said feed chamber extending below said froth chamber; a lift chamber, said lift chamber being interposed between said feed chamber and said froth chamber, and feeding onto the top of the latter; a passage feeding back by gravity from the bottom of said froth chamber to said feed chamber; a false bottom in said feed chamber having a concentric opening, said feed chamber being open to said lift chamber below said false bottom; a shaft supported above said feed chamber and extending vertically through said opening and an impeller secured on said shaft below said false bottom for forcing pulp into said lift chamber.

---

1,556,084. ORE CLASSIFIER. ARTHUR C. DAMAN, Denver, Colo. Filed Mar. 3, 1924. Serial No. 696,589. 9 Claims. (Cl. 83—81.)



1. A classifier comprising a tank having an angularly disposed, semi-cylindrical bottom; a longitudinal shaft in said tank; rakes secured to said shaft and means for rotating and reciprocating said shaft.

---

1,556,085. SURGICAL INSTRUMENT. HENRY H. DE PEW, Des Moines, Iowa. Filed Nov. 4, 1922. Serial No. 599,020. 1 Claim. (Cl. 128—218.)

In an instrument of the class described, a piston designed to be advanced through a cylinder by a screw like movement for forcibly ejecting material from the cylinder, comprising a shaft formed with a shoulder and a reduced extension beyond the shoulder, a disk rotatably mounted on the extension and engaging the shoulder, a ring mounted upon the extension and engaging the disk, a head formed on the extension and engaging said ring, a disk shaped piston end member engaging said head, and a cylindrical piston body portion enclosing said disks and ring and fixedly connected to both disks and rotatable relative to said ring, for the purposes stated.

---

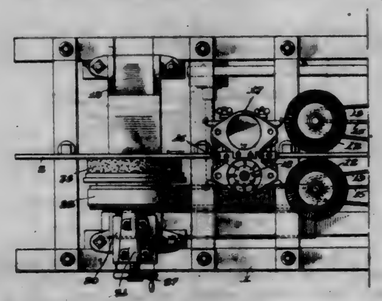
1,556,086. DAVENPORT. JOSIAH A. DEWEY, Oakland, Calif. Filed Sept. 13, 1923. Serial No. 662,440. 2 Claims. (Cl. 5—31.)

1. In a davenport, a supporting frame, a foldable bed frame comprising a head section pivotally attached to said supporting frame for simultaneous movement vertically and horizontally, a second section pivoted to the

first, a substantially vertical guideway arranged on said supporting frame, and an arm extending longitudinally from said second member and provided with a roller at its outer end arranged to travel in said guideway from one end to the other when said bed frame is changed from folded to extended position and vice versa.

---

1,556,087. MACHINE FOR FINISHING FLOORING. ELMER C. DITTMAR, Williamsport, Pa., assignor to The Crooks-Dittmar Company, Williamsport, Pa., a Corporation of Pennsylvania. Filed July 31, 1919. Serial No. 314,467. Renewed Nov. 11, 1922. Serial No. 600,479. 12 Claims. (Cl. 91—13.)

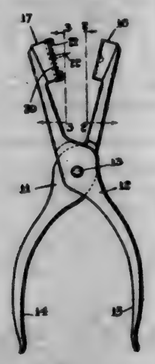


3. An apparatus for finishing flooring, comprising means for guiding and moving the strip continuously, means for initially cleaning the strip, receptacles arranged in the path of travel of said strip for applying a coating to the opposite faces of the strip in its passage through the machine, and means for polishing one face of said strip.

10. An apparatus for finishing strips of lumber comprising means for guiding and moving a strip of lumber on edge in its passage therethrough, means for applying a coating to the opposite faces of said strip in its passage through said machine and means for polishing one face of said strip in its passage through said machine.

---

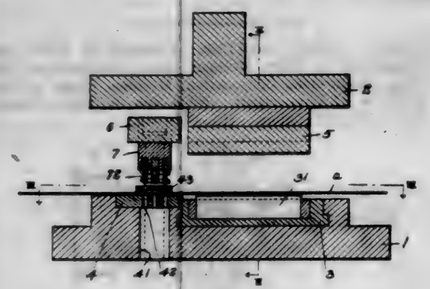
1,556,088. LIVESTOCK-TAGGING DEVICE. SYDNEY J. DOUGHERTY, Montreal, Quebec, Canada. Filed Nov. 29, 1922. Serial No. 604,045. 1 Claim. (Cl. 128—330.)



A live stock tagging device comprising a pair of coacting rectangular jaw members, one of said jaw members being provided at one end with an integral transversely extending projection having a curved inner surface affording a pocket for the reception of a tag having a correspondingly curved end, a pair of guide lugs extending upwardly and inwardly from opposite sides of said jaw member at a point remote from said projection and serving to hold the body portion of an inserted tag against lateral or outward movement with respect to said jaw member, the other jaw member being provided at each end with a relatively long and narrow recess positioned centrally with respect to the sides of said jaw member and formed with a bottom wall curved to provide a deflecting surface for the prongs of a tag carried by the first mentioned jaw member, whereby when the two jaw members are brought together the prongs of an inserted tag are bent downwardly toward the body of the tag and a pair of handle members pivoted together and connected to said jaws.

---

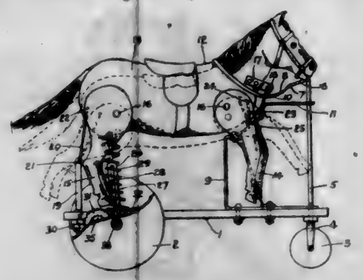
1,556,089. EMBOSSING AND SHEARING MACHINE. WILLIAM R. ECKE, Emsworth, Pa., assignor to James H. Matthews & Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 7, 1925. Serial No. 28,605. 5 Claims. (Cl. 101—3.)



1. In an embossing and shearing machine the combination of a bed, a plunger reciprocable with respect to the bed, a second plunger reciprocable with respect to the bed and adapted to be engaged by the first plunger in its descent and carried toward the bed, a pair of cooperating embossing instrumentalities borne one by the bed and the other by one of the two plungers, and a pair of cooperating shearing instrumentalities borne one by the bed and the other by the other plunger.

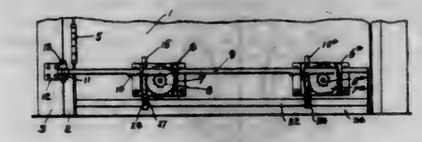
---

1,556,090. CHILD'S VEHICLE. ISAAC JOHN EDWARDS, Vancouver, British Columbia, Canada. Filed Feb. 4, 1924. Serial No. 690,594. 3 Claims. (Cl. 208—42.)



1. In a child's vehicle, a propelling mechanism comprising a shaft driven from a counter shaft having a fixed ratchet wheel thereon, a freely rotatable gear having a pawl in engagement with said ratchet wheel and a reciprocating rack having teeth in engagement with said gear.

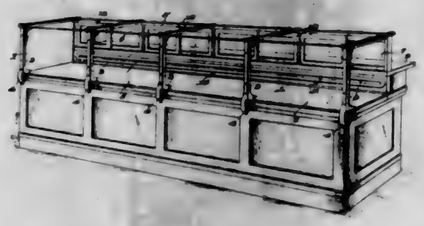
1,556,091. DRAFT EXCLUDER. THOMAS EDWARDS, Vancouver, British Columbia, Canada. Filed Mar. 13, 1924. Serial No. 699,106. 3 Claims. (Cl. 20—68.)



1. The combination with a hinged door and a weather strip for the lower edge thereof, of a horizontal bar movable with the door and pivoted at one end at a point adjacent the hinged edge of the door; and a connection between the bar and strip functioning to raise the strip during opening movement of the door and to lower the strip during closing movement of the door.

---

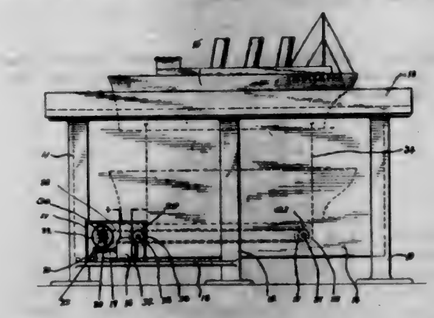
1,556,092. REFRIGERATOR DISPLAY COUNTER. ALBERT H. EHRLICH, St. Joseph, Mo. Filed May 4, 1921. Serial No. 466,801. 1 Claim. (Cl. 24—25.)



A refrigerator show-case including a counter, a detachable glass enclosed case extending along the top thereof and clamped thereto, the said case having a compartment along the rear portion thereof and opening into the said case, the top of said compartment being formed as a shelf, cooling pipes in said shelf compartment, and doors between the said shelf and the upper rear edge of said case.

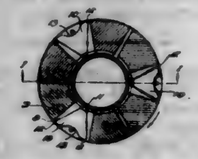
---

1,556,093. SUBMERGIBLE FLOATING TOY. ANTON FILACCHIVO, Newark, N. J. Filed Sept. 4, 1923. Serial No. 660,909. 2 Claims. (Cl. 46—87.)



1. The combination with a water filled tank and a ship floating thereon, of a pair of shafts rotatable in said tank, means for actuating said shafts, grooved cams fixed on said shafts, and flexible elements attached to the hull of said ship adapted to be wound on said cams.

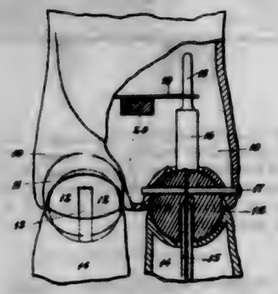
1,556,094. BACK-UP SLIP. HAROLD W. FLETCHER, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Nov. 23, 1922. Serial No. 602,916. 12 Claims. (Cl. 24—263.)



1. In a device of the character described, a plurality of pipe-engaging slips, transversely arranged teeth on the inner faces thereof, a single vertical tooth loosely mounted in a central recess in each slip, said tooth being formed to grip the pipe when said slip is rotated relative to said pipe.

---

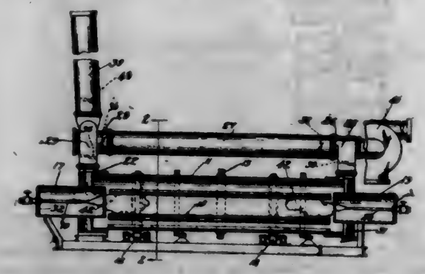
1,556,095. SWIVEL JOINT FOR DOLLS. OTTO GANS, Waltershausen, Germany. Filed Apr. 19, 1924. Serial No. 707,628. 1 Claim. (Cl. 46—40.)



In a swivel-joint for walking dolls, sockets in the thigh and the body of said doll, a ball in said sockets having a vertical slot, a shaft for said ball, an elastic connecting ball and thigh, attached at one end in said slot and at the other to said thigh, a walking mechanism for said doll, an arm secured to said ball and rotating with said shaft, said arm adapted to be engaged in the moving parts of the walking mechanism for said doll.

---

1,556,096. COMBINATION DRIER. THEODORE A. GANROW, Los Angeles, Calif. Filed Mar. 11, 1924. Serial No. 698,531. 8 Claims. (Cl. 34—6.)

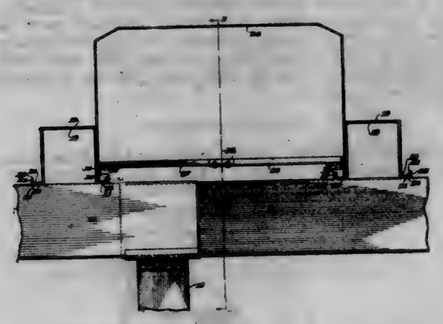


4. In a device of the character described, the combination of: a rotary tubular shell; means at the forward end of said shell for delivering a material thereinto; means at the rearward end of said shell through which

said material is discharged; and means equipping said shell for use in drying light or heavy materials, consisting of housings forming combustion chambers at each end of said shell, and burners situated in each of said housings for selectively producing a flow of gases through said shell from either end thereof.

---

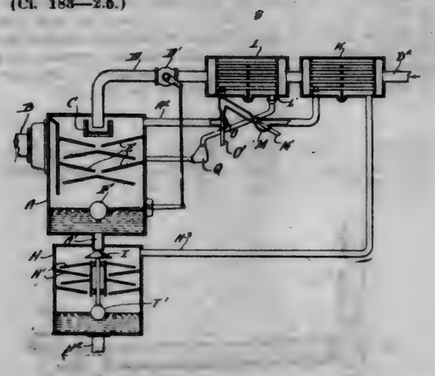
1,556,097. ALL-METAL SYSTEM FOR CONCRETE MOLDING. HARVEY M. GERSMAN, Chicago, Ill., assignor to Kalman Steel Co., Chicago, Ill., a Corporation of Delaware. Filed June 27, 1924. Serial No. 722,721. 11 Claims. (Cl. 25—131.5.)



1. In a concrete molding system, the combination of shores, a cap member thereon and metal stringers rested on said cap member, said stringers being of inverted channel construction and comprising alternate wide and narrow units, the narrow unit being adapted to be received within the wide unit.

---

1,556,098. WATER DEAERATION. GEORGE H. GIBSON, Montclair, N. J., assignor to Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1922. Serial No. 602,463. 15 Claims. (Cl. 183—2.5.)



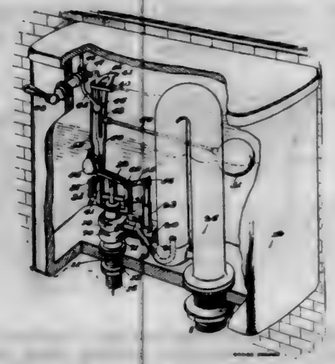
1. The method of deaerating water which consists in passing the water through a closed chamber containing a vapor space, withdrawing air and vapor from said chamber to maintain a vapor pressure in the chamber lower than the pressure of the atmosphere, passing the water from the first chamber through a second closed chamber containing a vapor space, and withdrawing air and vapor from said second chamber to maintain a vapor pressure therein lower than the vapor pressure in the first mentioned chamber.

1,556,099. COVER FOR SEMISOLID BALLS. JAMES J. GILSON, Philadelphia, Pa. Filed Jan. 22, 1924. Serial No. 687,682. 4 Claims. (Cl. 273—58.)

1. A cover for balls comprising semi-spherical sections, each made up of interfitting parts of a figure-8 stitched together.

---

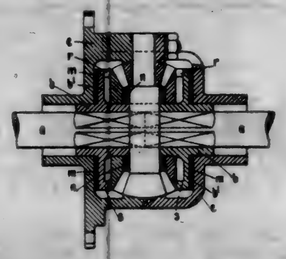
1,556,100. FLUSHING TANK. NICHOLAS JOSEPH GONDOLF, New Orleans, La. Filed June 6, 1922. Serial No. 566,838. 6 Claims. (Cl. 4—44.)



1. A flushing apparatus comprising a valve associated with the casing, a main actuating lever for controlling said valve and having a longitudinal slot formed with a diagonal branch, a float having an arm rigidly connected to said main actuating lever, a second valve for controlling the discharge of water from said first named casing, a link having connection with said second valve and provided with a yoke slidable on said main actuating lever, and an actuating handle having an arm slidable in said slot and adapted to be received within said diagonal branch and to engage said yoke whereby to lock the yoke in an elevated position.

---

1,556,101. DIFFERENTIAL GEARING. GAVIN CAIRD GOODHART, Inkpen, England. Filed Sept. 8, 1920. Serial No. 409,012. 14 Claims. (Cl. 74—99.)

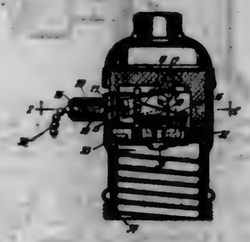


1. In differential gearing of the class described and in combination with a rotatable housing and means for driving the same; differential pinion mechanism rotatable

with said housing; two driving gears driven by said pinion mechanism; two driving axles driven one by each of said driving gears; and two locking devices associated one with each of said driving axles and acting to lock the same relative to said housing so as to rotate in unison therewith each locking device comprising a driving member operatively connected with a driving axle; two cams carried one by said driving member and the other by one of the driving gears aforesaid, and with cams act to force said driving member and driving gear apart; and co-operating friction surfaces which are forced into engagement with one another by the action of said cams.

---

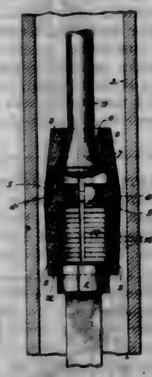
1,556,102. ELECTRIC SWITCH. DAVID D. GORDON, Chicago, Ill., assignor to McGill Manufacturing Company, Valparaiso, Ind. Filed May 19, 1921. Serial No. 470,871. 6 Claims. (Cl. 173—354.)



1. A switch mechanism comprising a U-shaped frame having laterally extending lug stops, an insulation mechanism supporting plate fitting over the legs of the frame, and means for holding the plate against said stops.

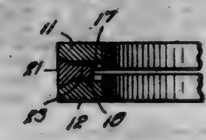
---

1,556,103. GRAPPLE. HARRY S. GOSS, Midwest, Wyo. Filed Jan. 28, 1925. Serial No. 5,277. 8 Claims. (Cl. 294—102.)



1. In a grapple, the combination of a plurality of slips each having a transverse groove formed in the exterior surface thereof; a fulcrum ring loosely mounted in said grooves and serving to maintain said slips in assembled relation; a relatively movable head located between the slips for engagement therewith only above the fulcrum ring to swing the upper portion of each of the slips outwardly about said ring as center, each of said slips having a portion adapted, upon said swinging movement of the slips, to engage an object to be lifted; and suspension means for said head.

1,556,104. METALLIC PISTON RING. JAMES R. W. GAMOC, Medford, Oreg. Filed June 28, 1921. Serial No. 480,970. 2 Claims. (Cl. 74—109.)



1. A piston packing comprising two outer and one intermediate rings, each outer ring having lap joints cut in their ends, with the overlapping and engaging faces concentric with the periphery of said outer rings, a lock on the intermediate ring and recesses in the adjacent faces of the outer rings adapted to receive said lock, to lock the said rings against relative rotation.

---

1,556,105. [WITHDRAWN.]

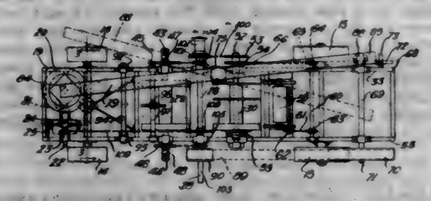
---

1,556,106. ORNAMENT. ARTHUR L. HAMILTON, Bellaire, Tex. Filed Apr. 30, 1923. Serial No. 635,605. 2 Claims. (Cl. 63—2.)

2. An ornament including a necklace formed with a clasp, ear engaging members, depending chains connected, at their respective ends, to said ear engaging members and adapted to hang, one in front and the other in the rear of the wearer, one of said chains being also connected, to each side of said necklace and a pendant carried by each chain.

---

1,556,107. PORTABLE DRILLING RIG. WILLIAM R. HAMILTON, Los Angeles, Calif. Filed Jan. 30, 1923. Serial No. 615,800. 5 Claims. (Cl. 255—3.)



1. In a portable drilling rig of the class described, the combination of: a vehicle having side frame members; a rotary table mounted at the forward end of said vehicle; a jack frame situated upon said vehicle, said jack frame comprising an A bracket mounted upon each of said side frame members, each formed of a pair of inclined legs converging upwardly from said frame members to an apex; a tension member disposed between

each apex and a central point on each of said frame members for trussing said frame members; a jack shaft mounted upon said jack frame; means for driving said jack shaft; a sprocket mounted near each end of said jack shaft; a drum shaft having a small sprocket at one end thereof, and a large sprocket at the other end thereof, each of said drum shaft sprockets being drivable from one of said jack shaft sprockets; and clutch means whereby said drum may be driven from said jack shaft through either said large sprocket or said small sprocket.

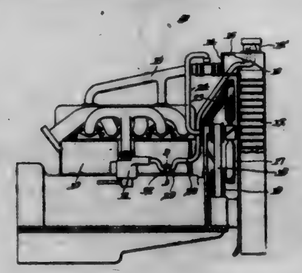
---

1,556,108. BRAKE-PIN RETAINER. VICTOR H. HARMAT, Springfield, Ill., assignor to E. Payson Smith, Springfield, Ill. Filed Aug. 11, 1922. Serial No. 581,138. 6 Claims. (Cl. 85—8.)

1. A brake pin retainer comprising two members resiliently connected, the end of one of said members bent to form an acute angled flange.

---

1,556,109. AIR PURIFIER AND MOISTENER FOR INTERNAL-COMBUSTION ENGINES. LESLIE SCOTT HAYES, Louisa, Ky., assignor of one-half to Fred M. Vinson, Louisa, Ky. Filed June 6, 1925. Serial No. 35,378. 5 Claims. (Cl. 123—25.)

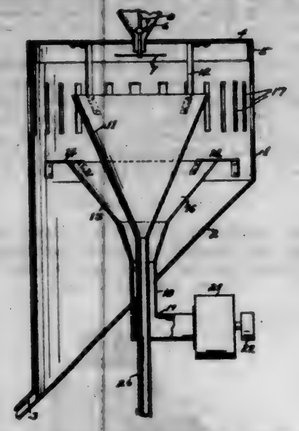


1. The combination with an internal combustion engine having a circulatory water cooling system including a radiator and a carburetor connected with the engine, of a pipe leading from the interior of said radiator to the carburetor to conduct cleansed and moistened air and water vapor thereto, said carburetor being closed to outside air except through said pipe, and means for introducing outside air under forced draught to said cooling system and through a portion of the water therein to the radiator, said means being supplementary to the carburetor suction.

---

1,556,110. PROCESS FOR SEPARATING CALCINED COLEMANITE FROM CLAY AND OTHER IMPURITIES. HENRY D. HELLMERS, Las Vegas, Nev., assignor to West End Chemical Company, Oakland, Calif., a Corporation of California. Filed Apr. 10, 1923. Serial No. 631,139. 3 Claims. (Cl. 23—54.)

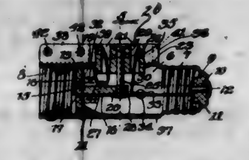
2. The process for separating calcined colemanite from clay and other impurities which consists in discharging the material to be treated peripherally by centrifugal force in baffling the lighter particles dropping naturally within a limited central area and collecting the particles



in a receiving vessel and in drawing certain of the heavier particles dropping outside of the receiving vessel into a second vessel by suction.

---

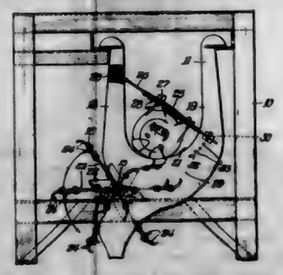
1,556,111. CURRENT-TAP SOCKET. MAX HERSKOVITZ, Chicago, Ill., assignor to Peerless Light Company, Chicago, Ill., a Corporation of Maine. Filed June 28, 1923. Serial No. 648,227. 9 Claims. (Cl. 173—334.)



1. A device of the character described comprising a tubular member provided at its opposite ends with contacts, a strip member extending lengthwise of said tubular member and connecting together certain of said contacts, said tubular member containing openings in its side wall, and a block of insulating material extending crosswise of said tubular member in a plane parallel with said strip member, and extending at its ends into said openings.

---

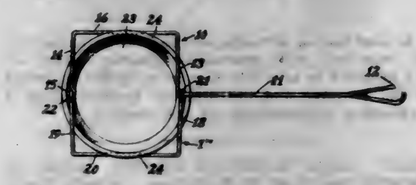
1,556,112. APPARATUS AND PROCESS FOR DEHAIRING ANIMAL CARCASSES. BERT EUGENE HILL, Chicago, Ill., assignor to Allied Packers, Incorporated, Chicago, Ill., a Corporation of Delaware. Filed Jan. 6, 1923. Serial No. 611,019. 7 Claims. (Cl. 17—18.)



6. A method for dehairing animal carcasses, which consists in concurrently moving the carcass in the direction of its longitudinal axis, scraping the carcass in a direction transverse to its longitudinal axis whereby a torque is applied to the carcass tending to rotate the same, and scraping the carcass in the reverse direction.

---

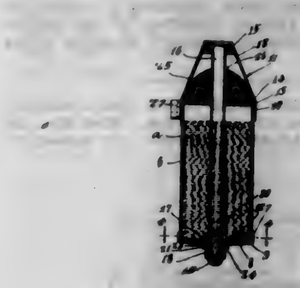
1,556,113. PAN AND PLATE LIFTER. JACOB HORSTEDE, Lomita, Calif. Filed Dec. 18, 1924. Serial No. 755,606. 1 Claim. (Cl. 294—30.)



A lifter for pans and plates comprising a wire handle bent to form at one end a U-shaped frame-piece having an open unobstructed side, and a complementary U-shaped frame-piece consisting of another wire, loosely hinged to said aforementioned frame-piece, said frame-pieces being adapted to cooperatively engage the edges of a pan or plate to lift the latter.

---

1,556,114. VAPORIZING DEVICE. JAMES H. HOPKINS, Los Angeles, Calif., assignor, by mesne assignments, to Vapor Lubricant Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 14, 1921. Serial No. 514,935. 1 Claim. (Cl. 261—124.)



In an apparatus of the character described, the combination of a light-transmitting vertical cylinder, heads at the opposite ends of the cylinder, a vertical tube opening at its upper end through the upper head and having a port for its lower end, the upper head having an internal annular lip, a screen positioned in the upper head and surrounding the tube and resting on the annular lip, and an outlet pipe communicating with the upper head.

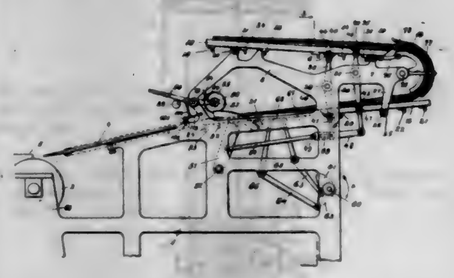
---

1,556,115. PLASTIC. WILLIAM HOSKINS, Chicago, Ill., assignor to Economy Fuse & Manufacturing Company, Chicago, Ill., a Corporation of New York. Filed Feb. 21, 1923. Serial No. 620,502. 9 Claims. (Cl. 106—27.)

1. A plastic composition produced by the interaction of a phosphatic material, sulfuric acid and an aluminate binder.

---

1,556,116. PAPER-FEEDING APPARATUS FOR PRINTING PRESSES, FOLDING MACHINES, AND THE LIKE. MAX GÜNTHER WILHELM KOENIG, Berlin-Grunewald, Germany, assignor to Maschinenfabrik Koenig-Werk G. m. b. H., Berlin-Grunewald, Germany, a Joint Stock Company. Filed Apr. 18, 1925. Serial No. 24,152. 6 Claims. (Cl. 271—62.)



5. An apparatus for feeding banks of sheets of paper, comprising a pair of bank supporting tables located one above the other and made in sections, a reversing member disposed between said tables at one of the ends thereof, means to impart feeding movement to said tables, and means for successively returning the sections of the tables into initial positions.

---

1,556,117. SURFACE CONDENSER. CHARLES LEONARD ARMAND MAURICE LEBLANC, Paris, France, assignor to Societe Anonyme pour l'Exploitation des Procedes Westinghouse-Leblanc, Paris, France. Filed May 15, 1920. Serial No. 381,762. 7 Claims. (Cl. 257—43.) (Granted under the provisions of the act of Mar. 3, 1921. 41 Stat. L., 1313.)

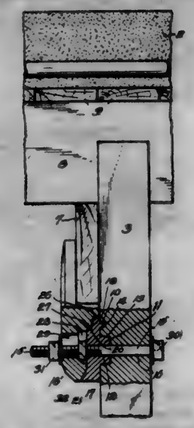
1. In combination in a surface condenser, a casing having a steam inlet port and a condensate delivery port, a nest of tubes located within said casing, means for deflecting steam entering said inlet port and for causing said steam to traverse said nest in an ascending direction across the path of the condensate and means for extracting air and non-condensable gases from the top of said nest of tubes.

---

1,556,118. REENFORCED-CONCRETE-FLOOR-FORM CARRIER-SUPPORTING BRACKET. PHILIP LEE, St. Louis, Mo. Filed Nov. 19, 1923. Serial No. 675,509. 6 Claims. (Cl. 25—131.5.)

1. A carrier supporting bracket for reenforced concrete floor form structures comprising a stationary

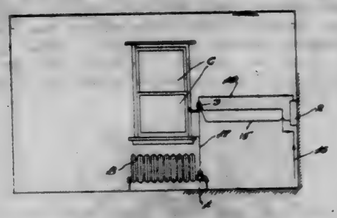
bracket member removably fixed to a supporting post having beveled shoulders at different elevations at the upper end of said member and a beveled extension at



its lower end and a movable bracket member for supporting form carriers shiftable laterally and downwardly for lowering carriers supported thereby.

---

1,556,119. THERMOSTATIC RADIATOR CONTROL. CHARLES C. MCDERMOTT, Chicago, Ill. Filed Sept. 5, 1922. Serial No. 586,255. 5 Claims. Cl. 236—36.)



1. In a room, the combination of a heat supply line, a ventilating device, a fluid pressure valve interposed in the heat supply line and adapted for governing the heat supply through said line, a fluid pressure line leading to said valve, thermal means controlling the fluid supply to said valve, and means for connecting the fluid pressure line directly with the valve in the heat supply line by rendering the ventilating device active and for connecting said fluid pressure line with the valve in the heat supply line by way of said thermal controlling means when the ventilating device is rendered inactive.

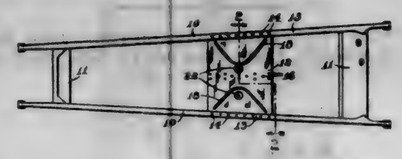
---

1,556,120. METHOD OF STERILIZING PROTEINS OR OTHER COLLOIDAL MATERIAL. CLARENCE A. MILLS, Cincinnati, Ohio. Filed July 25, 1922. Serial No. 577,442. 4 Claims. (Cl. 167—7.)

1. A process for sterilizing sensitive medicinal and therapeutic proteins and the like, which consists in treating a solution containing such protein with mercury bichloride, subsequently clearing the solution by converting the mercury proteinate into the protein and the mercury in a soluble double salt, and then removing the double salt from the solution.

4. A process of sterilizing organic non-diffusible colloids having useful medicinal functions which consists in treating a solution of such colloids with a sterilizing salt of mercury, adding a chemical to act with the salt of mercury to form a soluble mercury salt, and dialyzing the solution to remove the mercury salt, leaving a sterile colloidal solution.

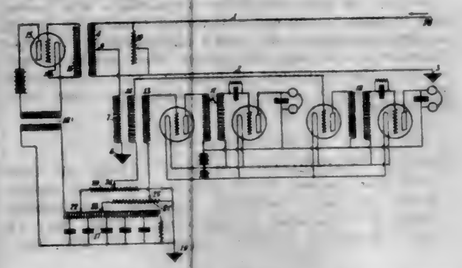
1,556,121. AUTOMOBILE FRAME STIFFENER. JOHN C. MOORE, Connersville, Ind. Filed Dec. 23, 1921. Serial No. 524,865. 10 Claims. (Cl. 280—106.)



1. In combination with the side bars of an automobile frame, relatively wide sheet-metal members which are rigidly attached to said side bars on vertically separated lines and converge and are attached together along a line extending longitudinally of said frame.

---

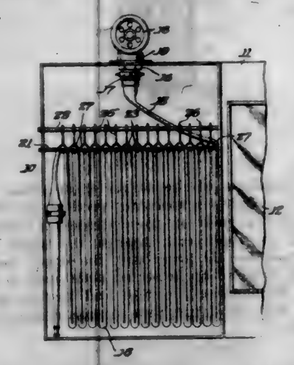
1,556,122. RADIO RECEIVING SYSTEM. ALBERT B. MOULTON, New York, N. Y., assignor to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Nov. 1, 1922. Serial No. 598,446. 29 Claims. (Cl. 250—20.)



1. A radio receiving system comprising in combination a long horizontal antenna consisting of two parallel conductors and a damping resistance connected across adjoining ends.

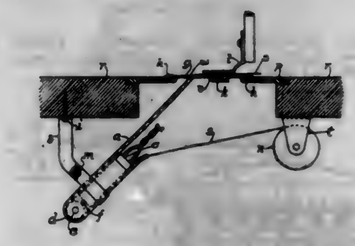
---

1,556,123. COMBINED HOSE RACK AND CABINET. CHARLES NUHRING, Cincinnati, Ohio. Filed Mar. 20, 1922. Serial No. 545,381. 12 Claims. (Cl. 248—28.5.)



1. In a hose supporting device, the combination with a plurality of pivotally mounted hose supporting elements adapted for supporting hose in pendent loops, of a pivoted support for each of said supporting elements engageable with the latter and successively releasable from the supporting elements under pressure exerted on the supports when withdrawing the hose from said supporting elements.

1,556,124. PROCESS AND APPARATUS FOR REENFORCING SHOE VAMPS, TIPS, AND THE LIKE. PHILIP L. O'DONNELL, Cincinnati, Ohio. Filed May 1, 1922. Serial No. 557,543. 6 Claims. (Cl. 154—42.)

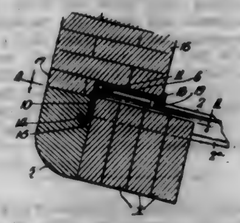


3. A process of applying tape to shoes and leathers during the reenforcing operation which consists in applying heat to a heat plastic tape, and while hot feeding the tape together with the portion to be taped, by applying a drag on one side of the article, directed toward the desired line of feed, and at the same time imparting to the other side of the article a series of rapidly successive blows at approximately the same point of application as the drag, the mechanism for applying the drag and blows being free from heat.

6. A process for reenforcing shoes and leather which consists in supplying a selvage edge tape, having adhesive substance thereon in a plastic state, supplying a leather or shoe portion to be reenforced, and applying a frictional feeding action to the said materials at their point of junction and simultaneously causing them to adhere without stretching.

---

1,556,125. FIRE ARCH. HERMAN A. POPPENHUSEN, Hammond, Ind., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Aug. 4, 1921. Serial No. 489,718. 6 Claims. (Cl. 110—99.)



1. In a fire-arch, two laterally spaced beams, a row of tiles between said beams and suspended therefrom, said tiles being in contact with each other, a plate extending between said beams above said tiles, an end tile at one end of said row and in front of said plate, and means for suspending said end tile from said plate, said plate having engagement with said beams so that said end tile may be adjusted into contact with the tile to the rear thereof.

---

1,556,126. BOND-WIRE SUPPORTER. FREDERICK A. PRESTON, Highland Park, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1921. Serial No. 449,893. 6 Claims. (Cl. 173—262.)

1. A bond wire supporter for attachment by a fastening device to the bar splicing abutting railroad rails composed of a substantially Z-shaped strip of metal bent to form a loop for the bond wire and to provide spaced portions which together embrace said fastening device,

the ends of which loop are forced one upon the other to close the loop when the supporter is fastened to the splice bar.

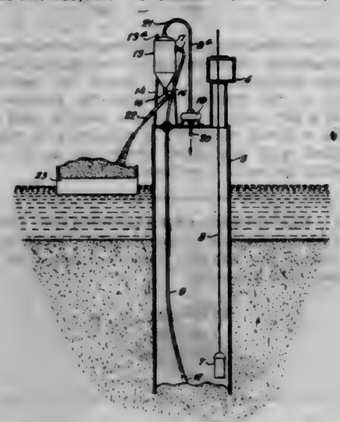
---

1,556,127. BAIT-CAN HOLDER. WILLIAM A. PRUETT, Los Angeles, Calif. Filed Feb. 25, 1924. Serial No. 695,073. 4 Claims. (Cl. 224—25.)

1. The bait can holder attachment set forth comprising a body; a hook and arms integral with said body, said hook, arms, and body being a sheet metal stamping, and said body and arms being of a form adapted to engage and hold a can; a liquid having a forward extension forming a finger hold; said lid being pivotally connected to the body and adapted to close the open end of the can; and a spring for normally holding the lid in closed position.

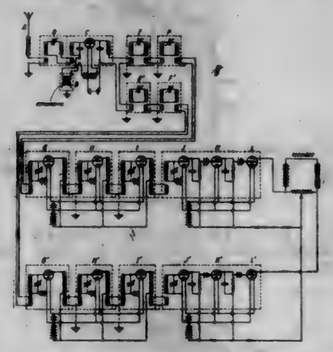
---

1,556,128. METHOD OF HANDLING MATERIAL IN THE PRESENCE OF COMPRESSED AIR. WILLIAM F. ROOS, Pelham Manor, N. Y. Filed Feb. 15, 1923. Serial No. 619,321. 13 Claims. (Cl. 37—56.)



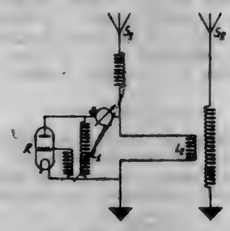
1. The method of handling material in the presence of compressed air normally sealed to the atmosphere which consists in moving the material by means of a fluid conveyor in a manner to maintain the pressure of said compressed air at an approximately constant point.

1,556,120. RECEPTION OF WIRELESS SIGNALS. HENRY JOSEPH ROUND, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed July 9, 1921. Serial No. 483,492. 4 Claims. (Cl. 250—8.)



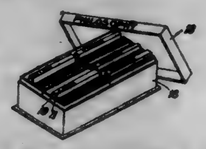
1. The method of beat reception of wireless telegraph signals which consists in passing the beat currents through resonance circuits of damping so low that the signals cannot be detected by the ear rectifying the beat currents and causing the rectified currents to actuate a recorder.

1,556,130. CIRCUIT ARRANGEMENT FOR WIRELESS SIGNALING. OTTO SCHRIEVER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallescher, Berlin, Germany, a Corporation of Germany. Filed Dec. 27, 1922. Serial No. 609,214. 11 Claims. (Cl. 250—17.)



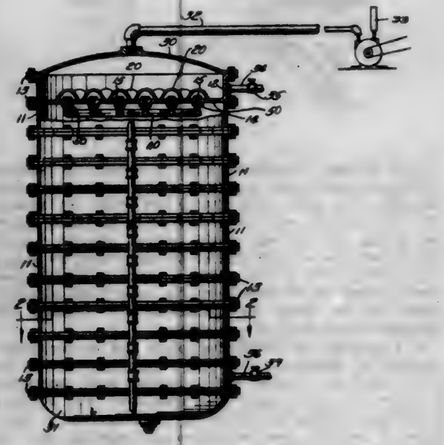
1. A circuit arrangement comprising two senders having their antennæ electrostatically coupled, and arranged to operate simultaneously, and means for neutralizing the effect of the coupling between the antennæ with respect to a part only of one of the senders, said means comprising a circuit connected in parallel with said part and coupled with the other sender so as to receive compensating potential therefrom.

1,556,131. RECORDING AND CLASSIFYING SYSTEM. ALVA L. SCOVILLE, Los Angeles, Calif. Filed Apr. 13, 1921, Serial No. 461,053. Renewed June 30, 1925. 2 Claims. (Cl. 129—16.)



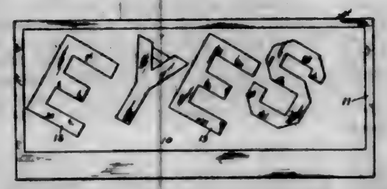
2. In a recording and classifying system, a tray, data-bearing cards removably received in the tray, a follower for maintaining the cards in proper position, said follower being formed of a single card board in the shape of an inverted V, the legs of which tend normally to spread apart whereby to compact the cards, said follower having a flat ridge at its top formed integral with the legs to receive a general designation explanatory of the subject matter contained on the cards.

1,556,132. EVAPORATOR. SAMUEL T. SMITH, Los Angeles, Calif. Filed May 26, 1923. Serial No. 641,586. 3 Claims. (Cl. 196—100.)



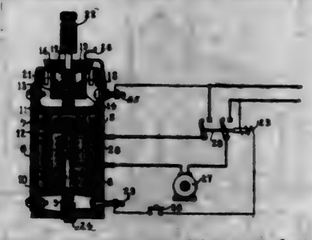
1. An evaporator comprising: walls forming a gas tight enclosure; septums extending across said enclosure so placed as to form pools of menstruum on the upper surface thereof; a series of bosses on said septums extending upwardly therefrom and each having a vertically disposed hole therethrough; a series of deflectors each being placed over one of said bosses and forming an inverted cup extending downwardly about said boss; a series of heating coils, each coil being placed below one of said septums and above the menstruum carried on the next lower septum, each turn of the heating coil being so placed that the drip through said vertically disposed holes falls on said heating coil; means for delivering liquid to the space above an upper septum; means for withdrawing liquid from the space below a lower septum; and means for withdrawing vapors from the top of said enclosure.

1,556,133. SIGN. NATHAN M. STANLEY, Dayton, Ohio. Filed Feb. 2, 1925. Serial No. 6,256. 6 Claims. (Cl. 40—129.)



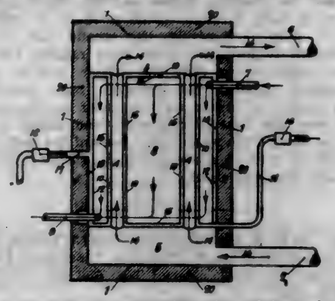
1. In a sign, a plurality of movable letters pivoted at one end thereof closely adjacent thereto so that the upper end does not move bodily laterally and means for moving said letters bodily about said pivotal points.

1,556,134. PROTECTIVE DEVICE FOR ELECTRIC CIRCUITS. ERWIN R. STOEKLE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1922. Serial No. 537,860. 7 Claims. (Cl. 200—122.)



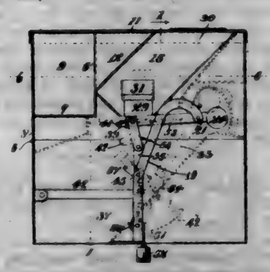
1. A circuit interrupter comprising a conductor which is liquid at working temperatures, electro-thermic means including an external heater for subjecting said conductor to fluid pressure of its own vapor to effect sudden interruption of circuit through said conductor and means requiring operation thereof to effect restoration of circuit.

1,556,135. METHOD AND APPARATUS FOR PREVENTING SUBSTANCES FROM MIXING. JAN VAN DER HOEVEN, Leiden, Netherlands. Filed May 19, 1923. Serial No. 640,281. 16 Claims. (Cl. 23—230.)



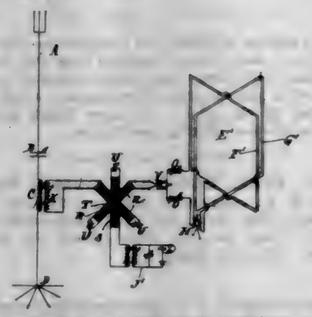
1. A method of preventing the mixing of undesired substances on the breaking down of a separating partition consisting of introducing into the space between the double separating partition a separating substance neutral to the possible extent, having a pressure different from those of said substances to be separated and providing a device operated by pressure differences in connection with said separating substance to indicate any alteration of pressure therein.

1,556,136. TRAP. AXEL WAHLSTROM, Oakland, Calif. Filed Aug. 5, 1924. Serial No. 730,205. 5 Claims. (Cl. 43—70.)



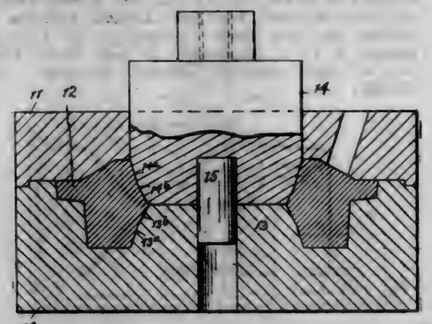
1. A trap consisting of a plurality of superimposed chambers, a tiltable diversion wall separating the same and forming a floor for the upper chamber, a bait holding means accessible from the upper chamber, a pivotally suspended member provided with a hopper at its upper end, a trigger mechanism for normally maintaining said pivotally suspended member in substantially upright position, mechanism actuated by the operative swinging movement of the pivotally suspended member for imparting a tilting movement to the division wall, means for supply material to the hopper for causing pivotal movement of the suspended member and means for restoring said dividing wall and said pivotally suspended member to their normal positions on the dumping of the charge from said hopper.

1,556,137. METHOD AND APPARATUS FOR RADIO-SIGNALING. ROY ALEXANDER WEAGANT, Douglas Manor, N. Y., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Feb. 7, 1919. Serial No. 275,556. 20 Claims. (Cl. 250—20.)



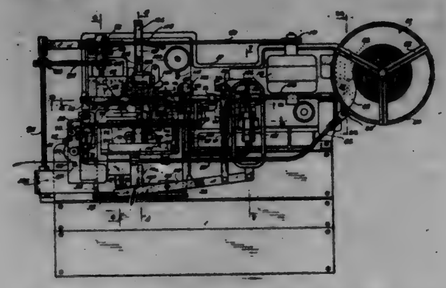
1. The method of reducing static interference in radio communication which consists in receiving signals and heterogeneously polarized static waves in each of a plurality of antenna system portions one of which portions is directional, said antenna system portions being differently affected by vertically polarized horizontally propagated waves of different azimuth, comulatively combining the currents due to said signal waves on said portions to increase signals and differentially combining the currents due to static waves on said portions to reduce static interference.

1,556,138. MOLD AND METHOD OF CASTING. WILLIAM G. WEBB, East Cleveland, Ohio, assignor to The Cleveland Electric Tramrail Co., Wickliffe, Ohio. Filed July 30, 1923. Serial No. 654,560. 12 Claims. (Cl. 22—168.)



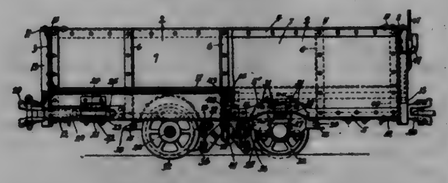
1. A mold having a chill for chilling the metal around the wall of an inner opening, said chill being tapered at an angle such that there will be a relative axial movement between the chill and the casting as the latter contracts upon the chill in cooling.

1,556,139. SEALING MACHINE. MERLE J. WEST, Milwaukee, Wis., assignor to West Manufacturing Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 30, 1923. Serial No. 677,781. 26 Claims. (Cl. 216—9.)



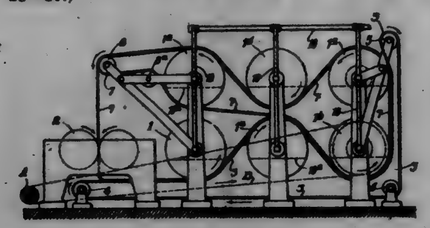
1. In a sealing machine, the combination with a punch for cutting a seal from a sealing strip fed thereto, of seal-affixing mechanism, and means including a movable carrier and a pin mounted thereon upon which the seal is impaled by the punch and upon which the seal is carried to the seal-affixing mechanism.

1,556,140. STEEL MINE CAR. JAMES B. WOLF, Glen Ridge, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 24, 1925. Serial No. 4,515. 11 Claims. (Cl. 105—364.)



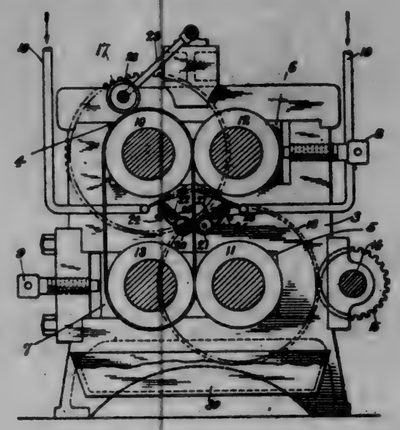
1. In a car structure, a body having walls and a bottom, a housing extending longitudinally in the body and opening through the bottom of the body, brakes beneath the body, and brake operating means including a member extending longitudinally in the housing.

1,556,141. PROCESS AND APPARATUS FOR MASTICATING RUBBER. HARRY CLARANCE YOUNG, Sutton, and COLIN MACBETH, Four Oaks, England, assignors to Dunlop Tire and Rubber Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed Jan. 31, 1924. Serial No. 689,822. 9 Claims. (Cl. 18—50.)



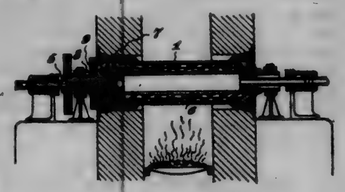
2. The method of treating raw rubber which consists in masticating it and converting it into sheet form and passing it automatically in such form around cooling rollers to a point where it is again masticated, and repeating such operations to the desired extent.

1,556,142. WASH MILL. PHILIP E. YOUNG, Fair Haven, Mass. Filed July 31, 1922. Serial No. 578,572. 3 Claims. (Cl. 18—2.)



1. A mill for washing rubber and the like comprising two pairs of rolls through which a sheet of rubber is adapted to pass successively, the second pair of rolls being adapted to pull the sheet more rapidly than the first pair feeds it, so that the rubber will be placed under tension between the pairs of rolls, means for directing sprays of water on the sheet as its emerges from between the first pair of rolls and means for deflecting the flow of the wash water toward the ends of the second pair of rolls to prevent dislodged dirt from being ground back into the sheet.

1,556,143. STEAM GENERATOR. JOHAN VIKTOR BLOMQUIST and KARL FREDRIK WESSELAD, Stockholm, Sweden. Filed Aug. 11, 1923. Serial No. 656,832. 1 Claim. (Cl. 122—11.)

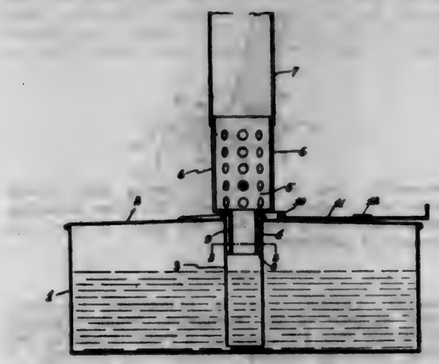


A high pressure steam generator, comprising, a rotary tubular element, the element having two ends, a cover fixed to one of the ends, a hollow journal carried by the cover, an annular sleeve shaped member fixed to the other end of the element and provided with a seat, a removable cover formed to fit the seat, a hollow journal carried by the removable cover, and means for removably and tightly connecting the removable cover to the sleeve shaped member.

1,556,144. ORCHARD HEATER. HENRY F. CONGABLE, Oakland, Calif. Filed Sept. 20, 1923. Serial No. 663,778. 7 Claims. (Cl. 158—91.)

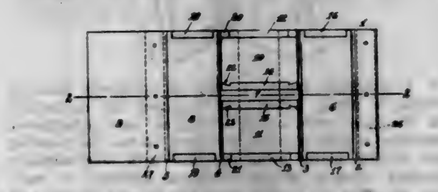
7. A heater comprising a tank, a cover on said tank, a tube secured to said cover and extending into said tank, a conduit extending into said tube, a combustion chamber positioned at the upper end of said conduit, said conduit being of smaller diameter than the tube

to form an air passage, a tapered yoke positioned between the cover and the bottom of the combustion chamber to adjust said chamber above said cover and



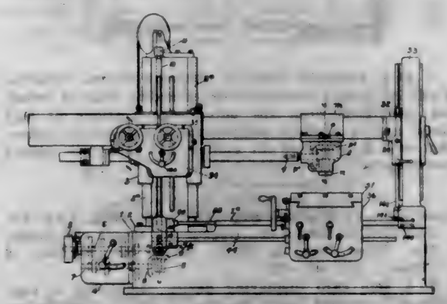
admit air into said passage, a handle for said yoke whereby the same may be operated and a guide for said handle.

1,556,145. LUG BOX. EDWARD T. DYSON, Oakland, Calif. Filed Dec. 27, 1923. Serial No. 682,941. 2 Claims. (Cl. 217—12.)



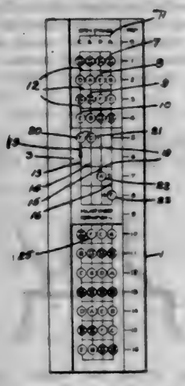
1. A packing box comprising a strip of thin material adapted to form the top, front, rear and bottom faces, side strips secured to the bottom of said box, strips secured to the outer edge of the bottom, reinforcing bars secured to the outer edges of the front and rear sides, locking cleats secured to the upper edges of said ends, said locking cleats and strips having notches formed therein into which said reinforcing bars are adapted to fit.

1,556,146. MACHINE TOOL. KARL HOEPFNER, Detroit, Mich. Filed July 29, 1921. Serial No. 488,331. 4 Claims. (Cl. 29—26.)



1. In a machine tool, the combination with a bed, a carriage moveable thereon, a platen transversely moveable on said carriage, feed change gear mechanism carried by said carriage for actuating said carriage and platen, a column, a spindle head vertically moveable thereon, a spindle journaled in said spindle head, an over arm moveable in said spindle head, means for projecting or retracting said over arm, a boring bar longitudinally moveable in said spindle, feed mechanism carried in the spindle head for actuating the spindle head or the boring bar, operative connection with the feed change gear mechanism of the carriage and the feed mechanism of the spindle head, micrometer adjustment to the spindle head, the carriage and the platen, substantially as described.

1,556,147. CHORD INDICATOR FOR MUSICAL INSTRUMENTS. ALLAN W. JOHNSON, Bloomfield, and HARRY MEKKER, Jr., Newark, N. J. Filed Apr. 30, 1924. Serial No. 709,961. 11 Claims. (Cl. 84—485.)

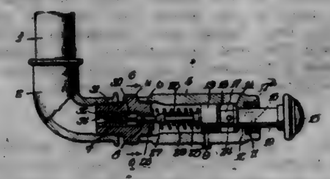


4. A chord indicator for string instruments comprising a base member having characters thereon representing the strings on a finger board, grooves in said base at opposite sides of said characters, a slide movable in said grooves, said slide having perforations to expose characters to indicate a chord.

1,556,148. STERILIZER. DOROTHY KNOTT, Wimbledon Common, England. Filed Feb. 16, 1925. Serial No. 9,690. 3 Claims. (Cl. 167—3.)

1. A sterilizer comprising an outer vessel and an inner vessel mounted in the mouth thereof in an air-tight manner, and a hollow head removably fitted to the mouth of the inner vessel, and a valve and aperture in said inner vessel, substantially as and for the purposes set forth.

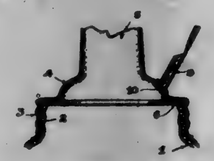
1,556,149. DISPENSING VALVE. HAROLD I. KOPPELMAN, Chicago, Ill., assignor to U. S. Sanitary Specialties Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 7, 1923. Serial No. 637,072. 8 Claims. (Cl. 221—102.)



3. In a dispensing device, the combination of a casing having an inlet port and an outlet port, a plunger operable in the casing to eject liquid through the outlet port, an inlet valve normally closing the inlet port, an outlet valve controlling the outlet port, said valves being movable independently and means operable by the plunger to open the inlet valve while the outlet valve is closed.

---

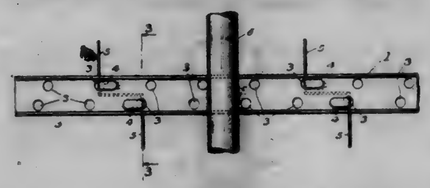
1,556,150. DISPENSING CAN. HENRY G. KUCK, Peoria, Ill. Filed July 3, 1924. Serial No. 723,935. 5 Claims. (Cl. 221—28.)



2. A dispensing device for liquids comprising a receptacle, a separate nozzle or spout including a base adapted to be connected to the receptacle and detachable therefrom, and a handle including a tubular portion formed therewith secured at one end upon the nozzle and opening into the same above its base.

---

1,556,151. SUPPORT AND SPACER FOR REENFORCING BARS. HENRY H. LAMPERT, Chicago, Ill. Filed Dec. 18, 1923. Serial No. 681,879. 1 Claim. (Cl. 72—122.)

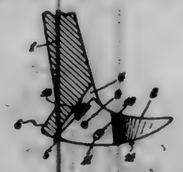


A support for reenforcing bars comprising a channel bar, the web of which is provided with rows of perforations, the perforations being uniformly spaced in each row, but the perforations of one row being staggered with respect to the perforations of the adjacent row, sheet metal supports for said channel bar, said sheet metal supports being bent into Z form and provided with projections extending through said apertures and bent down against the web of the channel bar.

---

1,556,152. SPIKE PULLER. MARGARET E. LEE, Oakland, Calif. Filed Nov. 10, 1923. Serial No. 673,930. 1 Claim. (Cl. 852—24.)

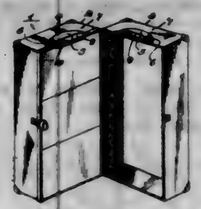
A spike puller comprising an elongated handle, a pair of arms formed on the lower end of said handle, a pin between the arms, and a pair of jaws having apertures therethrough pivoted between said arms, and a spring engaging the rear of said jaws to urge them



downwardly, each of said jaws having slots formed therein and a second pin between the arms extending through said slots, and into the arms, to limit the movement of said jaws.

---

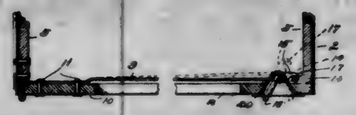
1,556,153. TRUNK. CARL B. LINDENBERG, Columbus, Ohio, assignor to The Indestructo Trunk Company, Columbus, Ohio, a Corporation of Ohio. Filed July 30, 1924. Serial No. 729,171. 1 Claim. (Cl. 190—13.)



In a wardrobe trunk, a pair of relatively movable sections, a tilting attachment designed for connection with the head ends of said sections, said attachment comprising a pair of concavo convex plates, the meeting edges of said plates being provided with longitudinally extending integral flanges arranged adjacent to each other, an offset lip formed upon one of said flanges and arranged to project below the other of said flanges to provide a strengthened union between said plates when the latter are in active positions.

---

1,556,154. WARDROBE TRUNK. CARL R. LINDENBERG, Columbus, Ohio, assignor to The Indestructo Trunk Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 18, 1924. Serial No. 732,647. 2 Claims. (Cl. 190—13.)



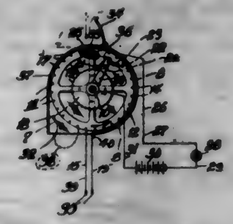
2. In a wardrobe trunk, a wardrobe section including a pair of spaced longitudinally extending sides, a swinging closure between the outer edge portions of said sides, and a metallic reinforcement carried in connection with said closure for pulling said sides into aligned relationship.

---

1,556,155. COMBINED STREET INDICATOR AND ADVERTISING DEVICE. GEORGE T. MOORE, St. Louis, Mo. Filed June 3, 1922. Serial No. 565,553. 6 Claims. (Cl. 40—55.)

2. A sign card displaying device comprising a horizontally arranged shaft bearing a pair of rigidly secured spaced apart members, said members being for the support of a series of sign cards which are arranged so as to overlap one another, each of said cards being borne by said members in a manner whereby each in

turn can be vertically suspended therefrom, a ratchet wheel rigidly secured to said shaft, an armature arm loosely mounted on said shaft, a pawl borne by said arm for engagement with the teeth of said ratchet wheel, an electric magnet co-operable with said arm, a normally open electric circuit co-operable with said arm and said armature which when closed is adapted to cause



said arm to move and the pawl borne thereby to actuate said ratchet wheel, and a horizontally arranged member to be engaged by the intermediate portion of each card after each card has been suspended for assisting the overlapping operation of said cards, and a horizontally arranged member to be engaged by each card after being suspended for assisting the overlapping operation of said cards.

---

1,556,156. RESILIENT WHEEL. FRANZ H. NIERMAN, Jefferson City, Mo. Filed Dec. 5, 1921. Serial No. 519,940. 2 Claims. (Cl. 152—36.)

1. In a vehicle wheel, a felloe therefor, cushioning means surrounding the outer periphery of said felloe, a pair of clamping plates carried by said felloe adapted to provide means for gripping said cushioning means sidewise thereof, an outer felloe located over said cushioning means having a pair of plates secured thereto which are slidable over said other plates, and a resilient tire carried by said outer felloe.

---

1,556,157. DAM. JAMES W. NORTH, Pittsburgh, Pa. Filed Jan. 27, 1925. Serial No. 5,062. 7 Claims. (Cl. 61—27.)

1. A dam comprising a turn-table and a gate collapsibly mounted thereon, and collapsible means for assisting said gate to withstand the hydrostatic pressure imposed thereon and adapted to limit the rotation of said turn-table.

1,556,158. HEADLIGHT LENS. HARRY M. PATCH, Seattle, Wash. Filed Nov. 9, 1920, Serial No. 422,760. Renewed Mar. 16, 1925. 2 Claims. (Cl. 240—48.4.)

1. A headlight lens, having one of its faces formed to provide a non-prismatic surface above the center thereof, a prism above the horizontal diameter of the lens at each side of the aforesaid non-prismatic portion, a prism located below the lens center and medially of the transverse width of the lens, and a prism at each side of the last named prism and below the horizontal diameter of the lens, all of said prisms having outer concave spherical surfaces whose centers of generation are located in the axis of the lens, the prisms above the horizontal diameter serving to refract the light rays passing therethrough into converging directions axially of the lens, the prisms below the horizontal diameter serving to respectively refract to variant extents light rays passing therethrough into radially divergent directions.

---

1,556,159. HEADLIGHT. NORMAN H. RICE, Santa Barbara, Calif. Filed June 4, 1923. Serial No. 643,379. 2 Claims. (Cl. 240—41.)

1. In combination, a headlight housing presenting an annular front opening adapted to receive a lens therein, a second housing of smaller dimensions mounted transversely thereto having a reflector therein adapted to divert a portion of the light rays laterally and having a strip of material extending rearwardly therefrom, the strip being bent at its free end so as to allow the same to lie flat against the front face of the lens and to be turned over and around the edge of the same before the latter is inserted in the housing and having reinforcing flanges depending from its edges made to bear on the lens with the ends thereof, and means associated with the headlight housing made to bear against the front face of the lens and the strip of material after the latter two have been inserted.

---

1,556,160. GAME BULLET. ROY F. RIGGS, Alton, Ill., assignor to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed June 20, 1924. Serial No. 721,198. 8 Claims. (Cl. 102—26.)

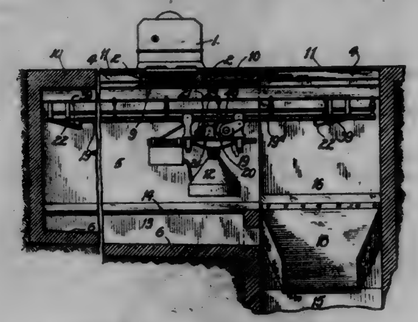
8. A game bullet comprising a solid hard metal body having a cylindrical rear end and a tapered forward end, said last end having a socket formed therein, to

render the forward portion of the body relatively thin and easily susceptible of splitting, and a solid but soft metal slug constituting a tip arranged in the socket

and extending beyond the outer end thereof, the outer end of said slug being relatively small and formed with a fine point, for the purpose described.

---

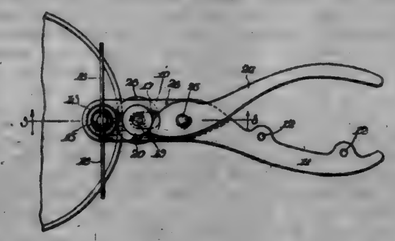
1,556,161. SYSTEM FOR DISPOSING OF METAL CUTTINGS. ALEXANDER G. RIPBERGER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 23, 1925. Serial No. 17,626. 20 Claims. (Cl. 214—1.)



1. The combination with a chamber of a metal cutting machine arranged to deliver its metal cuttings into said chamber, and travelling means in said chamber for collecting and removing said cuttings.

---

1,556,162. CAN OPENER. BENJAMIN ROCKLIN, Chicago, Ill. Filed Feb. 21, 1925. Serial No. 10,727. 1 Claim. (Cl. 30—3.)



In a can opener of the character described, the combination of a body member comprising a rearwardly-extending handle and having a feed roller mounted on one side of a forwardly extending part of the body with means for rotating said feed roller by hand, the body member being provided with a longitudinal slot in the forwardly-extending part thereof, a shaft extending through said slot, a disc cutter mounted for rotation on said shaft and positioned on the same side of the body member as is the feed roller, a disc mounted on said shaft on the side of the body member opposite to that on which said cutter is positioned, and a handle member complementary to said first-mentioned handle pivoted to the body member and having a cam surface at its forward end adapted to engage said disc and move the cutter member forward, the arrangement being such that when the feed roller is placed on one side of the upstanding flange of a can the cutter may be forced into the opposite side of such flange by drawing the two handles toward each other and through the rotation of the feed roller the device as a whole may be caused to travel about the flanged margin of the can to sever the same.

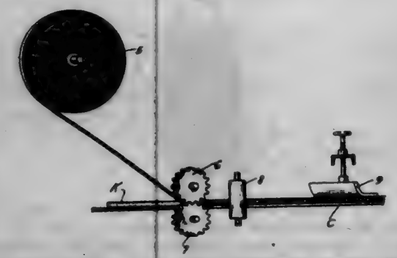
---

1,556,163. REENFORCED PLASTER BOARD. JOHN SCHUMACHER, Los Angeles, Calif. Filed July 24, 1924. Serial No. 727,867. 4 Claims. (Cl. 154—45.9.)

1. A reenforced plaster board or the like comprising a cementitious body, a covering sheet bound thereto, and a narrow corrugated strip embedded in the edge of said body and bound thereto, said strip extending the length of said board and forming a marginal reenforcement.

---

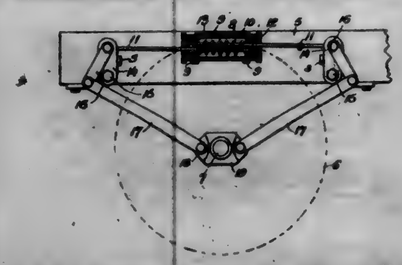
1,556,164. METHOD OF FORMING PLASTER BOARD AND THE LIKE. JOHN SCHUMACHER, Los Angeles, Calif. Filed July 24, 1924. Serial No. 727,868. 6 Claims. (Cl. 154—2.)



1. The method of forming reinforced plaster board and the like comprising advancing a green board having a plastic stratum and a pliable covering sheet, corrugating a strip of pliable reinforcement material, and forcing edgewise said strip into said body.

---

1,556,165. VEHICLE BODY SUSPENSION. BENJAMIN F. SEYMOUR, Indianapolis, Ind. Filed Dec. 14, 1920. Serial No. 430,694. 5 Claims. (Cl. 267—20.)

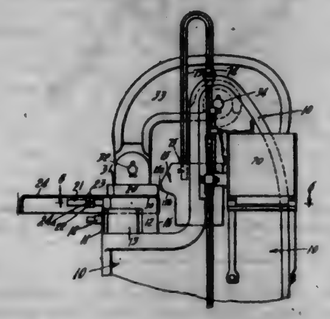


1. In a resilient suspension for vehicle bodies, the combination with a chassis, an axle, and a wheel journaled thereon, of a spring mounted on the vehicle body, a pair of oppositely acting compression rods connected

to said spring at its respective ends, lever arms fulcrumed on the vehicle body and connected to the compression rods, and reach rods and links connecting the axle with said lever arms, substantially as set forth.

---

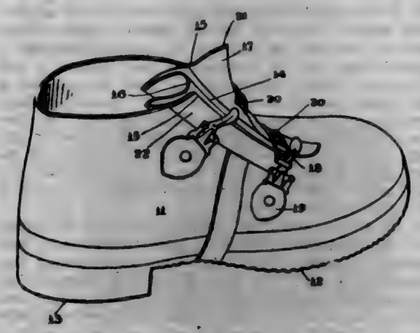
1,556,166. FLANGING MACHINE. CHARLES W. SIEVERT, Los Angeles, Calif. Filed July 14, 1920. Serial No. 396,107. 15 Claims. (Cl. 153—25.)



1. In a flanging machine, an anvil and means to hold a plate with its edge to be flanged projecting beyond the anvil, and a former movable transversely of the plate onto its projecting edge part and past the plate supporting face of the anvil, the former having on its forward face that first engages the plate and passes the anvil surface a concave plate engaging surface with the concavity facing in the direction of its movement onto the plate the curvature of said concavity extending along the edge of the anvil over which the plate projects, substantially as described.

---

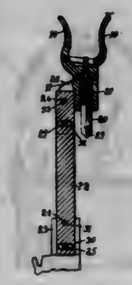
1,556,167. FOOTWEAR. PEARL Y. SMILEY, Kitchener, Ontario, Canada. Filed Apr. 10, 1924. Serial No. 705,601. 1 Claim. (Cl. 36—50.)



A boot or shoe having a front opening, an expansible gusset joining the edges of the opening, a flap attached to one of said edges, layers of canvas attached respectively to the inner surface of the flap and to the outer side of the upper immediately adjoining the remaining edge of the opening and complementary fastening members carried by the shoe and adapted to be secured together with one of said members extending across the flap and serving to hold the edges of the opening together.

---

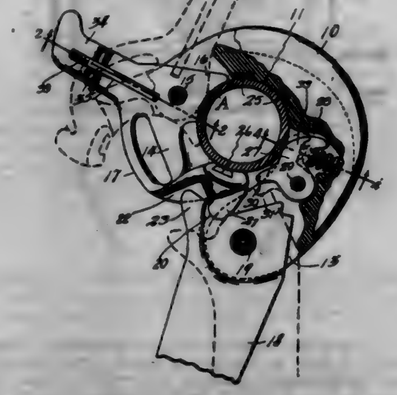
1,556,168. MARKING MACHINE FOR LAUNDRY ARTICLES. LEONARD S. SMITH, Jr., Cincinnati, Ohio. Filed Jan. 12, 1925. Serial No. 1,996. 4 Claims. (Cl. 101—97.)



1. In a machine of the class described, the combination of a toothed type wheel, a toothed sector co-operating with the type wheel, a notched locking bar adjacent to the toothed sector, a lever locking device including a slide bolt to co-operate with and enter the notches of the notched locking bar, and a means for adjustably connecting the said sector and the lever locking device, comprising an arm adjustably secured to the toothed sector and also adjustably secured to the lever locking device.

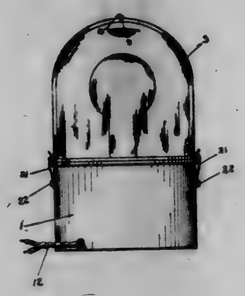
---

1,556,169. PIPE WRENCH. NELSON K. SMITH, Dallas, Tex. Filed Feb. 12, 1924. Serial No. 692,204. 10 Claims. (Cl. 81—67.)



1. In a pipe wrench, a yoke having ears at its ends and provided with a gripping face, a handle lever pivoted to the ears at one end of the yoke, a gripping arm pivoted to the ears at the other end of the yoke, a shoulder on the ear at the end of the yoke to which the arm is pivoted, a latch pivoted to the arm and having its end located to engage the shoulder, and means on the handle lever for engaging and swinging the arm after the latter is closed and latched.

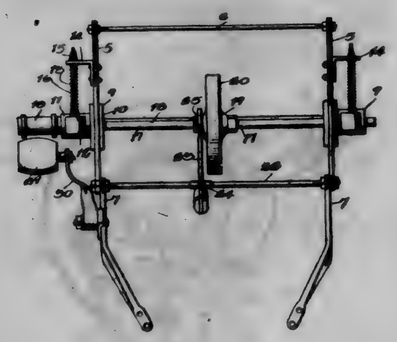
1,556,170. VARIABLE-COLOR LAMP. WILLIAM DOUGLAS SMITH, Lumber Bridge, N. C. Filed Jan. 23, 1925. Serial No. 4,274. 6 Claims. (Cl. 240—107.)



2. A base containing bladders, electromagnets for depressing said bladders, a transparent globe mounted on the base and capable of receiving a fluid, fluids of different colors in said bladders, and connections between the bladders and the fluid receiving means in the transparent globe.

---

1,556,171. GRINDING DEVICE. FRED SPANGLER, Midway, Wis. Filed Sept. 25, 1923. Serial No. 664,754. 7 Claims. (Cl. 51—247.)

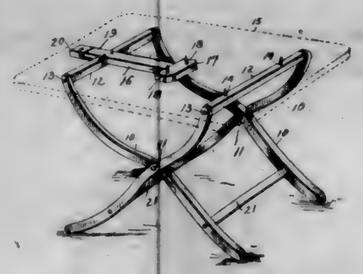


1. In a grinding device of the class described, a frame including a pair of inverted U-shaped sides, journals slidable in the sides, a shaft in the journals, means for rotating the shaft, and a grinding wheel rotatable by the shaft and slidable longitudinally thereof.

---

1,556,172. TABLE AND THE LIKE. ERNEST A. SPEAR, Belmont, Mass. Filed Jan. 14, 1924. Serial No. 686,175. 2 Claims. (Cl. 45—31.)

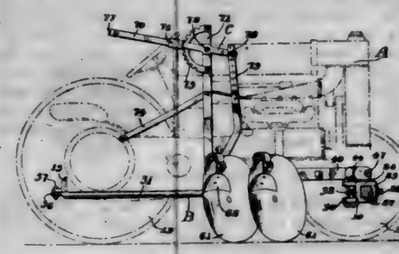
1. A top supporting structure comprising two pairs of pivoted legs, the pivots being between the ends of the legs and top engaging members extending between and pivoted to opposite legs of the two pairs said top-engaging members rocking upon their pivotal connection with the respective pairs of legs and moving towards and from one another with the legs when the table is folded and unfolded, respectively, one of said members having an



arm thereon with a block hinged to the end of said arm by means of which block the connection with the top is made.

---

1,556,173. TRACTOR PLOW. JAY G. STEPHENSON, Athens, Tenn., assignor, by mesne assignments, to Athens Plow Company, a Corporation of Tennessee. Filed Oct. 7, 1921. Serial No. 506,123. 17 Claims. (Cl. 97—47.)



1. A tractor plow comprising in combination an elongated frame, a pair of tractor wheels supporting said frame at one end and disposed at equi-distances and at opposite sides of the longitudinal axis thereof, a pair of steering wheels supporting the other end portion of said tractor, one of said wheels offset a greater distance from the longitudinal axis of the frame than the other of said steering wheels, and a plow beam carried by said frame and extending from substantially midway of the ends of the frame toward the forward end of the tractor and having a front supporting connection adjacent to the offset steering wheel.

9. As a new article of manufacture, a plow attachment for tractors comprising a supporting beam, a right angularly disposed plow draft bar cap attaching foot secured to the rear end of said beam, an inwardly extending angled end formed on the forward end of said beam, a diagonally extending plow beam, a sleeve mounted upon the forward angled end of said supporting beam, a thrust bearing carried by said sleeve having a tapered bore, an extension axle, an upwardly extending inclined ear formed on the upper portion of said extension axle, a second bearing having a tapered bore, an ear formed on said second bearing arranged to abut the first mentioned ear, the inner faces of said ears having meshing teeth formed thereon, a pivot bolt connecting said ears, plow brackets secured to said plow beams, and disc plows carried by said brackets.

12. A tractor plow comprising a frame, front and rear running gear for the frame, a supporting rod connected adjacent its ends to said tractor and extending substantially parallel of the longitudinal axis thereof, and a plow beam supported at its rear end by the supporting rod and at its forward end by the front running gear.

14. A tractor comprising a chassis which includes a frame, rear running gear for the frame, and front running gear for the frame including an axle with steering wheels at the ends thereof, a beam, means supporting the beam upon said frame of the chassis at a location on the frame substantially halfway between the front and rear running gear with the beam extending forwardly of said location towards an outer end of the axle of the front running gear, means connecting the forward end of the beam to said chassis adjacent a steering wheel of the front running gear, a plow, and means mounting the plow upon the beam between the front and rear running gear in bodily offset relation from said beam.

17. In a tractor plow a chassis including front running and steering gear, rear running and traction gear, and a frame supported by said front and rear running gear including a crank case and differential housing having attaching flange means extending outwardly from the longitudinal axis of the tractor at a location substantially half way between the front and rear running gear, a beam, means connecting the beam to said attaching flange means at a side of the frame with the beam extending from said flange means forwardly toward the front running gear, means connecting said beam at its forward end to said chassis, and a plow supported by said beam between said connections of said beam.

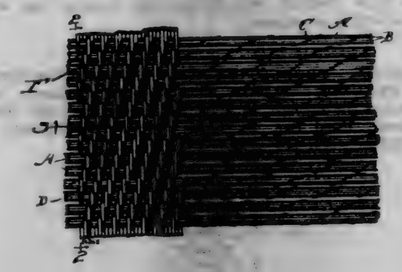
---

1,556,174. PURIFICATION OF VISCOSE SOLUTIONS. WALTER JAMES STEVENSON, deceased, late of London, England, by May Lucie Stevenson, administratrix, Pinner, England, assignor to Artsilk Limited, London, England, a Corporation of Great Britain. Filed May 19, 1925. Serial No. 31,405. 2 Claims. (Cl. 260—100.)

1. In the manufacture of artificial silk from viscose, the purification of the viscose solution prior to its formation into filaments in the precipitating bath, by submitting it to a centrifugal separating treatment, and then passing the centrifuged solution through filter presses containing powdered charcoal.

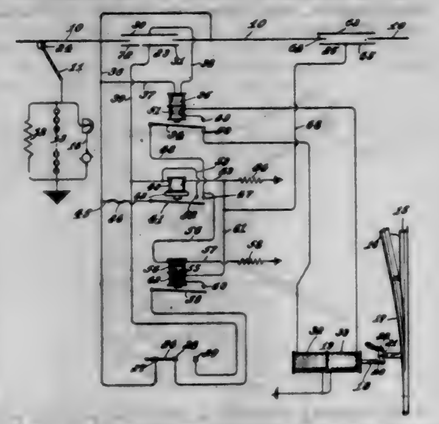
---

1,556,175. RUG. WILLIAM M. STEVENSON, Oshkosh, Wis., assignor to Waite Grass Carpet Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Sept. 15, 1924. Serial No. 737,666. 6 Claims. (Cl. 139—420.)



1. In a rug, the combination of a plurality of relatively bulky weft strands of grass twine extending in parallel relation to one another, and a warp composed of warp strands of fibrous material interlaced through the weft strands and laid in close laterally adjacent relation to one another and standing away from the weft strands to prevent exposure of the grass twine to abrasive action, substantially as described.

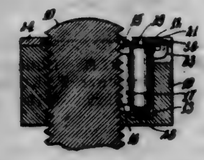
1,556,176. CIRCUIT CHANGER. SAMUEL S. STOLP, Chicago, Ill., assignor to Cheatham Electric Switching Device Co., Louisville, Ky. Filed Aug. 18, 1921. Serial No. 493,258. 21 Claims. (Cl. 246—227.)



2. In an electrical switch-operating device, in combination, a switch operating circuit, a circuit changer therefor not included in the circuit, and means for shunting out the circuit changer when the switch operating circuit is closed.

---

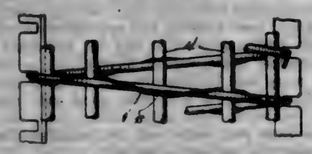
1,556,177. SAFETY NUT. ALEX SZABO and PETER BALOGH, Perth Amboy, N. J. Filed Oct. 29, 1924. Serial No. 746,482. 2 Claims. (Cl. 151—25.)



1. In a nut lock, a nut having a socket entered thereinto from the face thereof parallel to the bore of the nut, a plug rotatably mounted in said socket, and projections on one side of the plug adapted to be projected into the marginal portion of the bore of the nut by rotation of the plug, said projections comprising teeth formed in correspondence to the threads of the nut, and said plug being longitudinally adjustable in the said socket to bring the said teeth into registry with the threads of a bolt on which the nut is threaded.

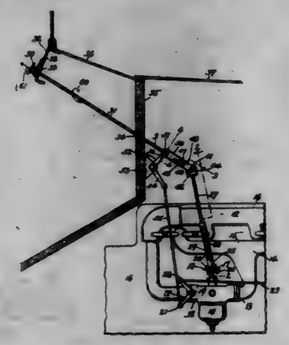
---

1,556,178. BAR SUPPORTING AND SPACING DEVICE. OLAF TALLAKSEN, Chicago, Ill. Filed Feb. 9, 1923. Serial No. 618,113. 3 Claims. (Cl. 72—76.)



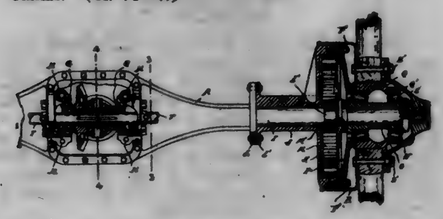
1. A spacing and fastening device for concrete reinforcements comprising a wire having U-shaped loops formed therein at intervals therealong, said wire being spirally wrapped around the perimeter of a partially fabricated reinforcement with the loops extending inwardly therefrom to provide openings adapted to receive, and hold in place, transversely disposed reinforcing bars.

1,556,179. COMBINED CHOKE AND NEEDLE VALVE CONTROL. JACOB RUSSELL TITMAN, Rahway, N. J., assignor of one-third to George B. Titman and one-third to Sherman F. Titman, both of Rahway, N. J. Filed May 13, 1924. Serial No. 712,992. 9 Claims. (Cl. 137—139.)



1. An adjusting device for a carburetor provided with a rotatably adjustable needle valve stem and a choke, comprising an arm, a manipulating member secured at one end of said arm for setting said arm, arm means pivotally connected at one of its ends to said rotatably adjustable needle valve stem, said arm means comprising telescopically related members, rotation transmitting connection means connecting the other end of said arm means with the other end of said first-named arm, means rotatably loosely mounted on said device for operating said choke and stop means for limiting the movement of said choke operating means axially of said first named arm.

1,556,180. VEHICLE AXLE. HOMER E. TOMLINSON, Malden, Mo., and HERSCHEL P. KINSOLVING, Kokomo, Ind. Filed May 29, 1922. Serial No. 564,401. 7 Claims. (Cl. 74—7.)



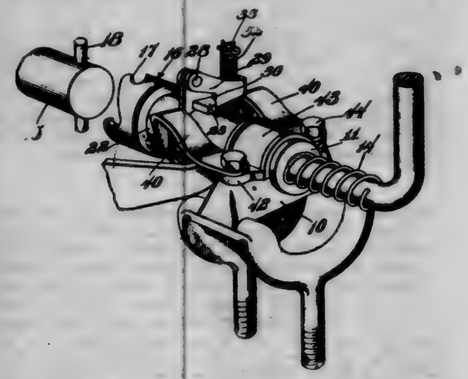
3. A dead axle in the form of a structural beam having a central vertical web and top and bottom flanges, said beam diminishing in width from the center towards its ends, a stub axle integral with said beam projecting from the end thereof, a gear housing having a hub sleeved upon said stub axle, adjacent flanges upon said beam and gear housing hub connected to each other to transmit torque stresses, a cap for said gear housing having a hollow outwardly projecting hub, a wheel hub journaled upon said hollow hub, an integral gear wheel within said housing, a stub axle upon said gear wheel projecting outward from said hollow hub, and a cap secured to said stub axle and transmitting the torque stresses therefrom to said wheel hub.

1,556,181. WATER FEED FOR DENTAL INSTRUMENTS. CHESTER TYREE, London, Ky. Filed Dec. 18, 1924. Serial No. 756,749. 2 Claims. (Cl. 32—10.)

1. In a dental syringe, a hand piece, a nozzle, metal tubing extending from said nozzle into said hand piece, a metal tube extending into and at the opposite end of said piece, a collapsible pipe within the hand piece and connecting the said metal tubes, a lever in the hand

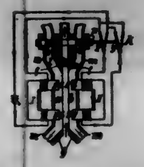
piece, a spring engaging the lever and normally holding it against the pipe to collapse it, and a manually operated arm to move the lever from contact with said pipe.

1,556,182. STARTING-CRANK HOLDER. ROBERT H. VISSER, Virden, Ill. Filed Dec. 13, 1924. Serial No. 755,733. 5 Claims. (Cl. 74—33.)



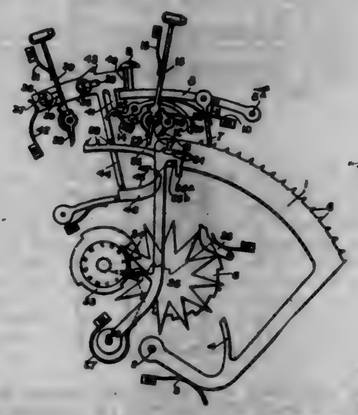
1. In combination with a rotatable starting crank for engines, the starting crank being longitudinally shiftable to engage the crank shaft of the engine, a collar secured to the starting crank and having a latching lug provided with a rearwardly directed shoulder, a plate fixed with relation to the crank shaft and at the opposite side of the collar from the crank shaft, said plate having an opening through which the latching lug of the collar may extend and over one edge of which the shoulder of the latching lug may engage and means carried by the plate yieldably maintaining the latching lug with its shoulder so engaged.

1,556,183. PRODUCTION OF THERMOINDUCTION CURRENTS. ELEMÉR VIZ, Budapest, Hungary, assignor of one-half to Max Meinhardt, Coventry, England. Filed Dec. 28, 1922. Serial No. 608,803. 5 Claims. (Cl. 171—125.)



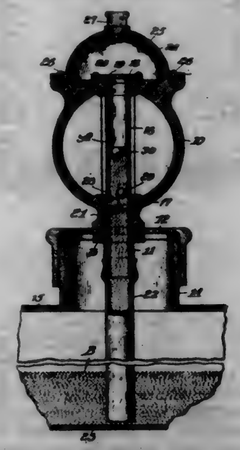
1. In apparatus for producing electric currents, the combination of a magnetic circuit composed of two sections of high permeability separated by air gaps, means of high magnetic permeability disposed in the gaps in spaced relation to both sections and means constructed and arranged to alternately heat and cool said means.

1,556,184. SIMPLE REPEATER MECHANISM FOR CLOCKS AND WATCHES. JACOB VOLPO, Jerusalem, Palestine. Filed Apr. 24, 1923. Serial No. 634,280. 8 Claims. (Cl. 58—61.)



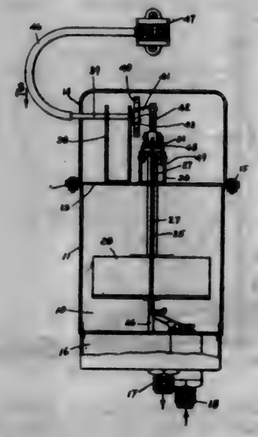
1. In a repeater mechanism for timepieces, a toothed rack movable towards an outward position, hand actuated means for advancing said rack toward its outward position step by step, striking mechanism actuated by the step by step movement of said rack, a locking member movable to engage and lock said hand actuated means when said rack reaches its outward position, said locking member being movable by hand into inoperative position for disengaging said hand actuated means, yielding means urging said rack inwardly, means for freeing said rack for inward movement when said locking member is moved to inoperative position and means controlled by the timepiece for limiting the inward movement of said rack.

1,556,185. INDICATOR FOR RADIATORS. EARL C. WALKER, Canton, Ill. Filed June 5, 1924. Serial No. 718,024. 2 Claims. (Cl. 116—114.)



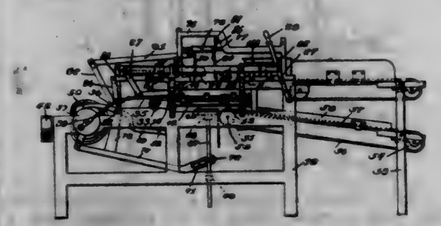
2. An indicator for automobile radiators comprising an open body for connection to the radiator, an indicator tube for communication with the cooling liquid of the radiator and for observation through the opening of the body, means providing a point between the tube and the body, a suction bulb marginally secured to the body adjacent the top thereof, independently of the tube and outwardly of the latter operable to elevate liquid from the radiator into the tube, specific gravity indicating means in said tube, and means secured at the said joint of said tube and body and maintained in place by the said joint to prevent displacement of the specific gravity indicating means from the tube.

1,556,186. LIQUID METER. WILLIAM G. WALL, Indianapolis, Ind. Filed Aug. 19, 1922. Serial No. 583,017. 7 Claims. (Cl. 73—28.)



1. A liquid meter including a casing having a measuring chamber, a float mounted in said chamber, a vertically-extending connecting stem secured to said float at one end, an actuating lever having one end pivotally connected to the other end of said stem, a bracket to which the other end of said actuating lever is pivoted, a rotating shaft having a ratchet wheel mounted on one end thereof, and a second lever pivotally connected at one end to said first-mentioned lever and provided with a pawl on the other end theereof for engaging and rotating said ratchet wheel upon the vertical movement of said float.

1,556,187. WRAPPING MACHINE. HENRY WATERSTONE, Montgomery, W. Va. Filed July 24, 1922. Serial No. 577,122. 12 Claims. (Cl. 93—2.)

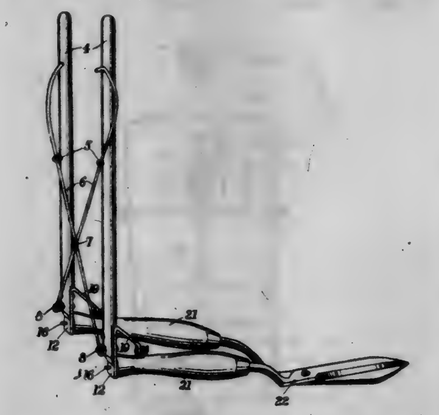


1. In a bread wrapping machine, a wrapping paper holding and feeding mechanism, a loaf elevating mechanism, movable to bring a loaf into contact with the paper fed from the first mentioned mechanism, a horizontally reciprocating paper folding and loaf moving device movable to and from a position above the elevating mechanism, reciprocating mechanisms for folding one side of the paper under the loaf and for folding one side of each end inward, means to actuate said mechanisms in timed relation

and stationary devices arranged to act on the paper as the loaf moving device moves away from above the elevating mechanism and arranged to successively fold the remaining side of each end inward on the loaf end and fold the top and bottom portions of the paper ends over the side portions thereof.

---

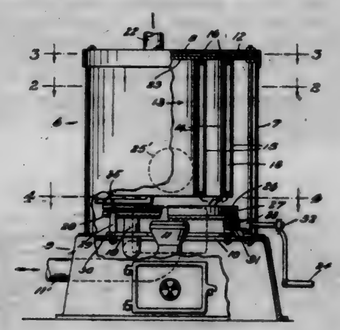
1,556,188. CONVERTIBLE LAWN AND HEDGE SHEARS. J. WALTER WILKINSON, Philadelphia, Pa. Filed June 15, 1922. Serial No. 568,386. 24 Claims. (Cl. 30—11.)



1. The combination with shears, a pair of handle bars mounted parallel to each other in a vertical plane and adapted to move bodily toward and from each other in said plane to operate the shears, and means guiding the bars to move in said plane.

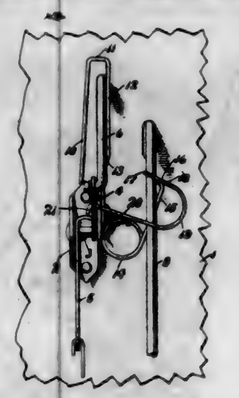
---

1,556,189. WATER HEATER. ROBERT J. WILSON, Seattle, Wash. Filed Apr. 18, 1922. Serial No. 555,050. 3 Claims. (Cl. 122—261.)



1. In a water-heater having a heating chamber provided with a smoke outlet in its peripheral wall, a water-containing coil provided in the upper portion of the heating chamber, said coil being arranged to provide a smoke-flue which extends horizontally and spirally from the center of the chamber to said outlet, an annular member rotatably mounted below the said coil, means pivotally connected to said member and revolubly carried thereby for cleaning the outer surfaces of said coil, and means to rotate said member for actuating the aforesaid means.

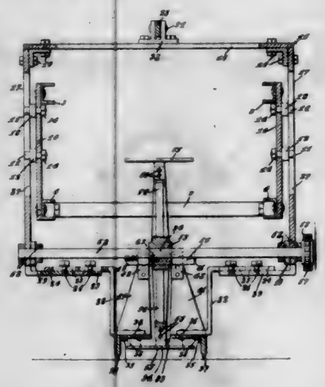
1,556,190. PRIMING-ROD ANTIRATTLER. FLOYD G. WITHROW, Grand Rapids, Mich. Filed July 27, 1925. Serial No. 46,381. 6 Claims. (Cl. 74—39.)



1. In combination with a vertically disposed automobile dash, a needle valve operating rod extending downwardly and forwardly through said dash, and a choke valve operating means mounted on the front side of said dash and comprising a pivotally mounted bell crank lever and an operating rod therefor extending upwardly and to the rear through the dash, of an anti-rattling device disposed against the front side of the dash and having parts engaging against said rods and bell crank lever with yielding spring tension to hold the same against aimless movement.

---

1,556,191. BEET TOPPER. JOSEPH WOLNY, Sheridan, Wyo. Filed Sept. 12, 1923. Serial No. 662,286. 4 Claims. (Cl. 55—107.)



1. In a device of the class described, a vehicle embodying a frame; shoes carried by the frame; means for mounting the shoes on the frame for adjustment toward and away from each other; a rotary topper journaled on the frame and including a blade coacting with the shoes; and means for rotating the topper.

3. In a device of the class described, a vehicle including a frame; shoes carried by the frame; a relatively fixed blade disposed transversely of the shoes; means for mounting the blade on the shoes for vertical adjustment; a topper journaled on the frame and including a blade coacting with the first specified blade.

1,556,192. STEEL EXTRACTOR. CHARLES A. ZEIGE, Spokane, Wash. Filed Oct. 1, 1924. Serial No. 741,076. 1 Claim. (Cl. 254—29.)

A steel extractor comprising a jack formed of telescoping tubular members coactingly threaded substantially throughout their respective lengths and adapted when in a starting position to have a major preponderance of their threads in coacting engagement to distribute the load on substantially all the threads and shorten and stiffen the jack against distorting strains, the bore of the inner member permitting the jack to be telescoped onto the projecting end of the steel with the base of one member against the formation and the free end of the other member inside of the terminal ends of the steel, an initially loose gripper on the projecting end of the steel endwise outside of said jack and adapted to be manually adjusted against the free end of the latter, and said jack having means whereby said tubular members may be relatively turned to lengthen said jack into endwise annular abutting swivelled engagement against and energize said gripper into rigid non-rotative and longitudinally fixed engagement with said steel during extracting of the latter, whereby an exclusively straight pull is exerted on the steel without imparting rotative or angular distortion thereto.

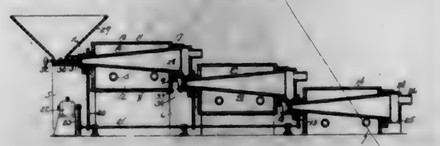
---

1,556,193. METHOD AND APPARATUS FOR MAKING CERAMIC PRODUCTS. EDWARD ANDERSON, Dayton, Ohio, assignor to The A. A. Simonds-Dayton Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 19, 1924. Serial No. 750,881. 16 Claims. (Cl. 25—156.)

1. The method of making a ceramic article, which comprises puddling the constituents of the article, adding a quantity of temporary binding material, enclosing the puddle in a mold and depositing the mold in an oven, the temperature thereof being then raised to a point sufficiently high to cause the binding material to bind the constituents of the puddle together, and maintained thus until the puddle is dry, the puddle being subjected indirectly to air currents in the oven.

---

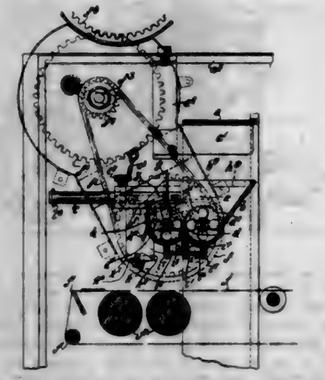
1,556,194. ROTATING RETORT. FREDERIC S. BACON, Middletown, Conn. Filed Apr. 7, 1923. Serial No. 630,501. 8 Claims. (Cl. 263—34.)



8. A retort comprising a series of end communicating tapered tubes rotatably mounted and arranged in stepped down formation, the smaller ends of the tubes communicating with the larger ends of the tubes, the smaller ends of the tubes forming the inlets, vapor and gas conducting means for the larger end of each tube, the smaller receiving end disposed below the lower side of the larger end of the adjacent tube, there being a material collecting chamber between each tube, and independently controlled heating means associated with each tube whereby gases possessing different chemical properties may be sequestered from each tube.

---

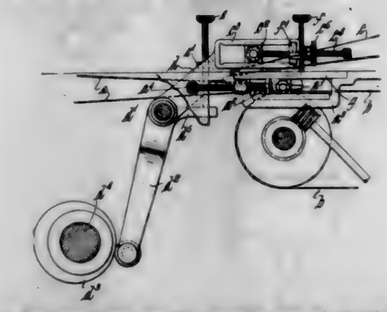
1,556,195. APPARATUS FOR THE COATING OF CONFECTIONS AND THE LIKE. GEORGE RALPH BAKER and RONALD HEAD, London, England, assignors to Joseph Baker Sons and Perkins Company, Incorporated, White Plains, N. Y. Filed June 9, 1923. Serial No. 644,827. 16 Claims. (Cl. 91—57.)



1. In apparatus for the coating of confections and the like, the combination of a mixing vessel having separate inlet and discharge portions, means for supplying coating to said inlet portion, mixing and stirring means in the vessel and interposed between said inlet and outlet portions, and deflecting means cooperating with said mixing and stirring means to substantially cut off the inlet portion from the outlet portion and compel the coating to take a substantially circuitous path and be subjected to said mixing and stirring means before its discharge from said outlet portion.

---

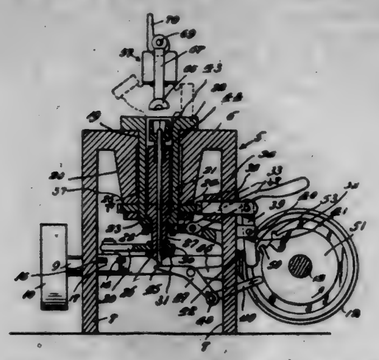
1,556,196. APPARATUS FOR THE MANUFACTURE OF BISCUITS AND THE LIKE. GEORGE SAMUEL BAKER and GEORGE RALPH BAKER, London, England, assignors to Baker-Perkins Company, Incorporated, White Plains, N. Y., a Corporation of New York. Filed Dec. 27, 1924. Serial No. 758,341. 7 Claims. (Cl. 107—6.)



6. In apparatus for the manufacture of biscuits, the combination of a conveyor on which biscuits are cut from the dough, a scrap conveyor receiving the scrap from said cutting conveyor, a knife edge about which said scrap conveyor passes, rocking means for impart-

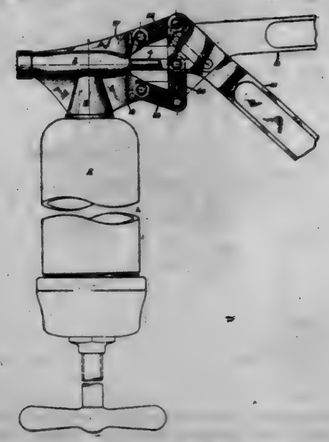
ing rising and falling movements to said knife edge relatively to the cutting conveyor, and screw means acting on said rocking means for adjusting the extent of said movements, or preventing said movements at will.

1,556,197. VALVE-GRINDING MACHINE. JOHN M. BARTLETT, Waterville, Me. Filed Aug. 28, 1923. Serial No. 659,721. 8 Claims. (Cl. 51—28.)



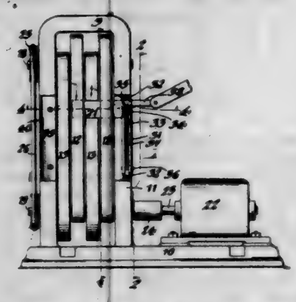
1. In a machine for grinding the cores of valves, a support, a sleeve mounted for rotation within said support, said sleeve including a portion adapted to receive a valve, a shaft freely oscillatable within said sleeve, said shaft embodying means for operatively connecting it to the core of the valve, means for oscillating said shaft, means for maintaining said valve in position upon the sleeve, automatic means for raising the valve core within its casing during the oscillatory motion of said core, and means for intermittently rotating said sleeve and consequently imparting rotation to the casing during the oscillation of the core within the casing.

1,556,198. GREASE INJECTOR. JULIUS H. BECKER, San Francisco, Calif., assignor to Goodman Bros., a Copartnership consisting of Sydney M. Goodman, Louis Goodman, and Samuel Goodman, San Francisco, Calif. Filed Nov. 24, 1924. Serial No. 751,829. 1 Claim. (Cl. 221—47.3.)



A grease injector adapted to be attached to and receive grease from a grease gun, comprising a body having a cylindrical bore into which the grease is forced by the grease gun, a plunger movable in said bore, ears on said body above and below the plunger, a lever having a pocket therein at its upper end, said lever being pivoted to the end of the plunger, a link connecting the lever above said pivot with the upper ear, a second link connected to the lower ear and a third link connecting the free end of the second link with the end of the plunger, said second and third links being disposed in said pocket when the plunger is at the end of its ejection stroke, the ejection stroke of the plunger being limited by contact of the connected ends of the second and third links with the back wall of the pocket.

1,555,199. RAZOR SHARPENER. WILLIAM F. BETHMANN, Buffalo, N. Y. Filed Dec. 21, 1921. Serial No. 523,977. 11 Claims. (Cl. 51—140.)

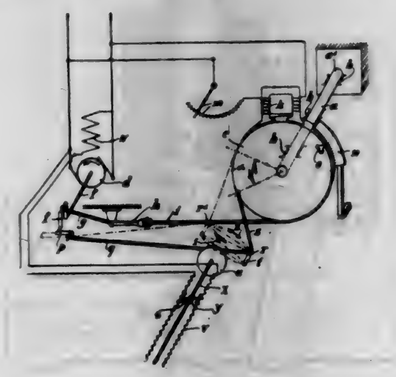


1. A razor-sharpener, comprising a frame, and a pair of traveling stropping belts arranged side by side in said frame, said belts having straight, flexible stretches inclined in opposite directions and crossing each other edgewise thereof to form an angular throat between them for receiving the cutting edge of a razor.

1,556,200. SHOVEL. FRANCIS C. BRANDENBURG, Piqua, Ohio, assignor to The Wood Shovel and Tool Company, Piqua, Ohio, a Corporation of Ohio. Filed Jan. 17, 1921. Serial No. 437,763. 4 Claims. (Cl. 148—31.)

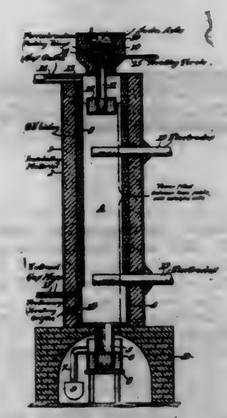
1. In heat-treated steel shovel having a straight cutting edge, the heat-treated metal in said shovel being substantially free from stresses produced by cold working.

1,556,201. APPARATUS FOR DETERMINING THE TORSIONAL OSCILLATORY STRENGTH OF MATERIALS FOR ENGINEERING. ADOLF BUSEMANN, Brunswick, Germany. Filed Mar. 1, 1924. Serial No. 696,329. 6 Claims. (Cl. 265—1.)



1. A device for determining the torsional oscillatory strength of test rods, comprising in combination, means for fixedly securing one end of a test rod, means for preventing the rod from bending, a weight adapted to be fixed to the free end of the rod, so that the rod and weight form a system capable of oscillation, mechanical means for exerting on said system periodic impulses in resonance with the period of natural oscillation of said system, and means for controlling the amplitude of oscillation of said system.

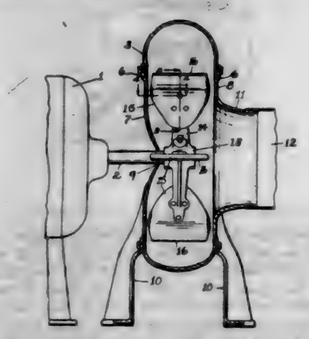
1,556,202. PROCESS OF FIXING NITROGEN. JOHN COLLINS CLANCY, New York, N. Y. Filed July 18, 1922. Serial No. 575,767. 13 Claims. (Cl. 23—80.)



2. In a continuous process of fixing nitrogen the step comprising, subjecting a flowing body of molten alkali metal compound to the action of a gas current comprising a carbonaceous gas and nitrogen in a reaction zone wherein the reactants are made to contact with packing units composed of high melting point nitrogen containing bodies capable of both splitting off and combining with nitrogen at reacting temperature during the operation of the process, supplying molten alkali metal compound to said zone through a liquid sealed inlet, and withdrawing the molten reaction product from said zone through a liquid sealed outlet while maintaining said nitrogen containing packing units in said zone.

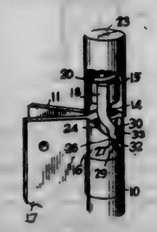
13. In a process of fixing nitrogen the step comprising establishing and maintaining a counter current flow of molten alkali metal compound and gas comprising nitrogen and a hydrocarbon through a fixed porous catalytic body comprising separate zone containing tantalum, nitrid, chromium nitrid, thorium nitrid, titanum nitrid and manganese nitrid, at reacting temperature.

1,556,203. EXHAUST FAN. HARRY R. CLARAGE, Kalamazoo, Mich. Filed Apr. 3, 1924. Serial No. 703,953. 3 Claims. (Cl. 230—11.)



1. In a fan, the combination of a housing comprising a main body member having a tangential discharge and opposed side openings, a side wall, an inlet member having an inwardly expanding inlet of Venturi-like curvature, said side wall and inlet members being interchangeably mounted in said side openings, a shaft disposed through said side wall, a fan wheel comprising a hub having arms, and ovately-shaped blades mounted on said arms with their smaller ends disposed inwardly, their outer ends being forwardly curved, their side edges having forwardly curved flanges, the ends of which merge into the ends of said blades both at the outer forwardly curved ends thereof and at points adjacent their inner ends.

1,556,204. COMBINED DOOR HINGE AND CHECK. ABRAHAM M. COHEN, New York, N. Y. Filed Mar. 31, 1925. Serial No. 19,572. 12 Claims. (Cl. 16—50.)

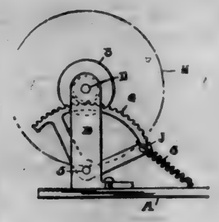


1. In a combined door hinge and check, a stationary, solid hinge pintle, a hinge cylinder rotatably mounted on said pintle and operatively connectable to a door, ends on said pintle projecting outside of said cylinder, means for preventing relative longitudinal movement of said pintle and said cylinder, a cylindrical cam edge on said

cylinder, and a slide mounted for axial reciprocatory movement only on said ends of said pintle, spring-pressed into engagement with said cam edge for continuously rotating said cylinder to a predetermined position, for checking the rotative movement of said cylinder at said position, and for continuing the rotative movement of said cylinder beyond said position.

---

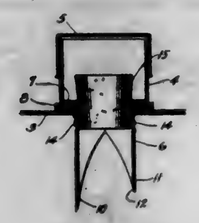
1,556,205. ROLL-PAPER-DISPENSING APPARATUS. WILLIAM B. COLLINS, Ben Avon Borough, Pa. Filed Mar. 15, 1923. Serial No. 625,315. 4 Claims. (Cl. 211—31.)



1. In apparatus for dispensing sheets of paper of equal length from a parent roll, the combination of a support, a mandrel journaled in said support and rotating on a fixed axis, and upon which the roll of paper is mounted, a gear rigidly mounted on one end of said mandrel, a toothed sector rotatably mounted on said support and in mesh with said gear, and a finger extending from said sector and brought into engagement with the perimeter of the roll by the unwinding movement whereby the length of paper unwound is governed by the diameter of the roll of paper.

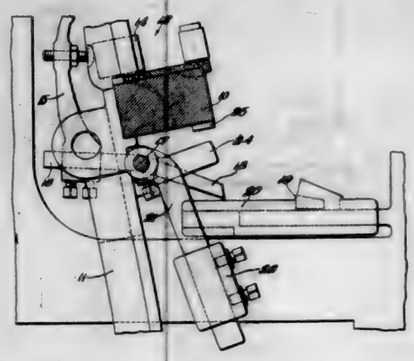
---

1,556,206. DETACHABLE CAN SPOUT AND OPENER. ROY N. DICKEY, Seattle, Wash., assignor to Meets-A-Need Manufacturing Co., a Corporation. Filed Apr. 26, 1923. Serial No. 634,747. 2 Claims. (Cl. 221—23.)



1. A device of the class described comprising a pouring spout with a tubular mounting shank of substantially lesser diameter joining the spout in an annular shoulder and terminating in two oppositely disposed piercing points adapted to make an opening for the shank in the wall of a container to which the device is applied; said shank being exteriorly threaded adjacent the spout for application to the container opening forming by the piercing points as a ments for tightening the said annular shoulder against the can wall and being interiorly threaded to receive and retain a stopper therein.

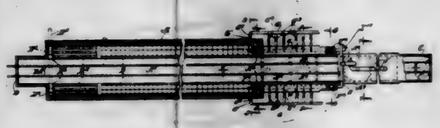
1,556,207. SHUTTLE-BOX TENSION-CONTROLLING MECHANISM FOR LOOMS. CLARE H. DRAPER and JONAS NORTHROP, Hopedale, Mass., assignors to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Dec. 8, 1924. Serial No. 753,611. 11 Claims. (Cl. 139—187.)



1. Shuttle box tension controlling mechanism for looms having, in combination, a lay, a shuttle box, a binder, a dagger shaft on the lay, binder fingers on the dagger rod, and an inertia arm on the dagger rod provided with a weight below the dagger rod.

---

1,556,208. SALT GLAZING AND KILN FOR SAME. CONRAD DRESSLER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed May 17, 1920. Serial No. 382,002. 11 Claims. (Cl. 25—142.)



1. The method of glazing ceramic ware which consists in moving the ware through an elongated kiln chamber, cooling an exit end portion of the kiln chamber and heating other portions thereof as required to glaze fire and then cool the ware in its passage through the chamber, maintaining a reducing atmosphere containing a vaporized glazing agent in a high temperature glazing zone portion of the chamber.

---

1,556,209. METHOD OF AND MEANS FOR HANDLING MATERIAL IN ANNEALING. PHILIP D'HUC DRESSLER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., Cleveland, Ohio, a Corporation of New York. Filed Sept. 21, 1923. Serial No. 663,949. 4 Claims. (Cl. 148—13.)

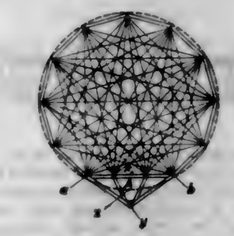
1. In subjecting bodies of sheet metal to heat treatment, the improvement which consists in piling the bodies in a horizontally laminated stack on a support

provided with an uprising post about which the bodies are stacked and by which the support and stack may be lifted and capping the stack with a weight whereby

the stack is compressed and the flat sides of the bodies are substantially protected against the action of the heated atmosphere to which they are subjected.

---

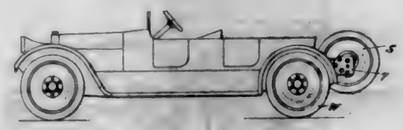
1,556,210. AIRSHIP. LUDWIG DÜRR, Friedrichshafen, Germany, assignor to the Firm Luftschiffbau Zeppelin, Gesellschaft mit beschränkter Haftung, Friedrichshafen, Bodensee, Germany. Filed Aug. 16, 1923. Serial No. 657,834. 3 Claims. (Cl. 244—3.)



1. A rigid airship, comprising a tubular rigid hull of substantially polygonal cross section, a reinforcing rigid keel of substantially polygonal cross section, said keel replacing a portion of the wall structure of said hull, and being situated partly inside and partly outside of said hull.

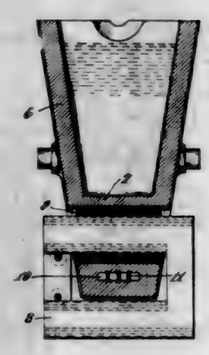
---

1,556,211. VEHICLE SUSPENSION AND STABILIZER. THOMAS J. FAY, Brooklyn, N. Y. Filed Jan. 24, 1922. Serial No. 531,325. 37 Claims. (Cl. 267—9.)



19. In a vehicle having a chassis frame part and an axle part, a suspension device between the said parts, an element having inherent inertia carried by said device and connected to one of said parts for operation thereby whereby relative movement between said parts will be resisted by the inertia of said element, and frictional means for resisting operation of the inertia element.

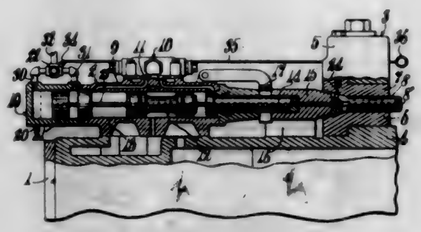
1,556,212. ELECTRIC FURNACE. CHARLES B. FOLEY, Bristol, Conn., assignor to Charles B. Foley, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 13, 1920. Serial No. 365,634. 13 Claims. (Cl. 204—64.)



12. An electric furnace comprising a receptacle adapted to hold a pool of molten metal, said receptacle having interior walls adapted to form a portion of the molten metal into a plurality of loops depending from the bottom of the pool.

---

1,556,213. DRILL-SHARPENING MECHANISM. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 7, 1923. Serial No. 679,231. 16 Claims. (Cl. 76—5.)



1. In a drill sharpening mechanism, an upsetting mechanism, and a separate hole-opening mechanism arranged in alinement therewith.

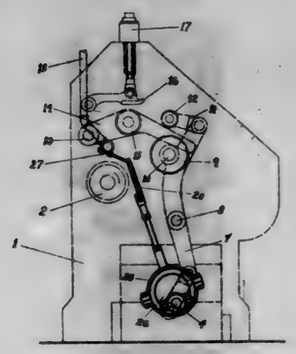
11. The combination with a drill sharpening mechanism, of a plurality of separate alined motors adapted to act on a hollow drill steel.

---

1,556,214. HIDE-PROTECTOR ATTACHMENT FOR FLESHING MACHINES. OLIVER GERRISH, Benicia, Calif., assignor to Kullman, Salz & Co., San Francisco, Calif., a Corporation of California. Filed Nov. 17, 1924. Serial No. 750,257. 7 Claims. (Cl. 149—14.)

1. In combination with a fleshing machine including a fleshing cylinder, means for receiving a hide to be

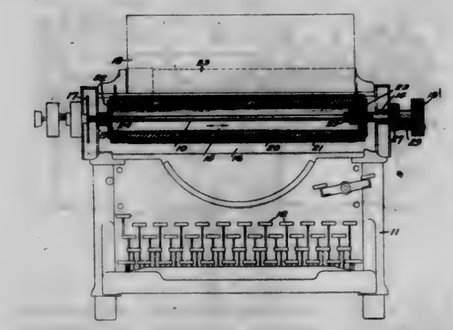
fleshed and for feeding the same to the cylinder, means for moving the hide receiving and feeding means into and



from operative position relatively to the fleshing cylinder, a hide protecting guard, and means for moving the guard to overlie the cylinder.

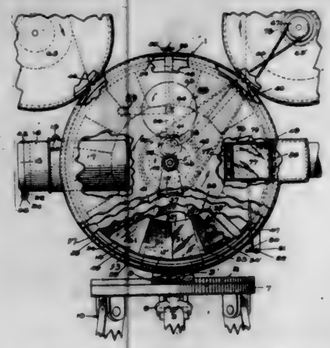
---

1,556,215. ADJUSTING DEVICE FOR TYPEWRITERS. CAMERON GIRTON, Berkeley, Calif. Filed July 29, 1924. Serial No. 728,861. 4 Claims. (Cl. 197—146.)



1. In a printing device, a type printing mechanism, a frame movable step by step relative to the mechanism, for moving a sheet into proper position to be operated on by the mechanism, a roller for supporting the sheet, a shaft supporting the roller on the frame and means for adjusting the roller axially on the shaft, comprising a hollow screw mounted coaxially on the shaft and threadedly engaging the roller.

1,556,216. PHOTOGRAPHIC AND PROJECTING INSTRUMENT. GRAVES GRIFFITH, San Francisco, Calif. Filed Nov. 13, 1924. Serial No. 749,580. 14 Claims. (Cl. 88—16.6.)



1. In a photographic instrument of the character described, a revoluble reflective system comprised of a plurality of reflective elements contiguously and annularly arranged, the reflective faces of which are of opposite and alternate disposition.

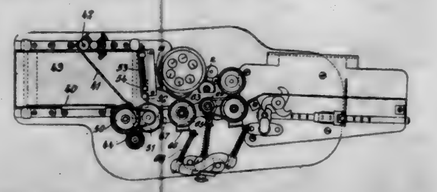
---

1,556,217. MOVABLE SECONDARY RAY DIAPHRAGM. WILBER E. HAMILTON, Seattle, Wash. Filed Dec. 12, 1921. Serial No. 521,754. 1 Claim. (Cl. 250—84.)

In a tray for taking X-ray pictures or the like having a movable screen with a plurality of parallel impenetrable strips extending transversally and arranged alternately with penetrable, a curved aluminum plate which follows the curvature of the screen, a short distance above the screen, rollers at the edges of the screen upon which it is supported, other rollers attached to the edges of the screen and bearing against the inner sides of the frame, an arm attached to the edge of the screen and to an eccentric, means for rotating the eccentric, and a pilot light for notifying the operator as the screen reaches the opposite side.

---

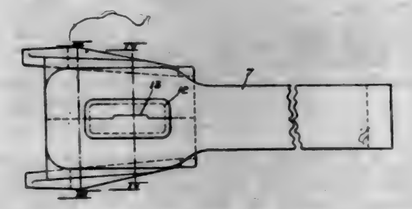
1,556,218. MACHINE FOR MARKING OR CANCELING MAIL MATTERS. GUSTAV ADOLF HANSEN, Christiania, Norway. Filed Aug. 2, 1923. Serial No. 655,182. 5 Claims. (Cl. 101—236.)



1. In combination, a rotary stamping device, having a fixed axis of rotation, means to continually feed a series of letters to the stamping device, means to hold the stamping device positively arrested during variable periods of the feeding, means to release the said arresting device at a given moment during the feeding of the letter, the means for arresting the stamping device comprising a spring actuated clutch member and a member actuated by the moving letters, said last named member controlling the clutch and serving to effect positive engagement and disengagement of the clutch member.

---

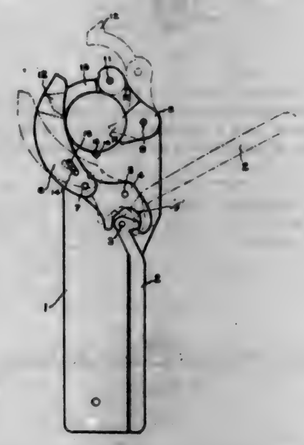
1,556,219. FORGED DRAWBAR YOKE. SOREN HANSSON, Butler, Pa., assignor to John H. Allman, trustee, Butler, Pa. Filed Aug. 13, 1924. Serial No. 731,849. 7 Claims. (Cl. 213—70.)



1. A yoke for draft rigging and the like, comprising a body portion having side members, and a head portion composed of two sections each fastened to said side members and having interlocking relation with the other.

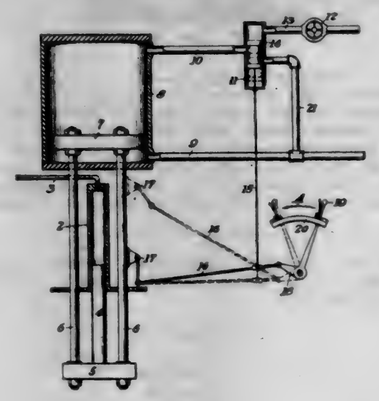
---

1,556,220. WRENCH FOR PIPE AND TOOL JOINTS. RICHARD DENNIS HILL, Wichita Falls, Tex., assignor to E. B. Zittel, Burkburnett, Tex. Filed Dec. 16, 1922. Serial No. 607,337. 2 Claims. (Cl. 81—66.)



1. A wrench comprising two series of pivoted clamping members, cam acting means for opening and closing said clamping members, and means for engaging the free ends of said clamping members.

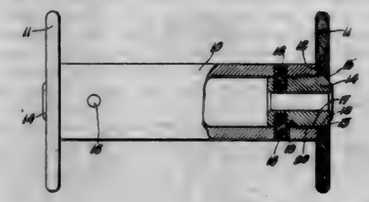
1,556,221. VALVE GEAR FOR INTENSIFIER CYLINDERS. LARS JOHNSON, Ingram, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 31, 1924. Serial No. 759,057. 9 Claims. (Cl. 138—16.)



1. An intensifier, comprising an intensifier cylinder, an actuating cylinder therefor, and means for normally maintaining steam pressure in opposite ends of said actuating cylinder, substantially as described.

---

1,556,222. SPOOL. WARREN N. KING, Greenville, S. C., assignor to Shambow Shuttle Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Jan. 30, 1925. Serial No. 5,742. 1 Claim. (Cl. 242—118.)



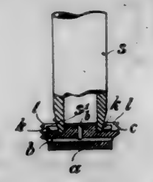
A spool or bobbin having a barrel provided with a round end and with a concentric hole therethrough, a head provided with a round recess on its inner side to receive the barrel end, and with a conical recess on its outer side, a bushing having a cylindrical portion to be received in the hole in the barrel, and a conical portion to be received in the hole in the head, a metal ferrule having similar cylindrical and conical portions, the ferrule and barrel being provided with co-operating projections and recesses to hold them from longitudinal movement with respect to each other, the end of the ferrule being mushroomed or flattened out on the surface of the head to hold the head securely on the bushing, the conical portion of the ferrule being provided with corrugations to prevent rotational movement between it and the head, and dowel pins for uniting the bushing and the barrel.

1,556,223. ORNAMENTAL CHAIN. GEORGE KOLLSTEDE, Providence, R. I. Filed Aug. 4, 1925. Serial No. 48,046. 1 Claim. (Cl. 59—79.)

In a device of the type specified, a series of hollow connected units provided with openings in their ends, slidable connecting plates in the units extending through the openings, flanges upon the corresponding ends of the plates, compressible tongues upon the opposite ends of the plates, the units being provided with holes in substantial alignment with the tongues, and springs engaging the flanges and the adjacent ends of the units.

---

1,556,224. VALVE. ALFRED KLOTZ, Munich, Germany. Filed Dec. 11, 1924. Serial No. 755,150. 2 Claims. (Cl. 251—55.)



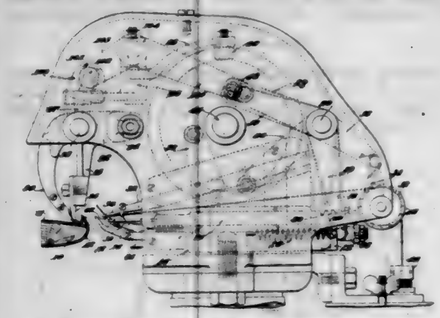
2. In a plug valve of the character set forth, operable by an independent, detachable tool, in which the relative displacement of the plug is caused solely by friction between it and the tool, means for preventing injury to the cooperative valve parts by excess operation of the plug, which comprise in combination with a rotatable tapered air supply nozzle presenting radially extending pins, a rotatable valve plug having an annular top groove and radial depressions merging into said top groove, said annular groove having a taper complemental to that of said nozzle, and the leading edges of said radial depressions slanting forwardly to form cam surfaces for engagement by said nozzle pins for causing them to ascend them upon the nozzle continuing its forward operative rotation after the plug has already become properly seated.

---

1,556,225. AUTOMATIC GUN. ALBERT KÜNG, Zurich, Switzerland, assignor to the Firm Werkzeugmaschinenfabrik Oerlikon, Oerlikon, Switzerland. Filed May 25, 1925. Serial No. 32,626. 3 Claims. (Cl. 89—1.)

1. In an automatic gun, in combination, a barrel provided with longitudinal ribs, a breech, a casing surrounding said barrel and rigidly connected to said breech, a recoil spring enclosed in said casing and operatively connected to the latter whereby the casing is adapted to carry out a reciprocating movement relatively to the barrel when the gun is fired, and a ring fixed to said barrel intermediate of the ends of said casing and substantially filling up the free cross-section between barrel and casing and acting as stationary piston to the reciprocating casing which acts as an air pump for renewing the air surrounding the barrel and increasing the cooling action.

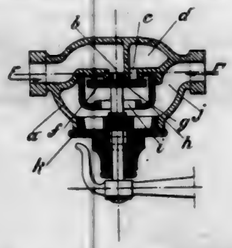
1,556,226. THREAD-HANDLING MACHINE. FRED N. LA CHAPELLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 11, 1921. Serial No. 460,531. 9 Claims. (Cl. 112—32.)



1. A thread fastening machine comprising an eye needle having a cutting edge designed to form a tongue in the work, means for actuating the needle to pass a loop of thread through the work, means for severing the thread, and means for compacting the loop of thread in the work.

---

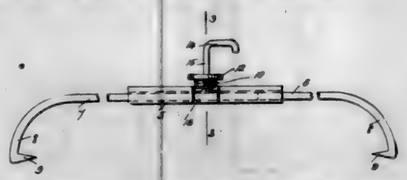
1,556,227. COCK FOR HOT AND COLD WATER WITH A SINGLE DOUBLE-ACTING VALVE. JULIEN ALBERT LEMÉTAIS, Paris, France. Filed Feb. 13, 1925. Serial No. 9,014. 3 Claims. (Cl. 251—106.)



1. In a cock for cold and hot water, a central conduit for admission of hot water, a conduit for admission of cold water, and a conduit concentric with said central conduit to conduct the waters into a mixing chamber.

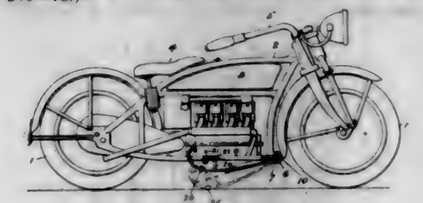
---

1,556,228. PARCEL CARRIER. JOHN MERIWEATHER LEWIS, Watsonville, Calif. Filed May 19, 1925. Serial No. 31,293. 2 Claims. (Cl. 294—16.)



1. A carrier, comprising a guide, bars supported by the said guide and provided with means for engaging with an article, one of the said bars being slidable longitudinally in the said guide, a locking screw screwed into the guide and bearing on the slidable bar and provided with a central hole and a socket, and a carrying handle provided with a shank which is swivelled in the said hole and socket.

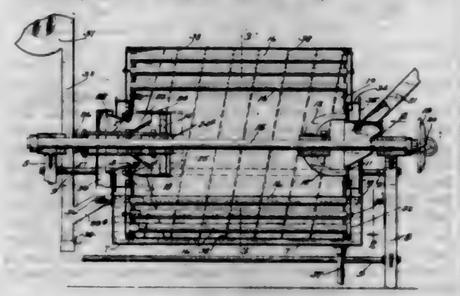
1,556,229. STABILIZER FOR TWO-WHEEL VEHICLES. CHARLES F. LEONARD, U. S. Army. Filed Dec. 18, 1922. Serial No. 606,608. 21 Claims. (Cl. 208—75.)



1. A stabilizer for motorcycles, comprising runners carrying footboards one or both of which adapted to be brought into contact with the ground, means for retracting the boards and runners, and means for retaining the boards in their retracted position.

---

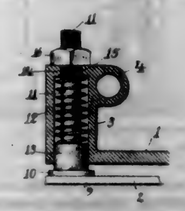
1,556,230. COFFEE-COOLING MACHINE. LUCIUS H. LISK, Minneapolis, Minn. Filed Aug. 2, 1924. Serial No. 729,701. 15 Claims. (Cl. 34—5.)



7. A cooler of the kind described comprising a tank adapted to contain water, a drum having tubes with ends opening at the outer sides of its heads and arranged to be moved through the water of the tank under rotation of the drum, means for introducing material into one end of said drum, means for discharging the material from the other end of the drum, said means at the discharge end of the drum comprising a spider bracket and a cylindrical gate telescopically movable thereon, the said cylindrical gate and spider bracket affording an open air passage, and a screen closing said air passage against the passage therethrough of the cooled material but permitting the flow of air.

---

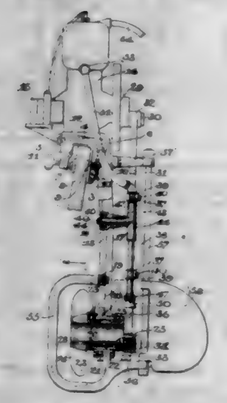
1,556,231. SHUTTLE CHECK. HOMER F. LIVERMORE, Boston, Mass. Filed July 12, 1924. Serial No. 725,563. 1 Claim. (Cl. 139—185.)



A shuttle check for looms comprising a binder bar having a chambered boss at its outer end, said boss having an eye for receiving the pivotal stud for the bar, a bolt having a head located within and snugly slidable in said chamber, a helical spring mounted on said bolt between said head and the opposite end of the chamber, friction means attached to said head, and a nut turning on the end of said bolt exterior to the boss.

---

1,556,232. OUTBOARD MOTOR. ARTHUR J. MACHEK, Milwaukee, Wis. Filed Aug. 11, 1922. Serial No. 581,112. 7 Claims. (Cl. 115—17.)



1. In an outboard engine, the combination with the engine including a drive member provided with a crank, of a propeller shaft having a crank, an oscillatory and slidable transmission member to operatively connect said cranks, and a water pump carried by said transmission member and operated by the movements thereof.

---

1,556,233. FASTENER. HERMAN C. MAISH, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 27, 1923. Serial No. 659,669. 10 Claims. (Cl. 296—135.)

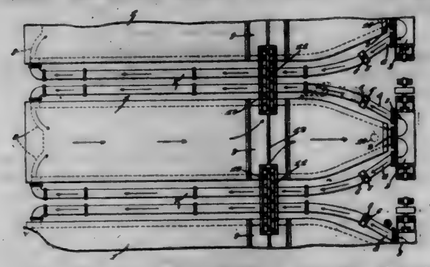
9. An article of manufacture comprising a sheet of flexible material having a flange at one edge, trimming material extending over one face of the sheet and folded around the flange, and a fastener projecting from another face of the sheet.

---

1,556,234. WEATHER-STRIP-ASSEMBLING MACHINE. HERMAN C. MAISH, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 8, 1923. Serial No. 667,424. 30 Claims. (Cl. 29—84.)

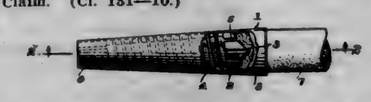
1. In a machine of the class described, a support for molding, means for separating portions of the molding to receive a portion of a weather strip, and means for moving the portion of said strip between the separated portions of said molding.

1,556,235. BLEACHING MACHINE. ALBERT D. MERRILL, Watertown, N. Y., assignor to Stebbins Engineering & Mfg. Co., Watertown, N. Y. Filed June 10, 1922. Serial No. 567,296. 1 Claim. (Cl. 8—18.)



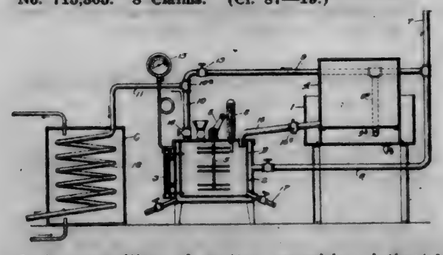
A bleaching apparatus including a plurality of tanks, a propeller communicating with one end of each tank, means for directing fluid from each propeller to the other end of its tank, thereby to set up a circulation of fluid in each tank independently of the circulation of fluid in another tank, means for directing fluid under pressure into the line of flow of the fluid in each tank, and means for conducting overflow from the circulating fluid in one tank to the circulating fluid in an adjoining tank.

1,556,236. NICOTINE-ABSORBENT CIGARETTE HOLDER. ALBERT M. MIRLER, San Francisco, Calif., assignor of one-half to Lewis O. Griffith, San Francisco, Calif. Filed Mar. 26, 1924. Serial No. 701,904. 1 Claim. (Cl. 131—10.)



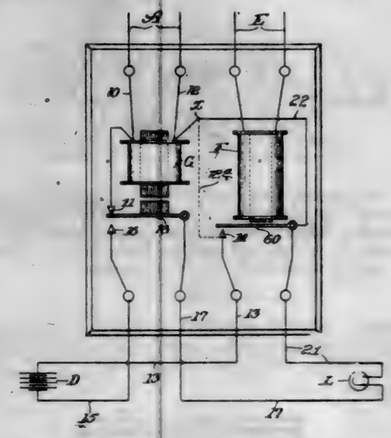
In a device of the character described, a casing comprising a cone-shaped body-portion, a mouth-piece and an extension fashioned to receive and retain a cigarette, a complementary-shaped absorbent core having thereabout a spiral groove and formed to fill the interior of said body-portion of said casing, the walls of said spiral groove in combination with a spiral section of said casing forming a continuous spiral passage from end to end of said absorbent core, a plurality of ducts leading from either extremity of said absorbent core into said spiral groove at varying distances, and a conically-formed centrally located projection carried by the forward end of said absorbent core and adapted to receive and expand the end of a cigarette when inserted.

1,556,237. ROSIN COMPOUND AND PROCESS FOR PRODUCING SAME. HERBERT S. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1924. Serial No. 715,305. 8 Claims. (Cl. 87—19.)



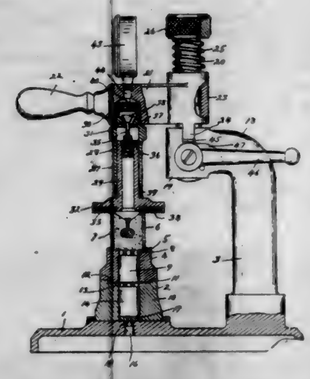
1. A composition of matter comprising intimately blended rosin and gum sandarac in a volatile solvent, the former comprising more than eighty per cent of the combined weight of said ingredients.

1,556,238. SIGNALING APPARATUS. SAMUEL MIKELLY, Chicago, Ill., assignor to Bryant Zinc Company, Chicago, Ill., a Corporation of Illinois. Filed May 7, 1925. Serial No. 28,711. 6 Claims. (Cl. 246—191.)



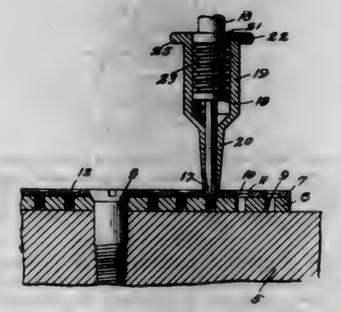
2. Apparatus of the character described comprising; a normal electric circuit; a signaling device in series with said circuit; a reserve circuit having a source of electric energy therein, said signaling device also being in series with said reserve circuit; a train approach switch in series with said reserve circuit and also in series with the normal circuit, said train approach switch being normally open; means operated by the approach of a train for closing said train approach switch; a current failure switch in said reserve circuit, normally open; and means operated by failure of the normal current for closing said current failure switch.

1,556,239. CASTING MACHINE. THOMAS A. MIXON, Detroit, Mich. Filed Feb. 18, 1924. Serial No. 693,599. 35 Claims. (Cl. 22—69.)



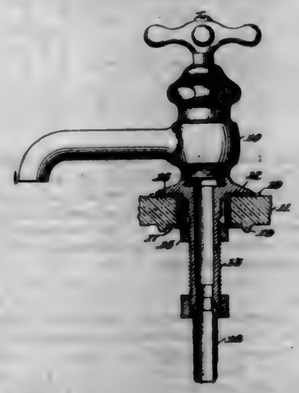
1. In a casting machine, the combination with a flask, of means for supplying air under pressure to the flask, including a valve casing having a head adapted to seat upon the flask, and a support for the casing mounted to move horizontally and vertically whereby the head may be moved over the flask and dropped to seat upon the flask.

1,556,240. HANDLING DEVICE. JAMES T. MORRISSEY, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Oct. 25, 1923. Serial No. 670,805. 3 Claims. (Cl. 206—1.)



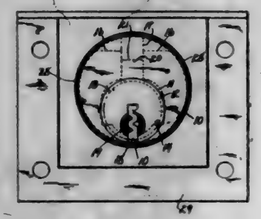
1. A device for the handling of screws or the like, comprising a plate with a plurality of openings, each opening having an internal bore, and an external bore of larger diameter, and a shelf between the bores.

1,556,241. LOCKING WASHER AND SANITARY FLANGE GASKET FOR BASIN COCKS. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 23, 1921. Serial No. 517,296. 5 Claims. (Cl. 285—30.)



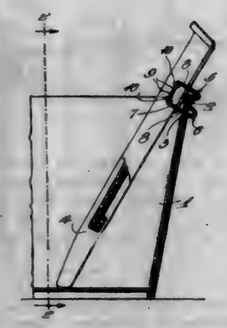
4. The combination of an apertured support, a flanged fixture having a threaded shank projecting through said aperture, a gasket of yielding material between the flange of the fixture and the support, a resilient lock washer on the shank of the fixture on the other side of the support from the flange, means for holding the washer against rotary movement, and a lock nut threaded to the shank and engaging the washer to force it longitudinally of the shank against the support and compress the gasket.

1,556,242. PIN-TUMBLER LOCK. JAMES J. MURPHY, Terryville, Conn., assignor to The Eagle Lock Co., Terryville, Conn., a Corporation. Filed Dec. 8, 1923. Serial No. 679,299. 3 Claims. (Cl. 70—46.)



1. In a sliding tumbler-lock, the combination with the lock-structure and the tumblers thereof, of a special key-obstruction forming a part of the fixed lock-structure, a key cut to align the tumblers when the key is fully inserted and also having a special cut to co-act with the said special key-obstruction which is constructed and positioned to prevent the revolution of the key except when the same is fully inserted into the lock when its special cut is brought into alignment with the said special obstruction.

1,556,243. CLOTHES-WASHING EQUIPMENT. BENJAMIN E. MUSSER, Bellingham, Wash. Filed Mar. 27, 1924. Serial No. 702,401. 3 Claims. (Cl. 68—29.)

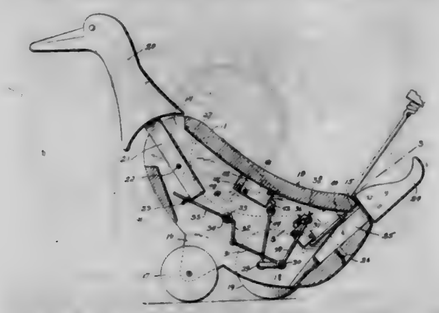


3. In combination, a wash tub having a bead at its upper edge and a pair of horizontally spaced openings, the upper edges of which are formed by said bead, a wash board and means carried by said board adapted for insertion through said openings and engagement with said bead to hold said board against lateral sliding movement.

1,556,244. TOY ANIMAL. JOHN T. NAUSS, Joliet, Ill. Filed Aug. 28, 1924. Serial No. 733,724. 3 Claims. (Cl. 46—45.)

1. A toy of the character described formed to provide a hollow body, the body at its forward end being provided with a vertically disposed slot and at its rear end with a horizontally disposed slot, wheels upon which the body is mounted and having a crank shaft, a head, a neck having a shank extending into the hollow body through said vertically disposed slot and pivoted thereon, means connected to the crank shaft for oscillating the head in a vertical plane, wings mounted upon the sides

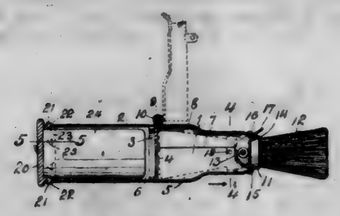
of the body for oscillation, means connected to the crank shaft for oscillating said wings, a tail having a portion disposed within the body and extending out through the



horizontally disposed slot in the rear end of the body, the tail being pivoted for lateral oscillation, and means operatively connected to the crank shaft for laterally oscillating the tail.

---

1,556,245. SHAVING BRUSH AND SOAP HOLDER. JOHN S. NEWLON, Butler, Mo. Filed Sept. 1, 1922. Serial No. 585,663. 2 Claims. (Cl. 15—185.)

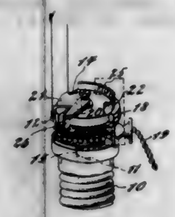


1. A shaving brush comprising a tubular body having an open end and a lateral opening communicating therewith and having adjacent to said open end an arcuate groove, a partition dividing said body into two compartments, one of which communicates with said opening, a bristle supporting member pivoted to said body so as to be swung through said opening from a position in which the bristles will be disposed in said body to a position in which the bristles will project from said open end, said member having a peripheral flange adapted to be sprung into said groove, when the bristles are in the last named position, and a cover hinged to said partition and adapted to close said opening.

---

1,556,246. LAMP SOCKET WITH TIMING DEVICE. CHARLES F. NORDEN, New York, N. Y., assignor to Henry Hyman & Co., Inc., a Corporation of New York. Filed Nov. 16, 1922. Serial No. 601,209. 4 Claims. (Cl. 200—122.)

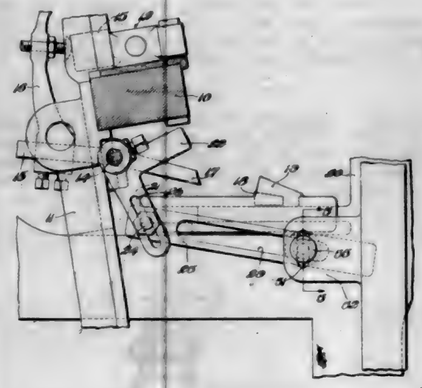
2. In a thermostatically controlled lamp socket switch for use in a main circuit including a lamp, a main switch for said main circuit having a main switch member arranged to be moved step by step around an axis to alternately close and to open said switch, an oscillating member arranged to swing around said axis and to move said main switch member one step for each oscillation of said oscillating member, a shunt circuit around said main switch, said circuit including a shunt switch element arranged to oscillate on said axis and a thermostatically controlled latch, said shunt switch element having a bias away from said latch and adapted to be engaged thereby, and connection between said oscillating member and said shunt switch element to move said element into position to be held by said latch when said oscillating member



moves said main switch member into closed position, said shunt circuit being arranged to heat said thermostatically controlled latch to cause it to operate to release said element only when said main switch is open.

---

1,556,247. SHUTTLE-BOX TENSION-CONTROLLING MECHANISM FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Dec. 1, 1924. Serial No. 753,017. 2 Claims. (Cl. 139—187.)



1. Shuttle box tension controlling mechanism for looms having, in combination, a lay, shuttle boxes on the lay, binders for the boxes, means for applying pressure to the binders, and friction means acting during forward movement of the lay to increase the shuttle tension, and during rearward movement of the lay to decrease the shuttle tension.

---

1,556,248. LENS-CLEANING PROCESS. CLARENCE H. OHLWILER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 20, 1920. Serial No. 432,141. 8 Claims. (Cl. 141—1.)

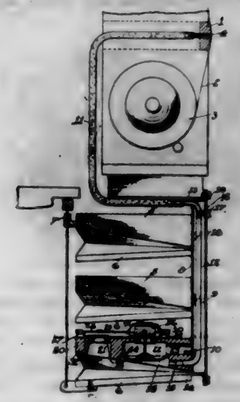
2. The process of cleansing lenses from a blocking compound consisting in subjecting the lenses to a heavy coal tar distillate solvent bath and to a second acid solvent bath which will remove the composition formed by the first solvent, and removing the second solvent through the use of a final water bath.

---

1,556,249. PNEUMATIC-PIANO CONSTRUCTION. CLAUS E. PETERSON, Worcester, Mass. Filed Aug. 25, 1922. Serial No. 584,287. 7 Claims. (Cl. 84—58.)

1. In a pneumatic player action, a rear wall and cover plate comprising a vacuum chamber, a plurality

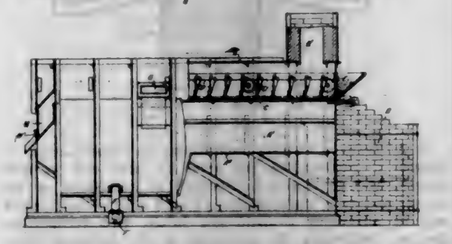
of actuating pneumatics having tracker-bar connections, said tracker-bar connections inclosed in said vacuum



chamber, bleeds in said connections, and individual means of access in the cover plate of said vacuum chamber to said bleeds.

---

1,556,250. PROCESS OF AND APPARATUS FOR USE IN DRYING ORES, CONCENTRATES, AND OTHER GRANULAR MATERIALS. GILBERT RIGG, Melbourne, Victoria, and WILLIAM J. MCBRIDE, Broken Hill, New South Wales, Australia. Filed July 11, 1922. Serial No. 574,218. 7 Claims. (Cl. 34—25.)

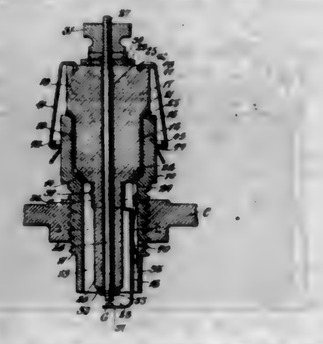


7. Apparatus for drying ores and other granular materials comprising a chamber having a rotating screen mounted therein, the wet or damp material being fed into the interior of the said screen and hot gas being drawn through the said screen, characterized by the fact that the said rotating screen consists of an inner screen and an outer screen the space between which is filled with balls, pebbles, or other rounded materials the interstices between which are such as that damp or wet material is retained on the screen whilst dry material is permitted to pass therethrough.

---

1,556,251. SPARK PLUG. HARRY SAMPSON, Long Beach, N. Y. Filed Feb. 1, 1924. Serial No. 689,954. 1 Claim. (Cl. 126—169.)

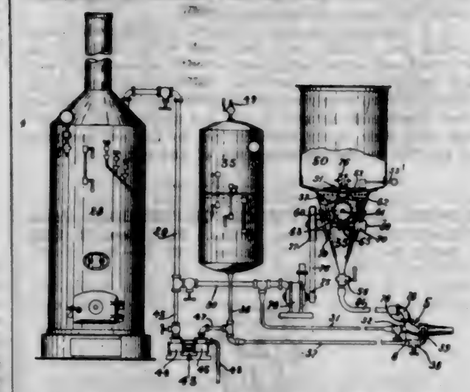
A spark plug comprising a shell or body member adapted for threading into a cylinder, a removable insulator core mounted therein, insulated and grounded electrodes carried by said core, a resilient conductor element carried by the shell or body member and engageable with the ground electrode when the core is seated in the shell, said shell and core each having a plurality of co-acting gasket seats, gaskets interposed between said seats and means engageable with the shell and core for holding the same in assembled relation, for clamping the gaskets in sealed relation to the seats and for positioning and retaining the grounded electrode in contact with the resilient conductor element, said means comprising a plurality of clips having hooked



terminals, keeper lugs projecting radially from the shell and notched portions in the core with which lugs and notches the hooked terminals of the clips engage.

---

1,556,252. STEAM-OPERATED APPARATUS AND PROCESS FOR MIXING AND APPLYING PLASTIC AND OTHER MATERIALS. JOHN E. SHEPHERD, Charlottesville, Va. Filed July 5, 1923. Serial No. 649,634. 10 Claims. (Cl. 91—44.)



1. A process comprising supplying a stream of steam; and separately adding cementitious material and water to said stream.

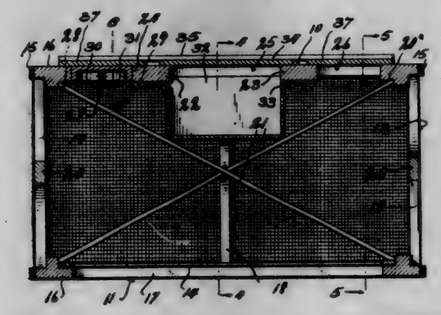
4. In combination, a combined nozzle; a boiler; a steam conduit leading from the boiler and feeding steam to said nozzle; an air tight water pressure tank having a water conduit extending from its lower part and leading to said nozzle; a receptacle for dry material; and means for feeding the dry material into said nozzle.

---

1,556,253. CIGAR LIGHTER. MILTON H. SHOENBERG, San Francisco, Calif. Filed Sept. 1, 1923. Serial No. 660,514. 7 Claims. (Cl. 219—32.)

1. In a cigar lighter, a heating element comprising a plurality of convolutions of resistance wire formed as a flattened helix with air spaces between the respective convolutions and air spaces between the flattened portions of the helix.

1,556,254. SHIPPING CAGE FOR BEES. HERMAN C. SHORT, Fitzpatrick, Ala. Filed Dec. 30, 1924. Serial No. 758,866. 8 Claims. (Cl. 6—9.)



4. A bee shipping cage having a top provided with three openings, a food compartment arranged beneath one of said openings, the second opening having its inner end screened from the remainder of the cage, the third opening communicating with the interior of the cage and separate closures for each of said openings, the second named opening being adapted for the reception of a queen bee cage and being of a size closely fitting the cage to be inserted therein.

7. A bee shipping cage including a skeletonic frame having top, bottom, side and end walls, said bottom, side and end walls being covered with screen mesh, said top and bottom each including end members and a plurality of transversely spaced diagonal braces each having their lower ends secured to the end members of the bottom and their upper ends secured to the end members of the top at the opposite ends of the cage.

---

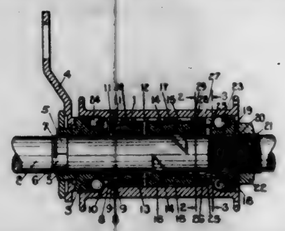
1,556,255. LOADING DEVICE FOR FIREARMS. JORGE GARAY Y SILVA, Mexico, Mexico. Filed Nov. 12, 1924. Serial No. 749,521. 5 Claims. (Cl. 42—89.)

1. In a device of the character described, a center piece having a plurality of substantially semi-circular openings formed on its periphery, a pair of substantially semi-circular members arranged around said center piece, said members being provided with openings on their inner faces adapted to operate with said semi-circular openings in said center piece, and means for moving said members with respect to said center piece.

---

1,556,256. CLUTCH MECHANISM. CHARLES B. SIMMONS, Bristol, Conn., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed June 13, 1924. Serial No. 719,800. 4 Claims. (Cl. 192—6.)

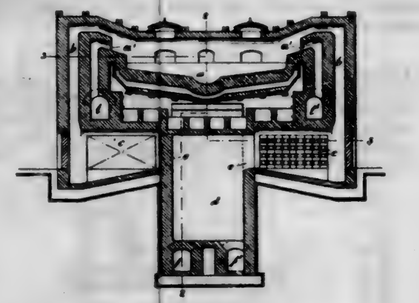
1. In a device of the character indicated, a driven member, a driver therefor, a laterally shiftable connector having operative connection with said driver, and a separable clutch element slidable upon said driven member and in driving connection therewith and cooperating with said connector for driving said driven member, said



clutch element being free from contact with relatively stationary portions of the device; substantially as described.

---

1,556,257. FURNACE. ALFRED SMALLWOOD, Highgate, London, England. Filed Oct. 4, 1921. Serial No. 505,414. 2 Claims. (Cl. 263—15.)



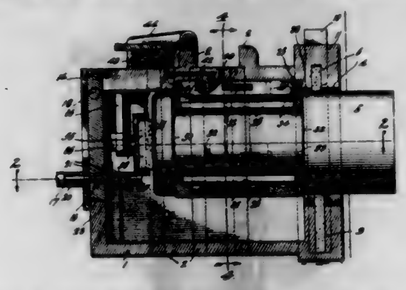
2. A furnace, which comprises, in combination, a hearth, a combustible gas inlet at each end of said hearth, and controlled to permit the admission of gas at one end only, flues located at each end of said hearth and in adjacency to said gas inlets, two recuperator devices, comprising the equivalent of the checkered brickwork type, arranged so that one communicates with the flues located at one end of the hearth, and the other communicates with the flues situated at the other end of the hearth, a recuperator system built up of a plurality of passages, with every alternate passage arranged in communication and isolated from its neighbor, to form two distinct sets of passages which are arranged so that each communicates at one end with one of the said recuperator devices, means whereby a source of fluid may be arranged in communication with the end of the passage away from the hearth of one set of passages, and a chimney stack arranged in communication with the similar end of the other set of passages, and means whereby the said passages may be interchanged with relation to the source of fluid supply and the chimney stack, and means whereby the gas inlet which is situated adjacent to that flue which is in communication with the chimney stack is maintained closed.

---

1,556,258. JOURNAL BOX AND BEARING. JAMES G. SMITH, Westwood, Ohio, assignor to James H. Smith, Westwood, Cincinnati, Ohio. Filed Nov. 14, 1923. Serial No. 674,779. 6 Claims. (Cl. 308—174.)

1. A journal bearing comprising hollow half sections hinged together at one side substantially at their parting line, said sections adapted to be brought together

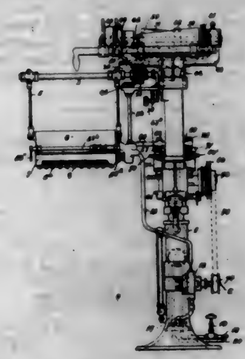
and engaged about an axle, to provide a bearing therefor, the top section of said bearing having a longitudinally disposed slot therein, to provide for the radial introduc-



tion of roller bearings into the bearing and about the axle after said bearing has been attached thereabout, and means for locking the sections together.

---

1,556,259. CHOCOLATE AND LIKE DEPOSITING AND COATING MACHINE. ASBJORN SONSTHAGEN, London, England. Filed Apr. 11, 1922. Serial No. 551,583. 7 Claims. (Cl. 107—27.)

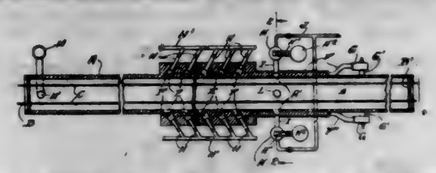


3. A machine for coating or decorating sweetmeats, comprising a hopper moving horizontally in all directions, nozzles for the passage of the material from the hopper, a by-pass for the material from the nozzles to the hopper, a valve controlling the passage of the material to the hopper, a handle for controlling said valve, pressure producing means for the material in the hopper, said means being located in said hopper, a friction drive for said pressure producing means, means for adjusting the pressure between the friction surface of said drive, a handle for manipulating the hopper said handle controlling the action of the pressure producing means.

---

1,556,260. CONSTRUCTION AND OPERATION OF TUNNEL KILNS. ROBERT W. STEERE, Providence, R. I., assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed June 18, 1920. Serial No. 390,012. 8 Claims. (Cl. 25—142.)

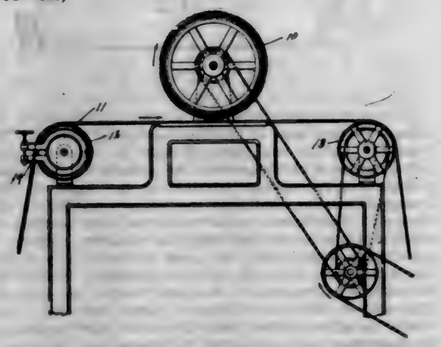
1. The method of burning and surface finishing ceramic ware which consists in passing the ware through an elongated kiln chamber of a continuous tunnel kiln heated to first raise the ware to a maximum temperature and then to cool the ware as the latter is moved through the kiln chamber from one end to the other, and injecting a finely divided solid material into a high temperature portion of the kiln chamber to thereby produce surface markings on the ware and restricting



the dispersion longitudinally of the kiln out of said high temperature kiln portion of said solid material and the gases formed therefrom.

---

1,556,261. DULL-FINISH COATING AND THE PROCESS OF MAKING SAME. WILLIAM O. STODDARD, Jr., Madison, N. J., assignor to Duratex Corporation, Newark, N. J., a Corporation of New Jersey. Filed Dec. 12, 1919. Serial No. 344,416. 8 Claims. (Cl. 91—68.)

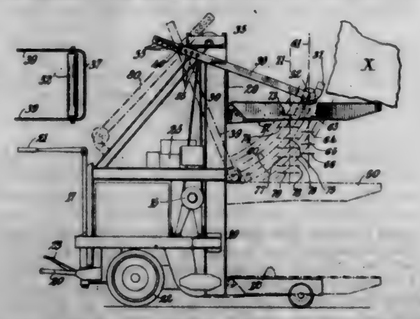


1. A coated material comprising a base and a nitrocellulose coating applied thereto, the surface of said coating being provided with a plurality of relatively slight abrasions.

6. The process of producing a dull finish coated fabric comprising applying a nitrocellulose coating to a suitable base and then providing the surface of said coating with a plurality of relatively slight abrasions.

---

1,556,262. ELEVATOR AND ELEVATOR TRUCK. ALBERT WILLIAM STUBSTER, Carteret, N. J., assignor to United States Metals Refining Company, a Corporation of New Jersey. Filed Jan. 10, 1925. Serial No. 1,603. 12 Claims. (Cl. 214—95.)

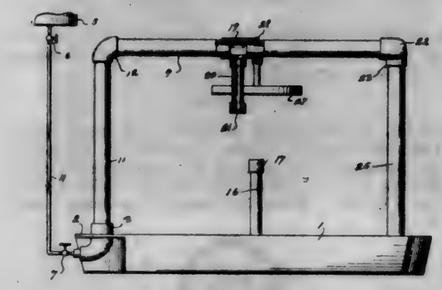


1. An elevator comprising a platform, means for raising said platform, an ejector, and means coacting with

said platform during its rising movement adapted to cause said ejector to move across the face of said platform to eject the load thereon.

---

1,556,263. OIL BURNER. JAMES F. SUTTERFIELD, Goose Creek, Tex. Filed Mar. 1, 1924. Serial No. 696,263. 4 Claims. (Cl. 158—83.)



3. An oil burner comprising a pipe line having a U-shaped portion and a portion extending beneath the U-shaped portion and provided with an upwardly projecting nozzle directed between the arms of the U-shaped portion and in spaced relation to the bight of the U-shaped portion, said pipe line being provided in the arms and bight thereof with T's to the stem portions of which are connected depending oil receiving pockets, a spreader supported from the arms of the U-shaped portion and against which the gas generated in the U-shaped portion impinges to be spread thereby and brought into contact with said U-shaped portion and with said depending oil receiving pockets, one of said depending oil receiving pockets having its lower end extending below the level of the nozzle and a pan against which the lower end of said oil pocket engages, said pocket being connected with the bight portion of the U-shaped portion of the pipe line and forming a support therefor, the ends of the arms of the U-shaped portion having depending pipe portions, one of which is connected with the nozzle and the other of which is adapted for engagement with a source of supply, said depending pipe portions having engagement with the pan to thereby support the ends of the arms of said U-shaped portion.

---

1,556,264. ARTIFICIAL BIRD TARGET. EDWARD E. THRESHER, Akron, Ohio. Filed Dec. 4, 1919. Serial No. 342,436. 7 Claims. (Cl. 124—16.)

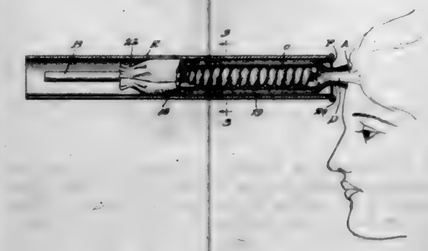
1. An artificial bird target comprising a carrier casing, a sheave within the casing, a suspension wire connected at its ends to said casing above said sheave with the intermediate portion of said wire arranged beneath the sheave whereby said carrier is effectively braced to overcome lateral swaying and a bird target body connected to said carrier casing.

1,556,265. HAIR-WAVING HEATER. ERNEST UNGER, New York, N. Y. Filed May 24, 1923. Serial No. 641,036. 14 Claims. (Cl. 219—24.)

7. An electric heater including a support, a heating coil wrapped about the support, a layer of insulating material enclosing the coil, a metallic band encircling the layer to secure the coil in place, said band provided with means for connecting the same electrically with one end of the coil, and said band provided with easily securable means for connecting thereto an electric lead.

---

1,556,266. HAIR-WAVING DEVICE. ERNEST UNGER, New York, N. Y. Filed Jan. 18, 1924. Serial No. 686,968. 12 Claims. (Cl. 132—31.)



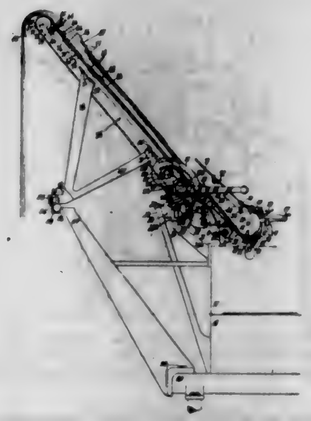
1. A unit for use in waving hair comprising a pad for enclosing a coiled strand of hair, said pad having an end portion for encircling a straight part of the hair strand adjacent the coil, a closing clip for crimping the portion into engagement with said part and a tube enclosing the coil and acting to secure the clip in place closing the tube.

---

1,556,267. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 14, 1923. Serial No. 645,261. 15 Claims. (Cl. 197—126.)

1. In a typewriting machine, a rotatable platen, means for holding work-webs, having carbons interleaved therewith, for line-space feed with the platen, a table over which the composite web is fed toward the platen, a carbon-carrier on the table, to which the carbons are

connected at their rear, a belt connected to the carbon-carrier, pulleys for the belt at the front and rear of the table, a shaft to which one of the pulleys is



fast, a counter-shaft, step-up gearing connecting the shafts, and means for turning the gears to cause the belt to shift the carbon-carrier.

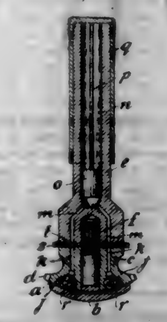
---

1,556,268. LIGHT-WEIGHT AGGREGATE. GEORGE A. WALKLEY, Westfield, Mass. Filed Jan. 23, 1920. Serial No. 353,638. 5 Claims. (Cl. 106—35.)

1. The process of making a light weight aggregate, which consists in mixing clay and finely divided fuel into a plastic mass, forming the mass into separate units, partially drying such units sufficiently for stacking into a kiln, stacking the units into a kiln, and in then rapidly firing the kiln with an intense heat.

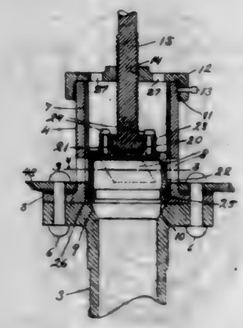
---

1,556,269. SHAVING APPARATUS WITH SUPPLY OF SHAVING LIQUID TO THE CUTTING EDGE. KAI WARMING, Copenhagen, Denmark. Filed Oct. 23, 1924. Serial No. 745,356. 7 Claims. (Cl. 30—12.)



1. A shaving apparatus comprising in its construction means including a cavity directly covered by the blade when secured in its place in the apparatus for supplying a liquid to the cutting edge of the said blade.

1,556,270. OUTLET VALVE FOR TANK CARS. HAL P. WELLS, Kansas City, Mo., assignor of one-third to Bird L. Swearingen, Kansas City, Mo. Filed May 21, 1920. Serial No. 383,140. 1 Claim. (Cl. 137—21.)



In an outlet valve for railway tank cars, a railway car tank, a hole in the bottom of said tank, a cylindrical casing extending through said hole into said tank, an annular flange integral with said casing and bearing upwardly against said tank, an outlet nozzle with an annular flange on the upper end thereof and bearing against the flange on said casing, rivets securing said flanges to said tank, an internal annular flange integral with said casing and approximately even with the bottom thereof and provided with an inverted frustrum shaped valve seat, ports extending through said casing laterally at some distance above said valve seat, a non-revolving trunk piston shaped valve in said casing with the open end downwardly disposed and provided with a companion inverted frustrum shaped valve seat, said valve closing said ports and resting on said frustrum shaped seats when closed and a screw threaded revolvable valve stem arranged to raise and lower said valve and to force said frustrum shaped seats in closed contact, so that in closing said valve said ports are first closed by the body of said valve and then said frustrum shaped seats are seated and in opening said valve said frustrum shaped seats are first separated and then said ports are opened.

---

1,556,271. METHOD AND ANODE FOR ELECTRODEPOSITION OF RUST-RESISTING COATINGS. CHRISTIAN JOHN WERNLUND, Tottenville, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Original application filed Jan. 5, 1924, Serial No. 684,506. Divided and this application filed July 6, 1925. Serial No. 41,866. 14 Claims. (Cl. 204—1.)

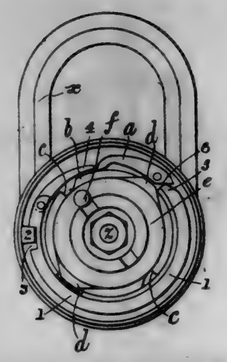
1. Method of electrodepositing a rust resistant deposit of cadmium and zinc which consists in electrodepositing these metals from a solution of their salts in an aqueous sodium cyanide-sodium hydroxide solution.

---

1,556,272. METHOD AND ANODE FOR ELECTRODEPOSITION OF RUST-RESISTING COATINGS. CHRISTIAN JOHN WERNLUND, Tottenville, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Original application filed Jan. 5, 1924, Serial No. 684,506. Divided and this application filed July 6, 1925. Serial No. 41,867. 13 Claims. (Cl. 204—1.)

1. Method of electrodepositing a rust resistant deposit of zinc, cadmium and mercury which consists in electrodepositing these metals from a solution of their salts in an aqueous sodium cyanide-sodium hydroxide solution.

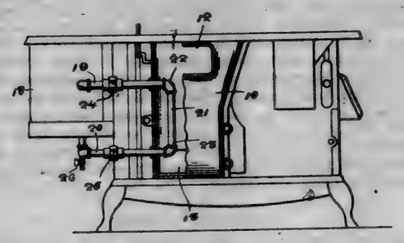
1,556,273. MAGNETO FOR INTERNAL-COMBUSTION ENGINES. DANIEL YELD WEBSTLEY, Ashford, England. Filed May 6, 1925. Serial No. 28,472. 8 Claims. (Cl. 123—149.)



1. A magneto for an internal combustion engine of the kind provided with an impulse starter having a catch with means actuated by reverse movement of the engine by which the catch is released for use.

---

1,556,274. WATER HEATER. ELLIS HALE WILKINSON, Bristol, Va., assignor to Bristol Stove & Foundry Company, Inc., Bristol, Va., a Corporation of Virginia. Filed Nov. 19, 1923, Serial No. 675,739. Renewed Aug. 3, 1925. 2 Claims. (Cl. 126—34.)

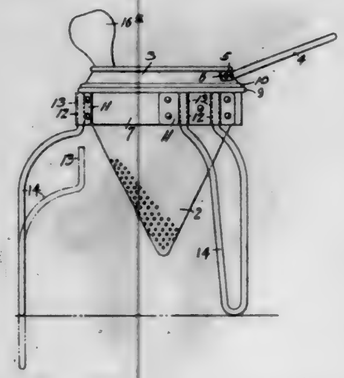


1. In a device of the class described, a firebox, an oven at one side thereof, a chamber extending around the oven and having communication with the firebox, a smoke flue in communication with the firebox and with the upper and lower portion of the chamber, a reservoir, and pipes extending from the reservoir and connected therewith at different levels, said pipes extending into the flue, means in the flue connecting the pipes with each other, said means extending upwardly alongside a vertical wall of the oven, and a damper for diverting all products of combustion, from direct passage to the flue, into contact with the bottom of the oven and thereafter around the pipes in the smoke flue.

---

1,556,275. SUPPORT FOR STRAINERS. JOHN H. WILSON, New Kensington, Pa., assignor, by mesne assignments, to The Aluminum Cooking Utensil Company, New Kensington, Pa., a Corporation of Pennsylvania. Original application filed Apr. 6, 1922, Serial No. 550,093. Divided and this application filed May 31, 1924. Serial No. 717,024. 1 Claim. (Cl. 248—30.)

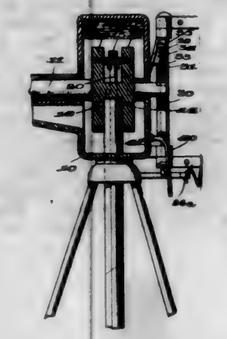
A stand comprising a collar upon which a strainer may rest, strap members secured to said collar and provided with pairs of circumferentially spaced sockets, and U-shaped legs of resilient wire or the like each having its free ends extending into a pair of sockets and bent outwardly toward its lower end, the ends of said legs which



seat within the sockets being sprung transversely of their axes to effect frictional contact with the walls thereof and the lower portions thereof being substantially vertical.

---

1,556,276. WINDMILL. JOHN H. WILSON, Mitchell, Nebr. Filed Oct. 1, 1924. Serial No. 740,999. 4 Claims. (Cl. 170—47.)



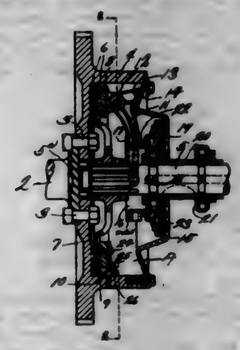
1. In a wind mill, a housing, a shaft rotatably mounted on the housing, a wind wheel fixed to one end of the shaft, a pair of cams fixed to that portion of the shaft which lies within the housing, said cams being spaced and having double cam grooves in their confronting faces, a lever fulcrumed on the housing and operating in between the cams, and a pair of followers pivotally mounted on the intermediate portion of the lever and operating in the grooves of the cams.

---

1,556,277. FRICTION CLUTCH. CLARENCE G. WOOD, Muncie, Ind. Filed June 9, 1922. Serial No. 567,108. 1 Claim. (Cl. 192—68.)

The combination with a disc clutch disposed within a casing, a thrust ring, an adjacent member with which the thrust ring cooperates, said thrust ring being guidable by lugs carried by the casing and disposed within recesses

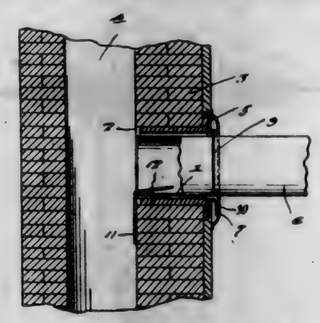
in the thrust ring, of means for moving said thrust ring instantaneously out of engagement with the adjacent member upon a declutching operation, said means com-



prising leaf springs secured to the outer side of the thrust ring, said leaf springs curving radially outwardly, and inwardly and cooperating with the outer sides of the lugs.

---

1,556,278. STOVEPIPE-SECURING MEANS. WILLIAM F. YORK, Grand Rapids, Mich. Filed July 30, 1924. Serial No. 729,128. 1 Claim. (Cl. 126—318.)



A stove pipe securing means including a sheet metal strip having its intermediate portion elongated for extending through the lateral opening of a chimney beneath the usual stove pipe mounted therein, the outer end of said strip being bent downwardly, said strip provided with openings adjacent the downwardly extending portion, a fastening wire extending through the openings, the inner end of said strip being slit, one portion of said slit end being disposed downwardly and the other portion being disposed upwardly and bent back over the strip.

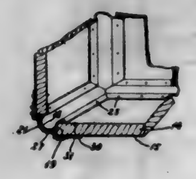
---

1,556,279. TOOL FOR FACILITATING THE ROLLING OF PNEUMATIC-TIRE INNER TUBES. GEORGE W. ALLEN, Indio, Calif. Filed May 27, 1924. Serial No. 716,250. 1 Claim. (Cl. 81—3.)

In a tool for facilitating the rolling of pneumatic tire inner tubes, a handle member, a pair of spaced parallel elongated fingers secured to said handle and between which the inner tube is adapted to be extended, a bolt fixed at one end to a portion of one finger and extending through the other finger, and a spring about said bolt for bearing against the finger through which the bolt projects for holding this last-mentioned finger normally parallel with the other finger.

---

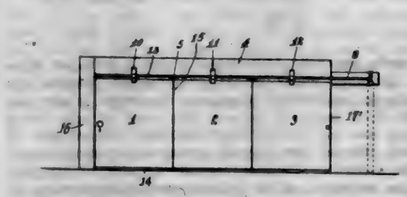
1,556,280. TRUNK. JOSEPH BERG, Brooklyn, N. Y. Filed Jan. 31, 1923. Serial No. 616,206. 7 Claims. (Cl. 190—37.)



1. In a container of the character described, in combination, adjacent walls spaced apart in angular relation at their edge portions, means for bridging the space between said walls secured to the inner surfaces of adjacent edge portions of the walls and having an arcuate portion in cross section located in the space between the walls, and means for reinforcing the bridging means secured to the outer surfaces of adjacent edge portions of said walls and having an arcuate portion in cross section conformably overlying the arcuate portion of the bridging means.

---

1,556,281. GARAGE DOOR. JOHN BOHNET, Hayward, Calif. Filed Jan. 18, 1923. Serial No. 613,447. 3 Claims. (Cl. 20—20.)



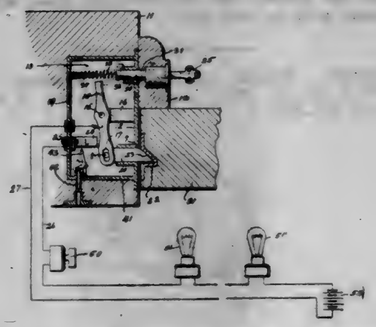
1. A sliding door comprising a plurality of panels, a supporting roller for each panel, a track on which said rollers operate, hinges secured to the upper and lower edges of contiguous panels having a plate pivotally connected to the edge of one panel and having a slidable connection with a holding device on the opposite panel edge, said sliding connection being substantially along the edge of the panel.

---

1,556,282. CIRCUIT CLOSER. HARRY B. BRADBY, Yacolt, Wash. Filed Mar. 18, 1924. Serial No. 700,121. 2 Claims. (Cl. 200—55.)

1. A circuit closer comprising a movable member and a stationary casing, said casing containing a stationary contact and a movable contact, a bolt operatively engaged with the movable contact, said bolt projecting in the path of the movable member when the movable contact is out of engagement with the stationary contact, said movable member being adapted to contact with and move the bolt in a direction to bring the movable contact into engagement with the stationary contact, a stem mounted in a wall of said casing for rotational and longitudinal movement, said stem being provided at its inserted end with a lug and having its opposite end projecting outwardly of said casing and provided with operating means, said stem being adapted to contact with and

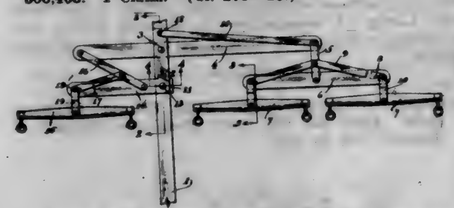
impart movement to said movable contact, and means within the casing for normally maintaining said stem out of contact with the movable contact, and additional



means for moving the movable contact out of engagement with the stationary contact and projecting the bolt into the path of travel of the movable member.

---

1,556,283. DRAFT EQUALIZER. JOHN B. BREI, Jr., Perryville, Wis. Filed Oct. 4, 1923. Serial No. 666,463. 1 Claim. (Cl. 278—15.)

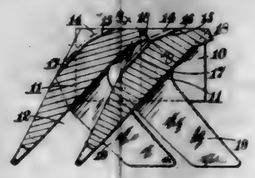


A draft equalizer comprising a draft pole, an elongated U-shaped clevis pivotally supported thereon and normally in longitudinal alignment therewith, a spreader bar pivotally mounted between the arms of said clevis adjacent one end thereof and extending transversely of the pole, the one end of said spreader bar extending to a point a greater distance beyond one side of the pole than the extension of the opposite projecting portion, an arm pivotally mounted between the arms of the other end of said clevis and extending to the side of the pole to which the shorter portion of the spreader bar extends, the normal position of said last mentioned arm being substantially parallel with the adjacent projecting portion of the spreader bar, a link member pivotally connected to the outer end of the shorter projecting portion of said spreader bar and pivoted at its opposite end to said arm adjacent the inner pivoted end of the latter, a second link member pivoted at its one end intermediate the ends of the last mentioned link and pivoted at its opposite end with a loose connection to the outer end of said arm, an elongated lever pivoted at one end to the rear end of said clevis and loosely pivoted at its opposite end to the outer end of the longer portion of said spreader bar, draft appliances pivotally secured to the outer end of said arm and the outer end of the longer portion of said spreader bar, and an upstanding angular and integral extension formed on the side edge of the forward end of said clevis adapted to engage the side of the draft pole for limiting movement of said clevis in one direction.

---

1,556,284. FURNACE. VERNER RUSSELL CHADWICK, London, England. Filed Mar. 27, 1923. Serial No. 628,004. 4 Claims. (Cl. 126—167.)

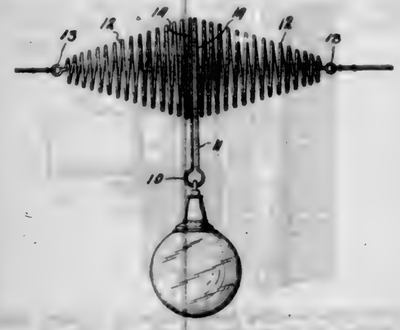
1. A furnace-grate for burning coal-dust and other pulverised material, comprising a plurality of fire-bars arranged side-by-side near one another to receive fuel on their upper surfaces, which bars have their fuel-bearing portions spaced apart to provide air gaps between them and are cast each with a plurality of air-supply channels which are directed upwards along their entire length and open upwards each through an air opening at an edge of the upper surface of each bar, which channels have their upper parts situated each in one



bar and open downwards into one of said air gaps, and the top portion of each said channel is sloped downwards at an angle less than the angle of repose of the fuel on the bars so that fuel will not slide down the said channels, which bars are further cast each with a plurality of projections on one side thereof arranged to extend each into said channel in an adjacent bar for directing the air flow along the same.

---

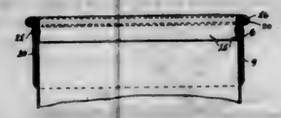
1,556,285. SPRING SUPPORT. JOHN B. CHRABKOW, Cincinnati, Ohio. Filed Oct. 14, 1924. Serial No. 743,572. 1 Claim. (Cl. 267—74.)



A spring support comprising a single length of spring wire formed centrally to provide an eye, the terminals of the eye extending vertically in side to side relation and at points spaced from the eye being coiled to form oppositly directed volutes, each spring having at its outer end an attaching eye, the bases of said springs being opposed and in close relation.

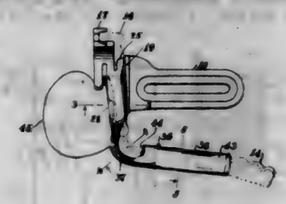
---

1,556,286. GOLF BAG. HARRY W. KEELER, New York, N. Y. Filed Oct. 19, 1923. Serial No. 669,535. 13 Claims. (Cl. 150—1.5.)



1. In combination, a tubular body; a rim at the edge of the body comprising a metal cuff around the outer edge face of the body; a wire ring around the outer edge of the cuff; and a collar around the inner face of the edge portion of the body and having its outer edge portion bent around the said wire ring.

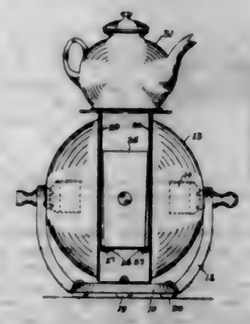
1,556,287. BINDER. BERNARD M. KEELL, New York, N. Y. Filed Aug. 10, 1922. Serial No. 580,916. 5 Claims. (Cl. 112—137.)



1. A binder for use with sewing machines, for attaching superposed layers to a fabric, said binder comprising separate binder elements for guiding the separate layers and provided with means for separating the layers, one of said elements being fixed and the other secured to the machine foot and movable therewith relative to the other element.

---

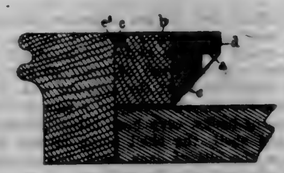
1,556,288. COMBINATION GUARD AND UTENSIL SUPPORT FOR ELECTRIC COOKERS OR TOASTERS. RICHARD G. LEDIG, Philadelphia, Pa., assignor to A. Mecky Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 9, 1922. Serial No. 542,312. 7 Claims. (Cl. 126—41.)



1. An appliance comprising a reflector; a heating unit near the reflector; a receptacle-receiving supporting-platform near the reflector and unit provided with sockets; and upstanding side members provided with turned ends received in said sockets formed with an upper support above said platform and higher than the reflector in position to be heated from beneath.

---

1,556,289. CUSHION FOR BILLIARD AND LIKE TABLES. FREDERICK LING, London, England, assignor to Thurston and Company Limited, London, England. Filed Jan. 28, 1925. Serial No. 5,267. 12 Claims. (Cl. 273—9.)



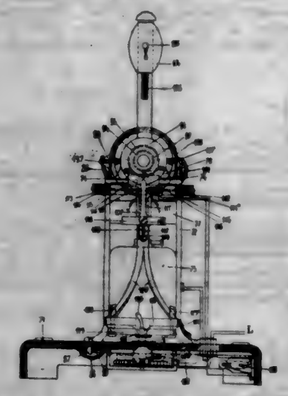
1. A billiard table cushion formed of tough cellular rubber.

1,556,290. NONSKID VEHICLE WHEEL. JOHN MCMULLEN, Butte, Mont. Filed Jan. 30, 1924. Serial No. 689,452. 5 Claims. (Cl. 301—51.)

5. In a wheel, a felly having annular laterally disposed tire supporting shoulders, the said felly further comprising an annular housing, a sleeve fitted through the housing, a base secured to the inner sides of the tire supporting shoulders and spanning the space between the same, the said base having an opening and the sleeve being threaded to fit within the opening, a cage supported by the base, the cage at its inwardly presented end being interiorly threaded, a bushing adjustably threaded into the said end of the cage and having its bore in axial alinement with the said sleeve, a ground-engaging member comprising a rod slidably fitted in the bore of the sleeve and in the bore of the bushing and guided thereby at its respective opposite end portion, the said rod having an abutment thereon within the cage, and a sleeve disposed about the rod within the cage and bearing at one end against the abutment and at its other end against the said bushing.

---

1,556,291. MOLDING MACHINE FOR DENTAL PURPOSES. GEORGES LOUIS VICTOR MAES and ARMAND LEON CLEMENT MAES, Paris, France. Filed Aug. 31, 1923. Serial No. 660,292. 10 Claims. (Cl. 22—65.)

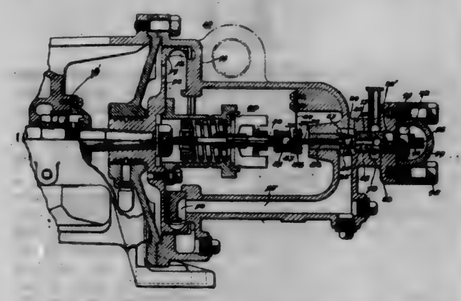


1. A molding machine of the character described comprising a rotating mold, a blow-pipe nozzle adjacent said mold and rotating therewith, means for rotating said mold and nozzle, and means for supplying fuel and compressed air to said nozzle during rotation.

1,556,292. VULCANIZING STUD FOR TUBE MAKING. MELVON A. MARQUETTE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 7, 1923. Serial No. 673,297. 1 Claim. (Cl. 18—45.)

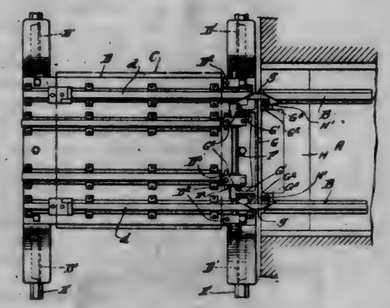
A vulcanizing stud for use in tube making having a hollow body portion closed at one end and holes through the sides of the body portion.

1,556,293. TURBINE VALVE. MATTHEW T. MARTIN, Brooklyn, N. Y., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 2, 1923. Serial No. 629,357. 28 Claims. (Cl. 137—140.)



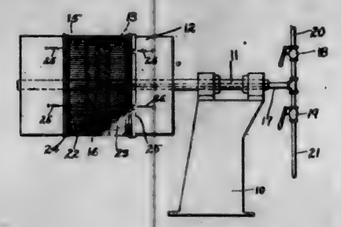
1. The combination with a turbine having an admission valve of the governor-controlled type, of means extending externally of the turbine for adjusting the seat portion of the valve while the turbine is in operation, and a fluid-tight cover for said means carried by the turbine.

1,556,294. TUNNEL-KILN-CAR CONSTRUCTION. PAUL A. MEEHAN, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., Cleveland, Ohio, a Corporation of New York. Filed Feb. 7, 1924. Serial No. 691,190. 9 Claims. (Cl. 104—48.)



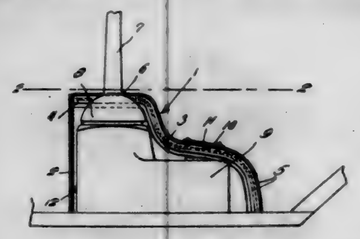
3. A transfer car provided with a track over which a car can be moved onto and off the transfer car and formed in sections, one of which comprises a frame hinge connected to the transfer car and track rail parts detachably connected to said frame.

1,556,295. DEVICE FOR EXPANDING ENDLESS BANDS. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 28, 1921. Serial No. 463,993. 6 Claims. (Cl. 154—10.)



2. In a device of the class described, an inflatable tube, and a plurality of flexible bands disposed across the tube and secured at their ends to substantially inextensible members.

1,556,296. PROTECTOR BOOT FOR GEAR-SHIFT LEVERS. HARRY E. MITCHELL, San Francisco, Calif. Filed Sept. 15, 1924. Serial No. 737,828. 2 Claims. (Cl. 74—89.)



1. A protector boot for gear shift levers comprising a substantially U-shaped casing extending around the lower portion of the lever, a covering strip having the side edges thereof disposed downwardly and fixed to the inner face of the U-shaped casing, said covering strip having an opening through which the gear shift lever projects and a U-shaped reinforcing plate secured to the inside of the casing.

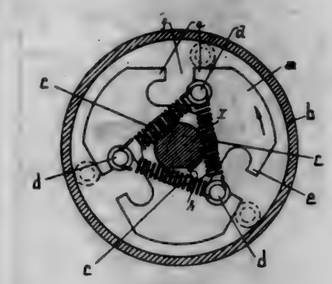
1,556,297. ARTIFICIAL MINNOW. JOSEPH W. MOORE, Oberlin, La., assignor of one-half to Ripley G. Corkern, Oberlin, La. Filed July 19, 1924. Serial No. 727,012. 2 Claims. (Cl. 43—35.)

1. An artificial bait of the character described comprising a shell substantially conical at its ends and having an axially aligned series of bearings therein, a longitudinally extending rod disposed within said bearings and projecting out of the forward end of the shell having means for the attaching of a line thereto, a plurality of sets of hooks, each hook being pivotally mounted within the shell, the shell being formed with openings opposite the bill of each hook and through which the bill of each hook may be projected or retracted, conical spreaders mounted upon the rod and coacting one with each set of hooks to cause the projection of the hooks when the rod is pulled forward relative to the shell, a spring urging the rod rearward, and springs for each hook urging each hook inward and against its corresponding spreader independently of any other hook.

1,556,298. BRUSH. PETER J. MORCK, San Francisco, Calif. Filed May 18, 1922. Serial No. 561,617. 1 Claim. (Cl. 15—192.)

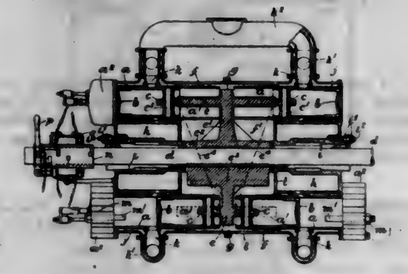
A brush comprising a frame; a plurality of rows of bristles having vulcanized ends arranged in said frame; a plurality of resilient and hollow U-shaped in cross section partitions adapted to be positioned between the vulcanized ends of said rows of bristles; and means for securing said frame to a handle.

1,556,299. AUTOMATIC COUPLING. KARL OBERMOSER, Baden-Baden, Germany. Filed June 6, 1922. Serial No. 566,850. 8 Claims. (Cl. 192—105.)



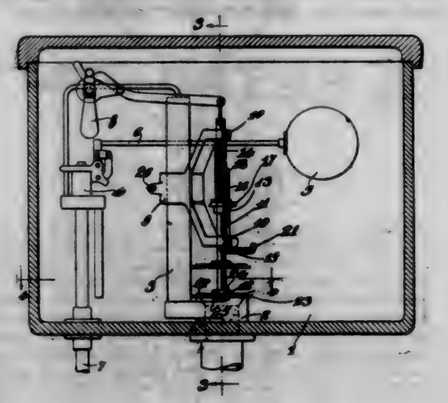
6. In a shaft coupling of the character set forth, in combination with a power shaft, a member loosely rotatable on said shaft, a driving member fixed on said shaft, comprising a plate presenting peripherally a plurality of T-slots, flattened faces on the periphery of said plate flanking each of said T-slots, coupling means adapted to coact with said plate slots, means associated with said plate and adapted to normally retain said coupling means in the inoperative position within said T-slots but allowing them to be moved thereout onto said flattened plate faces into the wedge-coupling position upon the said slotted plate being momentarily relatively displaced by sudden mass impulses sent over said power shaft.

1,556,300. MOTIVE-POWER ENGINE. SIMON DOKK OLSEN, West Ham, London, England, assignor to The Olsen Engine Syndicate Limited, London, England, a Bristish Company. Filed Aug. 27, 1821. Serial No. 495,862. 6 Claims. (Cl. 121—119.)



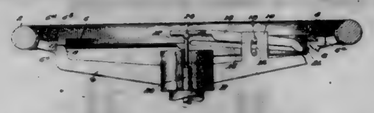
6. The combination of two circular groups of opposed cylinders and pistons acting counter to each other, a cylindrical cam arranged between said groups with the mouths of the cylinders overlapping same so as to come close to the web of the cam and afford guidance for the pistons and support against lateral pressure, rollers in the mouths of the pistons acting against the lateral edges of the cam, a shaft parallel with the cylinders, an outer casing for each cylinder group in which the said cylinders are fitted, bearings for the shaft arranged at the centre of each casing, and means for tying the casings together all round so that all the strains are self-contained and neutralize each other, substantially as described.

1,556,301. WATER-CONTROLLING MECHANISM FOR FLUSH TANKS. DANIEL A. O'NEILL, Philadelphia, Pa., assignor of one-half to John C. O'Neill, Overbrook, Pa. Filed June 24, 1924. Serial No. 721,978. 2 Claims. (Cl. 4—53.)



1. Water controlling means in flush tanks including an outlet; a bracket mounted in the tank; a rod slidable in the bracket; a radially extending and swingably adjustable valve member carried by the rod for closing the outlet; means for moving the rod, and tripping means for releasing the moving means whereby the valve will be moved to close the outlet when the water in the tank drops to a predetermined level.

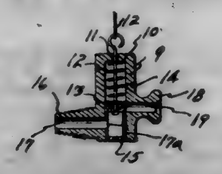
1,556,302. CONTROLLING DEVICE FOR MOTOR VEHICLES. JAMES HARALSON PACE, Scottdale, Ga. Filed July 24, 1924, Serial No. 727,920. Renewed July 31, 1925. 8 Claims. (Cl. 74—88.)



1. A controlling mechanism for motor vehicles comprising, in combination with the steering wheel of the vehicle, of a ring supported for turning movements within said wheel, and means operated by said ring to control the supply of fuel to the motor.

---

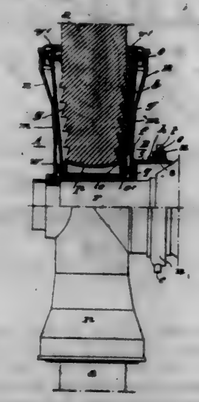
1,556,303. PET COCK. HERBERT PEARCE, Detroit, Mich. Filed Jan. 30, 1924. Serial No. 689,412. 1 Claim. (Cl. 251—137.)



A pet-cock comprising a body portion having a bore extending longitudinally therethrough for almost its entire length, a perforated end wall closing one end of the bore, a cylindrical cap fitting into and closing the other end of the bore and having an inlet aperture in its periphery, an inlet portion having a passageway aligning with the peripheral aperture in the cap, a spout having an outlet port opening into the bore in advance of and adjacent the open end of the cap, a plunger snugly fitting against the wall of the bore, a plunger stem extending through the perforation in the end wall of the body portion, and a spring arranged in the bore and engaging the plunger to normally press the plunger into position to simultaneously close the open end of the cap and the outlet port of the spout.

---

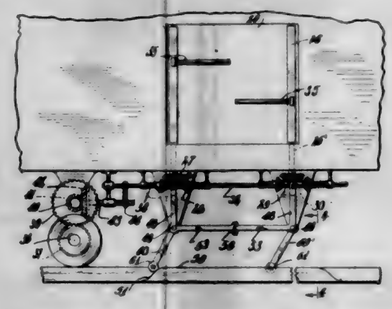
1,556,304. AIR PROPELLER. ENRICO PISTOLESI, Tivoli, Italy. Filed Aug. 30, 1923. Serial No. 660,068. 7 Claims. (Cl. 170—163.)



1. In a propeller of the character described, having a hub and blades rotatable therein, the combination of a blade having a serrated conical root and an internally serrated conical sleeve adapted to receive said root, said serrations comprising conical surfaces having inclinations opposite to that of the conical root.

---

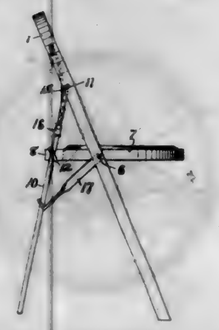
1,556,305. RAILROAD MAIL DELIVERING AND RECEIVING DEVICE. FREDRICH WILHELM RICHARD POEKERT, Pittsburgh, Pa. Filed Mar. 19, 1924. Serial No. 700,239. 3 Claims. (Cl. 258—8.)



1. In a mail car, mail delivering and receiving means comprising a pair of posts arranged at opposite sides of the car door opening, mail holding elements on said posts, and means for swinging said posts in unison to project said elements through the said opening, said means including a constantly driven shaft, gears fixed to said posts, pairs of gears feathered on to said shaft and adapted to selectively engage said first gears, a fixed rail, and a device adapted to engage said rail to move said gears into mesh.

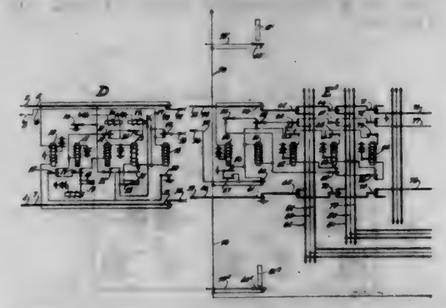
---

1,556,306. FOLDING CHAIR. WILLIAM C. RASTETTER, Fort Wayne, Ind. Filed Oct. 6, 1924. Serial No. 741,829. 3 Claims. (Cl. 155—142.)



1. In a folding chair, a main frame; a seat pivotally supported in the frame and having a rearwardly extending projection at each side thereof; a prop member having arms pivoted respectively at their tops to the frame at points therein above the seat; a shackle member encompassing each of said projections and the corresponding adjacent arms of the prop member, and having limited sliding movement on said arms and being operable to clamp the arms against said projections when the seat is in position for use; a back secured at its top to the frame and having a sliding connection at its bottom with each of the arms of said prop; and a pivoted brace at each side of the seat having limited sliding movement on the corresponding arm of the prop.

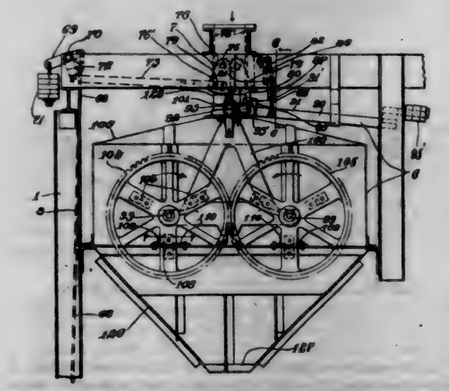
1,556,307. TRUNKING ARRANGEMENT FOR AUTOMATIC TELEPHONE SYSTEMS. RODNEY G. RICHARDSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1921. Serial No. 507,009. 29 Claims. (Cl. 179—18.)



1. In a telephone trunking system, a trunking section comprising a plurality of similar groups of inlets and a group of outlets divided into a plurality of subgroups, the number of outlets in each subgroup being always equal to the total number of outlets divided by the number of inlets in a group, irrespective of the total number of such outlets, and switching means for connecting inlets which are taken for use with idle outlets.

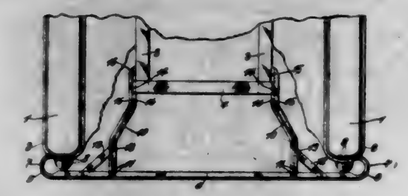
---

1,556,308. WEIGHING MECHANISM. LEVIGNE M. ZEPP, Baltimore, Md. Original application filed Mar. 10, 1923, Serial No. 624,087. Divided and this application filed Jan. 24, 1924. Serial No. 688,154. 7 Claims. (Cl. 249—2.)



1. A weighing hopper consisting of a plurality of radiating members, means mounting said members for rotation about spaced axes, weighing means supporting said members, means for locking them in co-operating position in which they form a receptacle to hold the material to be weighed, said locking means being placed to engage the radiating member in the empty position of the weighing device so that the said members are released from the locking means by passing out of engagement therewith, as the weighing operation is completed by filling of the hopper to the predetermined extent, the radiating members being caused to rotate and release the material weighed.

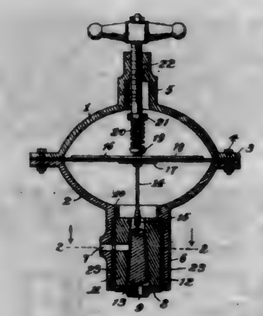
1,556,309. COMBINATION REAR FENDER BRACE AND BUMPER. ADOLPH R. BROCKSMITH, St. Louis, Mo. Filed Aug. 22, 1923. Serial No. 658,741. 11 Claims. (Cl. 293—55.)



1. In a motor vehicle equipped with a pair of rear fenders and a chassis frame having side members and a cross member, the combination of a transverse bar having curved ends arranged to be rigidly connected with the fenders, arms extending inwardly from said bar, said arms being provided with notches engaging the ends of the cross member, and connecting devices for securing said ends to the vehicle.

---

1,556,310. AUTOMATIC PRESSURE-CONTROL VALVE. THOMAS E. CROCKETT, Kansas City, Mo. Filed Sept. 14, 1922. Serial No. 588,226. 4 Claims. (Cl. 50—23.)



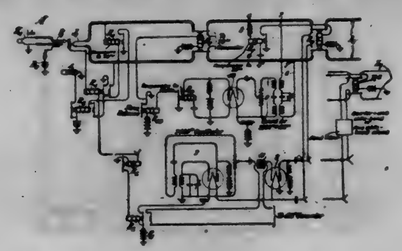
1. In a valve, a housing, seat members arranged on opposite sides of the housing, one of which only is provided with an inlet port, a closure member for the housing having an outlet port, resilient gaskets interposed between the seat members and the housing, a gate member having tapered side surfaces adapted to wedgingly engage the seat members and place the resilient members under compression and control the inlet port, means for lifting the gate member into contact with the seat members, and means for adjustably controlling the lifting means.

---

1,556,311. SIGNALING SYSTEM. JOHN DAVIDSON, JR., Trenton, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,783. 8 Claims. (Cl. 179—48.)

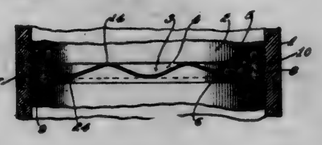
1. In a signaling system the combination of a line circuit, a cord circuit having a source of ringing current connected thereto, a source of high frequency oscillations,

a source of low frequency variations, means to modulate said high frequency oscillations by the said low frequency variations, and means controlled by the connection of the said cord circuit with the said line circuit to effect the modulation of the said high frequency oscillations by the said low frequency variations.



---

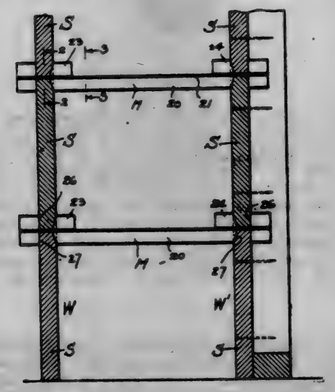
1,556,312. PISTON RING. JOSEPH REX DAVIS, Clarksburg, W. Va., assignor to Rex Manufacturing Company, Clarksburg, W. Va., a Corporation of West Virginia. Filed Jan. 20, 1922. Serial No. 530,596. 3 Claims. (Cl. 74—109.)



1. In a piston ring structure, the combination with the piston having an annular channel for confining the ring of a ring body having a groove on its inner face presenting an acute angle, and a spring consisting of a body of spring wire provided with oppositely extended loops, the crowns of opposite loops respectively bearing in the acute angle of the groove and the angle of the channel in the piston.

---

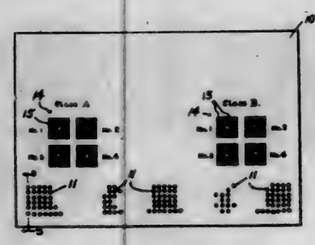
1,556,313. COMBINED SPACING AND TIE BAR FOR CONCRETE FORMS. JOHN H. DODD, Los Angeles, Calif. Filed Dec. 10, 1924. Serial No. 754,992. 12 Claims. (Cl. 25—131.)



1. In a form of the character described having sectional side walls, a spacing member interposed between the sections of the walls and spanning the latter, said member having integral portions defining tapered recesses into which the sections are adapted to be wedged to secure the latter against longitudinal and transverse movement relative to the member.

---

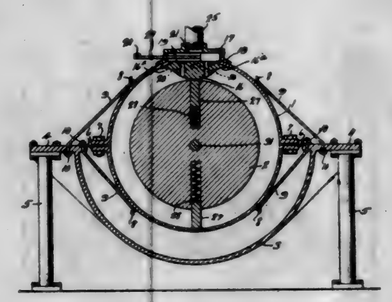
1,556,314. GAME. JULIUS D'ORIO, Highgrove, Calif. Filed Oct. 2, 1923. Serial No. 666,129. 1 Claim. (Cl. 273—139.)



A game of the character set forth comprising a board bearing a serial number and having cells therein, one surface of the board having a series of problems indicated thereon and its other surface having a single problem indicated thereon, a series of game elements bearing the serial number of the board and having indications thereon corresponding to one of the problems on the board.

---

1,556,315. ROTARY ENGINE. THOMAS DRENNAN, Croton, Ontario, Canada. Filed Jan. 17, 1920, Serial No. 352,177. Renewed Feb. 12, 1925. 8 Claims. (Cl. 121—194.)

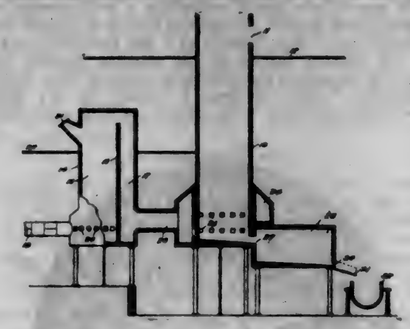


1. A rotary engine including a cylindrical casing, a rotor mounted therein, a concave bed arranged under the casing, supporting plates at the ends of the bed, hooks on opposite sides of the casing, and tie rods connected to the hooks and extending through the supporting plates, said tie rods cooperating with the hooks to hold the cylindrical casing in position.

---

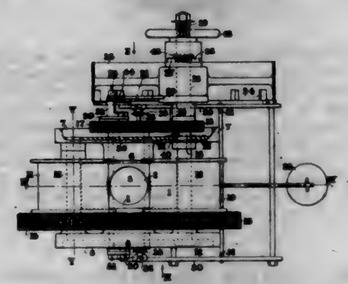
1,556,316. METHOD OF REDUCING OXIDE ORES TO METALLIC STATE. YULEE ALISON DYER, Birmingham, Ala. Filed Mar. 10, 1924. Serial No. 698,153. 7 Claims. (Cl. 75—17.)

1. A process of reducing oxide ores which consists in arranging a layer of the ore to be reduced on a thin-gauged bed of carbonaceous material, generating carbon dioxide gas from a separate body of carbonaceous material, and flowing the carbon dioxide gas to the bed of carbonaceous material and from the bottom to the top thereof, thereby converting said carbon dioxide gas to carbon monoxide gas for reducing the layer of ore above, whereby primary combustion of carbonaceous material in the presence of the ore is eliminated.



---

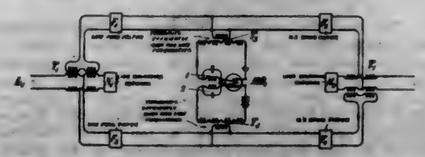
1,556,317. DOUGH-DIVIDING MACHINE. LAURENCE EMBERY, Blurton, England. Filed Dec. 6, 1923. Serial No. 679,009. 10 Claims. (Cl. 73—137.)



1. A dough dividing machine comprising a scale beam, a weight pan on one end of said beam, a cylinder having a piston supported adjacent to the other end, means for feeding dough into said cylinder, and means controlled by the scale beam for rotating said cylinder into a discharging position when the pressure of dough on the piston is sufficient to tip the scale beam, substantially as and for the purpose hereinbefore set forth.

---

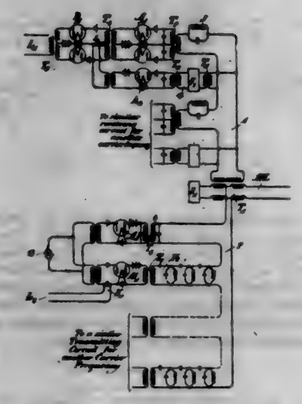
1,556,318. HIGH-FREQUENCY MULTIPLEX SIGNALING SYSTEM. LLOYD ESPENSCHIED, Hollis, and HERMAN A. AFFEL, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 30, 1919. Serial No. 327,397. 8 Claims. (Cl. 178—44.)



1. The method of modulating oscillations in a system characterized by means for the conversion of low frequency variations into high frequency oscillations, which consists in simultaneously impressing the low frequency variations and unmodulated carrier oscillations upon a translating circuit, regeneratively amplifying the said carrier oscillations, and simultaneously modulating the said amplified carrier oscillations by the low frequency variations, and transmitting the said modulated oscillations.

---

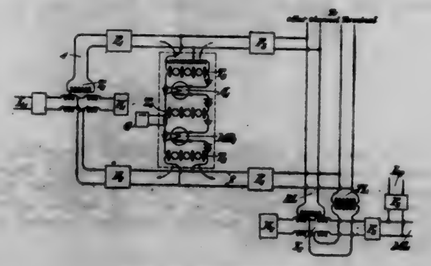
1,556,319. HIGH-FREQUENCY MULTIPLEX SIGNALING SYSTEM. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 30, 1919. Serial No. 327,501. 9 Claims. (Cl. 178—44.)



4. In a signaling system characterized by the simultaneous reception of modulated and unmodulated oscillations, the method for improving the quality of detection of received signals, which consists in separating by filtering the modulated oscillations and the unmodulated oscillations, amplifying one of said types of oscillations and combining both types of oscillations to produce detection.

---

1,556,320. HIGH-FREQUENCY MULTIPLEX SIGNALING SYSTEM. LLOYD ESPENSCHIED, Queens, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 9, 1921. Serial No. 459,834. 7 Claims. (Cl. 179—15.)

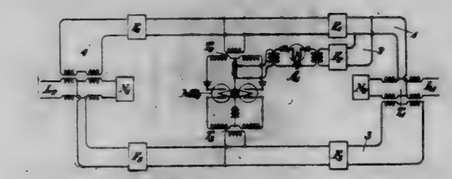


1. In a signaling system adapted for the transmission and reception of high frequency signals and characterized by a translating circuit common to the transmitting and receiving paths of the said system, the method which consists in simultaneously amplifying in a common circuit low frequency signals and modulated high frequency signals, modulating an unmodulated high frequency carrier current in accordance with the said low

frequency signals, demodulating the modulated high frequency oscillations by means of the said carrier current, and transmitting the currents resulting from such modulation and demodulation.

---

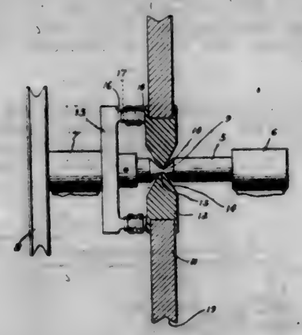
1,556,321. HIGH-FREQUENCY MULTIPLEX SIGNALING SYSTEM. LLOYD ESPENSCHIED, Queens, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed Sept. 30, 1919, Serial No. 327,501. Divided and this application filed Apr. 9, 1921. Serial No. 459,835. 9 Claims. (Cl. 179—15.)



1. In a signaling system adapted for the transmission and reception of high frequency signals, the method which consists in simultaneously receiving from a common medium modulated high frequency oscillations and unmodulated high frequency oscillations, separating the two types of oscillations, amplifying the unmodulated type, and detecting the modulated oscillations by means of the amplified unmodulated oscillations.

---

1,556,322. FLOATING STONE. GEORGE C. FAVER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 16, 1923. Serial No. 675,084. 2 Claims. (Cl. 51—168.)

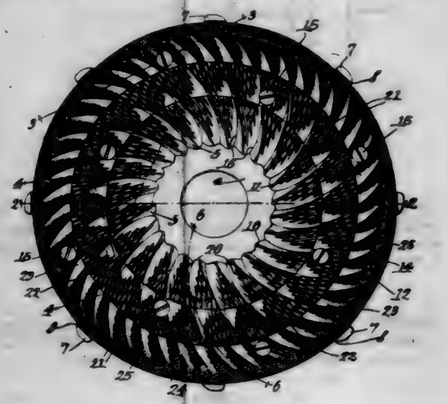


1. A device of the character described comprising a shaft, a stone loosely mounted thereon, having fingers extending therefrom, a spanner keyed to the shaft and having fingers for cooperation with the fingers carried by said stone and ball members interposed between the said cooperating fingers.

---

1,556,323. MILL DISK. PABLO GONZALES GARZA, San Antonio, Tex. Filed June 4, 1925. Serial No. 34,968. 9 Claims. (Cl. 83—8.)

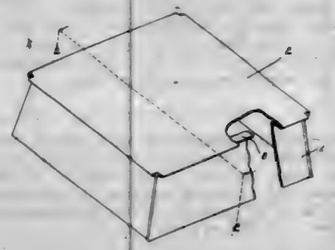
1. A grinding member provided with a central opening and equipped in its working surface with grooves which extend across the edge of the opening and outwardly toward the periphery of the grinding member, each groove being made up of a plurality of parts, each of said parts being of substantially V-shape in plan, the narrower ends of the parts of the grooves being disposed toward the periphery of the grinding member, each part of the groove comprising a wall disposed at a pronounced angle to the working surface of the grinding member, and a wall disposed at a less pronounced angle to the working surface of the grinding member, the parts of the groove diminishing in depth as they extend outwardly, thereby to form a shoulder at the point where the shallower outer end of each of said parts



communicates with the deeper inner end of an adjoining one of said parts, there being flat surfaces between the said parts of adjoining grooves, the flat surfaces being roughened by intersecting slits, the first-specified walls of the parts of the grooves being in longitudinal alinement, and there being projecting blades at the periphery of the grinding member, the blades having sharpened edges disposed approximately at right angles to the working surface of said member and located closely adjacent to the periphery of said member.

---

1,556,324. PROCESS FOR MAKING DOMES FOR PLASTIC CONSTRUCTION. WILLIAM M. GOLDSMITH, Cincinnati, Ohio. Filed Mar. 22, 1922. Serial No. 545,829. 3 Claims. (Cl. 113—116.)



1. The process of making domes for use with concrete floor construction and the like comprising forming a flange on one side and U-shaped grooves at opposite ends of plates, inserting a wall of each plate in the groove in the next adjacent plate, whereby a polygonal walled tube is formed, the plates having their flanges extending outwardly, forming a top with U-shaped grooves for the reception of the flanges on the plates, sliding the top over the tube and locking the flanges in the grooves in the top, and squashing the walls of all of the grooves whereby the plates and top are secured upon one another.

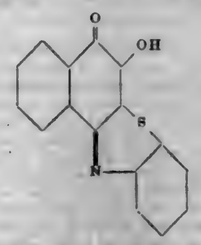
1,556,325. METHOD FOR CUTTING METALS BY THE AID OF AN ELECTRIC CURRENT FED TO A ROTATING CUTTING DISK. OSKAR FRITZ AMANDUS EMIL GRUMPELT, Hamburg, Germany. Filed Oct. 24, 1924. Serial No. 745,717. 2 Claims. (Cl. 219—1.)

1. A method for cutting metals by means of a rotating disk and an electric current comprising rotating the disk at a peripheral speed in excess of 120 m. per second and using an electric current not exceeding 10 volts, and having an amperage at least 10 times as great as the voltage, whereby a lineal combustion of the metal results.

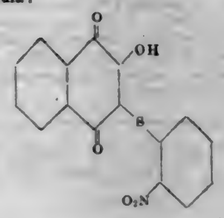
---

1,556,326. PROCESS FOR MANUFACTURING DYES. WILHELM HERZBERG, Berlin-Wilmersdorf, and GERHARD HOPPE, Berlin-Treptow, Germany, assignors to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Dec. 12, 1924. Serial No. 755,551. 1 Claim. (Cl. 260—27.)

A process for manufacturing dyes of the general formula:

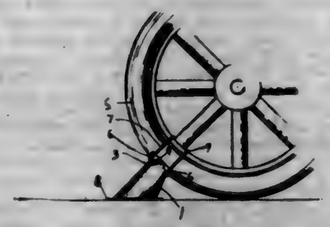


by treating with reducing agents compounds of the general formula:



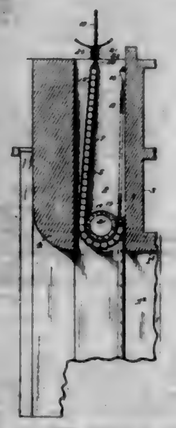
---

1,556,327. AUTOMOBILE BLOCK. LEO P. HUGHES, Cleveland, Ohio. Filed May 28, 1924. Serial No. 716,437. 4 Claims. (Cl. 188—32.)



1. In an automobile block of the type set forth, the combination with a body portion of general frusto-conical form, of a seat at the smaller end thereof for the reception of the wheel of a vehicle, the axis of said body portion inclining with respect to its base so as to lie on a line approximately radial to a wheel in engagement with said seat.

1,556,328. WATER GATE. EDWARD HUTCHINS, New York, N. Y., assignor to International Paper Company, a Corporation of New York. Filed Jan. 25, 1924. Serial No. 688,362. 20 Claims. (Cl. 61—22.)



1. A water gate comprising in combination, a plurality of sections lying side by side, and a flexible water-impervious sheet attached to each of said sections and covering the same and connecting them together in the form of a flexible apron.

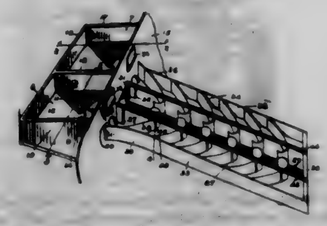
---

1,556,329. NEW ORTHO-HYDROXYAZO DYE. OSKAR KALTWASSER, Berlin, HERMANN KIRCHHOFF, Berlin-Lichterfelde, and HANS OEHEN, Charlottenburg, Germany, assignors to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed May 15, 1925. Serial No. 30,616. 3 Claims. (Cl. 260—87.)

1. The herein-described new ortho-hydroxyazo dyes the after-chromed tints of which and those obtained by dyeing in the presence of a chrome-mordant being orange to bluish red and having an excellent fastness to the action of light and to stoving, the dyes being manufactured by combining a sulphonated ortho-hydroxydiazo-compound with an unsulphonated 1-naphthyl-3-methyl-5-pyrazolone.

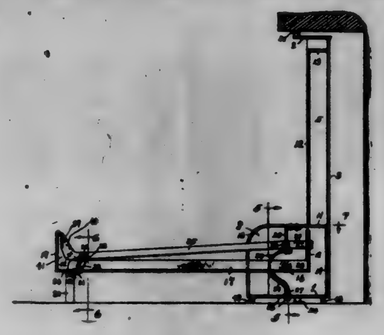
---

1,556,330. NEST AND EGG CHUTE. EDOUARD LAHIÈRE, Montreal, Quebec, Canada. Filed May 12, 1924. Serial No. 712,707. 2 Claims. (Cl. 119—48.)



1. In a nest and egg chute, a chute adapted to be secured to the nest at the outlet and inclined therefrom and forming a path for the eggs and egg pockets of sheet material having hooked stems leaning against the side wall of the chute and forming pocket and pivoted at the inner side of said path and overlapping in their closed positions.

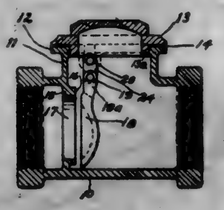
1,556,331. WARDROBE BED. GEORGE A. FAIR, Detroit, Mich. Filed Feb. 3, 1923. Serial No. 616,659. 4 Claims. (Cl. 5—164.)



1. In a bed, the combination of a case comprising a base, sides, a pair of alined pivots mounted in said sides, a bed frame mounted on said pivots and comprising side bars, guide bars mounted in said case and comprising circular portions parallel to the sides of the case and concentric with the bed frame pivots, and coil springs mounted on said guide bars and pressing upward against the side bars of the bed frame.

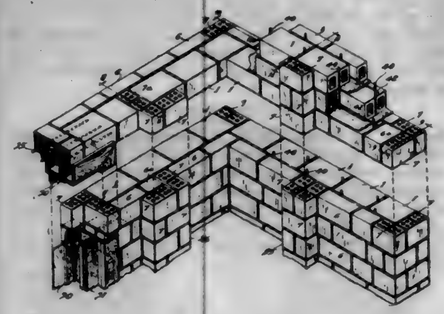
4. In a bed, the combination of a case, a bed frame pivoted at one end to said case, legs pivoted to the opposite end of the frame, a yoke pivoted above the legs, said legs and yokes on each side of the frame having overlapping arms extending beyond their pivots, one of said arms on each side of the frame being formed with a slot and a pin being mounted in the other arm extending through said slot, links extending from said pins to said case, and pivots carried by the case for the opposite ends of the links, said second pivots being above the pivots of the frame so as to cause the legs to remain vertical and to swing the yoke toward the frame when the frame is swung to vertical position.

1,556,332. CHECK VALVE. JOHN I. GORMAN, Cleveland, Ohio, assignor to The Midland Bank, trustee, Cleveland, Ohio, a Corporation of Ohio. Filed May 10, 1924. Serial No. 712,184. 3 Claims. (Cl. 251—123.)



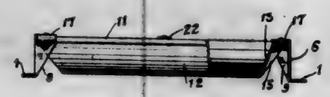
2. In a check valve of the character described, the combination of a valve body member provided with a partitioning wall having a passageway and a surrounding seat, a valve closure member adapted to co-act with the seat to close the passageway, a branch on the valve body and means disposed within the branch throat affording plural pivotal suspension for the valve closure member said means being spaced relative to the seat to normally suspend the closure member freely and in unseated position.

1,556,333. HOLLOW-BUILDING-WALL CONSTRUCTION. FREDERICK HEATH, Tacoma, Wash., assignor to The Heath Unit Tile Company, Tacoma, Wash., a Corporation of Washington. Filed Aug. 15, 1921. Serial No. 492,344. 6 Claims. (Cl. 72—41.)



1. A building hollow wall construction, comprising hollow blocks throughout, arranged in courses and having even continuous horizontal mortar beds, each course having one or more three void blocks having side and intermediate load bearing webs, the intermediate webs being separated by a median longitudinal void, and each course including blocks having vertical voids with webs and shells spaced apart distances corresponding to the spacing of the webs and shells of the three void blocks, each block in the structure being preferably arranged in overlapping relation with blocks in courses above and below to provide a bonded structure, all of the load bearing webs and shells of the two forms of blocks throughout the entire wall construction including corners and pilasters lying in true vertical planes and forming continuous vertical compression members throughout the entire structure.

1,556,334. TROUGH. JOHN C. HOEHNEN, Bushnell, Ill. Filed Nov. 12, 1923. Serial No. 674,177. 3 Claims. (Cl. 119—61.)

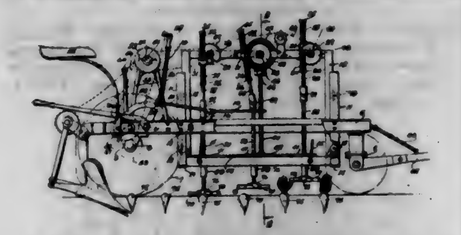


3. A trough, comprising a one-piece metal member having a concaved body portion provided with marginal flanges, ends terminating in top portions superposed upon said flanges, end supports integral with and extending downwardly from said superposed portions, lateral wings on said end supports underlying said marginal flanges and end top portions, and a single connecting means at each corner of the trough uniting said marginal flanges, top portions and wings.

1,556,335. BEET TOPPER. THEODORE C. HOLLNAGEL, Milwaukee, Wis. Filed Aug. 29, 1921. Serial No. 496,240. 9 Claims. (Cl. 55—107.)

1. In a machine of the class described, means for topping beets or the like comprising a cutter member, means for continuously alternately engaging and disengaging said member with the tops of beets or the like, and means for actuating said cutter member.

2. In a machine of the class described, means for topping beets or the like comprising a vertical reciprocally mounted shaft, a cutter member carried by the lower end of said shaft, means for continuously reciprocating said shaft during the operation of the machine to engage the cutter member with the beet or the like to be topped, and means for actuating the cutter member.

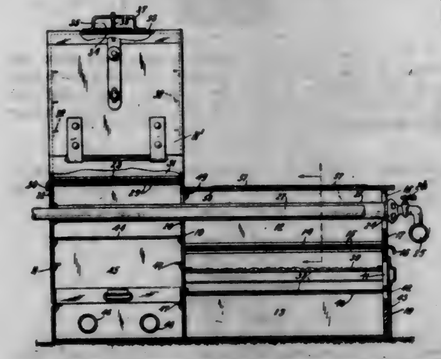


8. In a machine of the class described, beet or the like topping means comprising a hub member, cutting members pivotally carried thereby, and means retaining said members in a substantially horizontal position.

1,556,336. POWER-PROPELLED BOAT. CHARLES J. McHUGH and DURWARD S. RIVERS, Indianapolis, Ind. Filed Apr. 17, 1922. Serial No. 553,626. 5 Claims. (Cl. 46—37.)

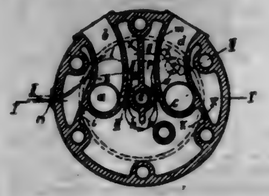
1. A power-propelled boat including a hull, two boilers in the hull spaced apart and having each a vibratory wall plate, the lower portions of the boilers being secured to the hull, a cap connected to the tops of the two boilers and covering the space between them, two pipes connected to the upper portions of the boilers respectively and extending downwardly in and rearwardly through the hull, and a fuel reservoir having a wick-fed burner between the boilers.

1,556,337. COOKING STOVE. IRA MAIER and FLORIAN KOLENC, New York, N. Y. Filed Jan. 16, 1925. Serial No. 2,805. 4 Claims. (Cl. 126—39.)



1. A stove including a burner compartment, a broiler compartment below said burner compartment, means for opening or closing, at will, the communication between said two compartments, said burner compartment including a top, and a burner within said burner compartment below said top, said burner being adapted to heat said top and said broiler compartment when said two compartments are in communication.

1,556,338. CYLINDER COVER FOR INTERNAL-COMBUSTION ENGINES. GEORG MANGOLD, Danzig-Langfuhr, Danzig. Filed May 12, 1924. Serial No. 712,819. 2 Claims. (Cl. 123—173.)

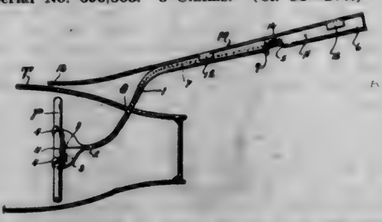


1. In a water-cooled cylinder cover for four-cycle motors, the combination with the inlet, fuel, and outlet, valve channels arranged in said cover, of one main rib connecting the outer walls of said valve channels in the direction of the cylinder axis and the lower end of which is at the proper distance from the gas-heated bottom of the cover to allow the water to pass between it and said bottom with whirling motion, substantially as set forth.

1,556,339. SAFETY SWIMMING BELT. AUGUST MARENGO, PETER MARENGO, and JOSEPH MARENGO, Stockton, Calif. Filed Sept. 17, 1924. Serial No. 738,165. 1 Claim. (Cl. 9—17.)

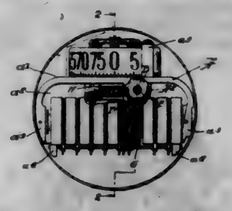
A swimming belt comprising a flexible casing adapted to partially surround a human body, the side of the casing engaging the body having a convex curvature in a vertical plane substantially that of the body adjacent the waist, and an air bladder in the casing.

1,556,340. SOUNDPOST-SETTING DEVICE. JOSEPH B. MYERS, Mount Pleasant, Pa. Filed Mar. 4, 1924. Serial No. 696,863. 3 Claims. (Cl. 84—277.)



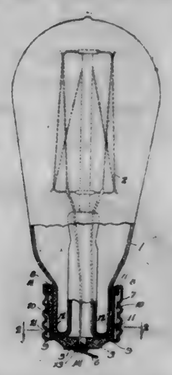
1. In a sound post setting device, a handle member, means at one end thereof for engagement with a sound post, a flexible member movably mounted within the handle for engagement with the sound post, spring means normally urging said flexible member in one direction to engage the sound post, a trigger connected with the flexible member for retracting the same from engagement with the sound post, the handle having an opening permitting movement of the trigger, and an indicator carried by the handle and positioned in line with a sound post engaged by the first named means on the handle.

1,556,341. COMBINED ODOMETER AND SPEEDOMETER. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 12, 1922. Serial No. 574,523. 1 Claim. (Cl. 235—1.)



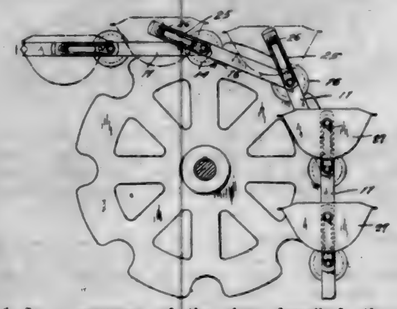
In a combined instrument comprising for deriving movement from the same driving shaft two independently operating mechanisms, in combination, main shafts of the two mechanisms respectively positioned in planes at right angles to each other, the plane of the first mechanism main shaft being offset laterally from the other mechanism main shaft; a driving shaft in common for the two mechanisms positioned crossing both said shafts, a frame having the journal bearings for the three shafts; intermeshing gears on the driving shaft in common and the two main shafts respectively, the journal bearing of said shaft-in-common communicating with the journal bearing of the main shaft of the first mechanism, said main shaft having mounted upon it at its upper end a lubricant container, the journal bearing of the driving shaft-in-common having a lubricant receptacle, said container having flow apertures leading to the journal bearing of the last mentioned main shaft; whereby lubricant may flow from said container to said main shaft bearing and thence to the two intermeshing gears on said main shaft and driving shaft-in-common, respectively, and from the latter of said gears to the journal bearing of said driving shaft-in-common and the receptacle therein.

1,556,342. NONREMOVABLE ELECTRIC-LAMP BULB. JOHN P. PETH, Chicago, Ill. Filed Oct. 29, 1923. Serial No. 671,349. 6 Claims. (Cl. 176—31.)



1. In a non-removable electric lamp bulb, the combination of a threaded member to be screwed into an ordinary socket, a glass bulb, metal means to normally lock the bulb against rotation in said member, but permitting axial displacement of said member on the bulb, adapted by distortion thereof to be rendered inoperative by a forcible rotation of the bulb after said member reaches its final position in the socket, so that the bulb will then rotate in either direction in said member, said member serving as one of the terminals of the filament of the lamp, and a yielding contact serving as the other terminal of said filament, adapted to yield when it strikes the bottom of the socket and prevent axial displacement of said member on the bulb, before reaching said final position.

1,556,343. PIVOTED BUCKET CONVEYER. WILLIAM E. PHILIPS, Cleveland, Ohio, assignor to The Stearns Conveyor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 29, 1921. Serial No. 496,318. 2 Claims. (Cl. 198—148.)

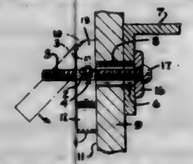


1. In a conveyer of the class described, the combination of a pair of inner links, a sleeve mounted therein, a pair of outer links overlapping the inner links and overlapping the ends of the sleeve, a pivot pin extending through the sleeve and through the outer links, an offset bucket supporting bracket secured to an extension of one of the outer links, said bracket having a longitudinally extending slot formed therein adaptable for the reception of an axle of a pivotally supported conveyer bucket and a pin spanning the slot, said pin being adapted to engage a bucket axle and maintain the same in a bucket supporting position relative to said links.

1,556,344. CARD DECK. DUANE PHIMISTER, Chicago, Ill. Filed Aug. 15, 1925. Serial No. 50,486. 2 Claims. (Cl. 273—152.

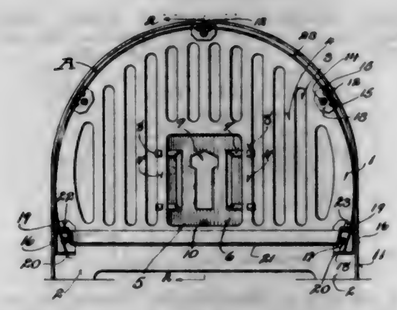
1. As a new article of manufacture, a card deck containing the letters of the alphabet in which each card bears two different letters, one letter of each card having one color designation and the other letter another color designation.

1,556,345. TOGGLE. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall. Filed July 29, 1924. Serial No. 728,898. 4 Claims. (Cl. 85—3.)



3. The combination of a toggle head having non-circular pivoting surfaces and a pivot member having undercut trunnions to engage with the non-circular pivoting surfaces of the toggle head.

1,556,346. KNOCKDOWN BIRD CAGE. THEODORE T. POPLAWSKI and HENRY R. SIEVERKROPP, Racine, Wis. Filed Sept. 17, 1923. Serial No. 663,169. 2 Claims. (Cl. 119—17.)

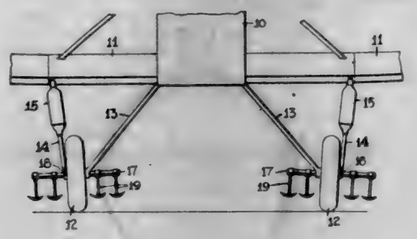


1. A knock-down bird cage comprising end members formed of sheet material, a plurality of channel shaped longitudinal members detachably joined to said end members and provided with a plurality of aligned regularly spaced apertures, a plurality of resilient wires threaded through said apertures, all of said wires being retained in place solely by their inherent resiliency, the lowermost of said longitudinal members having inwardly extending members against which the ends of said resilient wires contact.

1,556,347. CARBURIZING MATERIAL. GEORGE W. PRESSELL, Philadelphia, Pa., assignor to E. F. Houghton & Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 13, 1924. Serial No. 699,150. 14 Claims. (Cl. 148—30.)

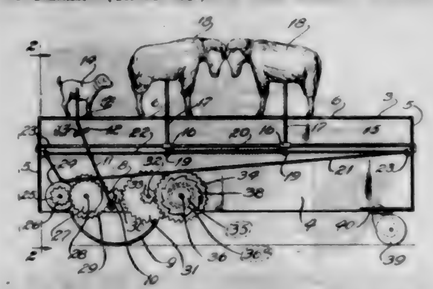
13. A carburizing material comprising 80% to 90% of a mixture of coke and charcoal, and 10% to 20% of carbon impregnated with a compound of cyanide with an alkali metal.

1,556,348. AEROPLANE LANDING GEAR. WILLIAM A. RAY and REX B. BISSELL, Hempstead, N. Y., assignors to Curtiss Aeroplane & Motor Co., Inc., a Corporation of New York. Filed Feb. 14, 1925. Serial No. 9,106. 4 Claims. (Cl. 244—2.)



1. The combination with an aeroplane landing gear including laterally spaced axle members, of an arresting gear therefor comprising a part detachably fastened to said axle members, and devices engageable, in landing the aeroplane, with a cooperating portion of the arresting gear, the devices collectively being carried by that part of the landing gear detachably fastened to said axle members.

1,556,349. FIGURE WHEELED TOY. ROCCO RECATTI, St. Louis, Mo. Filed Feb. 7, 1925. Serial No. 7,682. 3 Claims. (Cl. 46—45.)



1. A toy comprising a carriage having a top provided with a pair of longitudinally extending slots, a longitudinally extending rod mounted below said slots, supports slidably carried by said rod and extending through said slots, figures mounted on said slidable supports, means including a spring motor for moving said slidable supports from each other in opposite directions simultaneously, means for releasing said slidable supports from said moving means when the same have been moved a predetermined distance, means carried by said slidable supports for drawing the same toward each other when the first mentioned moving means has been released, and wheels driven by said spring motor for driving said carriage.

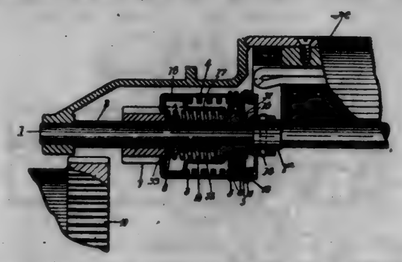
1,556,350. SHOE-REPAIRING STAND. THOMAS RENDLE, Ottawa, Ill. Filed Apr. 13, 1925. Serial No. 22,914. 2 Claims. (Cl. 12—123.)

1. The combination in a shoe repairing stand of a standard having a circular last mount and a rigidly fixed cleat at the rear thereof, said cleat having a groove at each side and a perforation therethrough, a heel part having a slot therein and an arm at each side thereof to cooperate with the grooves of the cleat, and also having indentures to cooperate with the perforation and a bolt in said cleat, whereby the heel part may be securely held, and a fore part having a circular socket and a pair of grooves at the rear and a groove in front of the socket whereby the forepart may be mounted to cooperate with the said cleat and the heel part for right and left shoes, the said standard uniting the last mounts with the base and having a shoe holding device comprising a loop and an arm encircling the standard, said arm being movable vertically and angularly with respect to the standard.

1,556,351. ENGINE STARTER. JULIUS H. RICHARDS, Torrington, Conn., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Oct. 18, 1923. Serial No. 669,203. 9 Claims. (Cl. 74—7.)

1. An engine starter drive incinding a rotatable shaft, a driving member mounted for longitudinal movement

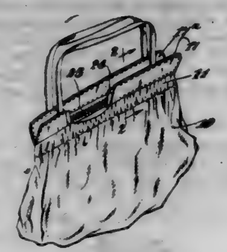
thereon to engage a member of the engine to be started, a control member mounted on the shaft for longitudinal movement thereon when such shaft is rotated and for



rotary movement therewith, a friction clutch splined on the control member, and a connecting means connected at one end with the clutch and at the other end with the driving member.

---

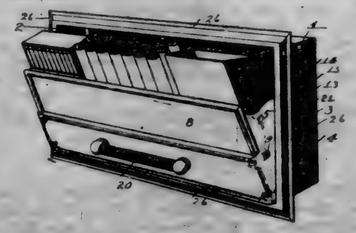
1,556,352. BAG. JACOB RITTER, Far Rockaway, N. Y. Filed Jan. 16, 1925. Serial No. 2,741. 5 Claims. (Cl. 150—28.)



2. A bag comprising an outer container having an opening at its top, a lining member within the container in which articles are to be received, upwardly extending portions of the bag arranged on either side above the opening at the top of the container, said portions each having an outer member secured to the outer container and an inner portion secured at its upper edge to the upper edge of the outer member and its lower edge to the lining member within the container, and a stiffening member secured between the upper edges of said inner and outer members of the upwardly extending portion of the bag and extending between the lower edges of said portion.

---

1,556,353. CONTAINER. GORDON E. ROEDDING, Grand Rapids, Mich., assignor to Doerr Manufacturing Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Nov. 24, 1924. Serial No. 751,833. 4 Claims. (Cl. 206—38.)



1. In a device of the character described: a frame; a receptacle swingably mounted thereon and having a slidable member provided with a guided keeper-engaging part, the frame having a guide-bearing comprising a keeper portion and a portion extending laterally therefrom, said member's said part being guidedly movable in the bearing and into its keeper portion to hold the receptacle in closed position.

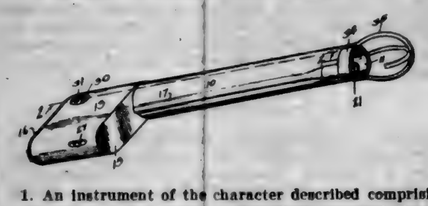
---

1,556,354. ACCOUNT-STATEMENT FORM. JAMES HENRY ROGERS, Quincy, Mass. Filed Jan. 16, 1925. Serial No. 2,888. 3 Claims. (Cl. 288—66.)

1. A bill head or statement form having a plurality of spaces consecutively designated to represent calendar periods for the reception of summaries of monthly accounts.

---

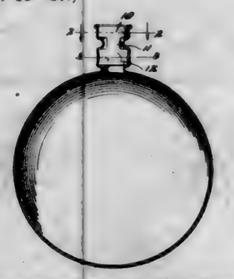
1,556,355. VETERINARY INSTRUMENT. GRANT RONEY, Swaledale, Iowa. Filed Jan. 9, 1924. Serial No. 685,152. 3 Claims. (Cl. 128—6.)



1. An instrument of the character described comprising a tubular shaped member, a light bulb mounted therein near the forward end thereof, a source of electrical energy connected to said light bulb, a mirror mounted in said tubular shaped member at an angle to the vertical, said tubular shaped member having an opening therein above said mirror and a guard member adapted to extend over the forward open end of said tubular shaped member, said guard being capable of being spread or contracted, as and for the purposes stated.

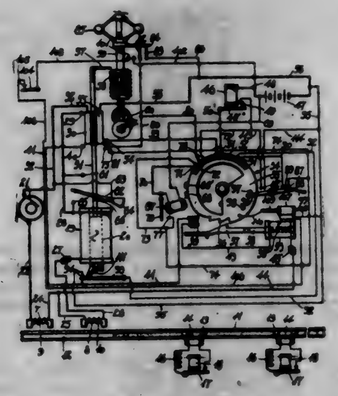
---

1,556,356. TOY BALLOON. ALBERT RUSSO, Pittston, Pa. Filed Dec. 10, 1923. Serial No. 679,686. 3 Claims. (Cl. 46—37.)



1. In combination with an india rubber toy balloon opening to the atmosphere through a neck of substantial length, a thin plane plate in said neck forming transversely tightly stretched neck portions on both sides thereof and parallel thereto adapted to be vibrated by the air rushing through the neck when the balloon is being deflated.

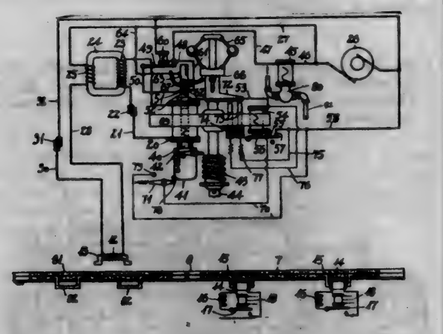
1,556,357. SIMPLEX TRAIN CONTROL. ALFRED L. RUTHVEN, Rochester, N. Y. Filed July 31, 1922, Serial No. 578,742. Renewed Sept. 3, 1925. 9 Claims. (Cl. 246—63.)



1. Vehicle controlling apparatus including a translating device having a run-down member for obtaining a predetermined condition of vehicle control, a second translating device operable for averting such condition and obtaining other conditions during the run-down movement of said member, a responsive device controlling the first-named translating device to start the run-down movement of said member, and means for changing the control by said responsive device from the first-named to the second-named translating device.

---

1,556,358. SIMPLEX TRAIN CONTROL. ALFRED L. RUTHVEN, Rochester, N. Y. Filed Sept. 6, 1922. Serial No. 586,471. 9 Claims. (Cl. 246—63.)



1. Vehicle controlling apparatus including an electrical translating device on the vehicle, a non-magnetic section in a rail of the track at each controlling station, a coil responsive to the magnetic portion of the rail for maintaining said device energized excepting when the non-magnetic rail section is being passed, and means associated with said non-magnetic rail section with which the coil is cooperable for energizing the translating device while passing the non-magnetic rail section.

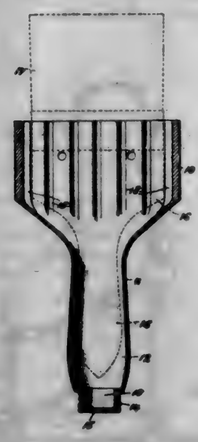
---

1,556,359. PHONOGRAPH MOTOR. CARL SCHWARTZ, Sheyboygan Falls, Wis. Filed June 16, 1924. Serial No. 720,311. 3 Claims. (Cl. 188—185.)

2. In a phonograph, the combination of an electric motor having a driving shaft, a record rotating spindle connected thereto by speed reduction mechanism, a drum carried by said driving shaft and having a diametrical passage thereacross, a circular casing surrounding said drum, a plunger slidably mounted in said passage and adapted to frictionally engage the interior periphery of said casing, a supporting member slidably carried by said drum, a spring connecting said supporting member and said plunger, a conical plug engaging said supporting member and mounted in axial alignment with said driving shaft, and micrometer means for adjusting said plunger.

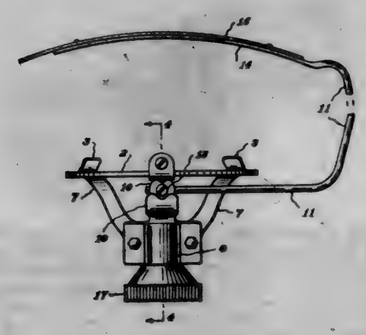
---

1,556,360. BRUSH HOLDER. LUTHER W. SELBY, Arapaho, Okla. Filed Aug. 29, 1924. Serial No. 734,970. 2 Claims. (Cl. 15—248.)



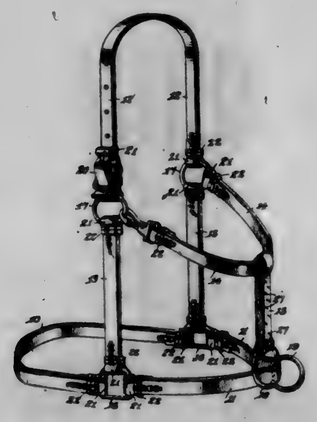
1. The combination with a brush having an elongated handle, of a hollow auxiliary handle, of a hollow auxiliary handle open at one end to receive the handle of the brush, said auxiliary handle having its inner walls provided with longitudinally disposed spaced grooves extending inwardly from the open end adjacent the brush bristles and cooperating with the brush handle to provide drain passages for directing surplus liquid from the brush into the opposite end of the auxiliary handle, a normally closed drain outlet for the last mentioned end of the auxiliary handle and means for removably securing the auxiliary handle in place.

1,556,861. DIRECTION INDICATOR. FRANK SIMONIST, Coopersburg, Pa. Filed Nov. 26, 1923, Serial No. 677,102. Renewed Aug. 19, 1925. 4 Claims. (Cl. 116—45.)



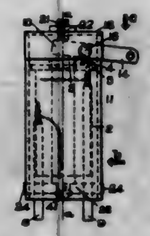
1. The combination with a spot-light for a vehicle, of a direction indicator comprising an attaching structure for detachable engagement with the spot-light, an arrow carrying rod supported from said bracket and extending partially about the spot-light, and an arrow carried by said rod and movable in front of the lens of the light, and a thumb-button connected to said rod for moving the rod and arrow.

1,556,862. HALTER. JOSEPH SILBERT, Winnipeg, Manitoba, Canada. Filed Jan. 15, 1925. Serial No. 2,679. 3 Claims. (Cl. 54—24.)



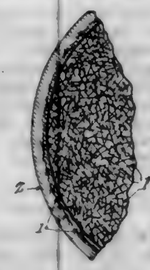
3. A halter member formed of a section of flexible material initially of double width and folded upon itself longitudinally with the end portions folded upon the same to form loops to receive ring devices, said folded over end portions and the adjacent portions of the longitudinally folded body being provided respectively with a plurality of clefts which register when the parts are superposed, and a lacing having a cleft at one end and looped through the lacing cleft and back and forth through the spaced registering clefts.

1,556,863. ELECTROMAGNET. EDWIN C. SMITH, Providence, R. I., assignor to Rhode Island Warp Stop Equipment Company, Pawtucket, R. I., a Corporation of Maine. Filed Dec. 10, 1920, Serial No. 429,723. Renewed July 11, 1925. 12 Claims. (Cl. 195—21.)



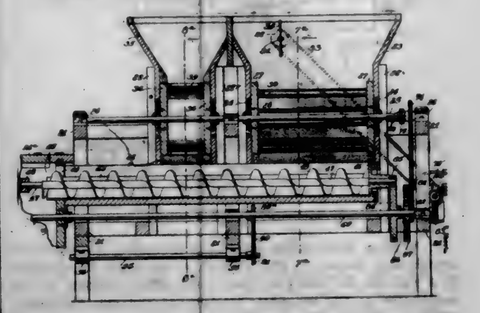
1. The combination with a magnet coil and its core, of a case in which the coil and core are mounted, an armature, a sliding cover for the case, and a pin to lock the cover to the case on which pin the armature is mounted.

1,556,364. REENFORCED GLASS. JOHN C. SMITH, Chicago, Ill., assignor to Solar Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1923. Serial No. 629,067. 6 Claims. (Cl. 49—92.)



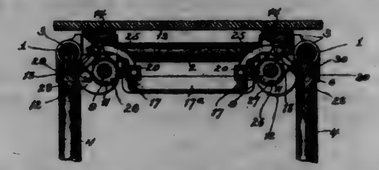
2. A reenforced glass having a layer of loosely matted short filaments interposed between the inner and outer surfaces of the glass.

1,556,365. MACHINE FOR PREPARING FOOD SUBSTANCES. WILLIAM A. SMITH, Clarkson, N. Y. Filed Nov. 19, 1920. Serial No. 425,091. 17 Claims. (Cl. 99—2.)



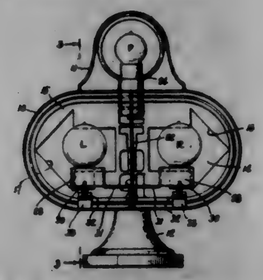
1. An apparatus for preparing food compounds comprising a horizontally elongated cooking container, means for receiving, mixing and supplying the ingredients to said container adjacent one end thereof, a device for advancing the compound through said container, and conducting means for directing a plurality of jets of steam upwardly through said compound during the passage thereof through said container.

1,556,866. TRUCK OR TRANSPORTING DEVICE. GEORGE E. SMOUSE, Washington, D. C. Filed May 28, 1925. Serial No. 33,488. 7 Claims. (Cl. 254—2.)



1. In a transporting device of the character described, the combination with a frame, a support member, and operating means for raising and lowering the support member of braking means connected with said operating means, said braking means comprising an eccentric wheel carried by a moving part of said operating means and a brake band engaging said eccentric brake wheel and connected with the frame, whereby the braking means will be gradually applied during the lowering of the support member and gradually released during the raising of the support member.

1,556,367. DIRECTION SIGNAL. EDWARD SOULE, Brooklyn, N. Y. Filed Mar. 7, 1922. Serial No. 541,747. 1 Claim. (Cl. 177—329.)

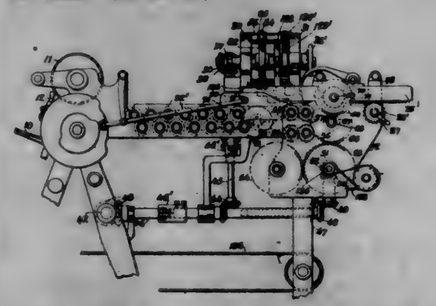


In a direction signal, the combination of a casing having a partition extending therethrough to form two compartments, a lamp located in each compartment, a socket in each compartment to support said lamp, a pair of spring shanks connected to said partition and to the individual sockets to support the lamps in spaced relation to the partition and to the bottom of the casing, and contacts upon the bottom of said casing, said spring shanks acting in co-operation with the contacts to maintain resiliently the lamps in proper circuit.

1,556,868. MOLDING FLASK. JOHN A. SPERRY, Munnsville, N. Y. Filed Apr. 19, 1922. Serial No. 555,574. 7 Claims. (Cl. 22—110.)

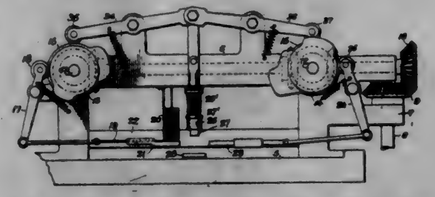
1. In a device of the class described, in combination with a flask comprising two or more parts, means to center and hold said parts in definite relation including apertured plates mounted on the contacting faces of one of said parts, and pins on another of said parts adapted to enter said aperture, each of said pins having a rigid member and a resiliently held member normally spaced therefrom.

1,556,869. ENVELOPE MACHINE. JACOB STIRISS, New York, N. Y. Filed Aug. 26, 1921. Serial No. 495,611. 22 Claims. (Cl. 93—61.)



1. In a clasp envelope machine, the combination of rollers comprising feeding and creasing means, folding means, a plunger adapted to affix the clasp in the back of the envelope, means for affixing a reinforcing patch to the flap of the envelope, and a punch adapted to perforate the reinforcing patch.

1,556,870. ENVELOPE MACHINE. JACOB STIRISS, New York, N. Y. Filed Dec. 1, 1922. Serial No. 604,175. 3 Claims. (Cl. 1—2.)

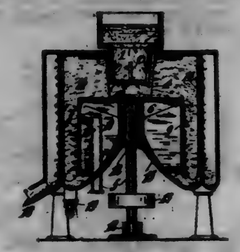


1. In an envelope machine, a container for a stack of clasp blanks, a reciprocating anvil, a reciprocating feed plunger adapted to feed a clasp blank from said container and deposit the same upon the anvil, a reciprocating fastener forming and inserting plunger adapted to coact with the blank clasp on the anvil and form spurs thereon and adapted to set said formed clasp in an envelope, reciprocating means adapted to clinch the inserted spurs to the envelope, and cam means for actuating the anvil, the feed plunger, the fastener forming and inserting plunger and the reciprocating clinching means.

1,556,871. SPECTACLE FRAME. JACOB STIRISS, New York, N. Y. Filed Oct. 9, 1923. Serial No. 667,516. 7 Claims. (Cl. 88—53.)

1. In spectacle frames, the combination of a frame split at each side and having sockets at each side of and parallel with the split, and locking means said in the sockets to unite the split ends and carried by the temples.

1,556,372. SEPARATOR. WILHELM THALER, Heidenheim-on-the-Brenz, Germany, assignor to American Voith Contract Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 31, 1923. Serial No. 615,978. 11 Claims. (Cl. 92—54.)



1. In a separator, in connection with an outside shell, a rotary shaft arranged in bearings on the outside of the shell, an entrance having its orifice centrally arranged in an arch-shaped manner above the rotary shaft, a basket having a perforated periphery extending from a hub-plate rigidly connected to said rotary shaft, a plurality of wings extending radially from the shaft on the hub-plate of said basket, a plurality of wings extending axially on the basket along its perforated periphery and being integral with the wings on the hub-plate, a sieve mantle mounted on the shell around the perforated basket and wings thereon, means to supply water to the inside space of the basket along its peripheral side, an outlet in the outside shell below the sieve mantle, an outlet in the outside shell communicating with the inside space of the sieve mantle, and means for rotating said shaft.

1,556,373. PLANT SUPPORT. HERMAN THOENI, Spokane, Wash. Filed Aug. 25, 1923. Serial No. 659,378. 2 Claims. (Cl. 47—47.)

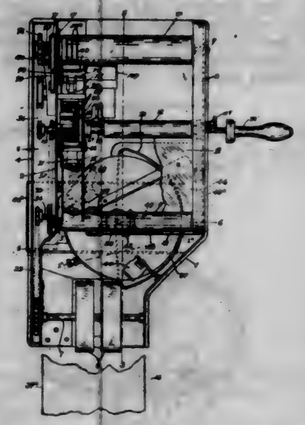
2. A plant support consisting of arms adapted to surround a plant, a fastening arm having an eyelet, and the first mentioned arms having hooks detachably engageable with said eyelets, securing portions for said arms, a clamp from which said securing arm and securing portions extend, and supporting means engageable by said clamp.

1,556,374. GRINDING APPARATUS. ELMER E. THOMAS, Hardin, Ill. Filed Apr. 19, 1924. Serial No. 707,677. 5 Claims. (Cl. 51—43.)

1. An apparatus of the class described comprising a drum, provided with heads, one of said heads being removable, said drum being provided in its peripheral wall with an opening, tubular members supported for endwise movement, and rotatable movement, means for securing each of said members and a head of the drum, a grinding element rotatably supported within the drum and supported for movement with respect to the peripheral wall of the drum, means extending through one of the tubular members for regulating such move-

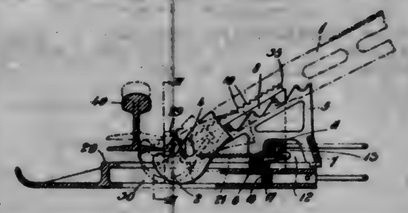
ment of the grinding element with respect to the peripheral wall of the drum, and means disposed through the second tubular member and coacting with the grinding element for rotating the same.

1,556,375. ENVELOPE SEALING AND STAMPING MACHINE. GUY E. TIPPT, Detroit, Mich., assignor, by mesne assignments, to Pitney-Bowes Postage Meter Company, Stamford, Conn., a Corporation of Delaware. Filed Sept. 20, 1920. Serial No. 411,465. Renewed Mar. 5, 1925. 11 Claims. (Cl. 216—3.)



1. In a device of the character described, the combination with a work feeding roller, of a cooperating non-rotative work feeding member, a bracket projecting above said roller and providing a support for said cooperating member, and a guide member for the work adjustably mounted upon said bracket.

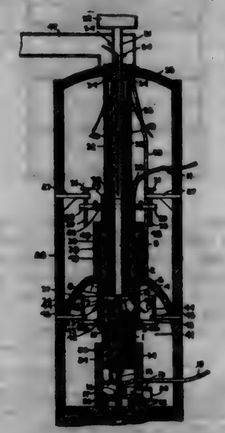
1,556,376. LIFTING APPARATUS FOR RAILWAY TRACKS. ERIK TIMANDER and GÖSTA TIMANDER, Orsa, Sweden. Filed Apr. 29, 1925. Serial No. 26,648. 9 Claims. (Cl. 254—121.)



1. A lifting apparatus for railway tracks, comprising a base plate, a lifting member movable thereon and consisting of two firmly united plates situated at a distance from one another and provided with a series of notches,

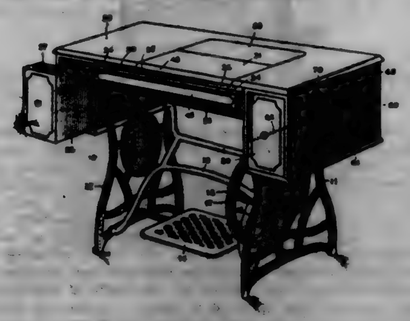
a movable stopping member, consisting of two united plates one on each side of the lifting member and each provided with teeth the said two members being connected by springs which are stretched at a forward motion of the lifting member and thereby tend also to move the stopping member forward, and a detachable lifting lever between the two plates of the lifting member, the said lever being provided with studs to be placed in the notches of the lifting member.

1,556,377. ELECTRIC FURNACE. STEPHEN L. TINGLEY, Boston, Mass., assignor to Smelters, Refiners & Chemicals Corporation, Nitro, W. Va., a Corporation of Virginia. Filed Dec. 13, 1920. Serial No. 430,114. 25 Claims. (Cl. 204—64.)



1. A pair of electrodes for an electric furnace, one of said electrodes having a shape relative to the other such as to produce a plurality of concentric annular arcs.

1,556,378. SEWING-MACHINE CABINET. ANTONIO TOPASSI, Stapleton, N. Y. Filed Nov. 6, 1924. Serial No. 748,292. 9 Claims. (Cl. 45—138.)



1. In a sewing machine cabinet, the combination of a top provided with an opening to permit the raising of the head of the sewing machine therethrough, closure means for said opening comprising a plurality of closure members arranged in substantially facial alignment when the closure means is in its closed position and pivotal means connecting said closure members to one another and serving to support the sewing machine head when the closure means is in its open position.

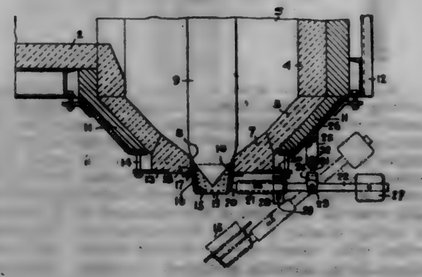
1,556,379. STOP-CYLINDER PRINTING PRESS WITH FRONT DELIVERY. FRIEDRICH OSKAR V. TRAITTEUR, Frankenthal, Germany. Filed Apr. 11, 1924. Serial No. 705,939. 4 Claims. (Cl. 101—276.)

1. A stop cylinder printing press comprising an impression cylinder having an impression surface and a non-impression surface each provided with a gripper; and an auxiliary cylinder associated with the impression cylinder which is adapted to receive the sheet to be printed from the non-impression surface of the impression cylinder and transfer it to the impression surface of said impression cylinder in order to remove the printed sheet directly from the impression cylinder to prevent blurring of the ink.

1,556,380. LOCK. GUILLERMO TREJO, New York, N. Y. Filed Aug. 10, 1923. Serial No. 656,677. 3 Claims. (Cl. 70—3.)

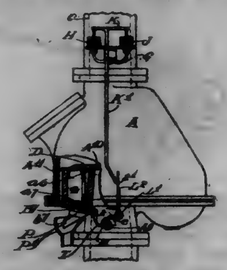
1. In a lock, a casing having a number of keyholes in the face thereof united by a slot, a bolt, a shutter covering the keyhole through which access is had to the bolt, a locking element applied to the shutter, said locking element being accessible for release by the key for releasing the said bolt when the said key is inserted into the said slot.

1,556,381. METHOD AND APPARATUS FOR CASTING PLATE GLASS. FRANK E. TROUTMAN and CHARLES H. CHRISTIE, Butler, Pa. Filed Apr. 18, 1922. Serial No. 552,340. 38 Claims. (Cl. 49—55.)



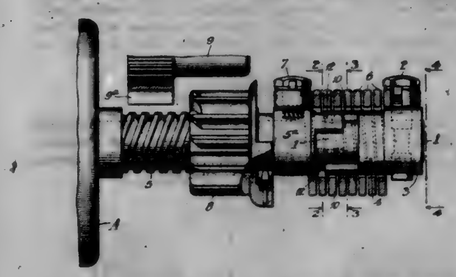
1. The method of casting plate glass that comprises flowing the glass through a downwardly opening outlet in a receptacle, checking the descent of the sides of the issuing glass and causing a portion of said glass to form a discharge throat, and discharging another portion of glass through the said glass-lined discharge throat upon a casting table.

1,556,382. DRY-PIPE-VALVE-ACCELERATING DEVICE. EMIL TYDEN, Evanston, Ill. Filed Aug. 25, 1923. Serial No. 659,333. 4 Claims. (Cl. 169—22.)



1. In a dry pipe sprinkler system, in combination with a dry pipe main valve, constructed for exposing different areas to the water and air pressures respectively, at its opposite sides, and having for that purpose, at the water inlet side, a chamber in which the pressure is normally substantially atmospheric; a port through the dry pipe main valve for communicating from the air pressure region beyond said valve to said atmospheric pressure chamber, a valve controlling said port; means in the atmospheric pressure chamber for opening said valve; an expansible and reducible chamber device exposed to the air pressure from the system reaching different areas of the moving wall of said device through two unequal ports, whereby change of air pressure in the system causes temporarily unequal pressures at said different areas, and connections from said device for actuating said valve opening means.

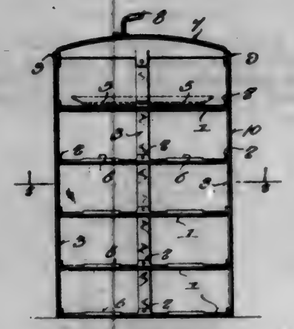
1,556,383. ENGINE STARTER. HENRY E. VAN NESS, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed June 28, 1918. Serial No. 242,347. 1 Claim. (Cl. 74—7.)



A transmission or drive for engine starters, including a driving and a driven element, and a spring operatively connecting them for initial driving, said elements having complementary tongues and slots permitting a limited relative movement one with respect to the other and adapted to operatively engage each other for direct driving at the end of such limit, the said tongues and slots being so constructed and arranged as to permit the driven element to move longitudinally in either direction with respect to the driving element and said tongues being normally positioned in contact with one side of their slots.

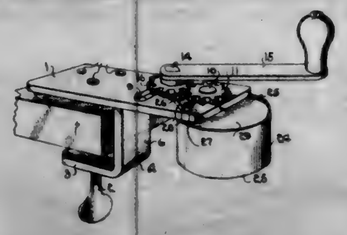
1,556,384. SERVING RACK. PAUL VEHLING and HUGO VEHLING, Milwaukee, Wis. Filed May 7, 1923. Serial No. 637,168. 1 Claim. (Cl. 45—71.)

A serving rack for plates comprising a top of sheet metal having downturned marginal portions and having a carrying handle attached to its upper side, a plurality of shelves positioned beneath said top and spaced from said top and from each other, a pair of diametrically arranged vertical strap-like members rigidly secured to said top and to each of said shelves, a third strap-like member positioned intermediate the strap-like members of said pair and secured to said shelves and to said strap, the space between said pair of strap-like members being open on the side opposite said third



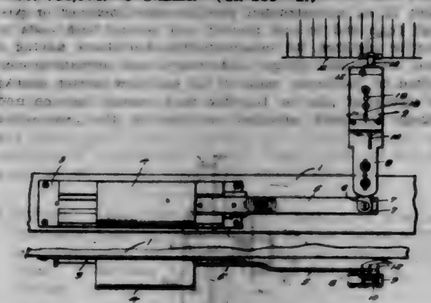
strap-like member, each of said shelves having upturned flanges on the side opposite said third strap-like member and each of said shelves having upturned ribs intermediate their center and peripheral edges and adapted to engage the bottom flange of a plate, and a cover secured to said serving rack and having overlapping edges positioned on the side opposite said third strap-like member.

1,556,385. CAN OPENER. ROBERT H. WALLER, Nashville, Tenn., assignor, by mesne assignments, to The Quicksafe Manufacturing Corporation, Nashville, Tenn., a Corporation of Delaware. Filed Dec. 7, 1922. Serial No. 605,395. 7 Claims. (Cl. 30—3.)



1. In a can opener, the combination of co-operating elements for cutting the can, comprising a rotary cutter and a roller for engagement with opposite surfaces of the bead of the can, parallel studs on which said elements are mounted, a fixed plate having a fixed bearing for one of said studs and having a slot transverse to the line connecting the axes of said studs when said elements are in coacting position, the other one of said studs being mounted directly in said slot for movement lengthwise thereof and guided by the walls of said slot, gears on said studs adapted to mesh to drive one positively from the other, and a crank handle for rotating one of said studs, the stud in said slot being pressed against one end thereof by coaction of its gear with the coacting gear during operation of the device, the teeth of said coacting gear, upon reverse movement of said crank handle, bearing against the teeth of said first-named gear, and thereby having a tendency to move the stud in said slot lengthwise thereof and carry one of said elements out of operative relation to the other element.

1,556,386. STARTING GAUGE FOR LOOMS. JOHN F. WAY, Norwich, Conn. Filed Oct. 18, 1924. Serial No. 744,366. 5 Claims. (Cl. 139—1.)



1. A starting gauge for looms comprising a housing, an arm slidably mounted into and out of said housing, a supporting member adjustably mounted on said arm, and a gauge carried by said supporting member, said supporting member being adapted to be adjusted relatively to said arm to permit introduction of the gauge carried thereby into the housing for protection when not in use.

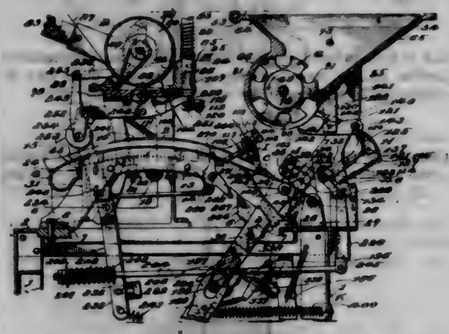
1,556,387. PIPE OR FLUE EXPANDER. HARVEY E. WILLIAMS, St. Joseph, Mo. Filed Mar. 20, 1924. Serial No. 700,669. 2 Claims. (Cl. 153—81.)

1. In a pipe expander, a mandrel having a substantially elongated body portion of equal diameter throughout and further having a portion thereof formed to provide a bearing, a bearing box encasing said bearing, said box having radial through passages extending from the center thereof, a fixed apertured bearing plate upon said mandrel, and revoluble trunnioned rollers extending between said plate and bearing box and bearing against said body portion, each roller having one trunnion in an aperture in said plate and another trunnion in one of said through passages.

1,556,388. VARIOCOUPLER. DAVID H. WILSON, Miami, Fla. Filed Feb. 17, 1925. Serial No. 9,786. 8 Claims. (Cl. 171—242.)

6. A variocoupler instrument including a pair of stators having windings connected in series and wound in opposite directions, a pair of rotors having windings in opposite directions and connected in series, each rotor being associated with a respective stator, a common shaft whereon said rotors are fixed with their axes parallel to each other and at right angles to the axis of the shaft, a second pair of stators opposite the first pair and having windings connected in series and wound in opposite directions, the second pair of stators being connected in series to the first pair and having their respective windings in directions opposite to the opposed stators of said first pair, and means to move said stators toward and from said rotors, said last means being arranged to effect movement of each pair of stators independently of the other pairs.

1,556,389. CIGAR-WRAPPING MACHINE. JASPER STANLEY WINGET, York, and AUGUSTIN CONVERSE WINGET, Tyrone, Pa. Filed Dec. 18, 1923. Serial No. 681,367. 12 Claims. (Cl. 93—5.)



1. A machine for wrapping cigars or the like, comprising a belt, a reciprocating mechanism carrying gripping means for holding the ends of a wrapper, a wrapper feed mechanism for feeding the wrapping material, a mechanism for cutting the wrapping material, means for depositing the severed wrapper upon the belt, and means for closing the gripping means after the wrapping is completed.

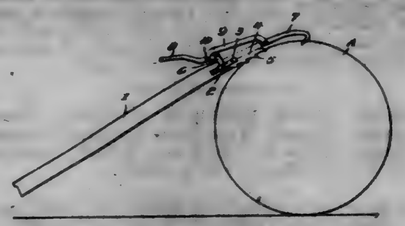
1,556,390. RAINCOAT. KATHERINE B. WOODLEY, Oak Park, Ill., assignor of one-half to Bertha Bowen, Chicago, Ill. Filed June 19, 1924. Serial No. 720,908. 11 Claims. (Cl. 2—87.)

1. A garment having a body portion and a hood portion formed of one piece of waterproof paper, said piece being cut on a substantially continuous curved line to form the lower or outer margins of said body portion, and also being cut on a curved line adjacent the center of area thereof to form said hood portion, said material being crimped or folded along lines radiating toward said margins.

1,556,391. SAWMILL DOG. DAVE WYMORE, Gardiner, Oreg. Filed July 8, 1924. Serial No. 724,796. 1 Claim. (Cl. 143—126.)

A device of the class described including an elongated member, a bracket mounted thereon, a saw mill dog comprising an elongated bar pivoted on said bracket, teeth formed on the lower edge of the bar and adapted for engagement with a log, an angular extension fixed to the pivoted end of the bar, a second saw mill dog comprising

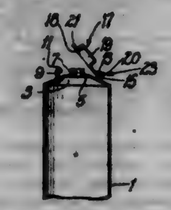
a hook disposed forwardly of the bar, an actuating lever pivoted at one end to the upper end of the extension,



and a link pivoted to said hook and to an intermediate portion of the lever whereby the saw mill dogs may be simultaneously operated by swinging the lever.

---

1,556,392. CLOSURE. WALTER A. YARGER, St. Louis, Mo. Filed Jan. 2, 1925. Serial No. 80. 6 Claims. (Cl. 221—60.)



1. In combination with a collapsible tube comprising a container, a breast, and nozzle therefor; a closure for said tube comprising a cap for said nozzle adapted to be seated on the said breast of the tube adjacent the base of said nozzle, a lost-motion hinge on the breast for the cap whereby the cap may rotate vertically or laterally about a point within said hinge, a latch arm on the breast, a lug on said cap adapted to engage said latch arm in such a way as to force said cap to said seat with said hinge acting as a fulcrum.

---

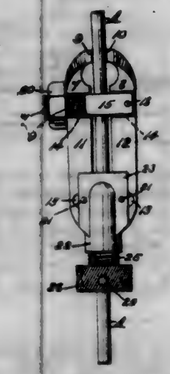
1,556,393. REFILLABLE FUSE. DALE W. YAMBERT, Toledo, Ohio. Filed Nov. 19, 1919. Serial No. 339,150. 8 Claims. (Cl. 200—132.)

1. A fuse having an enclosure, an element for electrical circuit interruption in said enclosure, and anchoring means having a scale disclosing indication in coaction with the enclosure, said means being for the purpose of disclosing the identity of the element for fuse operation.

---

1,556,394. HAND VISE. MAX CHRISTIAN ZANGS, Cincinnati, Ohio. Filed Oct. 16, 1922. Serial No. 594,708. 1 Claim. (Cl. 81—18.)

In a work-holding hand-vise or hand-chuck implement, the combination of a pair of jaw carrier-members having engaged openings in the lower tapered ends of their shanks or body-portions, transversely-elongated grip-jaws provided at the upper ends of the said jaw carrier-members, an open split-ended draw-bolt adapted to span the upper ends of the said carrier-members beneath said grip-jaws and to be pivotally-connected at its outer split end to the adjacent jaw carrier-member, a thumb-nut mounted on the threaded closed end of said draw-bolt and adapted to initially close the grip-jaws on the work that is extended downwardly through the implement in an unobstructed straight axial manner or passage from end to end thereof and beyond both ends as may be required, an internally-threaded sleeve having a pair of spaced upright side-wings and adjustably-connected to the lower ends of the said jaw-carrier shanks by means of pins or the like that extend through and engage the said enlarged openings in the jaw-carrier



shanks, and an externally-threaded spreader having a wedge-shape upper end for expanding-engagement with the said lower tapered ends of the jaw-carrier shanks and, also, for engagement with the said internally-threaded sleeve, and, also, having a manipulating-head at the outer end of said spreader or expander for use in turning the latter in opposite directions for the final tight gripping of the jaws on the work and permitting their release, respectively, substantially as herein shown and described.

---

1,556,395. HEEL-BUILDING MACHINE. WILLIAM HENRY ALBEE, Marlboro, Mass., assignor to B. A. Corbin & Son, Company, Marlboro, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1923. Serial No. 669,973. 6 Claims. (Cl. 12—50.)

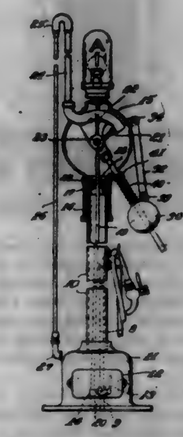
1. In a heel building machine, the combination of a ram, a chute into which the heels are forced by said ram, and means associated with said ram for positioning a heel rand in operative relationship thereto.

1,556,396. RECOVERING OILS. VICTOR S. ALLEN, Wilmington, Del., assignor to Darco Corporation, Wilmington, Del., a Corporation of Delaware. Filed Jan. 10, 1922. Serial No. 530,454. 1 Claim. (Cl. 196—16.)

In the treatment of crank case oil and the like to recover lubricating oil therefrom, the process which comprises settling said oil in a warm condition, removing further impurities by centrifugal action, steaming the oil to free it of volatile oils, removing solids by centrifugal action and finally treating with fuller's earth, an addition of decolorizing carbon being made to the oil prior to one of the centrifugal separations.

---

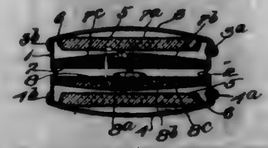
1,556,397. AIR-SUPPLY TOWER. ROLLIN L. BACHER, Cleveland Heights, Ohio, assignor to The United States Air Compressor Co., Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 1, 1922. Serial No. 604,189. 11 Claims. (Cl. 299—77.)



1. A device of the character described comprising in combination a support, an arm mounted on the support and adapted to be moved relatively thereto, a flexible hose depending from the arm and having at its lower end a connection for a tire valve, a counterweight tending to raise the arm, and means for increasing the distance between the counterweight and the pivot of the arm when the arm is lowered.

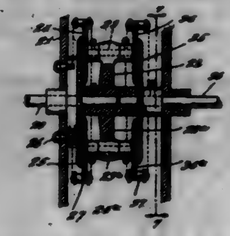
---

1,556,398. VANITY CASE. HOWARD M. BALLOU, North Attleboro, Mass., assignor to R. Blackinton & Co., North Attleboro, Mass., a Copartnership. Filed Nov. 22, 1923. Serial No. 676,446. 9 Claims. (Cl. 132—83.)



1. A vanity case embracing in its construction an annular body with open ends, covers for closing the respective ends, the body being provided with an interiorly projecting ledge, and powder-carrying plates provided with means for detachably connecting them together with their edges in engagement with opposite sides of said ledge, substantially as described.

1,556,399. SPEED-CHANGE MECHANISM. GEORGE M. BARTLETT, Indianapolis, Ind., assignor to Diamond Chain and Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Dec. 10, 1924. Serial No. 754,928. 9 Claims. (Cl. 74—84.)



1. A speed-changing chain-drive, comprising the combination of a sun sprocket and a planet sprocket with portions of their disks overlapping, and an endless chain engaging the teeth of both sprockets.

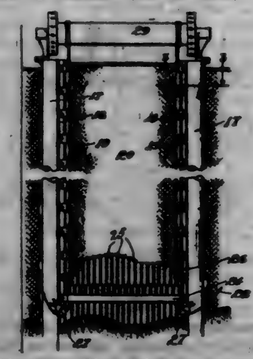
---

1,556,400. DIRECTION INDICATOR FOR MOTOR VEHICLES. GEORGE E. BATES, Syracuse, N. Y. Filed Mar. 26, 1924. Serial No. 702,129. 9 Claims. (Cl. 116—51.)

1. In a traffic signal, the combination of a case provided with a wall having a window opening and a lamp in the rear of the wall, a movable direction indicator member arranged in line with the window and movable about an axis located substantially centrally of the window, the indicator member comprising a back-ground wall and an indicator portion carried by the background wall and movable therewith when the indicator is moved about its axis, the background wall being arranged between the window and the lamp and one of said walls being provided with means to give color to the light passing through the window from the lamp and means for operating the background about its axis.

---

1,556,401. FISH-TRAP APRON. WILLIAM C. BECKMANN, Berkeley, Calif. Filed Dec. 1, 1924. Serial No. 753,165. 8 Claims. (Cl. 43—100.)

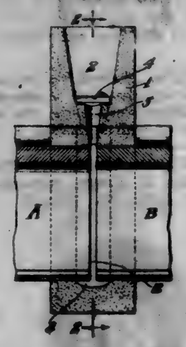


1. In combination with a fish trap having a heart wall opening therein, upright members at the sides of said opening and stationary relative to said trap, an apron

adapted to form a closure between said upright members, connections between the sides of said apron and said upright members, said connections permitting said apron to be vertically moved relative to said upright members, and means at the lower end of said apron adapted to automatically conform to the bottom and to cooperate with the apron proper to effect a complete closure of the space intermediate the uprights.

---

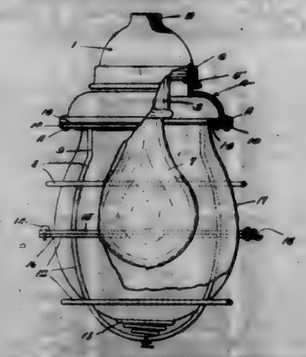
1,556,402. METHOD OF AND APPARATUS FOR WELDING RAILS. EDWARD F. ENGLEHUF, Jersey City, N. J., assignor to Metal & Thermit Corporation, Chrome, N. J., a Corporation of New Jersey. Filed Aug. 22, 1922. Serial No. 583,511. 12 Claims. (Cl. 22—204.)



1. The method of forming sound homogeneous rail joint welds, which comprises enclosing the ends of the rails to be welded in a mold provided with a space to define the welding joint including a space between the ends of the rails, providing a pouring gate so positioned and communicating with the joint defining space as to deliver the welding metal first to the space surrounding the base of the rails without contacting with other portions of the rails and finally to cause the metal to flow transversely around and between the upper portions of the rails, and pouring a molten metal into said mold to fill the space therein.

---

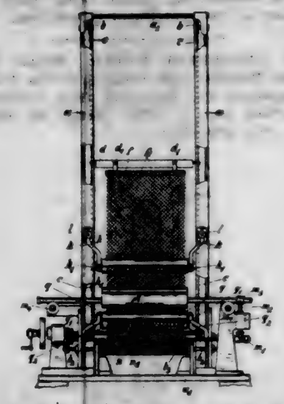
1,556,403. INCANDESCENT ELECTRIC-LAMP FIXTURE. CARL H. BISSELL, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed Dec. 4, 1923. Serial No. 678,514. 1 Claim. (Cl. 240—102.)



In an incandescent electric lamp fixture, comprising a cup-shaped body having an opening in its larger end, a lamp socket mounted in the body, and exposed through the opening, a lamp guard, comprising a base having a threaded neck, threading in the open side of the body, the base flaring outwardly from the neck, a cage carried by the base and secured to the outer margin thereof, the cage having a removable lower portion, a globe thrusting against the outer end face of the base, and a spring carried by the removable portion of the cage and thrust against the lower end of the globe.

---

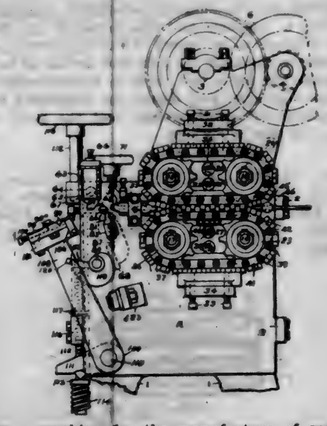
1,556,404. SOLDERING MACHINE. WILHELM BITTROLF, Pforzheim, Germany, assignor to Ernst Gideon Bek, Pforzheim, Germany. Filed Jan. 31, 1923. Serial No. 616,201. 11 Claims. (Cl. 113—59.)



1. In a soldering machine of the described class the combination of a vertically guided chain mail carrier, adapted to carry chain mail to burners to solder the same, means to suspend chain mail vertically hanging on said carrier, burners placed at both sides of the chain mail, means to move downward the said carrier and means to convey the mail sideward below the burners.

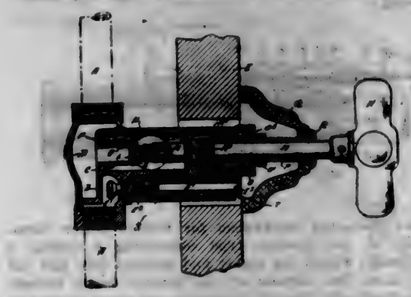
---

1,556,405. AUTOMATIC SPRING MACHINE. WILLIAM H. BLEUEL, Pittsburgh, Pa. Filed Sept. 23, 1922. Serial No. 589,989. 21 Claims. (Cl. 153—65.)



1. In a machine for the manufacture of springs, the combination of means for feeding the material, means for coiling the material, means whereby the operation of the machines stores power, means for releasing the power stored at predetermined intervals, means for regulating the amount of power stored, and means for severing the formed springs from the material engaged by the feeding means actuated by the release of said stored power.

1,556,406. BY-PASS VALVE WITH STOP AND MOUNTING THEREFOR. LEON BLOCH, Cleveland, Ohio, assignor to The Republic Brass Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 2, 1925. Serial No. 20,002. 6 Claims. (Cl. 277—68.)

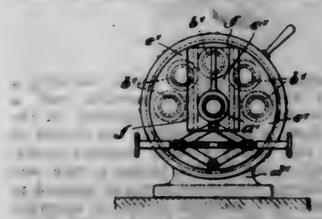


1. The combination with a valve casing having a main valve and stem, said stem extending through a wall opening, of a supplemental cut off valve and stem, said stem extending into the wall opening, and an escutcheon arranged upon the main valve steam and concealing the wall opening and supplemental valve stem.

6. The combination with a valve casing having two openings, one of said openings having a tubular seat arranged therein, of a main valve seating upon said seat, a stem for said valve, said valve casing having a chamber for said main valve and stem, a supplemental valve and stem, said supplemental valve being adapted to close the inlet opening in said valve casing, a housing connected to the casing and in which the supplemental valve stem works, said housing and casing chamber being adapted for location in a wall opening, the outer end of the supplemental stem being located adjacent the outer edge of said opening, means for closing the ends of the chamber and housing, the outer end of the supplemental stem being shaped to receive an operating tool, an operating handle upon the end of the main stem and means carried on said stem for covering the wall opening and concealing the outer ends of said chamber and housing.

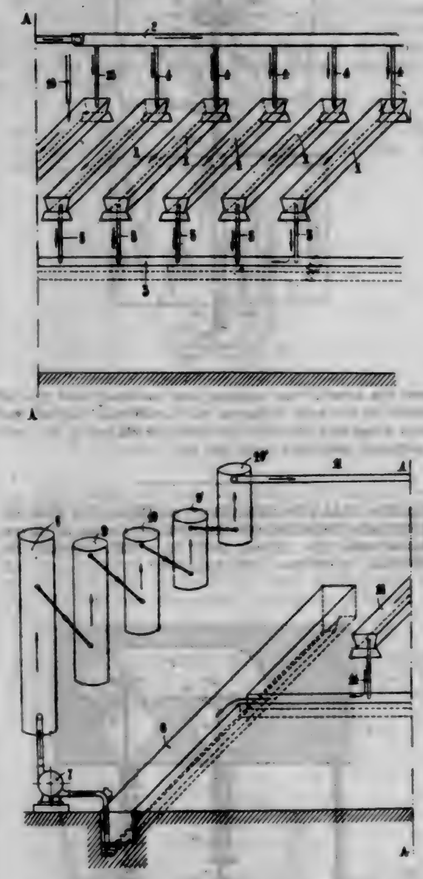
---

1,556,407. VALVE GEAR FOR PIPES WITH SEVERAL BRANCHES. ALFRED BÖTTCHER, Dusseldorf, Germany. Filed Sept. 1, 1921. Serial No. 497,796. 1 Claim. (Cl. 277—7.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



A valve system, comprising two members in tightening and rotary sliding engagement with each other and one of them stationary and formed with a plurality of apertures and the other one rotatable and formed with a single aperture located in position for being brought in line with the apertures of stationary member, a slide mounted on said rotatable member and having an aperture adapted to be brought in line with the aperture of the rotatable member, and tubular members respectively secured to the stationary member and slide and in line with the apertures thereof, the tubular member secured to the slide being constructed to follow the displacements of the slide and rotatable member.

1,556,408. PLANT TO MANUFACTURE IRON BY ELECTROLYTIC MEANS. ANTHELME BOUCHER, Paris, France, assignor to La Société le Fer, Grenoble, France. Filed Mar. 17, 1925. Serial No. 16,235. 8 Claims. (Cl. 204—11.)



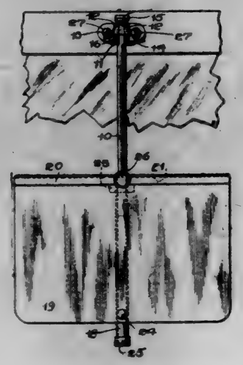
1. A plant for the continuous production of electrolytic iron, comprising an electrolyzing trough provided with an anode and a cathode and adapted to circulate an electrolyte gravitally therethrough; a pipe for supplying the electrolyte to said trough; a collector tank; piping for delivering spent electrolyte from the trough to said tank by gravity; apparatus interposed between said tank and the inlet end of the supply pipe and connected to the same for revivifying the spent electrolyte; and a pump for constantly withdrawing the electrolyte from the collector tank and forcing it into and through said apparatus and thence into the supply pipe.

---

1,556,409. GLARESHIELD. IRVIN J. BOWMAN, Johnstown, Pa. Filed Jan. 5, 1924. Serial No. 684,623. 1 Claim. (Cl. 296—97.)

In an anti-glare device adapted to be supported by the windshield of a vehicle, a bar, a tube receiving the bar at one end and having its opposite end closed, the first named end of the tube having integral transversely disposed oppositely extending wings, a channel bar secured

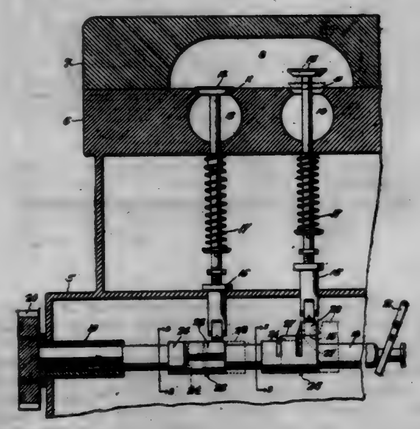
to said wings and having its channel downwardly directed, an anti-glare shield having one edge thereof engaged in the channel of the bar and clamped be-



tween the arms of the channel and the lower end thereof secured to the tube adjacent the lower end thereof, and means extending through the tube for clamping the tube in adjusted positions upon the rod.

---

1,556,410. VALVE-OPERATING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. JAMES L. BOYER, Johnstown, Pa. Filed Dec. 12, 1923. Serial No. 680,252. 4 Claims. (Cl. 123—90.)



2. A valve operating mechanism for use with internal combustion engines having an intake and an exhaust valve, comprising a longitudinally shiftable cam shaft; a cam for the intake valve fixed to the cam shaft and designed to effect the operations of said intake valve; and a cam for the exhaust valve fixed to the cam shaft and designed to effect the operations of said exhaust valve, each of said cams having a smooth surface concentric to the shaft and designed to permit all of said valves to remain in closed position to provide for convenient and simultaneous setting of the valves and also to provide for braking the engine.

1,556,411. FLEXIBLE POWER-TRANSMISSION MECHANISM. CLEMENT BROWN, Witton, near Birmingham, England, assignor of one-half to Brown & Barlow Limited, Witton, near Birmingham, England. Filed Feb. 1, 1924. Serial No. 689,927. 6 Claims. (Cl. 74—82.)

1. An operating mechanism for flexible power transmissions of the Bowden type comprising a casing, a block housed within the casing and movable into and out of the same, one element of the Bowden device extending longitudinally through the casing and being secured to the inner end thereof, the other element of the Bowden device being secured to the blocks, and means to move the block within the casing to operate the Bowden device, said block being apertured to permit free movement of the block with respect to the Bowden element secured to the casing.

---

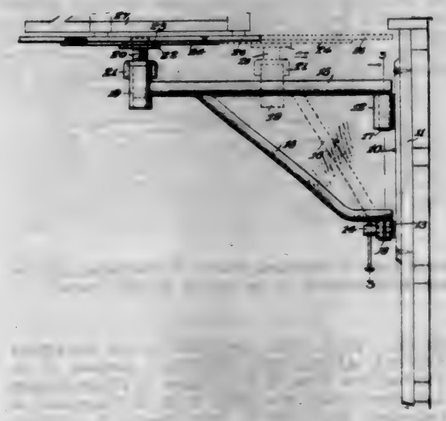
1,556,412. CRY-PRODUCING DEVICE. ELLIOTT W. BRÜCKNER, Jersey City, N. J. Filed Apr. 6, 1922. Serial No. 549,965. 4 Claims. (Cl. 46—46.)

2. A cry producing device for toy figures including a bellows having a weighted gravity movable wall, a sounding reed through which air is expelled in the collapse of the bellows, a sound receiving box carried by said bellows wall and having a sound emission orifice, and means exterior of the bellows having a fixed connection with a relatively stationary part and adapted to be received through said emission orifice to interrupt the issuance of sounds from said sound receiving box at spaced intervals in the gravity movement of the bellows wall to its collapsed position.

---

1,556,413. ADJUSTABLE SUPPORTING BRACKET. HENRY F. BUETTNER, Hampton, Iowa. Filed Dec. 12, 1924. Serial No. 755,520. 3 Claims. (Cl. 45—90.)

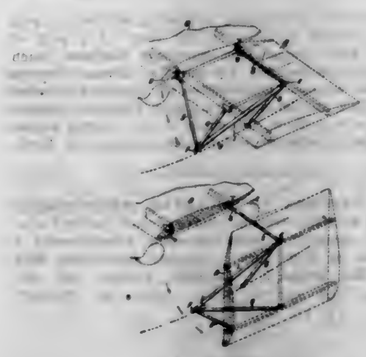
1. A device of the class described comprising a base member adapted to be attached to a support and having spaced vertically alined sockets, a bracket device having depending pins engaging respectively in said sockets and with an internally threaded sleeve at the free end, a threaded stud engaging in said sleeve, a laterally directed head carried by said stud and spaced below the upper end thereof, a supporting plate apertured to receive the



portions of the stud above the head and bearing on the head and attached thereto, and a platform supported on said plate.

---

1,556,414. AEROPLANE WITH FOLDING WINGS. FRANK ARNOLD BUMPUS, Elloughton, Brough, near Hull, England, assignor to The Blackburn Aeroplane & Motor Company Limited, Yorkshire, England. Filed July 11, 1925. Serial No. 42,943. 4 Claims. (Cl. 244—12.)



1. In monoplane aeroplanes having folding wings in which said wings are divided from each other about centrally of the machine and from the leading to the trailing edges; the combination of a central fuselage, an outstanding bracket on each side of said fuselage, a bearing carried at the outer extremity of said bracket, a wing pivotally mounted on said bearing, a more forwardly located outstanding bracket fixed to the under side of each wing and extending downwards, a bearing carried on said bracket and fulcrumed on said fuselage, said two bearings being so located relatively to each other that their common axis projects from the fuselage outwards, rearwards and upwards to permit said wings to be folded from extended flying positions to positions where the chord of each wing is vertical, and means for locking the wings when in the flying position.

1,556,415. PROCESS FOR RETARDING THE DETERIORATION OF RUBBER AND SIMILAR MATERIALS AND PRODUCTS OBTAINED THEREBY. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Aug. 8, 1923. Serial No. 656,454. 16 Claims. (Cl. 18—50.)

1. A process for retarding the deterioration of rubber due to oxidation which comprises treating vulcanized rubber with an agent substantially unable to activate oxygen but adapted to absorb appreciable amounts of activated oxygen.

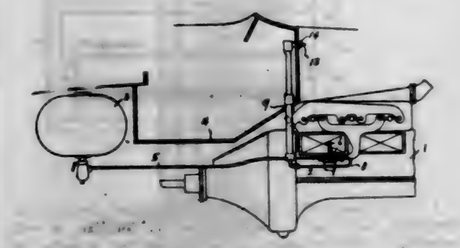
---

1,556,416. LOOSE-LEAF BINDER. EDWARD W. CARPENTER, Bridgeport, Conn. Filed Aug. 28, 1923. Serial No. 659,737. 6 Claims. (Cl. 129—24.)

1. In a loose leaf binder, a back plate provided with openings, a pair of rods provided with oppositely disposed complementary arched arms extending through said openings, the sides of the openings extending beneath the arms to form bearings therefor, a toggle connection between said rods, and resilient means coacting with said toggle to hold the arms either together or separated.

---

1,556,417. ATTACHMENT FOR INTERNAL-COMBUSTION MOTORS. MONROE W. CARROLL, Beaumont, Tex. Filed Aug. 5, 1924. Serial No. 730,825. 4 Claims. (Cl. 123—198.)



1. A device of the character described including a tubular conduit connected at one end into a fuel tank of an internal combustion motor, and whose other end is upturned forming a gauge tube, and formed with a transparent section, an intermediate connection between said conduit and the fuel intake of the motor carbureter, a valve controlling said conduit, and a buoyant gauge rod in said upturned end, and a tubular nipple forming a pump connection into said gauge tube, said nipple also forming anchoring means for said gauge tube.

1,556,418. HYPODERMIC-SYRINGE PROTECTOR. MOSCOW B. CARTER, Franklin, Tenn. Filed Dec. 27, 1923. Serial No. 682,971. 1 Claim. (Cl. 128—218.)

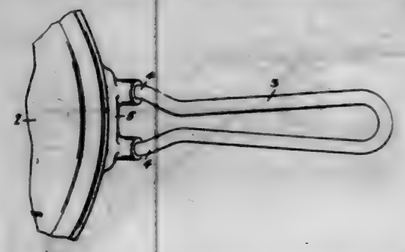
A protector for hypodermic syringes made from a blank, the same comprising side members, a yoke connecting the members at one end and having an elongated opening therein, said opening having parallel walls and curved walls joining the parallel walls, the yoke being continuous about the opening, fingerpieces at the opposite end of the members, and cooperating clips adjacent the fingerpieces to secure the side members when brought together.

1,556,419. ILLUMINATING MEANS FOR PLAYER PIANOS AND THE LIKE. VINCENT CECI, New York, N. Y., assignor to Schmidt-Dauber Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 8, 1924. Serial No. 730,814. 15 Claims. (Cl. 240—4.)

1. In a music-roll operated mechanical musical instrument, such as a player-piano or the like, a roll-receiving compartment, a roll-supporting spindle reciprocably mounted with its outer end extending into said compartment, an electric switch provided with an operating member adapted to be actuated by said spindle, and spring means normally acting to maintain said spindle in forward position and said switch in open position.

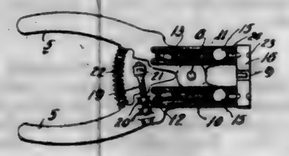
1,556,420. ATTACHMENT FOR UTENSILS AND METHOD OF MAKING THE SAME. EDWARD M. CHANDLER, New Kensington, Pa. Filed Jan. 21, 1922. Serial No. 530,948. 2 Claims. (Cl. 53—7.)

1. An attachment for an aluminum cooking or other utensil, of a different metal from that of the utensil, formed of a piece of spring metal bent in the form of a U, the free ends of said piece of metal having cast



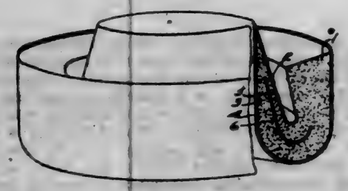
around them an attaching element of aluminum, said element being adapted to be welded to said utensil.

1,556,421. TOOL FOR DISTENDING OR DILATING DENTAL ANCHORING DEVICES. HERMAN E. S. CHAYES, New York, N. Y., assignor to Chayes System Laboratories Inc., New York, N. Y., a Corporation of Delaware. Filed May 5, 1922. Serial No. 558,656. 6 Claims. (Cl 32—10.)



1. In a tool for expanding anchoring devices, a pair of handles pivoted together in the form of a pair of pliers, and two co-operating spreader members, each connected to both handles for parallel motion towards and from each other as the handles are operated, opposed socket members on the spreaders, and a wedge member within and spaced from the walls of one of the socket members, substantially as and for the purpose set forth.

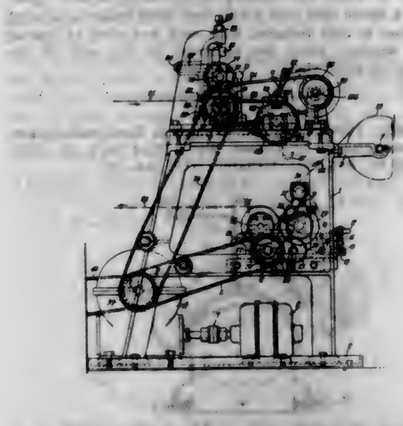
1,556,422. PROCESS OF MOLDING REENFORCED PACKING RINGS. GEORGE CHRISTENSON, North Plainfield, N. J., assignor to Johns-Manville, Incorporated, a Corporation of New York. Original application filed Apr. 4, 1922, Serial No. 549,629. Divided and this application filed Apr. 2, 1924. Serial No. 703,607. 3 Claims. (Cl. 18—55.)



1. The process of making the herein described packing ring which comprises the following steps; first, building up a blank of three layers of plastic homogeneous material, with sheets of textile fabric interposed between the layers and one sheet surrounding the three surfaces

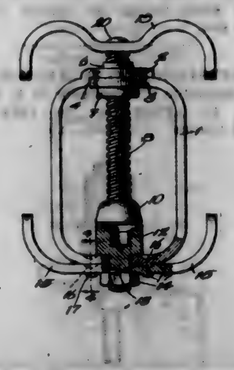
of the entire mass, two of the adjacent layers being relatively thin and of a width approximately equal to the axial dimension of the proposed packing ring, while the third layer is narrower and much thicker; second, molding the blank under heat and pressure so that the two thinner layers of homogeneous material form an inner upwardly projecting tapering lip, and the thicker layer forms an upturned heel, while the inner edges of the interior fabric layers are forced part way around the juncture of said heel and lip.

1,556,423. MACHINE FOR PREPARING COATED STRIPS. EUGENE E. CLEMENTS, New Haven, Conn., assignor to L. Candee & Company, New Haven, Conn., a Corporation of Connecticut. Filed Oct. 5, 1923. Serial No. 666,726. 16 Claims. (Cl. 91—14.)



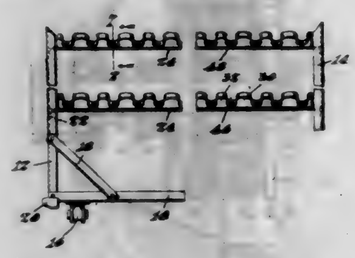
1. A machine for preparing coated strips comprising means for coating the strip, means for drying an extended portion of the coated strip, means for regularly scoring the dried strip, and means for reeling up the finished strip.

1,556,424. NUTCRACKER. FRANK B. COOK, Chicago, Ill. Filed Feb. 13, 1923. Serial No. 618,793. 6 Claims. (Cl. 146—3.)



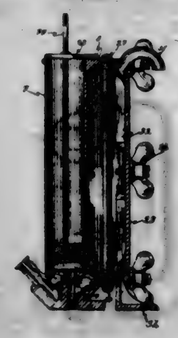
1. A nut cracker including a frame formed of a piece of strap metal whose ends overlap and are formed with holes that are aligned with each other and the opposite portion of the frame that constitutes a seat for the nuts; and a screw projecting through said holes and in threaded assembly with said frame at said holes, the inner end of said screw having a nut receiving seat thereon.

1,556,425. SHOE RACK. WARREN E. COOMBS, Boston, Mass., and CHESTER D. TURNER, Manchester, N. H., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 25, 1924. Serial No. 733,070. 4 Claims. (Cl. 211—14.)



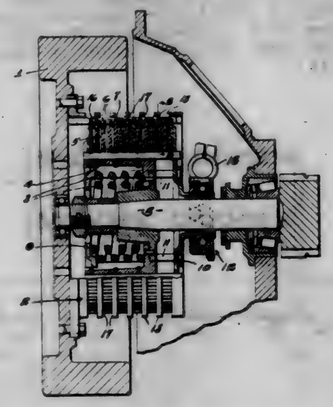
1. In a shoe rack, a series of pins for supporting shoes and maintaining them in spaced relation comprising wider pins each of sufficient width to position shoes with their outer edges closely adjacent but out of contact alternating with narrower pins each of sufficient width to position shoes with their inner edges closely adjacent but out of contact.

1,556,426. FILTER. WILLIAM L. COOP, Detroit, Mich., assignor, by mesne assignments, to Brighton Manufacturing Company, a Corporation of Michigan. Filed Dec. 8, 1924. Serial No. 754,462. 5 Claims. (Cl. 103—158.)



1. Filtering apparatus comprising a hand pump carrying a body portion having a vertically disposed clamping edge, a cover portion having a vertically disposed clamping edge, a filtering unit adapted to be held between said clamping edges, means for drawing one of the clamping edges toward the other, an inlet for liquids to the pump, an intermediate passageway from the pump to the body portion, and an outlet pipe carried by the cover portion.

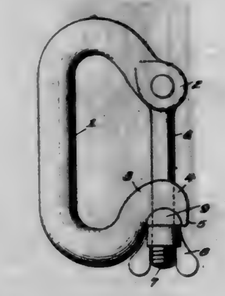
**1,556,427. CLUTCH CONSTRUCTION HAVING TOOTHED FIBER DISKS.** WILLIAM REED COUGHTRY, Syracuse, N. Y., assignor to The Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Sept. 24, 1924. Serial No. 739,508. 8 Claims. (Cl. 192—69.)



1. In a multiple disk clutch, the combination of driving and driven elements and sets of interleaved disks interlocked respectively with said elements, one of the elements comprising a drum formed with lengthwise grooves therein, one set of disks being of fibrous material and having fiber projections slidably interlocked in the grooves, the grooves and projections being formed to provide a clearance at the bottoms of the grooves and the tops of the projections.

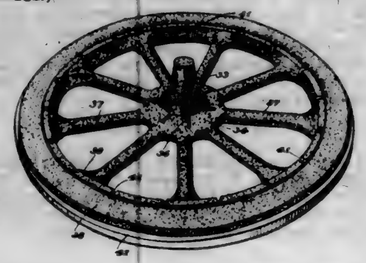
---

**1,556,428. SAFETY C LINK.** WINTFORD P. CUNNINGHAM, Tulsa, Okla. Filed Jan. 21, 1925. Serial No. 3,817. 2 Claims. (Cl. 24—241.)



1. A safety latch comprising a U-shaped link member, one terminal thereof being formed with a bifurcated bill having beaks extending therefrom, an eye bolt pivoted in the opposite terminal of said link and adapted to be swung into engagement with said bill, a wing nut disposed over the free end of said eye bolt, and a semi-cylindrical washer disposed over the free end of said bolt and adapted to be clamped by said wing nut under the bill and behind said beak.

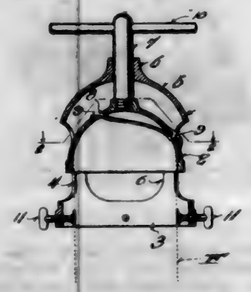
**1,556,429. METHOD OF PRODUCING CAST-METAL WHEELS.** THOMAS R. DAVIS, Fairfield, Conn. Filed Oct. 1, 1923. Serial No. 665,780. 13 Claims. (Cl. 22—131.)



1. In a mold for casting a one-piece hollow spoke wheel, a spoke core and a hub core, said spoke core being connected to and integral with said hub core at spaced points whereby holes are produced in the wall of the cast hub of said wheel.

---

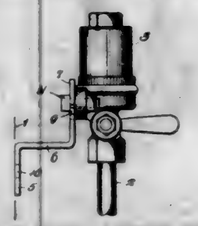
**1,556,430. POST TOPPER.** FRANK J. DAVY and JOSEPH T. NERMACHECK, La Crosse, Wis. Filed Sept. 29, 1923. Serial No. 665,588. 1 Claim. (Cl. 144—2.)



A device of the character described comprising a bracket adapted to surround the top of a post, means for securing said bracket on the post, a spherical shaped cup member rotatable and slidable within said bracket and provided with an arcuate slot extending downwardly at an angle to and outwardly from the axis of rotation of said cup shaped member, and a cutting knife secured to said cup shaped member and conforming to the contour thereof, said knife having its cutting edge extending through said slot.

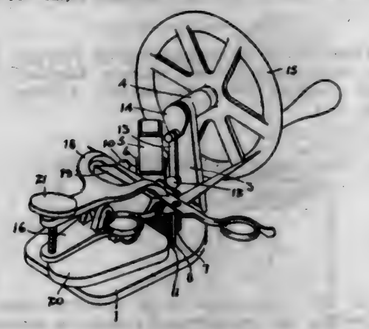
---

**1,556,431. RETAINING-VALVE ANCHOR.** GEORGE T. EBERMAN, Meadville, Pa., assignor to E. Payson Smith, Springfield, Ill. Filed Dec. 30, 1924. Serial No. 758,962. 4 Claims. (Cl. 303—1.)



1. The combination with a car and a retaining valve of a Z shaped bracket anchoring the valve to the car.

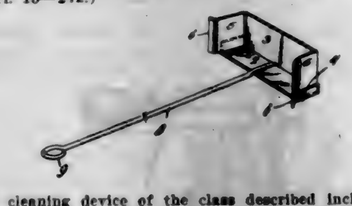
**1,556,432. SCISSORS-SHARPENING MACHINE.** ROBERT B. FLEMING, St. Catharines, Ontario, Canada. Filed July 16, 1923. Serial No. 651,817. 4 Claims. (Cl. 76—82.)



4. In a scissor sharpening machine, means for holding the scissor blade, a reciprocable member operating transversely of the scissor blade, and a transversely corrugated file secured in said reciprocable member and adapted to cut transverse corrugations in the edge of the scissors.

---

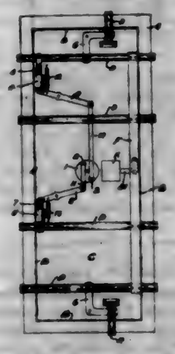
**1,556,433. STOVE CLEANER.** ROBERT FOLKEL, Herrin, Ill. Filed Mar. 14, 1925. Serial No. 15,512. 1 Claim. (Cl. 15—242.)



A cleaning device of the class described including a scraper blade formed with a rectangular base plate, and a perpendicularly extending rear wall, and ends disposed over the rear and end margins of the base plate, said ends projecting forwardly of said base plate and having flared terminals, and a handle fixed to the base plate and extending forwardly therefrom.

---

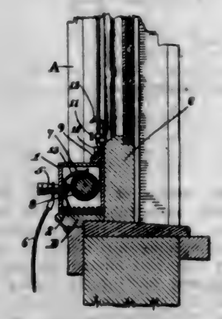
**1,556,434. SAFE LOCK.** CHARLES A. FOWLER, Salt Lake City, Utah. Filed Sept. 26, 1923. Serial No. 664,882. 3 Claims. (Cl. 109—3.)



1. In an auxiliary lock for safe doors the combination of longitudinally movable bars slidably carried on the door and adapted to engage the walls of the safe, of a combination lock secured in said door; a disk secured on the inside of said lock; links connected therewith and pivoted to spring actuated levers; locking bars adapted to engage with said longitudinally movable bars and each of said locking bars pivoted to its respective lever, whereby said locking bars will be moved longitudinally and engage said longitudinally movable bars when the said links are disengaged from said disk; and means to release said locking bars when said safe door is fully opened.

---

**1,556,435. PORTABLE ANTENNA.** ASHAD S. GORAYEB, New York, N. Y. Filed Sept. 15, 1923. Serial No. 662,971. 3 Claims. (Cl. 250—33.)



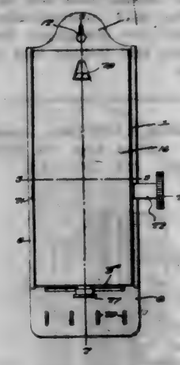
3. The combination with a window frame and a window sash therein, of a portable antenna, the latter comprising a casing adapted to be supported on said window frame, the bottom wall of said casing having its ends slit longitudinally, an antenna wire having the convolutions thereof receivable in said slots, a rolling metallic member supported in said casing and having the free end thereof detachably connected to said window sash, and an electrical connection between said rolling member and said antenna wire.

---

**1,556,436. ADJUSTABLE WINDOW SCREEN.** ASHAD S. GORAYEB, New York, N. Y. Filed June 12, 1924. Serial No. 719,676. 2 Claims. (Cl. 156—39.)

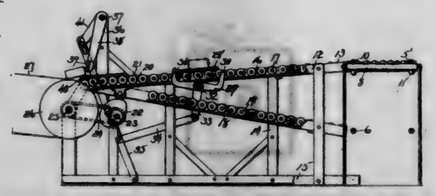
1. In a portable screen, a casing designed rectangular in cross-section provided with a slot in the top wall thereof, rectangular end boxings adjustably secured to the ends of said casing, the top walls of said boxings being provided with longitudinal slots registering with the slot in said casing, the top walls of said boxings being also provided with transverse slots, end walls applied to said boxings having upstanding ears formed thereon projecting through said transverse slots and affording means whereby the same may be secured to a structure, an adjustable roller supported between the aforesaid end walls of the boxings, a screen rolled on said roller and disposed through the slot in the top wall of said casing, and an adjustable molding secured to the end of said screen and adapted to normally rest on said top wall of the casing, as and for the purposes described.

1,556,437. DISPENSING DEVICE. GEORGE G. GRANGER, Moosup, Conn. Filed June 13, 1924. Serial No. 719,836. 8 Claims. (Cl. 221—60.)



1. A dispensing device of the class described for squeezing collapsible paste tubes and the like including a casing adapted to receive the collapsible tube and provided with an opening for receiving the discharge end of the paste tube and having its rear face open, a closure for the rear face of the casing providing a supporting bracket for the casing, the side walls of the casing having vertical slots arranged therein, one of the longitudinal edges of each slot having teeth provided therein forming a rack, a spindle extending through said slots, a roller carried by the spindle and adapted for engagement with the collapsible tube pinions on said spindle adjacent the ends of the roller and meshing with said racks and means on the outer end of the spindle for rotating the same for effecting a progressive squeezing action on the tube from its closed end to its discharge end.

1,556,438. CONVEYING APPARATUS. GUSTAVE HANSON and CHARLES A. NELSON, East Berlin, Conn., assignors, by direct and mesne assignments, to Lancaster Iron Works, Lancaster, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1923. Serial No. 536,570. 14 Claims. (Cl. 198—26.)

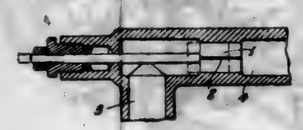


1. A conveying apparatus including an endless conveyor, means for automatically removing matter from one reach of said conveyor, means for separating said matter, and means for automatically delivering a portion of said matter to the other reach of said conveyor.

9. A conveying apparatus comprising two sections inclined in opposite directions to permit unrestricted movement of articles therealong, means for regulating the movement of articles along one of said sections, means for transferring articles from one of said sections to the other, and means for operating said transferring means and operatively connected with said regulating means.

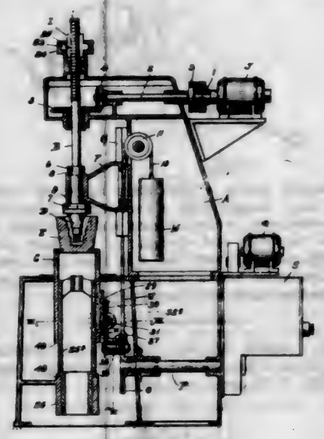
11. A conveying apparatus comprising an inclined section, means for regulating the movement of matter along said section, a stop to receive said matter after passing said regulating means, means for separating said matter while acted upon by said stop, and means for moving a portion of said matter away from said stop.

1,556,439. WAVE TRANSMISSION OF POWER. RICHARD GREENWOOD HANSON, Stafford, England. Filed Sept. 26, 1923. Serial No. 665,035. 6 Claims. (Cl. 138—23.)



1. In wave transmission power apparatus means for transforming the amplitude and pressure of alternating pressure waves comprising a leakage path interposed between the source of pressure generation and the point where the pressure is applied.

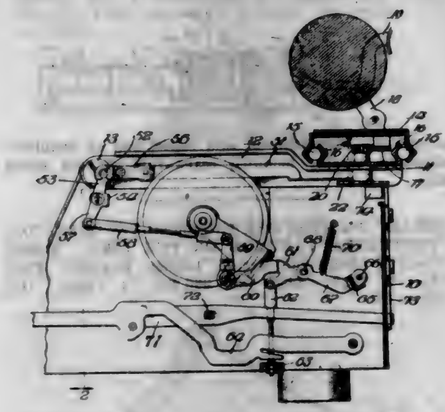
1,556,440. PRESS FOR MAKING INSULATORS AND THE LIKE. ROBERT L. HIBBARD, Bellevue, Pa. Filed Dec. 20, 1924. Serial No. 757,185. 13 Claims. (Cl. 25—3.)



1. In combination in a press, a mold support, a threaded spindle provided with a die in opposition to such support, a nut for the spindle fixed against vertical movement, means for rotating the spindle first in one direction and then in the other, means swivelled on the spindle and adapted to move up and down therewith, and a counterweight connected to such means so as to apply force tending to move the spindle upward relative to said nut.

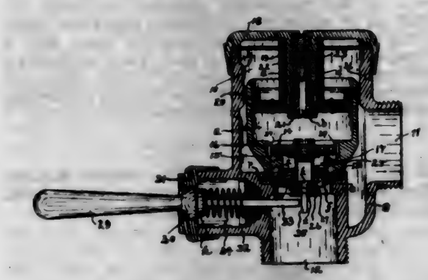
1,556,441. ESCAPEMENT MECHANISM FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Aug. 25, 1921. Serial No. 495,331. 9 Claims. (Cl. 197—82.)

1. In a typewriter, a main frame, a platen carriage frame pivotally mounted thereon, escapement mechanism mounted on said platen carriage frame, key levers mounted on said main frame, and link mechanism for actuating said escapement mechanism from said key levers, said link mechanism having a pivotal connection therein arranged in approximate alinement with the



pivot of said platen carriage frame to permit movement of said platen carriage frame while preserving the continuity of said link mechanism.

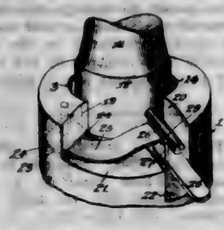
1,556,442. FLUSH VALVE. LAMBERT H. HOLCOMB and HENRY HAUBENS, Omaha, Nebr. Filed May 10, 1922. Serial No. 559,831. 2 Claims. (Cl. 137—93.)



2. In a flush valve, the combination with a valve housing having a valve seat and a cap having a tubular stem provided with an intake port, a valve for said valve seat having an annular chamber opening on its top and having a valve seat, a disc in the chamber of the valve, a screw threaded in the stem of the cap in engagement with the disc and having a passageway communicating with said intake port, a needle valve in the stem of said cap, and a release valve normally disposed on the valve seat of the first named valve and arranged to be moved for causing a movement of the first named valve.

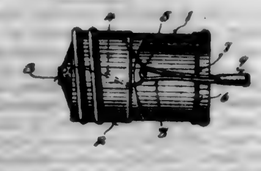
1,556,443. SAFETY GAS COCK. WILLIAM L. JACKSON, Chicago, Ill. Filed Dec. 20, 1924. Serial No. 757,287. 6 Claims. (Cl. 251—168.)

3. A safety cock comprising a shiftable plug, a plug housing having a cut out portion at its top to provide a pair of shoulders, the bottom of said cut out portion cut away to provide a diametrically disposed groove in said housing, a pin projecting radially from the plug stem and operating in said cut out portion between said shoulders, a depressible resilient locking member carried by the housing within said cut out portion and arranged above the bottom of the latter and further extending over said groove, said member having means shiftable in said groove and normally arranged in the path of said



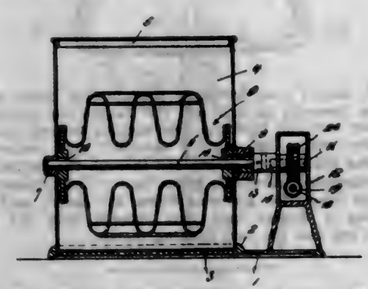
pin to provide a stop to arrest shifting movement of the plug stem, and said member further provided with a shifting finger therefor, said finger arranged in said groove and projecting radially from said housing.

1,556,444. FUSE PLUG. OSCAR H. JUNG, Milwaukee, Wis. Filed Feb. 9, 1924. Serial No. 691,621. 1 Claim. (Cl. 200—121.)



A screw plug fuse comprising a body portion having a cylindrical shell, a threaded ferrule surrounding said shell, a central contact located at the forward end of said body portion, a fusible element having one end secured to said central contact and the other end secured to said ferrule and having a rearwardly extending looped portion, a non-combustible flexible member passing through said loop and extending outwardly from said body portion and adapted to be drawn rearwardly to test the continuity of said fusible element, whereby when said member is drawn upon the stress is transmitted longitudinally to both strands of said fusible element.

1,556,445. CREAM-WHIPPING APPARATUS. JOHN G. KOOKOOTSEDES, Sidney, Ohio. Filed Dec. 19, 1924. Serial No. 756,916. 1 Claim. (Cl. 259—110.)

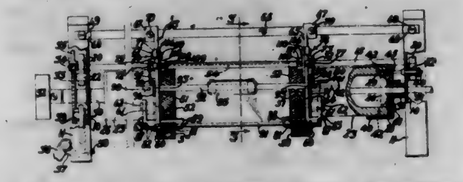


In an apparatus of the class described, a base, a prime mover mounted on the base, a drive shaft operatively associated with the prime mover, a continuous ledge formed on the base to provide a pocket, a receptacle seated in the pocket and capable of being twisted out of the pocket, a shaft journaled in opposite sides of the receptacle and slidable through and extending through

one side of the receptacle, said second shaft in alignment with the drive shaft, one of said shafts provided with a projection, and the other shaft provided with a slot for receiving the projection, whereby the receptacle may be lifted from the pocket to disalign the shaft, so that the second mentioned shaft may be slid out of the receptacle, and an agitator mounted on the second shaft within the receptacle to be rotated by the second shaft, said second shaft being slidable out of engagement with the agitator.

---

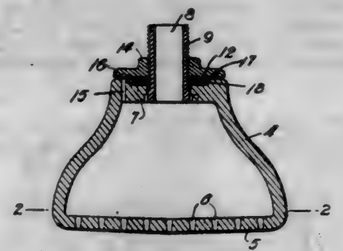
1,556,446. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 18, 1922. Serial No. 595,235. 16 Claims. (Cl. 197—135.)



1. In a front-strike typewriting machine, the combination with a rotary platen, of rollers, arms on which the rollers are mounted, supporting plates to which the roll-bearing arms are pivoted, springs connected to the roll-bearing arms for causing the rollers to press against the platen, and slides adjustable on the supporting plates for anchoring and varying the tension of the springs; said slides having offsets which ride on the edges of their supporting plates, and pin-and-slot connections with said supporting plates, whereby said slides are guided in their movements for adjustment of the tension of the springs.

---

1,556,447. SHOWER HEAD. HENRY W. A. LEHNERT, Brooklyn, N. Y. Filed Oct. 24, 1923. Serial No. 670,424. 3 Claims. (Cl. 299—140.)

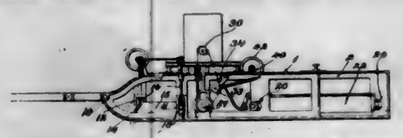


3. A shower head including a perforated outlet plate and an inwardly flanged top, the flanged top providing a gasket seat and having a vent opening formed therein, a gasket fitting the seat, a threaded pipe connection extending through the gasket and through the flanged top and engageable under the latter, and a nut threaded on the pipe connection for compressing the gasket, said nut including a flanged part that extends over the said flanged top and the vent opening therein.

---

1,556,448. ROAD MACHINE FOR SNOW. WALTER LLOYD, Antigo, Wis. Filed Sept. 12, 1924. Serial No. 737,512. 3 Claims. (Cl. 37—149.)

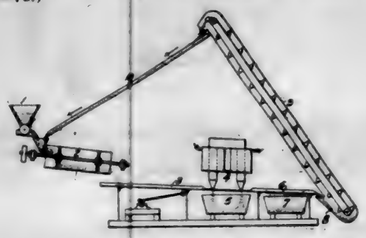
1. A machine adapted to be drawn over a snow covered road comprising a pair of side frames having runner, braces joining said side frames, a diagonally arranged knife extending between said side frames adjacent the front of the machine, a roller provided with vanes and mounted rearwardly of said knife, means for adjusting the height of said roller, a motor for driving said roller, a shield plate extending over said roller and curving



downwardly rearwardly of said roller, and an angularly adjustable scraper mounted rearwardly of said shield plate.

---

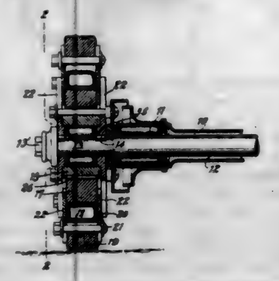
1,556,449. PROCESS FOR TREATING TIN ORES, CONCENTRATES, TAILINGS, OR THE LIKE. ALFRED ARTHUR LOCKWOOD, Merton, London, England. Filed Apr. 9, 1923. Serial No. 630,935. 1 Claim. (Cl. 83—71.)



In the treatment of suitable stanniferous material, roasting the stanniferous material in a manner to render certain of its constituents magnetic, subjecting the roasted ore or concentrate to magnetic separation, crushing the magnetic values and admixing them with a non-magnetic substance such as sand, whose particles are larger than the particles of the tin content, again subjecting to a magnetic separation and treating the residues to separate the admixed particles from the tin content.

---

1,556,450. COMBINATION WHEEL. JOSEPH MAKANT, West Haverstraw, N. Y. Filed July 8, 1924. Serial No. 724,824. 2 Claims. (Cl. 305—7.)



2. In a combination wheel, a hub member, a set of removable lugs extending radially outward from said hub member, spiders carried by the hub member, a pneumatic tube supported by and surrounding said hub member, a cushion tire surrounding the pneumatic tube in spaced relationship, side plates carried by said cushion tire, one of the side plates having notches therein to receive the set of lugs and disposed between a spider and adjacent portions of the hub member and pneumatic tube to maintain the pneumatic tube and cushion tire in concentric relationship, the pneumatic tube and cushion tire being permitted to assume an eccentric contacting relationship when the set of lugs is removed.

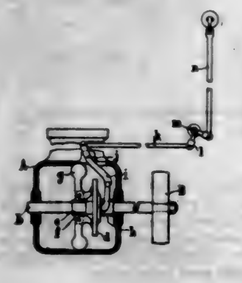
1,556,451. CONTAINER AND PROCESS OF MAKING THE SAME. VICTOR MAUCK, Norristown, Pa., assignor to John Wood Manufacturing Company, Conshohocken, Pa., a Corporation of Pennsylvania. Filed Jan. 27, 1923. Serial No. 615,278. 22 Claims. (Cl. 29—148.2.)

1. In a container, the combination with a sheet metal wall having an opening therethrough; of a sheet metal reinforcement for said opening, comprising a circular annular plate having a central opening smaller than the opening in said wall; the metal of said wall and of said reinforcement extending in coaxial conically curved tubular relation, in contact with each other; the tubular portion of the metal of said reinforcement extending within the tubular portion of the metal of said wall, and through said wall; the tubular portion of said reinforcement extending through said wall being expanded to a larger outside diameter than the inside diameter of the tubular portion of said wall; whereby said wall and its reinforcement are interlocked; a film of brazing alloy extending between said reinforcement and said wall, integrally uniting them, and forming a bead at the ends of the tubular portions of said reinforcement and wall and forming a fillet at the junction of the other end of said reinforcement with said wall, a coating of zinc alloy extending over said wall and reinforcement; and an internal pipe screw thread formed in the tubular portion of said reinforcement which extends in said wall.

12. The process of making a container, which includes forming a cylindrical tubular body shell; forming a closure for one end of said shell by pressing a primarily plane sheet of metal to form a circular web with a cylindrical flange; said web having a plane panel forming, within said flange, a plane seat for annular reinforcements; said closure having holes therethrough in symmetrical relation with said panel, at opposite ends thereof, in eccentric relation with said circular web; forming annular reinforcements of plane sheet metal, each having an axial hole of smaller diameter than the holes in said closure; applying said reinforcements in contact with said seat, with their holes respectively in registry with the holes in said closure; deforming the metal of said closure and said reinforcements, together, so that each of said reinforcements is deformed at its central portion to form a tubular cone within a corresponding tubular cone in the container wall; the tubular portion of each reinforcement extending in the tubular portion of the adjacent wall and being expanded so as to permanently engage the reinforcement with the wall; pushing said closure into said shell; preheating both the closure and the adjacent portion of said shell, to a visible red; then dipping said shell and closure into a molten bath of brazing alloy to a depth sufficient to submerge said closure flange in said bath; with a suitable flux, such as borax, molten upon the surface of the bath; so that said structure dipped in said bath is coated with such flux as it enters the brazing metal; thus causing the brazing metal to penetrate the interstices between said reinforcements and the adjacent wall; withdrawing said structure from the bath with the closure downward, so as to drain the molten brazing metal from the interior of said container through said openings, and cause said brazing metal to fillet the junction of the larger ends of said reinforcements with said container and also form respective rounded beads at the interlocked edges of the tubular elements aforesaid; thus integrating the metal of the container wall with said reinforcements; cleaning said structure; then immersing said structure in a molten bath of coating metal; withdrawing said structure from the coating metal so as to drain the surplus coating metal from the interior of said container through said openings; reaming each of said openings to the proper size for introduction of a screw threading tool; then forming, in said openings, in said tubular portions of said reinforcements, suitable pipe screw threads.

---

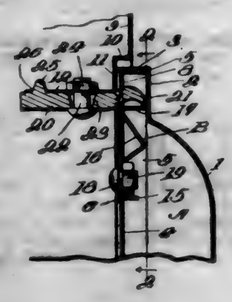
1,556,452. AUTOMATIC SAFETY PASSENGER-CAR-DOOR LOCK. LÉON MAURY, Begles, France. Filed July 3, 1923. Serial No. 649,314. 1 Claim. (Cl. 105—395.)



Apparatus for automatically locking the doors of railway cars, comprising a car wheel driven shaft, a disc movable longitudinally thereon, door latching means, operating means for said latching means including a lever movable in one direction by said disc, centrifugally acting means to move said disc in such direction, and thereby cause the door to remain latched when the car is in motion, and a spring to move said disc in the reverse direction when the car stops and thereby cause the latches to be released, said latch comprising a latching member, an actuating member, movable independently thereof, a spring between said members to cause the former to be actuated by the latter when the latter is moved inwardly, and a second spring to move the actuating member outwardly when not restrained by said operating means.

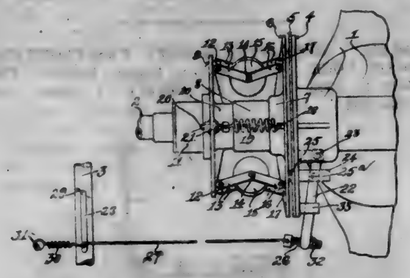
---

1,556,453. OVEN-DOOR CATCH. HENRY MOECKER, Jr., Homewood, and OTTO HAMMERMEISTER and THEODORE THOMPSON, Harvey, Ill., assignors to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 18, 1924. Serial No. 756,773. 5 Claims. (Cl. 292—76.)



1. The combination with an oven and a hollow door having a lining, of a catch comprising a spring member attached to the inner side of the door lining, the spring projecting opposite the said opening, a member secured to the oven top and projecting through the said opening in the door lining, and engaging the spring member.

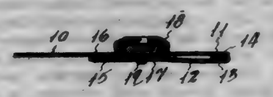
**1,556,454. SPEED AND POWER CONTROLLING MECHANISM FOR VEHICLES.** GEORGE B. MOLYNEUX, Bayonne, N. J., assignor of one-half to John F. Alverd, New York, N. Y. Filed June 12, 1923. Serial No. 644,850. 34 Claims. (Cl. 192—3.)



1. In combination with the driving shaft of a power driven vehicle, and power means for actuating said shaft, a brake mechanism mounted on said shaft, including means for automatically operating said brake mechanism, and means for throttling the power means when the brake mechanism goes into action.

---

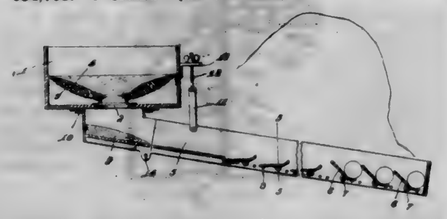
**1,556,455. BUTTON MOUNTING FOR GARMENTS.** GEORGE A. RIPLEY, Dallas, Tex. Filed Sept. 30, 1924. Serial No. 740,707. 1 Claim. (Cl. 2—122.)



As an article of manufacture, a garment having a button mounting comprising a facing strip provided with a narrow hem along its outer edge stitched to the edge portion of the fabric of the garment at a closure thereof and an inwardly folded wider hem forming a free extension of substantially one half of the width of the strip and lying between the strip and the fabric, stitching securing both hems of the strip to the garment at their folded edges, and buttons mounted on the fabric and secured by threads passing through the three-ply provided by the fabric, the free hem extension and the strip.

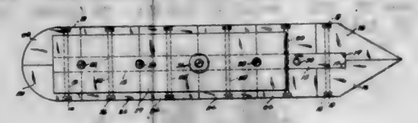
---

**1,556,456. NEST APPLIANCE.** HERMAN A. STEFFEN, Bellingham, Minn. Filed July 30, 1923. Serial No. 654,708. 1 Claim. (Cl. 119—48.)



A nest device of the class described comprising a nest box having an opening in its bottom, a chute composed of an elbow part and an inclined part, said parts being hingedly connected together, means for rotatably connecting the elbow part with the bottom of the nest and means for adjusting the inclination of the inclined part.

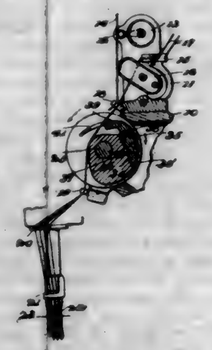
**1,556,457. BOAT-BUILDING BLOCK.** MILTON A. B. STEIN, Bridgeport, Conn. Filed May 11, 1925. Serial No. 29,280. 7 Claims. (Cl. 46—85.)



1. In toy blocks, a ship comprising a longitudinal central beam, blocks at the forward end of the beam to form the bow, suitably shaped blocks at the other end of the beam to form the stern, side blocks on opposite sides of the beam to fill in the spaces between the bow and stern blocks, and means for detachably securing the blocks to the beam.

---

**1,556,458. NEEDLE-THREAD PULL-OFF MEANS.** GILBERT LAWRENCE SUMMERS, Nottingham, England, assignor to Willcox & Gibbs Sewing Machine Co., New York, N. Y., a Corporation of New York. Filed July 29, 1920. Serial No. 399,709. 24 Claims. (Cl. 112—242.)



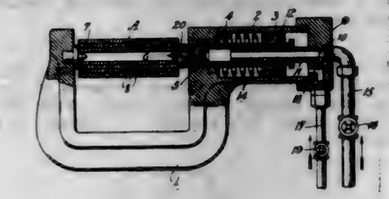
1. In a sewing machine, the combination with stitch-forming mechanism including one or more needles, of needle-thread pull-off means actuated by reverse rotation of the machine only to pull off needle-thread from its source of supply for the needle or needles in subsequent operation of the machine.

---

**1,556,459. AIRSHIP.** MICHAEL A. SZYMANSKI, Warsaw, Poland. Filed May 16, 1925. Serial No. 30,770. 3 Claims. (Cl. 244—6.)

1. An airship embodying an inflatable envelope and a framework including a keel, said envelope being subdivided into separate charge containing compartments, cars secured to the keel, electric heaters within the compartments having their frames fixed to the keel, propelling means on the cars, and current generators for the heaters driven by said propelling means.

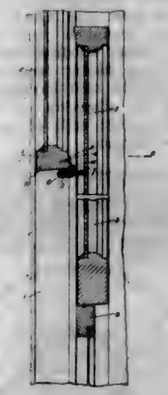
**1,556,460. SPRING OILER.** FRANK THILL, Long Island City, N. Y. Filed Feb. 9, 1925. Serial No. 8,039. 2 Claims. (Cl. 81—3.7.)



1. A spring oiler, comprising a yoke, a casing fixed to one end of the yoke, a piston movable in the casing, a hollow rod fixed to the piston and projecting beyond the end of the casing, a spacer fixed to the yoke and in line with a spacer on the end of the rod, a lubricant supply tube projecting through the piston and into the tubular rod, a spring exerting pressure on the piston to move it rearwardly, and an air supply pipe communicating with the end of the casing whereby air when admitted will move the piston forwardly.

---

**1,556,461. WINDOW-SEAL STRIP.** FRANK THILL, Long Island City, N. Y. Filed Apr. 7, 1925. Serial No. 21,354. 2 Claims. (Cl. 20—69.)

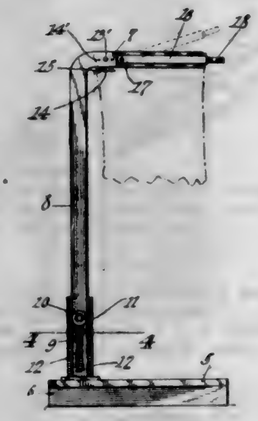


1. A window seal strip, including a strip of spring metal having a clamp at its lower portion, a flexible strip secured in said clamp, said metal strip having an upwardly projecting flange adapted to be secured to a window sash, and said metal strip between the flange and the clamp body bowed forming a spring and holding the clamp portion normally spaced from the sash to which it is secured.

---

**1,556,462. VEGETABLE SACKER.** JOHN TORSKE, Ada, Minn. Filed Jan. 29, 1925. Serial No. 5,576. 1 Claim. (Cl. 83—26.)

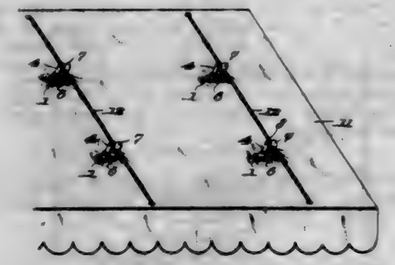
In a sack holding device, a base, a body portion including a length of metal bent intermediate its ends to provide leg members, said body portion including an upper section bent at right angles to the members, a pivoted clamping member cooperating with the right angled upper portion to clamp an article therebetween, a bar adjustably supported by the upper section, prongs



extending laterally from the bar and adapted to pierce an article positioned thereon, and means for adjustably supporting the body portion with relation to the base.

---

**1,556,463. ROPE GUIDE FOR AWNINGS.** CHARLES E. WHIBLEY, Harrisburg, Pa. Filed Sept. 22, 1924. Serial No. 739,217. 2 Claims. (Cl. 156—15.)



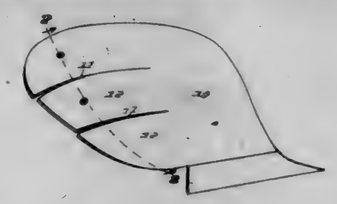
1. A rope guide for awnings, including a base, means of fastening the base to the awning, upstanding lugs and a frame made of a single piece of sheet metal and including sides and flanges, which latter are pivoted to the lugs, and a pulley rotatably connected with the sides forming a closed space through which a cord or rope is adapted to pass and be confined, whereby the rope or cord is freely engaged by the pulley irrespective of the accurate placement of the base and fastening means.

---

**1,556,464. MOLDBOARD.** FRANK WENCEL, Modesto, Calif. Filed Feb. 14, 1923. Serial No. 618,924. 1 Claim. (Cl. 97—123.)

A moldboard formed with a plurality of longitudinal slits arranged in different substantially horizontal planes and extending from the rear edge to provide a plurality of rearwardly directed wings, said wings being deflected

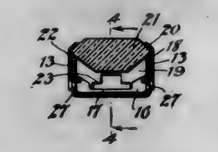
from the plane of the moldboard to a gradually increased extent from the bottom toward the top of the moldboard, a standard, and braces terminally secured



to the standard and to those wings above the lowermost wings, said braces being longitudinally extensible and contractible to vary the deflection of the connected wings.

---

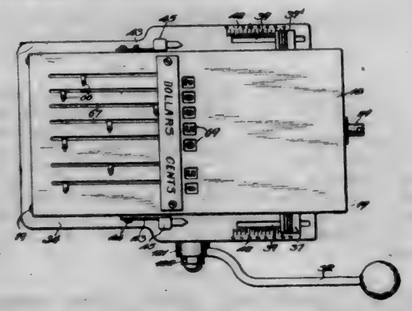
1,556,465. GEM MOUNTING. FRANS BERTIL WENDEL, Cranford, N. J., assignor to Hercules Novelty Mfg. Co. Inc., Newark, N. J., a Corporation of New Jersey. Filed Feb. 7, 1925. Serial No. 7,645. 3 Claims. (Cl. 63—26.)



2. As a new article of manufacture, a gem mounting comprising a base section including a bottom portion having a pair of upstanding opposite walls, said base section being open at its top between said upstanding walls, and a cap section having a tubular portion fitting on the upstanding walls of the base section and having an inturned flange at its upper end for cooperating with the upstanding walls of the base section to clamp edge portions of a gem against the upper edges of said upstanding walls of the base section, and means for fastening said sections together, said fastening means comprising slotted portions of the upstanding walls of the base section and tongues on the tubular portion of the cap section engageable with said slotted portions of the base section.

---

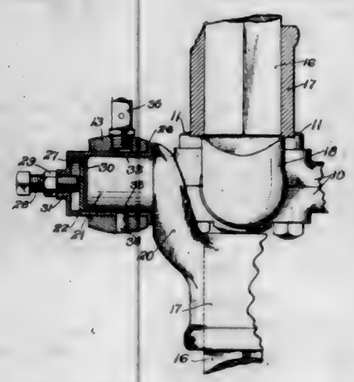
1,556,466. CHECK WRITER. GEORGE M. WILLIS, Chicago, Ill. Filed May 24, 1922. Serial No. 563,229. 21 Claims. (Cl. 101—19.)



1. In a check writer, the combination of a casing comprising an end wall and two side walls, the latter extending substantially from top to bottom of the machine, said end wall and said two side walls having a check receiving slot extending therethrough, a frame having a slot opening from one end thereof to register with the side wall slots and to dispose an overhanging frame portion in the overhanging portion of the casing, a plurality of type bars having longitudinal sliding adjusting motion between said side walls and above said slot, and a platen between said side walls and disposed below said slot.

---

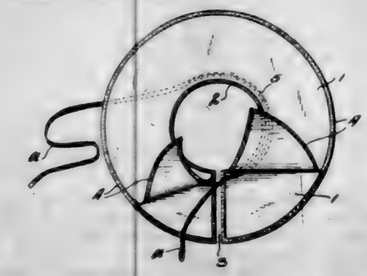
1,556,467. BEARING BUSHING. ROY B. ABELL, Vancouver, British Columbia, Canada, assignor of one-half to Edwin Bagnall, Toronto, Canada. Filed Jan. 26, 1923. Serial No. 614,968. 7 Claims. (Cl. 64—102.)



4. A flexible shaft coupling comprising a member having pairs of oppositely disposed bearings therein, a pair of fittings separate from one another and from said member, each having trunnions journaled in said bearings, bushings in said bearings for receiving said trunnions, said bearings having their outer ends closed, and bearing discs within said bushings and adjustable relative thereto in the direction of the axes of said trunnions for engaging the ends of said trunnions and resisting end thrust thereon.

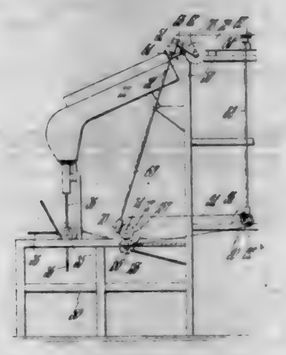
---

1,556,468. SANITARY COLLAR. OSCAR ALAMO, New Orleans, La. Filed Nov. 1, 1924. Serial No. 747,256. 1 Claim. (Cl. 2—50.)



As a new article of manufacture, a collar for use by a barber comprising two super-imposed annular members, means for connecting the inner margins of said members, said members being split transversely thereacross, and a tie string disposed between said annular members and having an intermediate portion thereof secured to one of the members from an end of one of said members to a point slightly beyond the center of said member, said connected portion of the tape extending along said member in close proximity to its inner margin.

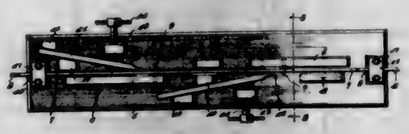
1,556,469. BOBBIN-HANDLING MACHINE. EUGENE R. ALDERMAN, Holyoke, Mass., assignor to Farr Alpaca Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Apr. 7, 1922. Serial No. 550,490. 24 Claims. (Cl. 73—51.)



1. A bobbin handling machine, having in combination, a hopper for receiving a supply of bobbins, means for effecting the feed of said bobbins through the machine, means for testing said bobbins as they are fed through the machine to determine their characteristic for fitting loosely or tightly upon a spindle or whorl, comprising means for arresting the progress of bobbins which would fit tightly upon a spindle.

---

1,556,470. WIRE-CUTTING BLOCK FOR LOOM REED. ISAAC ANDREWS, Spartanburg, S. C. Filed July 9, 1924. Serial No. 725,063. 2 Claims. (Cl. 90—28.)

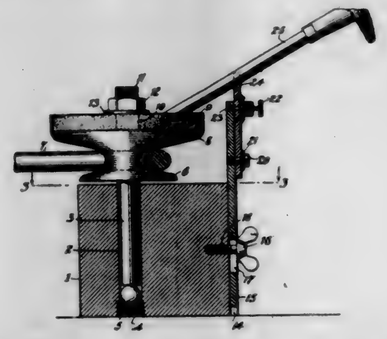


2. In a wire cutting device, a base, guiding members supported by the base, said guiding members including plates arranged in spaced relation with each other and having outwardly curved end portions to guide materal to the guiding members, guide blocks arranged in pairs and supported by the base, said guide blocks having their adjacent faces cut at oblique angles, relatively long cutting blades positioned between the guide blocks and resting against the obliquely disposed faces thereof, supports disposed adjacent to each pair of guide blocks and having threaded openings, threaded bolts adapted to pass through the threaded openings to engage the blades adjacent to their cutting ends, to hold the blades against movement with respect to the guide blocks.

---

1,556,471. GRAVER SHARPENER. EDWIN MERRITT ANDRUS, Macon, Ga. Filed May 10, 1924. Serial No. 712,411. 1 Claim. (Cl. 51—210.)

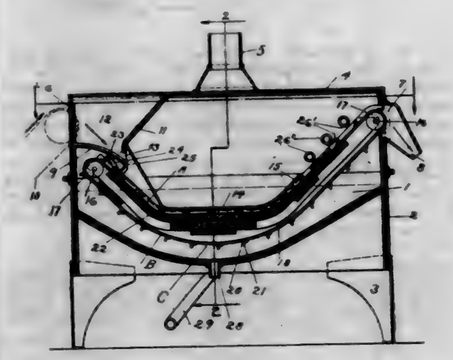
An apparatus of the character described, comprising a solid block constituting a base having a vertical bore therein, a shaft mounted to turn in said bore, a plug in the lower end of the bore, an anti-friction bearing interposed between the plug and the lower end of the shaft, a pulley fixed to the upper end of the shaft and having an enlarged upper portion constituting a table



adapted to support a disk or wheel, the upper extremity of said shaft above the table being screw-threaded, and a nut on said upper end adapted to clamp the wheel or disk on the table.

---

1,556,472. APPARATUS FOR COATING FOOD PRODUCTS. DAVID R. BAILEY, Sacramento, Calif., assignor to California Almond Growers Exchange, San Francisco, Calif., a Corporation of California. Filed Aug. 19, 1924. Serial No. 733,015. 4 Claims. (Cl. 91—2.)



1. The method of retaining a granular substance to the surface of nut meats and the like, which consists in first coating the surface of the material with a vegetable gum.

---

1,556,473. HANDLE OR GRIP FOR GOLF CLUBS. HOWARD M. BALLOU, North Attleboro, Mass. Filed Jan. 21, 1924. Serial No. 687,458. 6 Claims. (Cl. 273—81.)

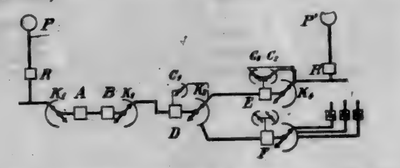
3. A gripping handle for a golf club having an approximately cylindrical shape and provided along one side with a longitudinal row of depressions disposed longitudinally near the upper end of the handle for receiving the fingers of one hand, another series of depres-

sions arranged below along the opposite side of the handle in advance of the first-mentioned depressions, and

thumb-sustaining depressions for each hand each of which is diagonally offset from the row of depressions for the fingers of the corresponding hand.

---

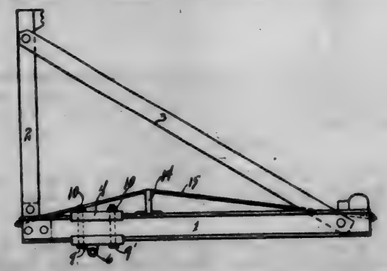
1,556,474. AUTOMATIC SWITCHING SYSTEM. ANTOINE BARNAY, Villeneuve St. Georges, France. Filed July 24, 1923. Serial No. 653,568. 31 Claims. (Cl. 179—18.)



1. In an automatic telephone system, a calling line, a called line, an electrical impulse sending device, an impulse receiving organ for the said impulses, a single motion connecting mechanism for connecting calling and called lines, the said mechanism consisting of a certain number of series of contacts, and an equal number of series of wipers, means for setting the wipers in accordance with the position of the impulse receiving organ, means for inserting a certain series of wipers in the connecting circuit according to the position of the impulse receiving organ.

---

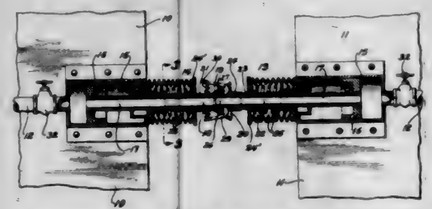
1,556,475. BEARING SADDLE FOR PUMP JACKS. FRED H. BARNEY, Fort Worth, and WILLIAM J. GOURLEY, Weatherford, Tex. Filed July 13, 1925. Serial No. 43,083. 6 Claims. (Cl. 74—5.)



1. Bearing saddles for pump jacks in combination with the channel beams of pump jacks comprising upper and lower members, the upper members having undercut channels for engaging the upper parts of the channel beams and the lower members having channels in their upper sides receiving and engaging the lower parts of the channel beams, and bolts for clamping the saddle members on the channel beams.

---

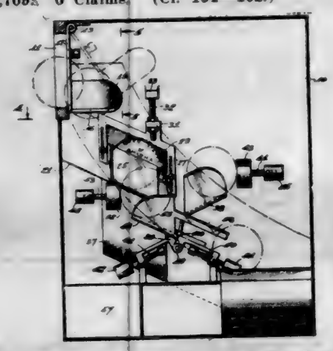
1,556,476. COUPLER. JAMES BARRETT, Archbald, Pa. Filed Aug. 11, 1924. Serial No. 731,486. 1 Claim. (Cl. 285—70.)



In combination with the meeting ends of a pair of cars, a cylinder secured to the ends of each of said cars, an air line pipe leading to each cylinder, a piston slidable in each cylinder, a hollow piston rod extending through each of said pistons and carried thereby, and co-acting elements carried by the free end of the rods for permitting the flow of air from one air line pipe to the other, and a flexible hose between the rods and the respective co-acting means, the end of one of said hose extending into one of said co-acting elements for forming a seat for the other co-acting element.

---

1,556,477. COIN DETECTOR. WALTER C. BELLOWS. New York, N. Y. Filed Dec. 3, 1924. Serial No. 753,709. 6 Claims. (Cl. 194—102.)

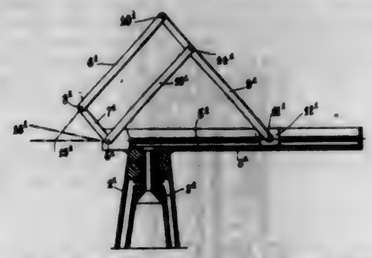


2. A coin detector comprising a casing having a vertical coin-receiving slot, a plate pivoted at its upper end within the casing to gravitationally depend to a position contiguous to and alongside of the discharge end of the receiving slot, said plate having a vertical slot therein of slightly less length than the diameter of a good coin whereby a good coin coacts with the ends of the slot in said plate to swing the same aside and drop directly downward, and means at the lower end of said plate for receiving and deflecting laterally a spurious coin, a substitute or foreign article, smaller than the diameter of a good coin, upon its passage through the slot in said plate.

---

1,556,478. CARRIAGE FOR ANTIAIRCRAFT GUNS. LAURENCE VINCENT BENÉT, Levallois-Perret, France, assignor to Société Anonyme des Anciens Etablissements Hotchkiss & Cie., St. Denis, Seine, France. Filed Feb. 28, 1925. Serial No. 12,282. 13 Claims. (Cl. 89—37.)

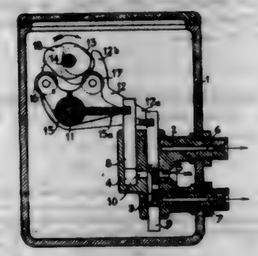
1. A carriage for anti-aircraft guns, comprising a vertical axis, a support capable of pivoting about said axis, a lever connecting the rear extremity of the gun to said support, a second lever connecting the front extremity of the gun to said support, a third lever connecting a



point on said second lever to the support and means for shifting the point at which said second lever is hinged to the pivoting support.

---

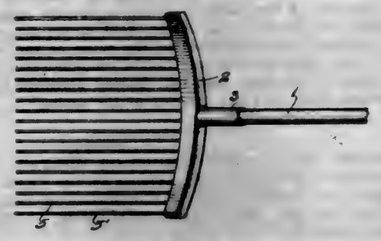
1,556,479. LUBRICATING-OIL PUMP. OTTO HAJEK and EMANUEL BLAUHORN, Vienna, Austria. Filed Apr. 3, 1922. Serial No. 549,158. 4 Claims. (Cl. 184—27.)



1. In a lubricating pump, a pumping cylinder, a pumping piston arranged in said cylinder, a rocking lever having a first arm for actuating said pumping piston and a second forked arm, a shaft, and a double tappet fixed on said shaft and located in such position relatively to said forked arm as to contact with the two ends of the fork of the lever in succession and thereby move one end of said fork in one direction and the other end of said fork in the other direction, each half of the double tappet being capable of alone reciprocating the piston positively once, so that two reciprocations of the piston occur at each complete revolution of the double tappet.

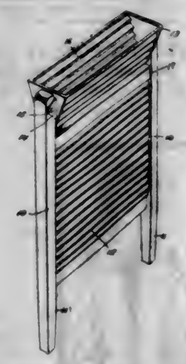
---

1,556,480. FRUIT COLLECTOR. FRANK BODINE, Visalia, Calif. Filed Feb. 8, 1924. Serial No. 691,458. 2 Claims. (Cl. 294—49.)



1. A device of the class described comprising a curved cross frame, a handle connected with the center thereof, tines carried by the cross frame, the end tines being of double construction with one half arranged above the other half so as to form edges at the sides of the device.

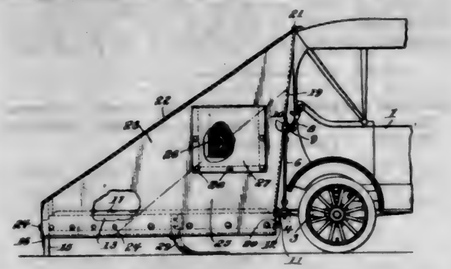
1,556,481. COMBINED WASHBOARD AND SUCTION CUP. BERT ST. AMOUR, Winooski, Vt. Filed May 12, 1924. Serial No. 712,701. 1 Claim. (Cl. 68—5.)



A clothes washing pounder comprising a body including spaced parallel side bars having its ends projecting beyond the body, and such ends serving as handles, a V-shaped in cross section member arranged between the opposite ends of the side bars and having its opposite faces corrugated, clips on the opposite ends of the V-shaped in cross section member and secured to the adjacent ends of the side bars, and strips secured to the opposite sides of the body and disposed upon opposite sides of the apex of the V-shaped member and serving with the clips to hold the V-shaped member in place.

---

1,556,482. FOLDING BED. MEINERT J. BOSCH, Chancellor, S. Dak. Filed June 21, 1922. Serial No. 569,799. 1 Claim. (Cl. 5—119.)



The combination with a camper's bed associated with a vehicle and including a frame, of barrels formed on the inner end of the frame, a cross piece, barrels formed thereon and cooperatively associated with the barrels first mentioned, pintles passing through the associated barrels to secure the cross piece to the frame, side members extending from the cross piece and secured to the vehicle and rods swiveled to the cross piece and rising therefrom for connection with the vehicle.

---

1,556,483. COMPARTMENT CAR. COLLINGWOOD B. BROWN, Jr., Montreal, Quebec, Canada. Filed Mar. 10, 1921, Serial No. 451,142. Renewed June 26, 1925. 33 Claims. (Cl. 105—315.)

20. In a car of the passenger type, a longitudinal passageway located adjacent one side and a plurality of transverse alcoves in full open communication with the

passageway, seat-berths in the alcoves and extending transversely to the car, and means for converting the alcoves into compartments.

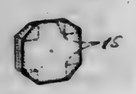
---

1,556,484. HANDKERCHIEF-DISPLAY CARD. CARRIE C. BRANDENBURG, Washington, D. C. Filed May 16, 1925. Serial No. 30,761. 2 Claims. (Cl. 211—34.)

1. A display card comprising a ground board, a form card fashioned to represent the body, head and limbs of a girl, a handkerchief folded on the form cards to represent a frock, means for detachably securing the handkerchief folds to the form card, and means for detachably securing the form card to the ground board.

---

1,556,485. GARMENT FASTENER. MARY V. BRUNK, Kansas City, Kans. Filed Dec. 28, 1923. Serial No. 683,153. 1 Claim. (Cl. 24—90.)

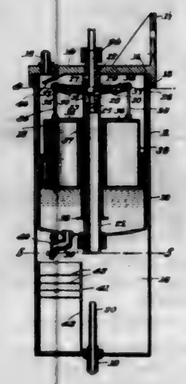


The method of manufacturing a button consisting of forming a strip of fabric into a tube, folding the ends of said tube within itself, folding the corners of said tube inwardly, and stitching the folded portions to hold them in place.

---

1,556,486. TANK. HAROLD O. BURGIN, Panguitch, Utah. Filed Jan. 26, 1925. Serial No. 4,839. 4 Claims. (Cl. 103—236.)

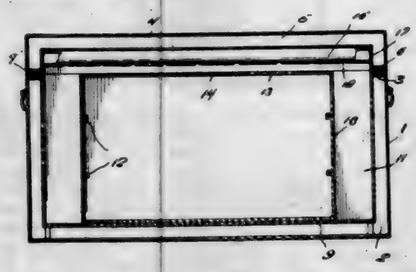
1. A vacuum feed tank comprising a casing, means dividing the casing into an inlet chamber and a discharge chamber, a fluid inlet for the inlet chamber, a fluid outlet for the discharge chamber, a vacuum controlled valve providing communication between the inlet and discharge chambers, a guide post within the inlet chamber, a passage extending inwardly from one end of the post and providing a suction passage adapted for communication with a source of suction, a vacuum relief port communicating with the suction passage, spaced valve seats within the suction passage between the outer end of the latter and the vacuum relief port, a valve common to both of said seats, said suction passage having openings provided in its walls upon opposite sides of the valve seats, stems extending from the valve through said openings, spring



resisted means engaging the stems to yieldingly hold the valve against movement and float actuated means for actuating the valve.

---

1,556,487. REFRIGERATOR. OBEY S. BURTON, Pensacola, Fla. Filed July 25, 1924. Serial No. 728,203. 3 Claims. (Cl. 220—9.)



1. A refrigerator comprising a substantially rectangular shaped casing open at its top, said casing including spaced inner and outer side walls and bottom, forming a dead air space therebetween, a hinged cover for the casing, a receptacle within the casing supported on the false bottom and spaced from the inner walls of the casing, forming an ice compartment around the receptacle, means for conducting the warm air from the interior of the casing and the receptacle outwardly through the cover of the casing, said means comprising an elongated tube supported in the cover of the casing, said cover having openings therein communicating with the ends of the tube, said tube having openings therein communicating with the interior of the casing.

---

1,556,488. INSULATING CEMENT OR MORTAR. LYLE CALDWELL, Lompoc, Calif., assignor to The Celite Company, Los Angeles, Calif., a Corporation of Delaware. Filed Jan. 29, 1923. Serial No. 615,738. 7 Claims. (Cl. 106—18.)

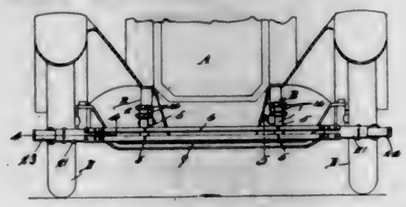
1. An insulating cement or mortar composition consisting principally of powdered diatomaceous earth and an organic adhesive and containing not over 7% of a salt adapted to act as a distending agent with respect to said organic adhesive.

1,556,489. PROCESS FOR PREPARING CULTURES OF BACILLUS FELSINEUS. DOMENICO CARBONE, Milan, Italy. Filed Oct. 23, 1922. Serial No. 596,518. 1 Claim. (Cl. 92—5.)

A process for preparing bacillus felsineus cultures by using recipients containing hemp cut into pieces, placed in water and sterilized, bringing same into contact with the saccharomyces ellipsoideus, cultivated separately, for example, in a malt decoction.

---

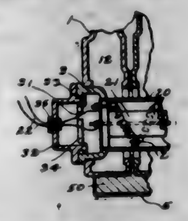
1,556,490. BUMPER. MARTIN CHICK, Tire Hill, Pa. Filed Nov. 22, 1924. Serial No. 751,685. 3 Claims. (Cl. 293—55.)



1. A bumper of the character described comprising a pair of L-section bars, means adapted to be secured to the frame of a motor vehicle and extending from the L-section bars, means secured to the ends of the L-section bars, and arms extending from said last mentioned means and secured to the springs of the motor vehicle

---

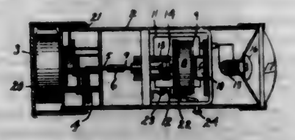
1,556,491. ELECTRIC STEAM RADIATOR. ALLAN CLARK, Seattle, Wash. Filed June 2, 1924. Serial No. 717,214. 5 Claims. (Cl. 219—38.)



1. A radiator comprising two terminal sections and intermediate sections therebetween, the lower portions of said sections communicating to form a boiler, means in said boiler for heating water contained therein, a pair of tie rods connecting said terminal sections and extending at opposite sides of the boiler portions of the intermediate sections, and heat insulation extending about said boiler and supported from said tie rods.

---

1,556,492. PORTABLE GENERATING SET. GEORGE B. COLEMAN, San Francisco, Calif., assignor, by direct and mesne assignments, to Majik Electric Appliance Company, San Francisco, Calif., a Corporation of California. Filed May 7, 1921. Serial No. 467,770. 2 Claims. (Cl. 240—10.5.)



2. In a device of the class described, the combination of a casing; a frame therein; field coils fixedly secured to said frame with their cores parallel to the axis of said casing; a lamp secured to one end of said frame; electric connections between said coils and lamp; a shaft in bearings on said frame; a magnet on said shaft with the end faces of its poles opposed and adjacent to the ends of said cores; and means for rotating said magnet.

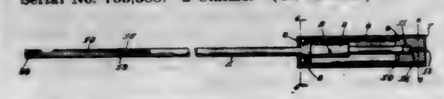
---

1,556,493. EXERCISING DEVICE. WEYMAN CONWAY, Jacksonville, Fla. Filed Apr. 19, 1924. Serial No. 707,786. 4 Claims. (Cl. 128—137.)

1. A device of the character described, comprising a bifurcated member adapted to fit within the lower jaw of the user and adapted to be positioned inside of the row of teeth of the jaw and lie substantially horizontal under the tongue with the furcations extending rearwardly and having an inclined upper face.

---

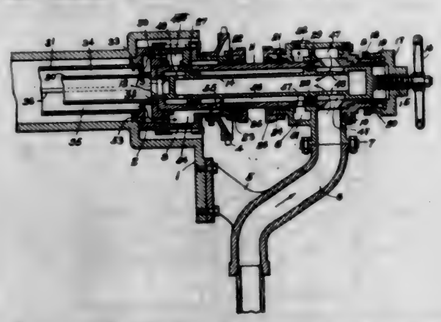
1,556,494. RIFLE CLEANER. GODFREY S. COOPER, Vankleek Hill, Ontario, Canada. Filed Aug. 22, 1924. Serial No. 733,588. 2 Claims. (Cl. 42—91.)



1. A rifle cleaner comprising a rod, a conical member secured thereto at one end; a tubular handle surrounding said conical member, ball bearings provided between said conical member and an end of the handle; the remaining end of the rod being threaded internally; a rag holder having one end reduced and threaded for insertion in the internally threaded end portion of the rod, the remaining end of the rag holder, being threaded internally; and a threaded adapter or connection for connecting the internally threaded end of the rod with the internally threaded end of rag holder or of the brush.

---

1,556,495. SOOT BLOWER. ALFRED C. DANKS, Cleveland, Ohio, assignor to The Ashmead Danks Company, a Corporation of Ohio. Filed June 27, 1924. Serial No. 722,786. 8 Claims. (Cl. 122—390.)



8. In combination in a soot blower, a body portion provided with a distributing cavity, means for supplying steam thereto, a blower tube having a plurality of laterally extending nozzles, a casing tube surrounding the blower tube, but spaced away therefrom, through which said nozzles lead, a conduit connecting said cavity and said blower tube, a valve in said body portion for controlling the supply of steam, and connections inde-

pendent of the valve for continuously supplying steam from said cavity through the space between the blower tube and casing tube.

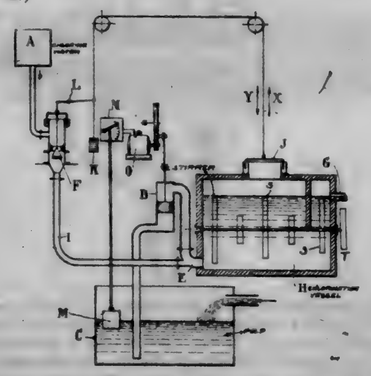
1,556,496. SPINE-TREATING APPARATUS. CHARLES LESTER DAVIS, Santa Barbara, Calif. Filed Jan. 25, 1924. Serial No. 688,586. 1 Claim. (Cl. 272—80.)

An apparatus of the class described, comprising a head harness, a bracket member presenting a semi-circular groove, a cable slidable in said groove and attached at one end to said harness and a latch member pivoted to said bracket and normally disposed to hold the cable against escape from said groove.

1,556,497. MANUFACTURE OF CELLULOSE. ANTOINE REGNOUF DE VAINS, Miribel, France. Filed Oct. 19, 1923. Serial No. 669,623. 6 Claims. (Cl. 8—2.)

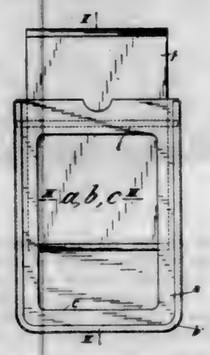
1. Process for neutralising the acids set free by the chlorination of cellulosic material and for dissolving out the chlorinated derivatives, consisting in neutralising, by means of a compound of the alkaline earth metals, the chlorinated cellulose and in rendering soluble, by means of an alkaline compound, the chlorinated derivatives formed during chlorination.

1,556,498. PROCESS AND APPARATUS FOR THE CONTINUOUS CHLORINATION OF CELLULOSIC MATERIALS BY MEANS OF CHLORINE WATER. ANTOINE REGNOUF DE VAINS, Miribel, France. Filed July 21, 1924. Serial No. 727,352. 6 Claims. (Cl. 8—2.)



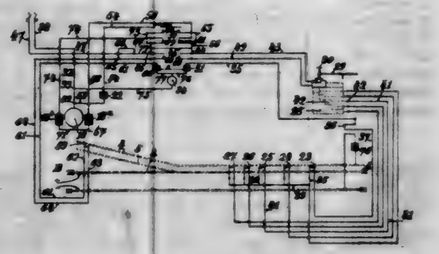
8. The process for the continuous chlorination of cellulosic materials consisting in continuously introducing a chlorinating agent and the said materials into a chlorination vessel, in making the supply of said materials dependent upon the rate at which they flow from an apparatus in which they are prepared, in making the supply of the chlorinating agent dependent upon the pressure inside said chlorination vessel, and in continuously discharging the chlorinated product at the same rate as that at which said materials are introduced into the chlorination vessel.

1,556,499. RECORDING DEVICE. HERMANN DEUTSCH, Berlin-Lichterfelde, Germany. Filed June 9, 1924. Serial No. 718,985. 12 Claims. (Cl. 35—10.)



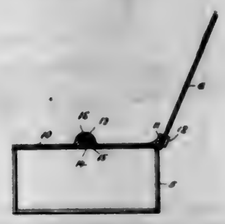
1. Recording device comprising a diaphanous writing sheet of resistive elastic material with a rear layer of adhesive substance, and a second sheet differing in color from the writing sheet and placed beneath the latter, said second sheet being thin and flexible so that when the point of a pointed instrument, that imparts no color to the writing sheet, is passed over the latter the parts of the second sheet, against which the elastic writing sheet is pressed by said instrument, adhere to the writing sheet and are raised by the same when the pressure of said instrument ceases.

1,556,500. BRAKE SHOE WITH DISTANT ELECTROMAGNETIC CONTROL. FERNAND DELOISON and JOSEPH DEVON, Lomme, France. Filed Aug. 6, 1924. Serial No. 730,505. 5 Claims. (Cl. 104—26.)



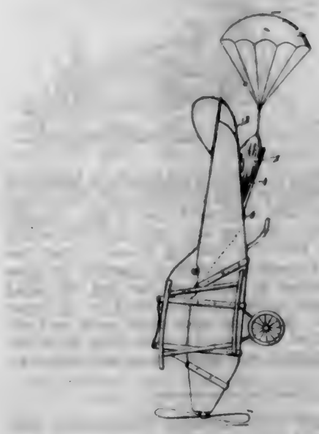
1. A device for the braking of railroad wagons upon sorting tracks, comprising in combination with one of the rails of the sorting track, guide rails forming a guideway whereof one portion is parallel to the said track and the other portion is oblique, a shoe normally placed in the said oblique portion and slidable in the said guideway and comprising a portion which extends upon the track rail when the said shoe is brought into that part of the guideway which is parallel to the track, the said portion being adapted for engagement with the front wheel of the first wagon of a series of wagons rolling upon the main track and proceeding towards the oblique portion of the guideway, a carriage slidable in the said guideway and adapted to draw the said shoe forward in the opposite direction to that followed by the wagon to be braked, a motor, means actuated by the said motor and connected with the said carriage whereby the latter is caused to travel in one and the other direction at will, and controlling means operated at a distance from the track and adapted to control the operation of the said motor in either direction as well as the stopping of the motor.

1,556,501. CIGAR-BOX COVER. WILLIAM DITZ, Saginaw, Mich. Filed Oct. 13, 1924. Serial No. 743,509. 3 Claims. (Cl. 131—30.)



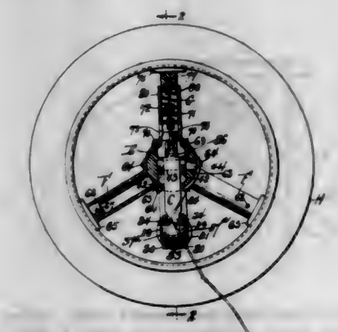
8. A humidifying attachment for cigar boxes comprising a cover to overlie the box, a longitudinally extending substantially tubular humidifying chamber formed with the cover and having a longitudinally extending passageway at one side of its underface whereby an absorbent element may be inserted into the substantially tubular member.

1,556,502. SAFETY DEVICE FOR AEROPLANES. LILLIAN DOUCETT, San Diego, Calif. Filed Mar. 9, 1925. Serial No. 14,178. 2 Claims. (Cl. 244—21.)



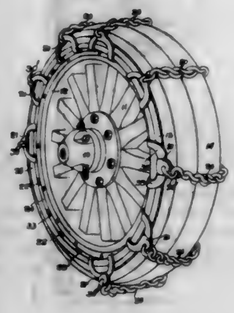
1. A safety device for an aeroplane comprising a parachute, a housing within the fuselage for containing the parachute, a reinforced frame attached to the fuselage, cables connecting the parachute with the frame so that the parachute when opened will hold the plane in horizontal position, breakable means for holding the cables against portions of the aeroplane when the parachute is in its housing and means for permitting an occupant of the plane to remove the parachute from the housing.

1,556,503. TIRE SUPPORT. RALPH H. DUNHAM, Jersey City, N. J. Filed Feb. 4, 1922. Serial No. 534,665. 7 Claims. (Cl. 224—29.)



1. In a tire support the combination of a lifting arm, a hub hinged to the swinging end of the lifting arm, a pair of supporting arms extending from the hub, a stationary locking shoe for the outer end of each of the supporting arms, a third supporting arm extending from the hub, a movable locking shoe for the outer end of the third supporting arm, and a linked connection between the movable locking shoe and the lifting arm.

1,556,504. ANTISKIDDING DEVICE. THADDIOUS V. ELLIOTT, New Brunswick, N. J. Filed Jan. 5, 1921. Serial No. 435,223. 7 Claims. (Cl. 152—2.)

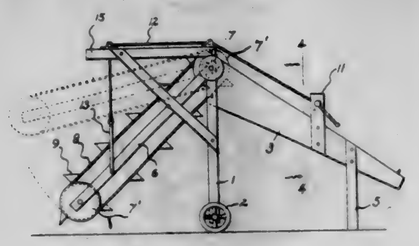


7. In an anti-skidding device for a vehicle wheel, a ring mounted to turn on a face of the wheel and provided with spaced apertures, a double hook adapted to engage the said apertures, and a bolt mounted on the ring and engaging the said hook to lock the latter in place on the ring.

1,556,505. COAL-BAGGING MACHINE. ALBERT H. ENGLERTH, Ambler, Pa. Filed May 14, 1923. Serial No. 638,991. 1 Claim. (Cl. 198—123.)

A coal bagging machine, comprising an upright frame, a horizontally arranged extension frame at the top thereof, wheels on the bottom of the upright frame, an inclined chute having its upper end connected with the upper end of the upright frame, legs on the chute which, with the upright frame, supports the apparatus in up-

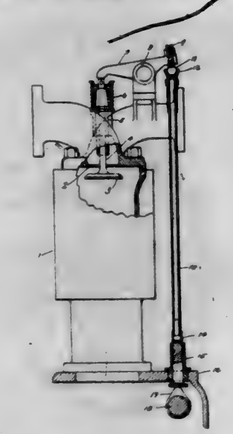
right position, a conveyor frame, drums carried by the same, a bucket carrying member passing over the drums, the pintles of the upper drum having bearings in the top part of the upright frame and pivotally connecting



the conveyor frame with said upright frame, pulleys on the extension frame, uprights on the chute, a winch carried thereby, a cable connected with the winch and passing over the pulleys and a yoke on the conveyor frame to which the other end of the cable is connected.

---

1,556,506. INTERNAL-COMBUSTION ENGINE. ANSLEY H. FOX, Philadelphia, Pa., assignor, by mesne assignments, to Fox Holding Company, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 1, 1922. Serial No. 533,419. 5 Claims. (Cl. 123—90.)



3. In an internal combustion engine, the combination with a rocker arm, of a push rod engaging said rocker arm of a push rod engaging said rocker arm and containing a lubricant chamber and a feed passage therefor, and a movable closure for said passage, said chamber discharging to the engaging surfaces of said rod and rocker-arm.

---

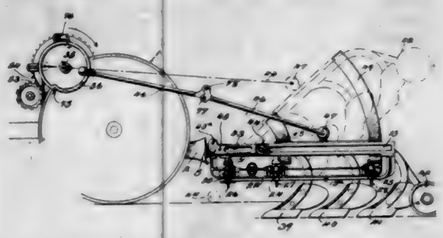
1,556,507. GARMENT SEPARATOR. IKE GRONAUER, Memphis, Tenn., assignor to Memphis Paper Company, Memphis, Tenn., a Corporation of Tennessee. Filed Dec. 12, 1923. Serial No. 680,271. 1 Claim. (Cl. 45—37.)

A separator for ladies' gowns comprising a sheet of relatively stiff flexible material adapted to be suspended between adjacent similarly suspended garments to prevent entanglement of the same, said flexible sheet having its upper corners folded upon itself to form a pocket for a hanger, a hanger having oppositely extending arms disposed beneath said corners, and a strip of material ex-

tending across and uniting said corners, said strip also being attached to the body of the sheet and forming a reinforce therefor, substantially as set forth.

---

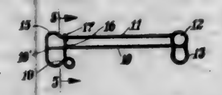
1,556,508. PLOW. CHARLES S. HENTZELL and MILLARD P. HENTZELL, Milwaukee, Wis., assignors of nine forty-eighths to George Hoelcher, Chicago, Ill., and nine forty-eighths to Charles R. Smith, Syracuse, Ind. Filed May 16, 1921. Serial No. 469,885. 1 Claim. (Cl. 97—47.)



The combination of a tractor, a substantially horizontal coupling frame secured thereto, a substantially horizontal kingbolt carried by said coupling frame, a plow supporting frame pivotally carried by said king bolt and having sliding connection with said coupling frame, a draw bar pivotally carried by said king bolt, a plurality of plow beams pivotally joined to said draw bar and extending rearwardly, a single guider wheel carried by an outer plow beam, a plow carried by each plow beam, and adjusting means carried by said plow supporting frame for simultaneously adjusting said plow beams and said draw bar.

---

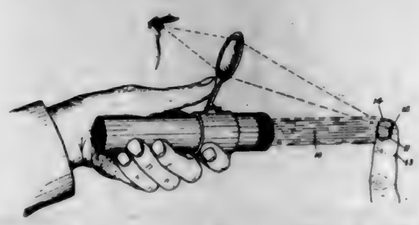
1,556,509. SAFETY PIN. LEOPOLD HOCHREINER, New York, N. Y. Filed Oct. 15, 1924, Serial No. 743,674. Renewed Aug. 27, 1925. 5 Claims. (Cl. 24—161.)



1. A safety pin formed of a length of wire bent to form two parallel reaches, said reaches being united at one end in a transversely projected coil, one of the reaches having its other end pointed, the other reach being formed at its other end to present a loop in which the said pointed end engages, the said loop and coil extending at a slight inclination to the plane of the said reaches.

---

1,556,510. MAGNIFIER. BURNHAM W. KING, New York, N. Y., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 26, 1922. Serial No. 608,934. 5 Claims. (Cl. 88—39.)



1. A device of the character described, the combination with a source of luminosity, of a controlling switch therefor and a foldable magnifier having a portion actuating the switch as the magnifier is shifted into operative relation.

---

1,556,511. ADVERTISING APPARATUS. EDWARD JOHN DOBBINS, St. Marylebone, London, England, assignor to William John Stewart, London, England. Filed Nov. 29, 1924. Serial No. 752,965. 7 Claims. (Cl. 40—125.)

1. An advertising apparatus comprising a horizontal transparent tube, a body of transparent fluid in said tube the volume of which is less than the volumetric capacity of the tube, and advertising matter arranged in inverted form on the back of said tube below the level of the liquid therein.

---

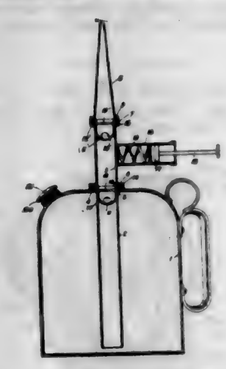
1,556,512. CEMENTING AND COATING COMPOSITION. VIRGIL LEROY FARRINGTON and EDWIN T. ALDERMAN, Nevada, Iowa. Filed June 14, 1922. Serial No. 568,241. Renewed Feb. 14, 1925. 2 Claims. (Cl. 134—79.)

2. A composition for coating or cementing films, comprising approximately four parts of nitrocellulose, eight parts of acetone, one to four parts of ether, two to eight parts of amyl acetate, and four to eight parts of alcohol.

---

1,556,513. OIL CAN. ALBERT EDWARD FEE, Killam, Alberta, Canada. Filed July 5, 1924. Serial No. 724,377. 2 Claims. (Cl. 221—51.)

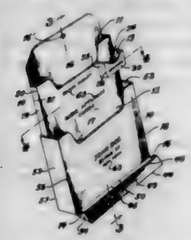
1. In an oil can, the combination with the can body, of an oil feed tube comprising separable upper and lower feed portions, the lower portion extending down into the can body, a depending cup shaped valve seat having an outwardly extending flange, a ball valve in the valve seat, means for removably securing the flange between the two portions, a separable spout portion, a depending cup shaped valve seat having an outwardly extending flange, a ball valve in the valve seat, means for



removably securing the flange between the spout portion and the upper feed tube portion, a plunger tube communicating with the upper feed tube portion and a plunger reciprocable in the plunger tube.

---

1,556,514. HOLDER. MORRIS E. FELDMAN, New York, N. Y. Filed Apr. 29, 1924. Serial No. 709,866. 2 Claims. (Cl. 120—8.)



1. A holder formed from a single blank of material, cut and bent to form a rear wall, an intermediate wall, and a front wall, side walls connecting said intermediate wall with said rear wall to form a pocket, a bottom for said pocket, side walls integral with said front wall and having flaps adjacent thereto for adhesive connection to the back of said rear wall to form a second pocket, a bottom therefor, and a plurality of sections between the front wall and said last bottom foldable for forming a trough.

---

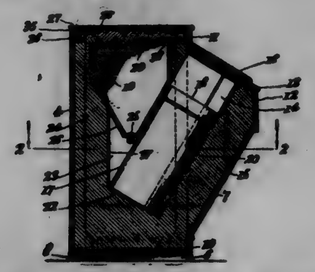
1,556,515. COUPON. HENRY E. FRENCH, New York, N. Y. Filed Sept. 11, 1923. Serial No. 662,121. 2 Claims. (Cl. 283—56.)

1. A coupon which includes a pair of folded portions separated by a line of perforations, printed matter on the outer surface of one of said portions relating to the fact that this portion of the coupon has an exchange value at a certain store, and printed matter on the outer

surface of the other of said portions relating to the fact that this portion has an exchange value at another store, the temporary union of the two portions thus permitting one company to assist in stimulating the trade of another by sending out these two coupons together to a customer.

---

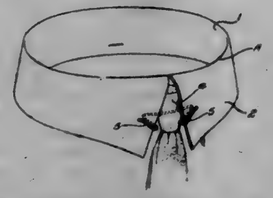
1,556,516. ICE-CREAM CABINET. EARL V. GARRETT, Tamaqua, Pa. Filed Feb. 10, 1925. Serial No. 8,258. 4 Claims. (Cl. 62—75.)



4. An ice cream cabinet comprising a substantially vertical portion and an adjoining lateral portion with communicating air spaces in both said portions, cans held diagonally in said lateral portion, a receptacle held above said cans in the vertical portion of the cabinet for holding refrigerant material out of contact with said air spaces and the cans and for promoting a circulation of cold air through the spaces and about said cans, a sub-counter above said refrigerant receptacle having an opening therein, a cover plate for the opening, and a main counter hinged to said cabinet above said sub-counter.

---

1,556,517. COLLAR SUPPORTER. STANLEY L. GRENEY, Maplewood, N. J. Filed Feb. 19, 1925. Serial No. 10,373. 2 Claims. (Cl. 24—81.)

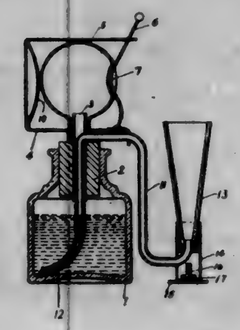


1. A collar supporter, comprising a pair of gripping devices adapted to engage the outer portions of a turnover collar at the front thereof, and a member connecting the gripping devices and of a length greater than the space between the outer portions of the collar and curved throughout its length concentrically with the normal curvature of the collar band and adapted to lie smoothly against the collar band, said gripping devices being located at an angle to the connecting member and functioning to hold said outer portions of the collar spaced from the neckband, and spaced from each other, and said device as a whole adapted to so hold the collar as to provide an unobstructed necktie receiving portion within the collar.

---

1,556,518. PEN-FILLING DEVICE. JAMES GILLIES, Fort Scott, Kans. Filed May 12, 1924. Serial No. 712,806. 1 Claim. (Cl. 120—69.)

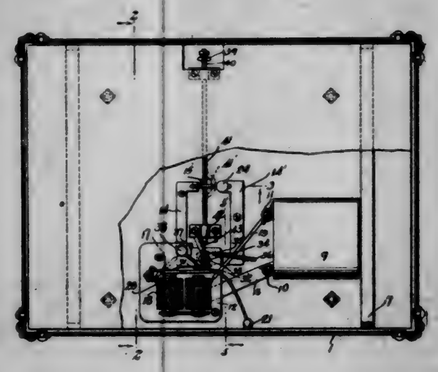
A device of the class described comprising a container, a stopper for the mouth of the same, a pipe passing through the stopper, a frame carried by the pipe, and having a slotted upper part forming a guideway, a bulb in the frame and having its mouth encircling the upper end of the pipe, a lever pivoted to the lower part



of the frame and engaging the guideway for collapsing the bulb, a receptacle, a pipe connected with the bottom of the same and passing through the pipe in the stopper and extending to the bottom of the container.

---

1,556,519. SAFETY CHEST. GEORGE O. GUMBS, Rockville Center, N. Y. Filed Dec. 28, 1921. Serial No. 525,306. 5 Claims. (Cl. 177—314.)



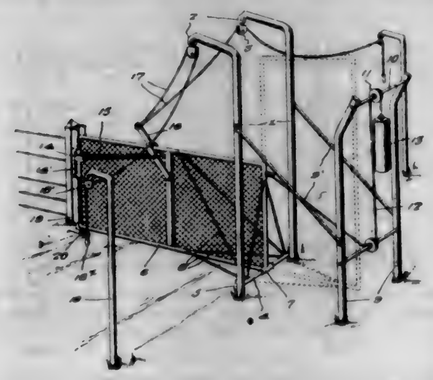
5. A chest having a hinged cover, a spring-pressed plunger, a hoe connected with said plunger and normally holding it in an inactive position, but releasing said plunger when the chest is moved, an alarm controlled by said plunger, and a setting mechanism, actuated by the opening of the cover, for bringing the shoe and plunger to the normal or inactive position, said mechanism including a link which has a lost-motion pivotal connection with the cover and limits the opening movement thereof.

---

1,556,520. GATE. ARTHUR C. HARMAN, Delta, Iowa. Filed Apr. 2, 1923. Serial No. 629,416. 1 Claim. (Cl. 39—44.)

A gate of the class described comprising a pair of uprights, a shaft rotatably carried by said uprights, pulleys at the upper ends of the uprights, a gate having its lower rear corner connected with the shaft, braces connecting the gate with the shaft, a cable connected with the upper rear part of the gate, posts in rear

of the uprights, shafts carried by the posts, pulleys carried by the shafts and over which the cable passes, a counterweight carried by the cable and a pair of



cables connected with the gate and passing over the pulleys carried by the uprights, said cables extending to a point where they may be seized by a person approaching or leaving the gate in a vehicle.

---

1,556,521. FURNITURE ELEMENT FOR SHOE FITTING. DANIEL F. HART, New York, N. Y. Filed Mar. 30, 1923. Serial No. 628,878. 5 Claims. (Cl. 155—165.)

1. An article of furniture for use in shoe stores, comprising a foot-rest board having a slot in one of its side edges, said slot extending from the front to the rear of the board and adapted to receive a foot rule substantially wholly therewithin, and spring means within the slot to restrain the rule within the slot.

---

1,556,522. CLEAT. PATRICK LEE HUDGINS, Decatur, Ga. Filed Jan. 5, 1925. Serial No. 682. 3 Claims. (Cl. 292—206.)

1. In combination with a freight car having a sliding door with a recess therein, a casing carried in said recess spaced from the bottom of the recess, a pivoted latch member in the casing, spring means behind the casing for pressing the latch member against the casing, means whereby said latch member may be sealed in latched position, a cover plate for said casing and recess, and means carried by the car body for cooperating with the latch member to hold the door in closed position.

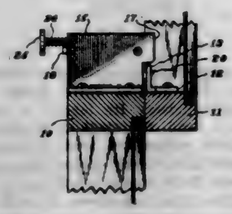
---

1,556,523. WRENCH. ALBERT G. HUGHES, New York, N. Y. Filed July 3, 1924. Serial No. 724,076. 2 Claims. (Cl. 81—53.)

1. A wrench comprising a pair of members each having a jaw and a handle section, and mating means extending longitudinally of the handle sections from the jaws to the ends of the handle sections, and permitting a relative longitudinal movement of said members to vary the distance between the jaws, and capable when the handle sections are gripped in wielding the wrench, of holding the members and therefore the jaws against relative movement by virtue of frictional contact set up between said mating means.

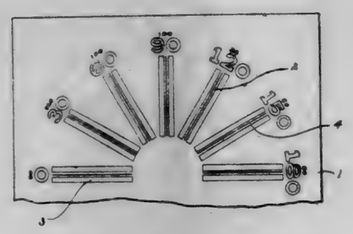
---

1,556,524. WINDOW LOCK. EMORY G. KIBBLE and CLAYTON C. WILSON, Jr., Philadelphia, Pa. Filed July 7, 1923. Serial No. 650,064. 1 Claim. (Cl. 292—127.)



The combination with the upper and lower sashes of a window casement, of an apertured angle plate, secured to and parallel with said upper sash, an inverted T housing secured to said lower sash at right angles thereto, a pawl pivotally disposed in said housing, its free end adapted to enter the aperture in said angle plate, a spring influenced rectangular plunger for controlling said pawl, a rectangular notch in one end of said plunger, for receiving the other free end of said pawl, a stop member integral with said housing, a shoulder formed on the other free end of said plunger, for limiting the rearward movement of said plunger, a retractile spring on said free end of said plunger, and a spring retaining finger piece secured to said free end of the rectangular plunger substantially as described.

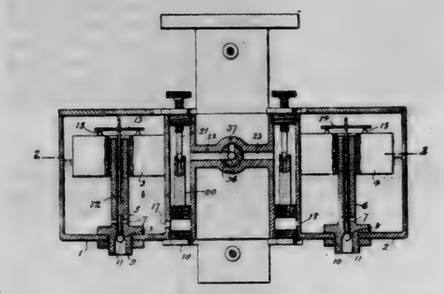
1,556,525. EYE TESTING. BURNHAM W. KING, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 7, 1923. Serial No. 637,089. 13 Claims. (Cl. 88—20.)



1. An eye testing chart having an astigmatic dial, and colored bands bordering the several spokes of the dial.

---

1,556,526. DUPLEX CARBURETOR. CARRL GOVERT KREBS, Brooklyn, N. Y. Filed May 21, 1924. Serial No. 714,853. 3 Claims. (Cl. 261—18.)

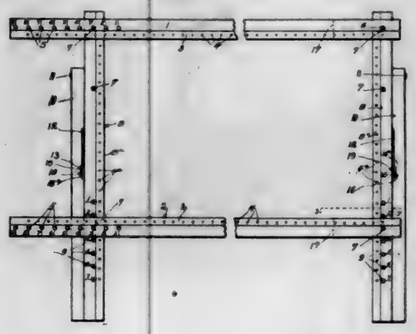


1. A duplex carburetor, comprising a casing provided with a mixture flow control valve having a pair of discharge openings midway its length, a pair of inlet openings near one end functioning at different times and a central bore connecting said discharge openings with said inlet openings, a pair of float chambers adapted to receive different fuels, means providing a passage-way from the respective float chambers to said inlet openings, said inlet openings being arranged at an angle to each other whereby the mixture flow control valve may be turned to one position for feeding fuel from one float chamber and turned to a second position for feeding fuel from the other float chamber.

---

1,556,527. CURTAIN STRETCHER. HENRY H. KRIEGER, Braddock, Pa. Filed Feb. 15, 1922. Serial No. 536,787. 1 Claim. (Cl. 45—24.)

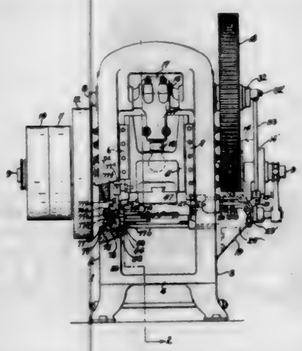
In a curtain stretcher, side bars provided with spaced forwardly projecting pins, top and bottom bars each provided in one end portion with openings adapted for reception of any of the pins, selectively, blocks secured on the inner face of each of the top and bottom bars adjacent to the other end thereof, said top and bottom bars being each provided with a pin receiving opening beyond said block and so related thereto that when a pin of the adjacent side bar is inserted through the opening the block is held in close contact with the adjacent edge of said side bar whereby said blocks



coact with the side bar to brace the top and bottom bars and hold them at right angles to the side bar with which the blocks contact.

---

1,556,528. APPARATUS AND PROCESS FOR MAKING CHAINS. SYLVANUS D. LOCKE, Bridgeport, Conn., assignor to The Locke Steel Chain Company, Bridgeport, Conn. Filed Mar. 1, 1923. Serial No. 622,092. 50 Claims. (Cl. 59—6.)



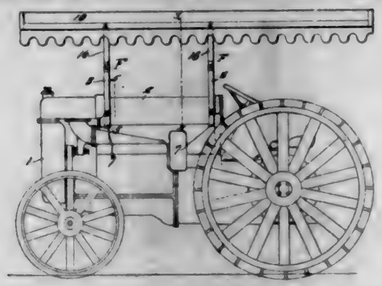
35. In a machine of the character described, the combination with means for transforming a strip of metal into similar chain links, devices for feeding said strip and similar links forward step-by-step, and means for severing each link as completed from the strip of metal and connecting it with the next preceding link, of devices for accelerating the forward feeding movement of said connected links while said strip of metal feeds forwardly one step whereby a link space is produced between said connected links and strip, and means for feeding a special link to said link space and in position to be incorporated in the strand of chain.

---

1,556,529. TRACTOR TOP. JOHN BARNEY LOGEMANN, Meltonville, Iowa. Filed Apr. 22, 1925. Serial No. 25,056. 3 Claims. (Cl. 296—102.)

1. The combination with a tractor having a fuel tank, of a top therefor, comprising spaced frames having

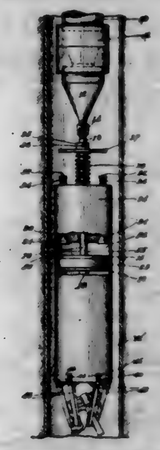
arched lower portions arranged over the tank, arched brackets on the under face of the tank and removably secured on the frames, the upper portions of the said



frames being arched and notched, slats arranged and secured in the notches and projecting beyond the frames and a fabric cover supported by said slats.

---

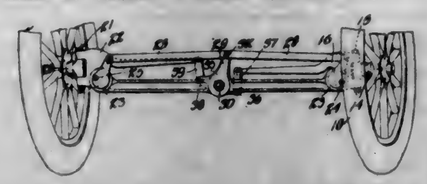
1,556,530. FISHING TOOL. ERVIN H. MCCLEARE, Long Beach, Calif., assignor of thirty-three and one-third per cent to C. Sheridan Bailes, Long Beach, Calif. Filed Nov. 6, 1924. Serial No. 748,132. 16 Claims. (Cl. 294—116.)



1. A fishing tool comprising a plurality of fish engaging members adapted to be connected to the lower end of a drill tube, hydraulic means for expanding said members while within a well, and means for contracting said members.

---

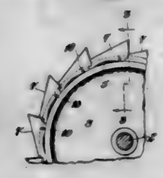
1,556,531. VEHICLE STEERING MECHANISM. ROBERT M. MCMILLIN, Lagrange, Ga. Filed Dec. 27, 1924. Serial No. 758,450. 6 Claims. (Cl. 280—95.)



1. In a vehicle, an axle having a bearing adjacent each end thereof, eccentric journaled in said bearings, levers fulcrumed on said eccentrics, steering knuckles carried by said levers, vehicle wheels on said steering knuckles, rock-arms extending rearwardly from the steering knuckles, a rod connecting said rockarms, means for turning the steering knuckles about vertical axes to steer the vehicle, connections from said rod to said levers for tilting them in opposite directions to tilt the vehicle wheels, and connections from said rod to said eccentrics for simultaneously moving them to maintain the horizontal level of the axle, substantially as set forth.

---

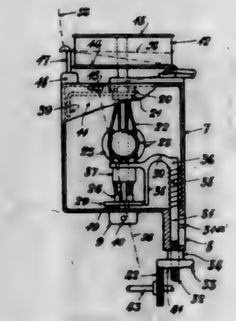
1,556,532. TURBINE WHEEL. PATRICK J. MAHER, New York, N. Y. Filed Nov. 11, 1924. Serial No. 749,249. 2 Claims. (Cl. 253—136.)



1. In combination, a turbine wheel having peripheral shoulders along its edges, curved blades having their edges resting on said shoulders, pins extending through the blades and the periphery of the wheel to fasten the blades thereto, the forward and rear edges of each blade being cut to provide shoulders which interlock with corresponding portions of the adjacent blades.

---

1,556,533. DRAG OR TENSIONING MOTION. JOHN HENRY MARSH, Manchester, England. Filed Jan. 24, 1924. Serial No. 688,205. 5 Claims. (Cl. 242—156.)



1. Means for applying tension to a yarn thread as it passes from a winding off point to a winding on point, comprising a drag wheel around which the thread passes and which wheel is rotated by the thread, centrifugal means operated by the rotation of the drag wheel to bring into operation at a predetermined speed of the latter retarding means for such wheel, and variable means for determining the speed point of the said drag wheel at which point the retarding means come into operation.

---

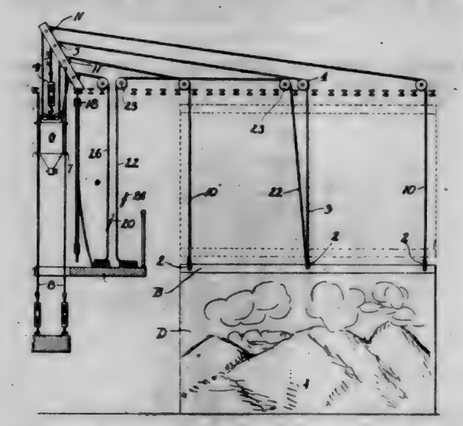
1,556,534. AUTOMATIC FUSE. JAMES MANIAS, Glens Falls, N. Y., assignor of one-half to Gust D. Goluses, Glens Falls, N. Y. Filed June 27, 1924. Serial No. 722,771. 2 Claims. (Cl. 200—126.)

1. A repeating fuse comprising a hollow body of insulating material open at one end and closed at its opposite end and having adjacent to its latter end a conductive covering, a spring terminal connected to the closed end of the body, a conductive member aranged in the open end of the body and electrically connected by an interior conductor with the said conductive covering, a terminal carrying member resting over the said con-

ductive member and having a lug back of the same and also having a plurality of spaced terminals intersecting the path of the free end of the spring terminal, a transparent disk opposed to the open end of the body and arranged over the terminal carrying member, and a closure cap arranged over said disk and secured on the body and having a slot for the display of the terminals.

---

1,556,535. THEATRICAL COUNTERWEIGHT SYSTEM. ANTON MAZZANOVICH, Los Angeles, Calif. Filed Mar. 15, 1923. Serial No. 625,194. 3 Claims. (Cl. 254—144.)

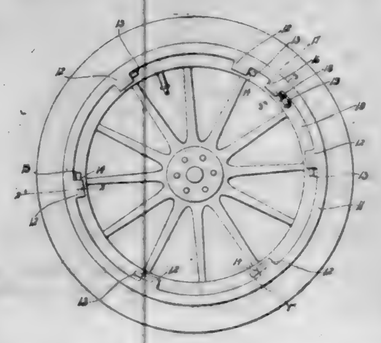


1. In a theatrical counterweight system, means forming vertical parallel guides, a hopper mounted to move vertically upon the guides, a cross bar connected to the hopper, pulleys mounted upon the cross bar, a baton, an adjustable counterbalancing cable connected to the center of the baton and running over guide pulleys and downwardly and connected to the cross bar, a second equalizing cable connected at its ends to the ends of the baton, and running over guide pulleys and around the pulleys upon the cross bar, and valve means for adjusting the weight of the hopper to counter-balance the load carried by the baton.

---

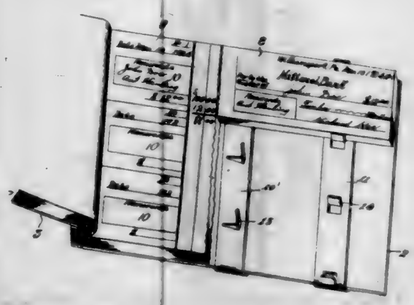
1,556,536. RIM. CHARLES S. MESERVEY, Bangor, Me. Filed Jan. 30, 1924. Serial No. 689,477. 1 Claim. (Cl. 301—17.)

The combination with a wheel felly and a rim removably mounted thereon, of a plurality of inwardly directed socket elements carried by the rim and disposed parallel to one of the vertical faces of the felly, a plurality of bolts passing transversely through the felly, tapered right angularly extending heads carried by the bolts and engaged in the socket members, an element also carried by the rim and provided with a longitudinally extending threaded bore, a sleeve carried by the felly, a screw rotatably supported in the sleeve and adapted to have threaded engagement with the bore whereby to hold the rim against circumferential movement.



---

1,556,537. INDEXED REFERENCE CHECK BOOK AND RETURNED-CHECK FILE. JOHN H. MORTIMER, Williamsport, Pa. Filed Apr. 1, 1925. Serial No. 19,985. 3 Claims. (Cl. 281—15.)



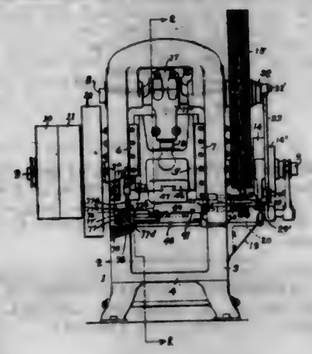
3. The combination with a check book, of bendable means on the inner face of the back cover thereof designed to pierce and sustain on the cover canceled checks in coaxial alignment with the stubs from which the checks were detached and means also on the cover for contacting with the edges of said canceled checks.

---

1,556,538. METHOD OF AND MACHINE FOR MAKING AND ASSEMBLING CHAIN LINKS. CHARLES PARKER, Bridgeport, Conn., assignor to The Locke Steel Chain Company, Bridgeport, Conn. Filed Sept. 17, 1921. Serial No. 501,429. 55 Claims. (Cl. 59—6.)

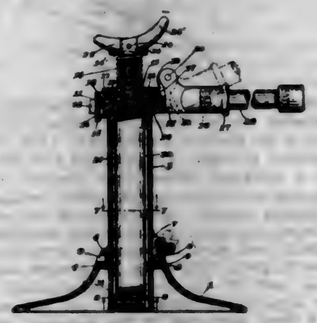
41. In a machine of the character described, the combination with a stationary die and a movable die adapted to transform a strip of metal into connected similar chain links, devices for simultaneously feeding said strip and connected links forward step by step, and means for at intervals interrupting the feeding movement of said strip while said connected links are fed forward, whereby a link space is produced upon the finishing portion of

the dies, of mechanism for feeding special links in position to be incorporated in the strand of chain, said special link feed mechanism including a link receiving member associated with said dies, and devices for moving a special link from said receiving member to each link space as produced.



---

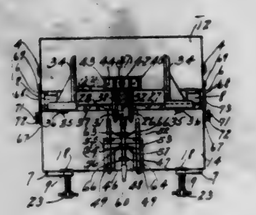
1,556,539. SCREW JACK. JOHN F. PARKER, Portland, Me. Filed Mar. 12, 1925. Serial No. 15,094. 1 Claim. (Cl. 254—100.)



In a screw jack, the combination, with a tubular body member having a nut rotatably mounted thereon and a screw adapted to engage said nut and to operate within and above said body member, and with means to actuate said nut, of a base member having an aperture in the top thereof through which the lower portion of said body member may pass, a circumferential flange on said body member adapted to bear on the top of said base member, a flange on the top of said base member projecting inwardly and with portions in opposition cut away for a spaced distance, lugs on said body member beneath and separated a spaced distance from said circumferential flange and adapted to enter the spaces where said base member flange is cut away, and positioned, vertically, so as to engage the under sides of said base flange when said body member is oscillated a predetermined distance on said base member, whereby the said base member flange may serve as the tongue and the space between the lugs and the circumferential flange of the body member may serve as the groove and together, constituting vertical locking means for the two members, stops on said base member against which said lugs may abut, restricting the lateral movement of said body member, a pawl pivotally mounted on said body member and adapted, to engage a depression on the said base member and constituting lateral locking means for said body member on said base member, substantially as described.

---

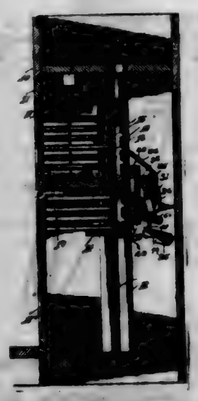
1,556,540. DOWEL PINHOLE-BORING MACHINE. GEORGE E. PATTERSON, Greenwich, Conn. Filed Sept. 14, 1923. Serial No. 662,632. 3 Claims. (Cl. 77—62.)



1. A device of the kind described, comprising shoes positioned horizontally in parallel spaced relation, the same having lower rearwardly extended stock bed ribs, and forwardly extended and relatively lower tool bed ribs, the latter ribs having integrally formed elongated dogs on their inner sides and inclined upwardly from their front ends to their back ends; a stationary stock bed on the rear ribs of the shoes; a vertically adjustable tool bed having elongated inclined dogs at its side edges complementarily and slidingly intermeshing with the dogs of the said shoes; means for clamping the stock to the stock bed; and means for adjustably supporting the bit on the tool bed and centering the bit to the stock.

---

1,556,541. TOWEL-DISPENSING MACHINE. JOHN M. PERRY, Vosburg, Miss. Filed Oct. 30, 1922. Serial No. 597,841. 3 Claims. (Cl. 45—32.)



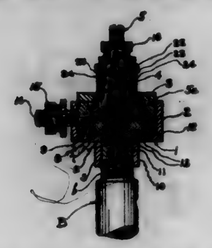
1. A towel dispensing machine including a cabinet and a towel carrying carrier movably supported in the cabinet, a rack carried by the carrier, detents engageable with the rack, a guiding means receiving slidably therethrough the detents, and means for moving the guiding means whereby to move the said detents out of the path of the rack.

---

1,556,542. TIRE ALARM. NORMAN PHILLIPS and ARCHIBALD J. MARTIN, Salem, Ohio. Filed Oct. 4, 1924. Serial No. 741,675. 7 Claims. (Cl. 200—58.)

1. In a device of the character described, a cap adapted to be removably secured on a tire inflating valve tube of a pneumatic tire, a head carried by the cap, said cap and head being of electrical conducting material and

communicating with each other, a diaphragm of electrical conducting material mounted in the head beyond the cap, means for effecting a fluid tight closure about the



diaphragm and for securing it in the head and electrically insulating it therefrom, and means for urging the diaphragm toward the cap and for connecting it to an electric conductor.

---

1,556,543. ELECTROLYTIC PROCESS FOR TREATING SOLUTIONS DERIVED FROM LEUCITIC ROCKS. UMBERTO POMILIO and FRANCESCO GIORDANI, Naples, Italy, assignors to Pomilio Brothers Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 25, 1922. Serial No. 584,385. 9 Claims. (Cl. 207—9.)

1. A process for deriving aluminum from potassium aluminum silicates soluble in hydrochloric acid comprising attacking the silicates with such acid, neutralising the resulting solution, and then electrolyzing such solution to remove the iron therefrom, substantially as set forth.

---

1,556,544. HAIR CURLER. WILLIAM H. PRITCHETT and OLAF J. CHRISTIANSEN, San Diego, Calif. Filed May 21, 1925. Serial No. 31,874. 3 Claims. (Cl. 132—41.)

1. A hair curler comprising a body strip rolled over in opposite directions at opposite ends and against its opposite faces to provide hinge eyes, the extremities of the strip being bent outwardly from the hinge eyes to provide hooks at opposite sides and at opposite ends of the body strip, and clamping members arranged at opposite sides of the body strip and hingedly mounted in said hinge eyes, said clamping members being adapted for engagement beneath said hooks to lie flat and in closely adjacent relation to the opposite sides of the body strip.

---

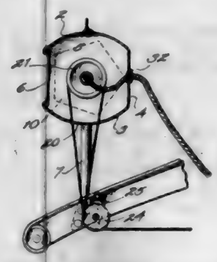
1,556,545. ADJUSTABLE INK RESERVOIR FOR PENS. JAMES M. QUICKE, Petersburg, Va. Filed Mar. 10, 1924. Serial No. 698,226. 1 Claim. (Cl. 120—114.)

An adjustable ink reservoir for pens, comprising a tongue, and a head on the inner end of the tongue, said head having curled spring arms adapted to yieldably and adjustably engage the opposite wings of a pen and support the head across the pen, said tongue being curved inwardly from the head toward the point of the pen to space the intermediate portion of the tongue from the pen and provide a reservoir for ink, said curled

spring arms being narrow and the curled spring portions thereof being adapted to bind and rock on said wings of the pen to yieldingly hold the end of the tongue against the point of the pen and adapt the device to pens of various types.

---

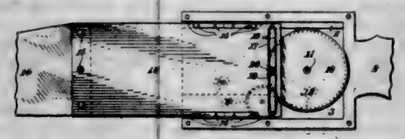
1,556,546. AUTOMOBILE SIGNAL. HENRY R. REYNOLDS, Wallace, N. Y. Filed Oct. 29, 1924. Serial No. 746,610. 1 Claim. (Cl. 116—43.)



A vehicle signal of the character described comprising an elongated box, a right angle disposed arm securing said box to the frame of the vehicle in a manner whereby it is adapted to overlie the left hand rear fender of the vehicle, a polygonal shaped drum mounted for rotation in said box and being provided with transparent side walls bearing legends, arcuate shaped top and bottom walls included in said box and having their free horisontal edges curved upon themselves to provide grooves, a transparent plate received in the grooves and forming the rear wall of the box, a substantially U-shaped bracket inwardly extending from one end wall of the drum, a lamp supported by the U-shaped bracket and being adapted to illuminate the drum whereby the rays of illumination will pass through the side wall of the drum confronting the transparent wall of the box as and for the purpose specified.

---

1,556,547. MOTOR-OPERATED HANDSAW. ALPHONSE T. RICARD, Detroit, Mich., assignor of nine-twentieths to Frank Frustaglib, Windsor, Canada. Filed June 14, 1923, Serial No. 645,406. Renewed Aug. 20, 1925. 2 Claims. (Cl. 143—68.)

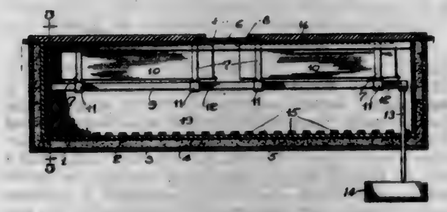


1. A hand saw comprising a frame having a hollow side wall and provided with a hand grip at one end, the inner face of said side wall having a circular recess therein, a removable wall secured to said side wall and forming a cover plate therefor, whereby to form a pocket in said frame open at the front end thereof, a saw sup-

porting member including a plate slidable in and out of said pocket and having a transverse slot extending across its inner end, a disk in said recess, a pin projecting from said disk and engaging in said slot, means to rotate said disk, bearing balls housed in the top and bottom edges of said plate and bearing on the top and bottom sides of said pocket, and other bearing balls housed in the faces of said plate and bearing against the cover plate and the opposed surface of the hollow side wall.

---

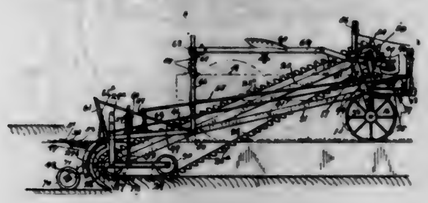
1,556,548. REFRIGERATOR. ARCHIE H. ROBERTS, Morris, Minn. Filed Apr. 30, 1921. Serial No. 710,055. 1 Claim. (Cl. 62—37.)



A refrigerator comprising a casing provided along its median longitudinal dimension and at its top with an opening, a cover for said opening, brine containers attached to the top of the casing and located one at each side of the said opening and extending longitudinally thereof, covers for the brine containers disposed upon the top of the casing, hangers depending from the top and extending around the brine containers, and drain pans supported in the lower portions of the hangers and beneath the brine containers.

---

1,556,549. DITCHER. ADRIAN G. RONNING and ADOLPH RONNING, Minneapolis, Minn., assignors to Ronning Machinery Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 12, 1921. Serial No. 451,747. 23 Claims. (Cl. 37—101.)

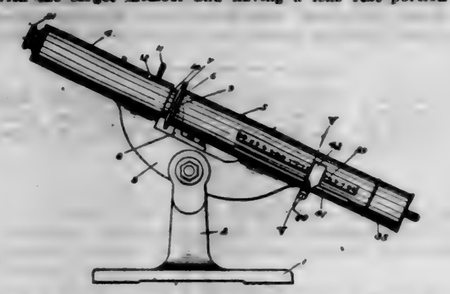


1. In a ditcher, an elevator belt having a portion arranged to run in contact with the ground, and a shovel having its cutting edge located below the ground-engaging portion of said elevator belt, the ground-engaging portion of said belt serving as a gauge to limit the depth of cut of said shovel.

---

1,556,550. LENS-TESTING INSTRUMENT. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 31, 1921. Serial No. 473,843. 15 Claims. (Cl. 88—56.)

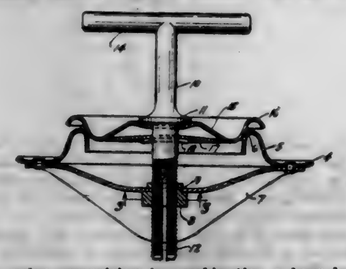
1. In an instrument of the character described, the combination with a support, of a target member slidably mounted upon the support, a sighting tube axially alined with the target member and having a lens rest portion



and an eye piece section slidably supported adjacent the lens rest a tube arranged within the tube and actuatable to clamp the lens to be tested against the lens rest.

---

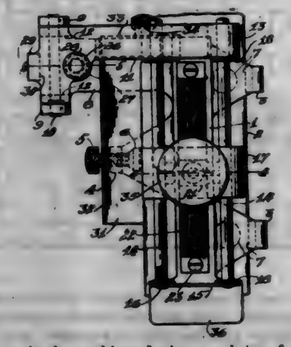
1,556,551. ORCHARD VALVE. WILLIAM A. WATERMAN, Exeter, Calif. Filed Aug. 6, 1923, Serial No. 656,091. Renewed June 30, 1925. 3 Claims. (Cl. 137—13.)



1. A valve comprising in combination a base having a port opening bordered by a raised seat, a valve cover of resilient sheet metal having a beaded outer flaring portion so arranged that the outer side of said bead will contact the inner side of said seat and slide thereon, said cover being dished so as to be expanded upon pressure downwardly upon the dished portion, a reversely dished portion at the center of said cover, a stem having a metal collar seating within the outer margin of said reversely dished portion in line contact metal to metal, a bracket mounted on the under side of said base and spanning said port opening, a nut secured to said bracket, said stem being engaged by threads with said bracket so as to move said cover to and from its seat.

---

1,556,552. CHECK PROTECTOR. HERMAN C. WELTER, Rochester, N. Y., assignor to Hall-Welter Co., Inc., Rochester, N. Y. Filed Aug. 23, 1923. Serial No. 659,011. 13 Claims. (Cl. 101—20.)

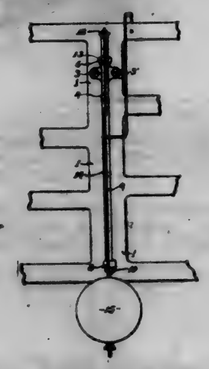


1. In a check marking device, a platen formed with a plurality of parallel extending ridges and grooves, a

roller movable over said platen and formed with a surface mating with said ridges and grooves, the surface of the roller also being formed with regularly spaced axially extending gooves, and a support for the roller.

---

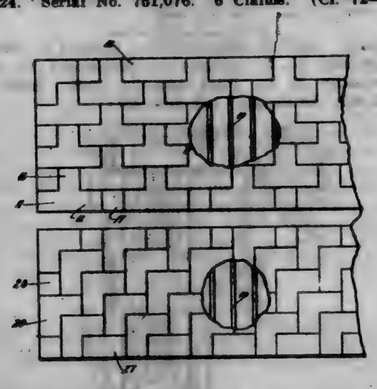
1,556,553. TEMPERATURE COMPENSATOR FOR CLOCKS. RICHARD A. WOODWARD, Geneseo, Kans. Filed Dec. 11, 1924. Serial No. 755,244. 3 Claims. (Cl. 58—133.)



1. In a temperature compensator for clocks, a vertical shaft having its upper end horizontally disposed and vertically slotted and a hole as a bearing in said horizontal portion, said shaft having its lower end horizontally disposed and recessed and perforated in vertical axial alignment with the hole through the upper portion thereof; a second shaft, having a coefficient of expansion differing from that of the first mentioned shaft; the said second shaft being housed within the hole in the upper portion of the first shaft and with its base anchored within and rigidly secured to the recessed base of the first shaft; said second shaft having its upper end portion horizontally disposed and inwardly slotted and arranged immediately above the corresponding parts of the first shaft, as a pendulum support.

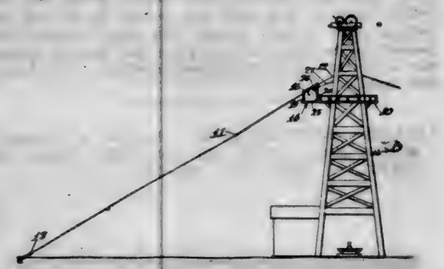
---

1,556,554. INTERLOCKING PLASTER BOARD. FRED H. BLANCHARD, Los Angeles, Calif. Filed Nov. 20, 1924. Serial No. 751,076. 6 Claims. (Cl. 72—25.)



1. A wall comprising equally spaced studs, and angular sections of plaster board secured to said studs, said sections being of such shape and so arranged that vertical as well as horizontal joints are broken.

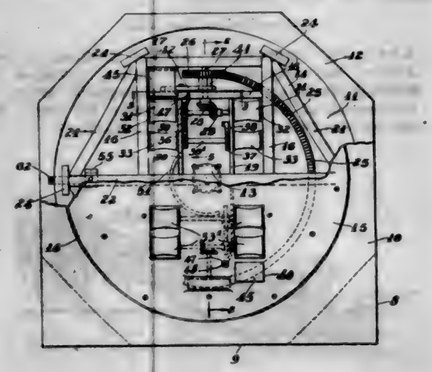
1,556,555. SAFETY DEVICE FOR DRILLING DERRICKS. ALVY ADELBERT BROWN, Long Beach, Calif. Filed Apr. 30, 1925. Serial No. 27,119. 8 Claims. (Cl. 227—12.)



1. A safety device for drilling derricks comprising a cable having an end secured to a derrick a substantial distance above the ground and the other end anchored to the ground remote from the base of the derrick, a carriage movable upon the cable, said carriage comprising a pair of grooved wheels, suspending members on which said grooved wheels are rotatably mounted, a platform supported upon said suspending members, one of the suspending members being longer than the other, whereby the platform of the carriage will assume an approximately horizontal position while the carriage is on the inclined cable, and a breakable cord for releasably holding the carriage upon the cable adjacent the derrick.

---

1,556,556. TURNTABLE. GEORGE E. CLAYTON, Compton, Calif. Filed Jan. 23, 1925. Serial No. 4,197. 5 Claims. (Cl. 104—41.)

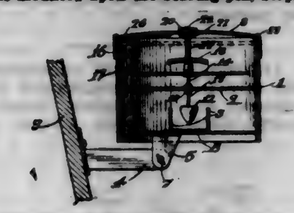


1. A turntable comprising a base, a carriage rotatably mounted on said base, and means for operating said turntable by motion of the driving wheels of a vehicle being carried, and a safety stop comprising a bar riding upon an incline adapted to interfere with improper movement of the vehicle.

---

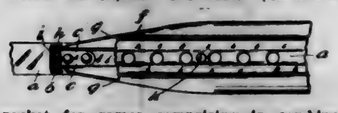
1,556,557. PATHFINDER. ARTHUR DE PASMELAERE, Gardena, Calif. Filed July 6, 1923. Serial No. 649,793. 8 Claims. (Cl. 33—215.)

2. A cylindrical housing having a bottom, a circular plate pivotally mounted in the housing upon a horizontal diametrical axis, a curved scale mounted adjacent to the periphery of the plate, a pendulum extending downwardly from the center of the plate, a bearing pin extending upwardly from the center of the plate, a compass needle mounted upon the bearing pin, stops for limiting the movement of the pendulum, a transparent cover for the housing, a threaded pin mounted through the cover, and a transparent plate upon the lower end of the pin to hold the compass needle upon the bearing pin.



---

1,556,558. METALLIC RACKET. FRANCIS WILLIAM GOWER, Moseley, Birmingham, HUGH JAMES OWEN, Birchfields, Birmingham, and ROBERT JOHN NASH, Cannon Hill, Birmingham, England. Filed June 6, 1925. Serial No. 35,460. 3 Claims. (Cl. 273—73.)



1. A racket for games comprising in combination a metallic frame of the usual bow form with the extremities continued parallel to each other, but spaced apart to form a handle portion, distance pieces secured at intervals between said spaced extremities, a pair of hollow metal pressings secured opposite each other between said extremities, one end of each hollow pressing tapering toward and being engaged over one of said distance pieces, said tapering end having a lip for this purpose, means for embracing said distance piece and the lips on said pressings, and a suitable closure piece secured at the other ends of said pressings.

---

1,556,559. MILKING-MACHINE TEAT CUP. HENRY ENOVALD KJESTRUP, Rangitumau, New Zealand. Filed June 5, 1924. Serial No. 718,129. 1 Claim. (Cl. 31—85.)

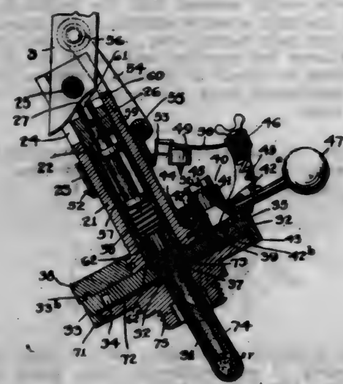
A teat cup, comprising a hollow casing, an elastic inflation tube arranged therein, said tube being of uniform uninterrupted interior area throughout its length, and a tapered nipple to hold the lower end of the tube relative to the casing, said nipple being held in place through the longitudinal elasticity of the tube, and a pulsator tube formed in part by the casing and opening into the latter at substantially a mid-length point thereof.

1,556,560. TANDEM MULTIPLANE. THOMAS R. MACMECHEN and ALEXANDER KLEMIN, New York, N. Y. Filed June 6, 1925. Serial No. 35,849. 9 Claims. (Cl. 244—12.)

1. A tandem multi-plane embodying a succession of aerofoils at substantially three chord intervals and substantially one-and-one-half descending altitudes from the leading to the rear aerofoils.

---

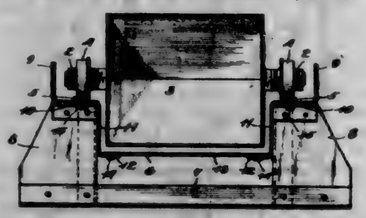
1,556,561. FUSE MECHANISM. JOSEPH MENCHEN, Summit, N. J., assignor to P. A. B. Alarm & Lock Corporation, Wilmington, Del., a Corporation of Delaware. Original application filed Apr. 13, 1918, Serial No. 228,843. Divided and this application filed June 17, 1921, Serial No. 478,385. Renewed Feb. 25, 1925. 7 Claims. (Cl. 102—36.)



8. A fuse container for aerial torpedoes comprising two disks secured together, the front disk having means of securement to the rear end of a torpedo and the rear disk having an arcuate series of flash ports leading from its rear face to a curved fuse channel within, and a detonator tube projecting centrally forward from the fuse container and having its rear end held between the disks.

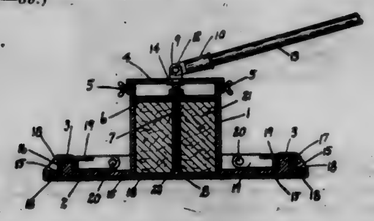
---

1,556,562. CONVEYER. GUSTAV R. RODDY, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 25, 1923. Serial No. 634,556. 7 Claims. (Cl. 198—204.)



1. A conveyor trough, comprising one-piece angular side plates and intermediate separable and replaceable bottom plates, the side plates being formed with downward extending flanges to which the bottom plates are directly and separately secured, and with top flanges adapted to serve as supports for the conveyer.

1,556,563. DEVICE FOR APPLYING POLISHING MATERIALS. JOHN A. THORBURN, Norwood, Ohio, assignor to Ray Thorburn, Hamilton County, Ohio. Filed Apr. 24, 1922. Serial No. 556,338. 3 Claims. (Cl. 91—39.)

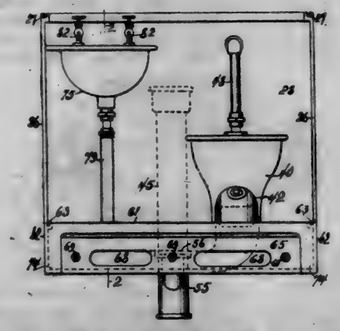


1. In a device of the character described, a base provided with an upwardly extending receptacle having a perforated bottom, a screw having its lower end rotatable in the bottom of the receptacle and having its upper end rotatably mounted in the top of the receptacle, a piston threaded to the screw and arranged in the receptacle for forcing waxing material through the perforated bottom, a pad conected to the base and adapted to receive waxing material from the receptacle, and a handle pivotally connected directly to the upper end of said screw, said handle being rotatable about the axis of the screw for operating said piston and to permit the handle to extend in different directions from the base, said handle being also rotatable about the axis of the pivot.

1,556,564. BLADE MOUNTING FOR CLIPPERS. LEO J. WAHL, Sterling, Ill. Filed Dec. 1, 1924. Serial No. 753,211. 11 Claims. (Cl. 30—1.)

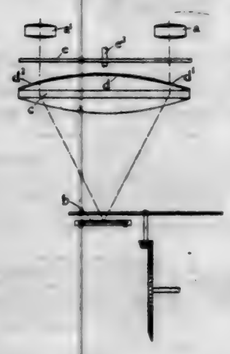
1. In a clipper, a stationary blade, a blade movable transversely of said stationary blade, means for reciprocating said movable blade comprising a connection having a single finger thereon and a member mounted to move with said movable blade having an opening therein with which said finger engages.

1,556,565. COMBINATION PLUMBING FIXTURE. ANDREW A. WALSH, Bayonne, N. J., assignor of one-half to William J. Coughlin, Bayonne, N. J. Filed Dec. 21, 1923. Serial No. 682,012. 7 Claims. (Cl. 4—3.)



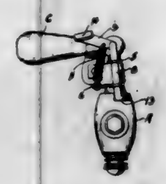
1. In a combination plumbing fixture the combination of a platform, a closet integral with and extending up from the platform, a trap integral with the closet, a soil pipe for the closet and integral with the outlet end of said trap, a slop sink formed with said platform and a trap connecting said slop sink and the soil pipe and integral therewith.

1,556,566. PHOTOGRAPHIC AND PROJECTION SYSTEM FOR OBTAINING STEREOSCOPIC EFFECTS. EDWIN HERBERT WRIGHT, Brighton, England. Filed Mar. 12, 1925. Serial No. 15,068. 1 Claim. (Cl. 88—16.6.)



In a stereoscopic cinematographic camera a pair of objective lenses spaced apart at substantially the normal ocular distance, a support for holding a photographic film in position for exposure, a superimposing lens disposed between the said objective lenses and the said support, a mask disposed adjacent the said superimposing lens and having two apertures therein whose axes coincide substantially with the axes of the said objective lenses, a rotatable disc disposed between the said objective lenses and the said superimposed lens, the said rotatable disc having its axis disposed centrally between the said objective lenses and parallel with the axes thereof and being of graded transparency which increases and decreases circumferentially, the transparency being at a maximum and at a minimum in diametrically opposite positions, and obturating means for preventing access of light to the film while the latter is moved for the exposure of successive image spaces thereof.

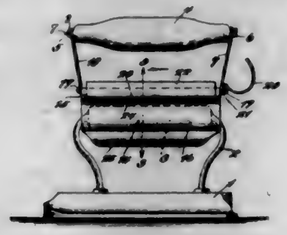
1,556,567. SAFETY ATTACHMENT FOR GAS COCKS. LEROY BROWN, Baltimore, Md., assignor to Harry M. Rodman, Baltimore, Md. Filed Feb. 28, 1925. Serial No. 12,439. 2 Claims. (Cl. 251—166.)



2. A safety attachment for gas cocks comprising a clamping member for securing the same to the valve means of a gas cock, a pair of paterally extending parallel arranged projections formed on the clamping member and being provided with registering openings, a latch lever mounted for slidable movement in the openings, a coil spring secured to said lever and one

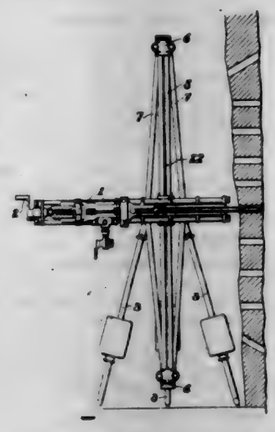
of said projections respectively and putting the lever under tension for automatically dropping the same to operative position, a right angle extension formed on the lower end of the lever for engagement with the gas cock to prevent the operation thereof and to also prevent removal of the lever from the projection, and finger manipulating means for the lever.

1,556,568. AUXILIARY HANDLE FOR SADIRONS. HAZEL A. DAVIS, Camden, Ark. Filed Mar. 18, 1924. Serial No. 700,134. 3 Claims. (Cl. 68—27.)



1. A device for the purpose indicated comprising opposed complemental clamping jaws having cross sectionally arcuate portions for engagement with the hand grip of a sad-iron, upstanding supports carried at the opposite ends of the jaws, and an auxiliary hand grip spanning said supports.

1,556,569. TOOL SUPPORT. DANIEL J. O'ROURKE, Clarkdale, Ariz., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Jan. 7, 1918. Serial No. 210,766. 18 Claims. (Cl. 255—54.)



1. In a drilling mechanism, a base, a bar pivotally mounted thereon for pivotal movement about an axis lying between its ends and disposable vertically adjacent the work, a drill support adjustable longitudinally of said bar, and a drill mounted on said support in a horizontal position and having feeding means associated therewith for feeding the same in a horizontal direction parallel to its axis.

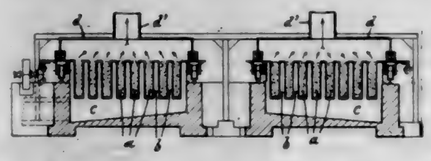
1,556,570. IMPREGNATED WOOD AND PROCESS OF TREATING WOOD. JOSEPH R. COOLIDGE, 3d, Brookline, Mass., assignor to Montan, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Feb. 2, 1925. Serial No. 6,463. 15 Claims. (Cl. 99—12.)

9. An article of the character described consisting of wood impregnated for a substantial depth with montan wax.

13. That improvement in the process of treating wood which consists in impregnating the wood for a substantial depth with montan wax.

14. That improvement in the process of treating wood containing excess water to impregnate it with a waxy substance which is hard at temperatures below 130° F. but becomes sufficiently fluid at 250° F. to flow into the tracheids of the wood, which consists in melting said substance, immersing the wood in the liquid so produced, driving the excess water out of the wood by heat transmitted to the wood through said liquid, maintaining a light preliminary pressure on said wood and liquid while said water is being driven off, and, after the desired amount of water has been driven out of the wood, increasing the pressure sufficiently to force said liquid into the pores and tracheids of the wood.

1,556,571. ANNULAR KILN FOR DRYING AS WELL AS FOR CARBONIZING SOLID CARBONACEOUS OR THE LIKE MATERIALS. OTTO DOBBELSTEIN, Essen, and HERMANN HESS, Duisburg, Germany. Filed Jan. 24, 1925. Serial No. 4,512. 5 Claims. (Cl. 202—4.)



1. An annular kiln for drying as well as for carbonizing solid carbonaceous or the like materials, comprising, in combination: a rotary series of concentric ring pockets having ring spaces with open lower ends between the single ring pockets, a stationary annular heating channel below said ring pocket system, a stationary annular gas collector above said ring pocket system having vapor offtake pipes, a stationary feeding hopper extending from above through said collector down to the top of the ring pocket system, and stationary means for excavating the materials from said pockets after their finished treatment; said heating channel having an admission opening located underneath the excavation place of the materials and an outlet opening located underneath said feeding hopper.

1,556,572. PROCESS OF PREPARING FRUIT JUICE. WINFIELD SCOTT PIERCE, Oakland, Calif. Filed July 24, 1924. Serial No. 728,036. 8 Claims. (Cl. 99—5.)

3. The process of preparing fruit juice comprising evaporating fruit juice and fruit pulp together in vacuo to a syrupy consistency, impregnating sugar with the essential oil of the fruit, incorporating the oil-impregnated sugar with such partially evaporated juice and pulp, partially dehydrating the whole together in vacuo, breaking the vacuum, stirring the whole, and then continuing the dehydration of the same in vacuo to a practically dry state, thus preventing the caking of the mass and preserving in the same the natural flavoring and coloring principles of the juice and oil, and rendering the whole readily soluble in cold water.

Patents Nos. 1,556,573 to 1,557,541.

# THE OFFICIAL GAZETTE

OF THE

# United States Patent Office.

Vol. 339—No. 2. TUESDAY, OCTOBER 13, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Attorneys—Disbarment.

(Order No. 2,926.)

U. S. Patent Office, *Washington, Aug. 31, 1925.*

Acting under the provisions of section 487 of the Revised Statutes of the United States as amended February 18, 1922, Carl Landeskroener, of 29 Waisenhausstrasse, Dresden-A, Germany, whose registration number is 10,559, has this day been disbarred from practice before the United States Patent Office.

KARL FENNING, *Acting Commissioner.*

## Amendment to Trade-Mark Rules.

(Order No. 2,930.)

U. S. Patent Office, *Washington, Oct. 5, 1925.*

Acting under the provisions of section 26 of the act approved February 20, 1905, rule 61 of the rules of the Patent Office governing the registration of trade-marks is amended by adding:

Cases which have been heard and decided by the Commissioner on appeal will not be reopened except by his order.

KARL FENNING, *Assistant Commissioner.*

## Interference Notices.

U. S. Patent Office, *Washington, Sept. 29, 1925.*

*Polydyne Corporation, its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of the Polymet Manufacturing Corporation, 599 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered October 14, 1924, No. 190,597, to the Polydyne Corporation, 248 West Fourteenth Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Polydyne Corporation at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Polydyne Corporation, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. Patent Office, *Washington, Sept. 11, 1925.*

*Importers Coffee Co., Ltd., its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Frank C. Weber & Company, of West 63d Street and Lowe Avenue, Chicago, Ill., for registration of a trade-mark and trade-mark registered August 4, 1908, No. 70,162, to Importers Coffee Co., Ltd., Tchoupitalis Street, New Orleans, La., and a notice of such declaration sent by registered mail to said Importers Coffee Co., Ltd., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Importers Coffee Co., Ltd., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. Patent Office, *Washington, Sept. 16, 1925.*

*C. T. Keally Co., their assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Palo Alto Orchards Company, of South Easton, Mass., for registration of a trade-mark and trade-mark registered May 23, 1911, No. 82,000, to C. T. Keally Co., Pennsylvania Lines Product Building, Twenty-first Street, Pittsburgh, Pa., and the Office having been unable to obtain proper service upon said C. T. Keally Co., notice is hereby given that unless said C. T. Keally Co., their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

## Disclaimer.

1,543,843.—*Peter Sivertsen*, New York, N. Y. Slicing Machines. Patent dated June 23, 1925. Disclaimer filed October 7, 1925, by the assignee, *Globe Slicing Machine Co., Inc.*

Hereby enters this disclaimer as to claims 12 and 29 of said patent.

## Condition of Applications Under Examination at Close of Business October 2, 1925.

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

### Ex parte Sutphen.

*Decided March 20, 1924.*

1. Designs—Drawing.

The drawing in design cases should illustrate the design as it will appear to purchasers.

2. Same—Description.

While in some instances a description of the design is permissible, and even desirable, that description must be of the appearance of the design and not of the manner in which the article is formed.

Application for Design Patent.

On petition.

DESIGN FOR SEAMLESS HOSE.

*Mr. John W. Steward* for the applicant.

Robertson, *Commissioner:*

This is a petition that the applicant be definitely and finally informed if the present showing of the design is acceptable, and, if not, what showing will be required; that the Examiner be directed to confine himself to the exact issue, and that he be directed to withdraw the final rejection.

With reference to the complaint in the first part of the petition, the Examiner's answer was prepared on December 13, 1923, but, through some clerical mistake, a copy thereof was not sent to the attorney, and this fact was not discovered until some time later.

[1] It is well settled that a drawing should illustrate the design as it will appear to purchasers (*Ex parte Kohler*, 116 O. G. 1185; 1905 C. D. 192). This is necessary not only in order to determine whether the design is patentable, but for the reason that in determining the question of infringement the design of the patent and the alleged imitation must be judged by the impression made upon the eye. *Hutter* v. *Broome*, 114 Fed. Rep. 655, and *Bevin Bros. Mfg. Co.* v. *Starr Bros. Bell Co.*, 114 Fed. Rep. 302.

[2] While in some instances a description of the design is permissible, and even desirable, that description must be of the appearance of the design and not of the manner in which the article is formed. The statement in the present application that a portion of the stocking is made by the use of tuck stitches is not a proper description of the design itself.

Obviously the drawing does not show the design which it is alleged constitutes applicant's invention, and this is admitted by the applicant. Viewing the drawing at an acute angle, the striations referred to may possibly be discerned, but they certainly can not be when the drawing is observed in the usual manner. Just how the drawing is to be made to bring out this appearance is a question for applicant to determine, or, if he wishes that a drawing be made by the Office from the stocking submitted as an exhibit, the draftsman can undertake the work and submit it to the applicant for approval.

It does not appear that the Examiner has raised any false issue or has attempted to ignore the point involved. He suggests, however, that the final rejection might be withdrawn "for the purpose of forming, if possible, a well defined issue," and he is authorized to take such action.

Except as just above indicated, the petition is denied.

---

### Ex parte Wadsworth.

*Decided February 19, 1924.*

1. Abandonment of Application—Petitions to Revive—Oral Hearings.

It is not the custom to grant oral hearings on petitions to revive applications.

2. Same—Delay Not Unavoidable.

Where the former attorney notified the assignee that it was his understanding that no further work was to be put on the W. application and he notified the assignee that this application would become abandoned in the event of no action being taken, where the attorney was not responsible for the lack of a conference proposed by the assignee relative to the prosecution of the case, and where the assignee was apparently more interested in disposing of the application to other parties than in prosecuting it in the Patent Office, prosecution was not unavoidable.

Application for patent.

On petition.

GLASS WORKING.

*Messrs. Green and McCallister* for the applicant.

Kinnan, *First Assistant Commissioner:*

Petition is taken for a rehearing in re revival of the above-identified application.

[1] An oral hearing is requested with an offer to produce at such hearing all correspondence relating to said application passing between the assignee and the attorney. It is not the custom to grant oral hearings on petitions to revive applications. This is for the reason that the showing relied upon to establish unavoidable delay must be made of record. This part of the petition is denied.

The petition is accompanied by affidavits from the applicant and from the president of the company to which this application is assigned. These affidavits recite that the former attorney was paid from time to time for the prosecution of this and other applications, including payment of services rendered as late as June, 1923; that by reason of this fact and the further fact that some of the other applications were maturing from time to time into patents both affiant and applicant believed the prosecution of the instant application

was being carried on, and that it was not discovered until June, 1923; that this application had long since become abandoned. Copy of a letter dated May 14, 1919, from the former attorney to the assignee company is submitted with the affidavits which seems to show that at that date the former attorney had the understanding that the applicant and the assignee company wished the instant case to be prosecuted. The affidavits recite that at no time did the former attorney inform the affiants of the abandonment of the instant application or give them any information concerning its status.

On the receipt of this petition and affidavits the former attorney was asked for an explanation of the matters set up in the affidavit. He has replied by a letter giving extracts from correspondence passing between him and the affiants during the year 1919 and also copy of a letter he wrote the president of the assignee company on August 1, 1923. In this last letter he called attention to a letter of January 8, 1919, written by the president of said assignee company in which the following is alleged to appear:

> We have no expectation of using the principles involved in the Wadsworth application in our manufacture; and unless there is some opportunity to realize something thru the development of others on account of the Wadsworth priority, it is not advisable for us to make any further expenditures in connection with the applications; and unless you can see where we have a priority interest that may be valuable in dominating the principles involved, we will let the matter drop.

In his letter answering the request of the Office for an explanation the former attorney quotes from correspondence following his letter of May 14, 1919.

In a letter from the assignee company to said attorney said to be dated May 20, 1919, the following is said to be found:

> Replying to your favor of the 14th inst., we have not been able to develop anything of practical value along the lines suggested in the Wadsworth applications; and as far as we are able to see there is nothing of patentable value to us that could be worked out.
> The writer will be pleased to go over the different applications with you at some convenient time and possibly you can show where we might gain some advantage by adding to the expense of following up the applications, but we think it best to let the matter rest and not incur any further expense until we can have such conference.

A letter from the former attorney to the assignee company said to be dated May 22, 1919, is alleged to contain the following:

> In reply to your letter of May 20th.
> I note what you say about the various Wadsworth applications and will take no further action in any of the cases without submitting each matter to you in advance.

Letters are referred to from the former attorney to the applicant dated May 20, 1919, and from the assignee company to the attorney dated November 1, 1919, and from the attorney to the assignee company dated November 3, 1919, which discuss the disposal of the Wadsworth interests held by the assignee company.

A further letter from the attorney to the assignee company dated September 23, 1919, is quoted from as follows:

> I have just returned to my office after an extended absence and in order that we may have a definite record in the matter, it is my understanding that so far as the Wadsworth applications which you purchased some time ago are concerned, no further work is to be put on them.
> Is the above the correct understanding or does this instruction relate only to the Wadsworth applications which are involved in interference? * * *
> If my understanding is correct that no further work is to be done upon any of the Wadsworth applications referred to, it, of course, goes without saying that the various applications will become abandoned.

A further letter from the assignee company to the former attorney dated September 24, 1919, is quoted from as follows:

> Replying to your favor of the 25th inst., writer expects to be in Indianapolis in the course of a few days and will call on you and talk over the Wadsworth patent situation.

The attorney states he wrote further to the assignee company on October 31, 1919, and a letter from the assignee company dated November 1, 1919, is quoted from as follows:

> Writer had intended to call on you before this but has not found the opportunity.

The former attorney states in his letter of explanation that it was not his custom in handling applications for this applicant or for this assignee company to currently advise them of the proceedings in the many cases he was handling for them, as it was his understanding that the matter of prosecution was left entirely to him. He states further that from the latter part of 1919 until the middle of 1923 no representative of the assignee company came to his office for conference relative to any Wadsworth cases, nor does he recollect during that period that any of these cases were mentioned to him by the president of the assignee company.

The showing thus made by the former attorney as to his responsibility for the prosecution of the instant case is considered sufficient to establish that he did notify the assignee company after May 14, 1919, that his understanding relative to the prosecution of the instant case had changed. The explanation appears to show that he notified the assignee company that this application would become abandoned in event of no action being taken, and it further appears to show that he was not responsible for the lack of the conference with the assignee company relative to the prosecution of this case.

The explanation further seems to show, in view of the correspondence quoted from by the former attorney, that the assignee company was more interested in the disposal of these applications to other parties than in prosecuting the same in the Patent Office.

[2] In view of the above it can not be held a showing has been made that the delay in prosecution was unavoidable, and the petition for rehearing is accordingly denied.

---

EX PARTE STATHAM.

*Decided May 1, 1924.*

CLAIMS—NEW MATTER.

Where the applicant described the mixing of a large portion of quicklime with waste liquor from soda-pulp manufacture, thus causticising and converting it and, together with an external source, supplying heat to distill volatile constituents, *Held* that this did not warrant a claim specifying that at least a major portion of the heat required for distillation was supplied autogenously from the reaction of the mixture.

[Note.—This application has resulted in Patent No. 1,539,966, June 2, 1925.]

Application for patent.

APPEAL from the Examiners in Chief.

DISTILLATION APPARATUS AND PROCESSES FOR PRODUCING ACETONE.

Application filed January 28, 1919, Serial No. 520,402.

*Mr. Harry L. Duncan* for Statham.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiners in Chief affirming that of the Primary Examiner denying patentability to claims 18, 20, and 21. Claim 18 will serve for illustrative purposes:—

> 18. The process for decomposing waste liquors from soda pulp manufacture in order to obtain valuable products including methyl alcohol and acetone, which consists in first concentrating such liquors, intimately mixing the same with sufficient quicklime to heat up the mass to a temperature at which methyl alcohol and other valuable constituents will be formed by destructive decomposition, then distilling off the methyl alcohol and other valuable constituents so formed while supplying at least the major portion of the heat required for such distillation autogenously from the reaction of said mixture, and collecting the volatile constituents so distilled.

The claims here on appeal relate to a process of obtaining methyl alcohol, acetone, and other valuable organic products occurring in the waste liquors from the soda pulp of paper manufacture by mixing quicklime with the concentrated solution of the waste liquor, so as to raise the temperature of the liquor high enough to distill off the volatile carbon compounds, which are thereafter collected.

The question here to be decided is whether the original disclosure as to the proportional quantity of quicklime to be added to the concentrated liquor supports or forms a basis for the specific limitation in claims 18 and 21, of—

> supplying at least the major portion of the heat required for such distillation autogenously from the reaction of the said mixture.

and the limitation in claim 20 of—

> mixing therewith sufficient quicklime to autogenously heat up the mass by the utilization of the aforesaid autogenous heat of the mass to a high temperature.

The Examiner held appellant failed to state anywhere in his original specification that he added sufficient lime to autogenously create the major portion of the heat required, that he supplied some heat from external sources and obtained some from the quicklime added, but nowhere stated he obtained the major portion of the heat from the action of the quicklime. The Examiners in Chief held that they also failed to find, after a careful review of the entire original specification, any reference to the specific proportion of the quicklime to be added as recited in the appealed claims. The Examiners in Chief explained why they were unable to read the terms "a large proportion," found in lines 15 and 16 of page 1, as meaning an amount necessary to supply the major portion of the heat. With their conclusions as to the meaning of these terms I fully concur. It is believed to be clear enough a large proportion might be such an amount of lime as would fall far short of producing a major portion of the necessary heat.

Appellant invites attention to the text beginning with line 6, page 8, in which the statement occurs that—

> some 900 to 1200 or 1400 pounds of lime per ton of liquor may be used,

and to the last seven lines on page 5 wherein it is stated—

> a large proportion of caustic lime may be incorporated with the concentrated waste liquor to causticize and convert it.

Appellant in his brief after describing the passage of the vapors from the causticized mixture 15 states these appealed claims are broad enough to relate to the preliminary distillation which occurs in the mixer 15. It must be held after an exhaustive review, and admitting all that appellant quotes to be true and giving the terms their full and fair interpretation, the specification does not support appellant's contention. It may well be, in practicing the process described, the proportionate amount of quicklime recited in these claims 18 and 21 is used; but appellant did not say so in his original specification. He can not, in consequence, include the specific matter in his claims.

Regarding claim 20, it is believed to be fully supported by the original disclosure. There is nothing in the terms of the claim to exclude preliminary heating of the mass before the addition of the quicklime and, whatever the temperature of the mixture when the quicklime is added, the result of the addition must be "to autogenously heat up the mass * * * to a high temperature", that is, to such high temperature described in the specification as necessary for the purpose had in view. I am, however, satisfied the conclusion of the Examiners in Chief that if the claim be construed as supported by appellant's original disclosure, it is unpatentable over the Drewsen reference [1,298,479], is sound. It is not material that the Drewsen patent is owned by the same assignee. His patent shows he was in possession of the invention when he filed his application, and on such date that invention was known to others. *Ex parte Hammond and Hammond*, 301 O. G. 1051; 1922 C. D. 15. It is noted, further, claim 9 of this patent recites substantially the same process.

The decision of the Examiners in Chief is affirmed.

---

EX PARTE HAMMOND, JR.

*Decided March 18, 1924.*

INVENTION—SUBSTITUTION OF EQUIVALENTS.

Where V. disclosed the advantage of associating two circuits in a receiving system, in which oscillations of such frequencies are set up as will produce beats, with a single tuned rectifying circuit inductively coupled to an indicator circuit, and applicant, instead of generating one of these frequencies at the receiving station, substitutes F.'s idea of radiating from the sending station both frequencies so related as to produce beats, each frequency affecting its respective tuned antenna circuit and setting up beats in a common circuit which affect a detector of the coherer

type, *Held* that applicant has done nothing more than pick out the good features of V.'s patent and the good features of F.'s patent and utilize them to accomplish the aggregate benefits existing in these old systems, without producing any new result dependent upon the combination or association of the circuits in a single receiving system.

[NOTE.—This application has resulted in Patent No. 1,522,882, January 13, 1925.]

Application for patent.

APPEAL from Examiners in Chief.

METHOD OF SELECTIVE ENERGY TRANSMISSION.

Application filed November 23, 1921, No. 517,378; renewal of application filed March 16, 1912.

*Mr. Ira J. Adams* for the applicant.

FENNING, *Assistant Commissioner:*

The applicant has appealed from the decision of the Examiners in Chief affirming that of the Primary Examiner denying patentability to claims 21, 23, 24, 27, and 32. Claim 21 will serve for illustrative purposes:

21. A method of signaling which consists in transmitting energy in such a form as to include a plurality of series of periodic impulses having different frequencies respectively, selectively receiving the energy of said plurality of series of impulses, and rectifying and combining said received energy to produce oscillations having a frequency equal to the difference between said frequencies.

The references relied upon are: Fessenden, No. 706,740, August 12, 1902; Fessenden, No. 1,002,049, August 29, 1911; Vreeland, No. 1,239,852, September 11, 1917.

The appealed claims are directed to a method of signaling either by electroradiant or by wire-guided energy. As illustrated the method involves the employment of a receiving system for radiant energy. In such system two local circuits, each adjusted so as to be resonant to a different frequency, are associated with the same antenna or each with its individual tuned antenna circuit. Where separate antenna circuits are employed, each is resonant to the same frequency as its associated local circuit. These local circuits are coupled to a closed rectifying circuit, which is in turn coupled to an indicating circuit. In operation the plurality of periodic impulses radiated from the sending station and having different frequencies respectively selectively affect the two antenna circuits, Figure 1, or the single antenna circuit, Fig. 2, and set up oscillations in the two locally-tuned circuits 7 and 10 corresponding to the different frequencies of the transmitted periodic impulses. These oscillations in the two local circuits 7 and 10 are sufficiently near in frequencies to produce oscillations having the beat frequency of the difference in periodicity. These beats in the local rectifying circuit inductively affect the indicator circuit.

The prior art discloses in the patent to Fessenden, No. 706,740, a system of signaling by electroradiant energy in which a series of periodic impulses having different frequencies respectively are transmitted from the sending station and each frequency affects its respective tuned antenna circuit, with the result that in the common circuit there are set up beats corresponding to the difference in frequency of the periodic impulses received, and these beats are arranged to affect a detector of the coherer type commonly employed at the date of the invention set forth in this patent. Applicant departs from this construction of Fessenden only in the arrangement by which he utilizes the beat frequency produced in the manner Fessenden discloses. Applicant substitutes an inductively-coupled local circuit with the two oscillating circuits respectively tuned to the sets of periodic impulses, and in this local beat circuit he employs a rectifying detector and an inductively-coupled indicator. Fessenden discloses in his Patent No. 1,002,049, Fig. 2, an arrangement which is one step nearer applicant's receiving apparatus. There has been considerable discussion as to whether or not Fessenden contemplated setting up oscillations of a beat frequency in the circuit 16 17 corresponding to the difference in the periodic frequencies received upon the antennæ 6 and 7. It is believed that the determination of this point is immaterial to the decision upon the matter here in issue. The specification states that "the wave responsive device is affected by waves of either of the periodicities to which the receiving conductors 6 and 7 are tuned, or to *both periodicities conjointly*" (underscoring mine), coupled with the further statement that "the wave responsive device may be adjusted by varying its sensibility so as to respond only when the effect of both the aerials is added and not to the effect produced by a single one, in which case the wave responsive device will only be operated by the *conjoint action* of the two sets of waves" (underscoring mine). From this it is clear that Fessenden contemplated sending out from the transmitting station periodic impulses having different frequencies respectively, just as he described in his earlier patent, and that he contemplated receiving their energy simultaneously upon his tuned antennæ 6 and 7 and setting up in the circuit 16 17 their combined effects and then utilizing such effects to actuate the coherer and produce an indication. This much does not seem open to controversy. Whether or not the two frequencies bear the close relation to each other necessary to produce beats is unimportant, since Fessenden in his earlier patent had clearly disclosed the possibility and desirability of receiving the energy of two periodic frequencies so related as to produce beats in the receiving system. It is not believed there is any point of merit in adopting such frequencies, even if Fessenden did not employ them in the system disclosed in Fig. 2 of his later patent. It is reasonable to suppose, notwithstanding applicant's contention to the contrary, that Fessenden actually employed frequencies bearing the relation necessary to produce beats in the local circuit of Fig. 2 of his later patent; but whether or not this inference is correct it is believed clear enough such frequencies could obviously be employed in view of the disclosure of Fessenden's earlier patent.

Vreeland discloses the advantage of associating two circuits, in which oscillations of such frequencies are set up as will produce beats, with a single tuned rectifying circuit inductively coupled to an indicator circuit. The advantages of such an association of circuits in a receiving system is fully disclosed by Vreeland's patent. Applicant substitutes for Vreeland's local source of oscillations, Fig. 9, the Fessenden idea of radiating from the sending station both frequencies so related as to produce the beats, instead of generating one of these frequencies at the receiving station.

With this condition of the prior art it is believed applicant has done nothing more than pick out the good features of Vreeland's patent and the good features of Fessenden's patent and utilize them to accomplish the aggregate benefits existing in these old systems, without producing any new result dependant upon the combination or association of the circuits in a single receiving system. The additional circuits necessary for carrying out all the steps recited in claim 24 include merely what anyone skilled in this art, or, indeed, in the broad art of transmitting oscillatory energy from one circuit to another, would readily adopt. Transforming oscillatory current energy from one circuit to another may go on almost indefinitely without involving inventive concept unless some new function or result is obtained. Tuning of circuits is merely what has been done from the very inception of the art of transmitting and receiving electroradiant energy.

On this appeal applicant files an affidavit of Weagant setting out his interpretation of Fessenden, No. 1,002,049; but a reading of the affidavit does not lead me to allow the claims.

It is believed the conclusions of the Examiner and of the Examiners in Chief that the appealed claims are wanting in merit are sound, and the decision of the Examiners in Chief is affirmed.

---

BUCHLI *v.* RASMUSSEN.

*Decided March 17, 1925.*

INTERFERENCE—RIGHT TO MAKE CLAIM—ADMISSION.

Where B. moved to dissolve for the reason that the count did not read on R.'s disclosure and R.'s attorneys concurred, R.'s admission was treated as an abandonment of the invention in issue, the interference was dissolved, and the Primary Examiner was instructed to reject the claim to R.

MOTION to dissolve.

*Messrs. Pennie, Davis, Marvin & Edmonds* for Buchli.

*Messrs. Popp & Powers* for Rasmussen.

FENNING, *Assistant Commissioner:*

Buchli, by his attorneys, has filed a motion to dissolve on the ground that Rasmussen has no right to make the claim constituting the issue, for the reason that the count does not read on Rasmussen's disclosure.

The attorneys acting for Rasmussen now file a letter stating that they had been planning to file a motion to dissolve on the same ground that is set forth by the attorneys for Buchli. They also state there is not clear and certain disclosure of the specific construction to which the count is limited, and they therefore consider that Buchli's motion should be granted.

The motion will not be set down for argument, and Rasmussen's admission will be treated as an abandonment of the invention of the count.

The interference is dissolved and the Primary Examiner instructed to reject the claim to Rasmussen on the estoppel contained in Rasmussen's letter taken in connection with Buchli's motion paper.

# TRADE-MARKS

## OFFICIAL GAZETTE, OCTOBER 13, 1925.

[VOL. 339. No. 2.]

**The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.**

**Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.**

**As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.**

Ser. No. 179,681. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE PIERCE-ARROW MOTOR CAR COMPANY, Buffalo, N. Y. Filed Apr. 25, 1923.

ARROW

*Particular description of goods.*—Unitary Automotive Vehicle Electric Systems for Generating and Distributing Electricity and Their Parts.
*Claims use* since about 1911.

Ser. No. 181,783. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) SIMPLICITY ENGINE AND MANUFACTURING COMPANY, Port Washington, Wis. Filed June 9, 1923.

Simplicity

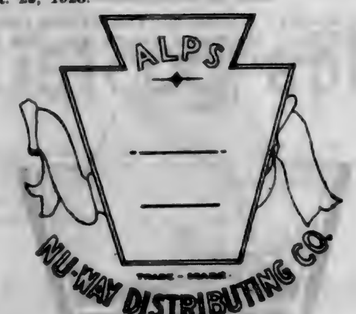
Trade-mark comprises the word "Simplicity."
*Particular description of goods.*—Boring and Grinding Machines, Boring Tools, Grinding Tools, and Parts Thereof.
*Claims use* since on or about May 11, 1922.

Ser. No. 183,365. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LEONARD DAY, New York, N. Y., assignor to Chem-Electric Engineering Corporation, a Corporation of New York. Filed July 18, 1923.

STARKIST

*Particular description of goods.*—Citrous-Fruit-Juice Powder.
*Claims use* since latter part of May, 1923.

Ser. No. 188,390. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) ALBERT L. PIERCE, doing business as Nu-Way Distributing Co., Altoona, Pa. Filed Sept. 29, 1923.



No claim is made to the words "Nu-Way Distributing Company" and "Trade-Mark" apart from the mark shown in the drawing.
*Particular description of goods.*—Furniture and Automobile Polish.
*Claims use* since June 1, 1922.

Ser. No. 192,787. (CLASS 12. CONSTRUCTION MATERIALS.) THE PARAFFINE COMPANIES, INC., San Francisco, Calif. Filed Feb. 25, 1924.

No claim is made to the words "High Grade Roofing" apart from the mark as shown in the drawing.
*Particular description of goods.*—Roofing Material—Namely, Ready Roofing, Roofing Felt, and Roofing Pitch.
*Claims use* since January, 1913.

Ser. No. 193,467. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM JOS. KORBONITS, doing business as Radio Medical Laboratories, Asbury Park, N. J. Filed Mar. 8, 1924.

*Particular description of goods.*—Medicine for the Treatment of Constipation, Headache, Torpid Liver, Intestinal and Gastric Indigestion, and Also Neuritis.
*Claims use* since Aug. 1, 1923.

Ser. No. 200,303. (CLASS 32. FURNITURE AND UPHOLSTERY.) ABRAHAM & STRAUS, INC., New York, N. Y. Filed July 21, 1924.

No claim is made to the words "Better Home Bureau" apart from the mark shown.
*Particular description of goods.*—Household Furniture—e. g., Chest of Drawers, Utility Chests, Wooden Table Covers, Cedar Chests, Beds, Chairs, Bureaus, Chiffoniers, Tables, Washstands, Matting Boxes, Tea Wagons, Bookcases, Divans, Morris Chairs, Sofas, Wardrobes, Dressers, Davenports, Stools, Coat Trees, Chair Cushions, Buffets, Sofa Pillows, Draft Screens, China Closets, Rocking-Chairs, Filing Cabinets, Hatracks, Desks, Desk Chairs, Wooden Umbrella Stands, Parlor Tables, Pedestals, Kitchen Cabinets, Kitchen Tables, Mirrors, Sewing Cabinets, Reclining Chairs, Springs, and Mattresses.
*Claims use* since May 1, 1924.

Ser. No. 200,430. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) J. H. BUNNELL & COMPANY, INC., New York, N. Y. Filed July 24, 1924.

GOLD

*Particular description of goods.*—Telegraph Keys or Transmitters, and Particularly for the "Automatic-Dot" Constructions of the Same Known in the Art for the Past 10 Years or More by the Generic Name of "Bugs."
*Claims use* since Nov. 1, 1922.

Ser. No. 200,439. (CLASS 39. CLOTHING.) JACOB FORSTADT, doing business as Braeburn Knitting Mills, Philadelphia, Pa. Filed July 24, 1924.

Braeburn

*Particular description of goods.*—Knitted Sweaters, Golf Hose, and Bathing Suits.
*Claims use* since on or about Feb. 1, 1924.

Ser. No. 200,812. (CLASS 39. CLOTHING.) FIRESTONE-APSLEY RUBBER COMPANY, Hudson, Mass. Filed Aug. 1, 1924.

RUBBERIBBED

*Particular description of goods.*—Soles for Footwear of Leather, Fabric, Rubber, or Other Materials or Combinations Thereof.
*Claims use* since July 9, 1924.

The ornamental design for a plate or similar article, as shown.

---

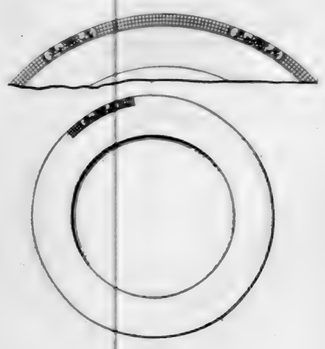
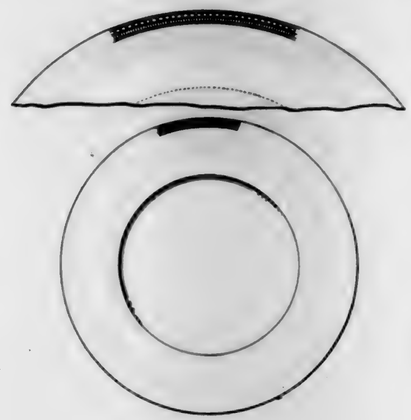
68,461. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Jan. 2, 1923. Serial No. 4,787. Term of patent 7 years.



The ornamental design for a plate or similar article as shown.

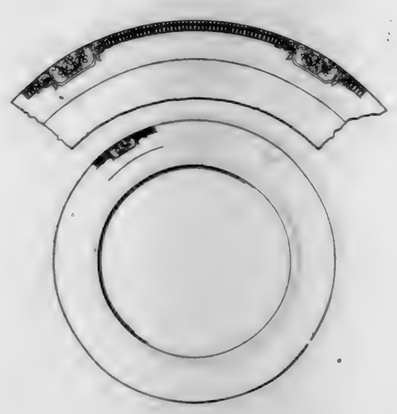
68,464. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed July 6, 1923. Serial No. 6,715. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

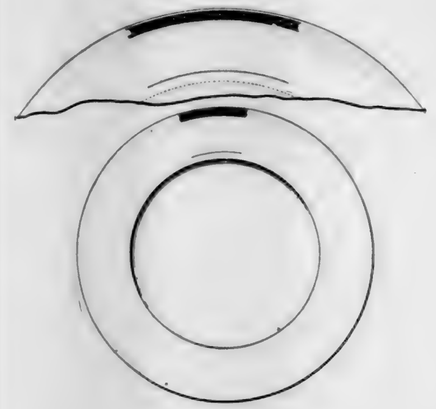
---

68,463. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed July 6, 1923. Serial No. 6,716. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

68,464. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed July 6, 1923. Serial No. 6,717. Term of patent 7 years.



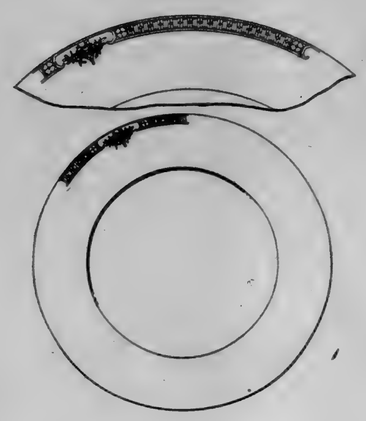
The ornamental design for a plate or similar article, as shown.

---

68,465. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed July 6, 1923. Serial No. 6,718. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

68,466. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed July 6, 1923. Serial No. 6,719. Term of patent 7 years.



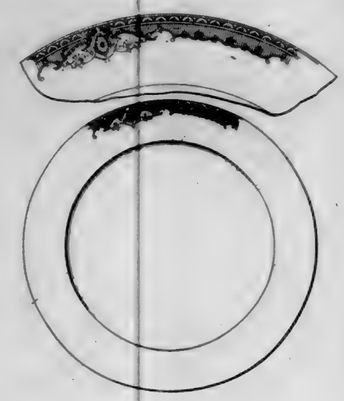
The ornamental design for a plate or similar article, as shown.

---

68,467. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed July 6, 1923. Serial No. 6,720. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

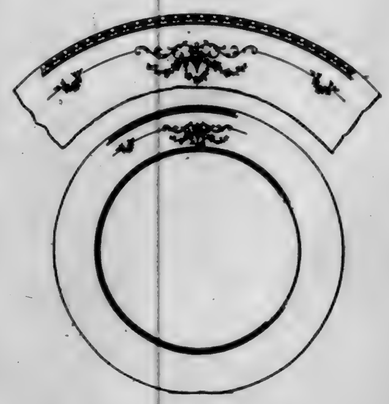
68,468. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed July 6, 1923. Serial No. 6,721. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

---

68,469. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed July 6, 1923. Serial No. 6,722. Term of patent 7 years.



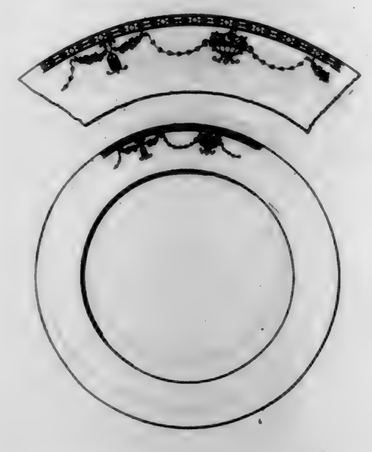
The ornamental design for a plate or similar article, as shown.

68,470. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed July 6, 1923. Serial No. 6,723. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

---

68,471. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed July 6, 1923. Serial No. 6,724. Term of patent 7 years.



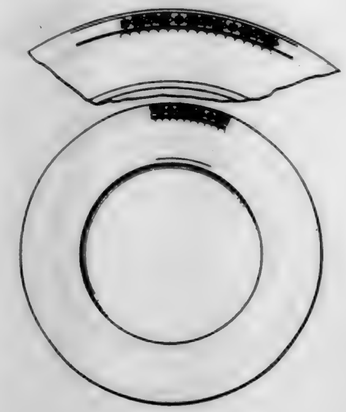
The ornamental design for a plate or similar article, as shown.

68,472. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Sept. 18, 1923. Serial No. 7,245. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

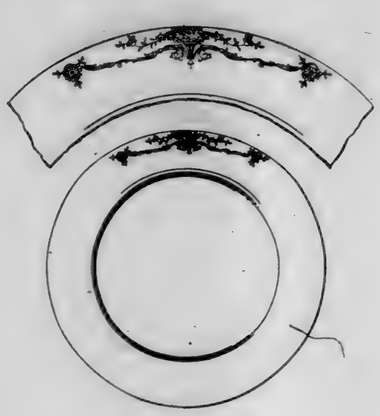
---

68,473. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Sept. 18, 1923. Serial No. 7,246. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

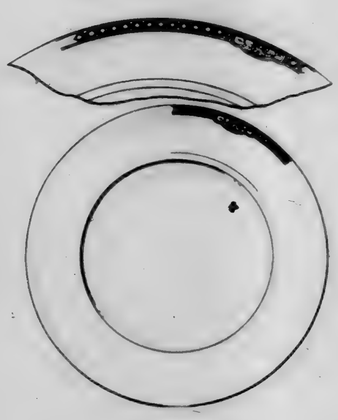
68,474. PLATE OR SIMILAR ARTICLE. TSUJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Sept. 18, 1923. Serial No. 7,247. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

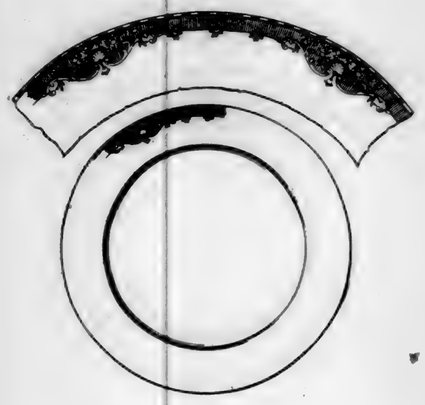
---

68,475. PLATE OR SIMILAR ARTICLE. TSUJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Sept. 18, 1923. Serial No. 7,248. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

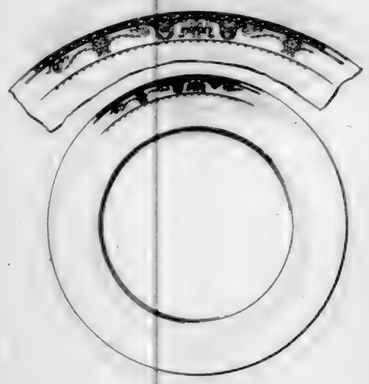
68,476. PLATE OR SIMILAR ARTICLE. TSUJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Sept. 18, 1923. Serial No. 7,249. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

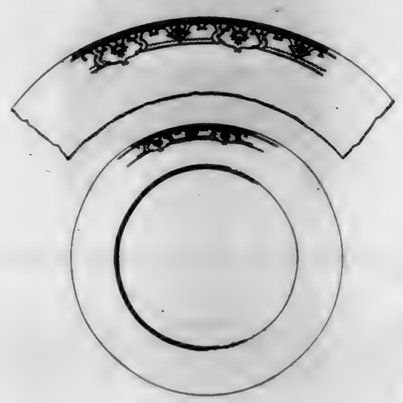
---

68,477. PLATE OR SIMILAR ARTICLE. TSUJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Sept. 18, 1923. Serial No. 7,250. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

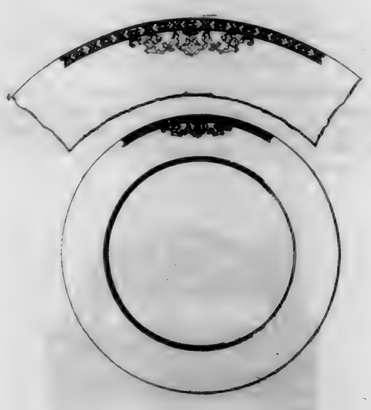
68,478. PLATE OR SIMILAR ARTICLE. TSUJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Sept. 18, 1923. Serial No. 7,251. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

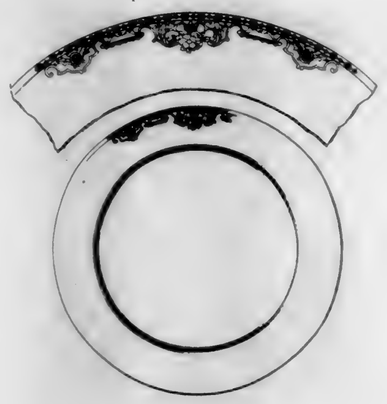
---

68,479. PLATE OR SIMILAR ARTICLE. TSUJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Sept. 18, 1923. Serial No. 7,252. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

68,480. PLATE OR SIMILAR ARTICLE. TSUJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Sept. 18, 1923. Serial No. 7,253. Term of patent 7 years.



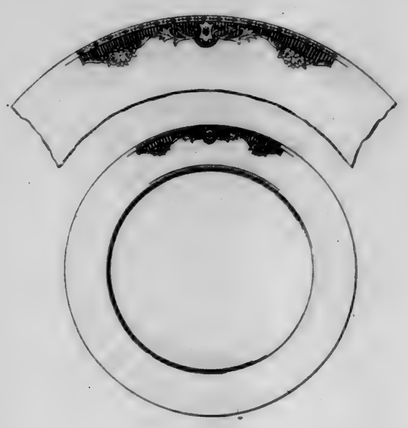
The ornamental design for a plate or similar article, as shown.

---

68,481. PLATE OR SIMILAR ARTICLE. TSUJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Sept. 18, 1923. Serial No. 7,254. Term of patent 7 years.

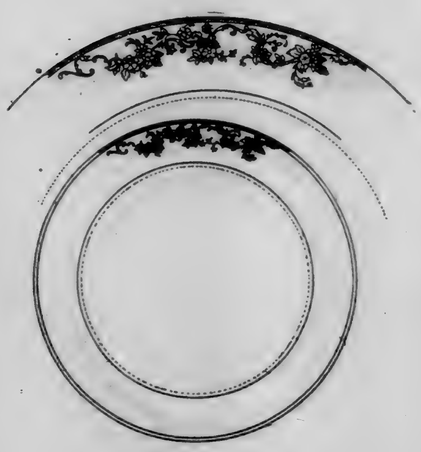
The ornamental design for a plate or similar article, as shown.

68,482. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Sept. 18, 1923. Serial No. 7,255. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

68,483. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y. Filed Feb. 23, 1924. Serial No. 8,704. Term of patent 7 years.

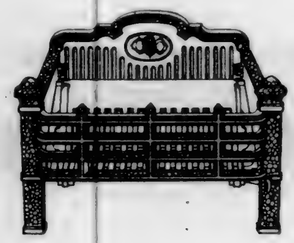


The ornamental design for a plate or similar article, as shown.

68,484. FIREPLACE BASKET. JOHN E. MCMINN, Louisville, Ky., assignor to Peerless Manufacturing Company, Louisville, Ky., a Corporation of Delaware. Filed July 30, 1925. Serial No. 14,262. Term of patent 7 years.

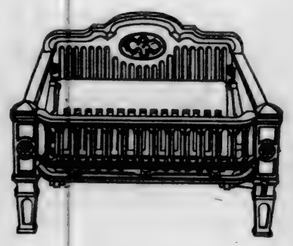
The ornamental design for a fireplace basket, as shown.

68,485. FIREPLACE BASKET. JOHN E. MCMINN, Louisville, Ky., assignor to Peerless Manufacturing Company, Louisville, Ky., a Corporation of Delaware. Filed July 30, 1925. Serial No. 14,263. Term of patent 7 years.



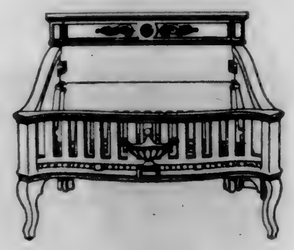
The ornamental design for a fireplace basket, as shown

68,486. FIREPLACE BASKET. JOHN E. MCMINN, Louisville, Ky., assignor to Peerless Manufacturing Company, Louisville, Ky., a Corporation of Delaware. Filed July 30, 1925. Serial No. 14,264. Term of patent 7 years.



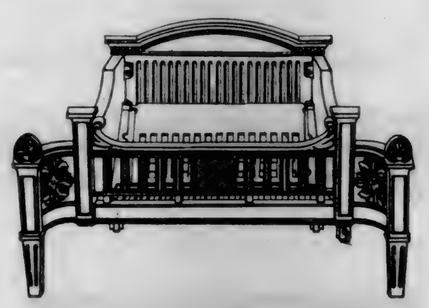
The ornamental design for a fireplace basket, as shown.

68,487. FIREPLACE BASKET. JOHN E. MCMINN, Louisville, Ky., assignor to Peerless Manufacturing Company, Louisville, Ky., a Corporation of Delaware. Filed July 30, 1925. Serial No. 14,267. Term of patent 7 years.



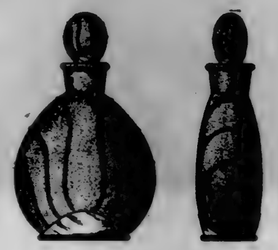
The ornamental design for a fireplace basket, as shown.

68,488. FIREPLACE BASKET. JOHN E. MCMINN, Louisville, Ky., assignor to Peerless Manufacturing Company, Louisville, Ky., a Corporation of Delaware. Filed July 30, 1925. Serial No. 14,268. Term of patent 7 years.



The ornamental design for a fireplace basket, as shown.

68,489. BOTTLE OR SIMILAR ARTICLE. GRANVY MILLER, Ridgewood, N. J. Filed June 4, 1925. Serial No. 13,651. Term of patent 14 years.

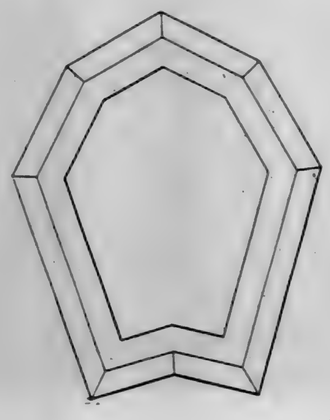


The ornamental design for a bottle or similar article, substantially as shown and described.

68,490. TEXTILE FABRIC. ROBERT J. MURRAY, Philadelphia, Pa., assignor to Francis A. Bruner, Inc., Philadelphia, Pa., a Corporation of New Jersey. Filed July 13, 1925. Serial No. 14,067. Term of patent 7 years.

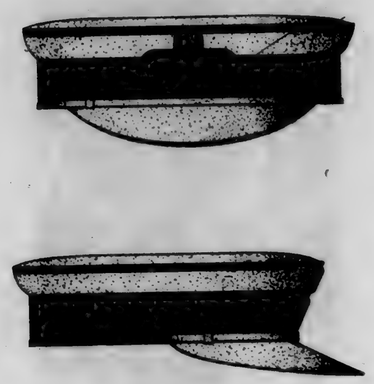
The ornamental design for a textile fabric, substantially as shown.

68,491. PICTURE FRAME. GEORGE H. NEVIUS, Shrewsbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 26, 1923. Serial No. 5,955. Term of patent 7 years.



The ornamental design for a picture frame as shown.

68,492. CAP. JOHN D. ROBBINS, Chicago, Ill. Filed Aug. 20, 1925. Serial No. 14,541. Term of patent 14 years.



The ornamental design for a cap, as shown.

68,493. RADIOREPRODUCER. MAURICE C. RYPINSKI, Yonkers, N. Y. Filed Aug. 6, 1925. Serial No. 14,327. Term of patent 14 years.

The ornamental design for a radioreproducer as shown.

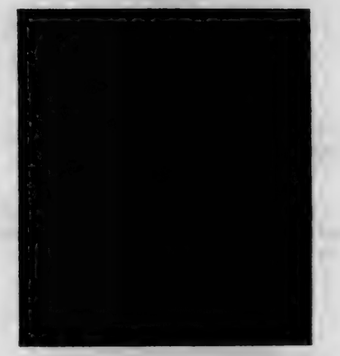
68,494. LAMP STANDARD. FRANK SCHUELER, Yonkers, N. Y., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed July 18, 1925. Serial No. 14,135. Term of patent 7 years.

The ornamental design for a lamp standard, as shown.

68,495. TEXTILE FABRIC. EDWARD SCHURMAN, New York, N. Y., assignor to Seneca Textile Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1925. Serial No. 14,641. Term of patent 3½ years.

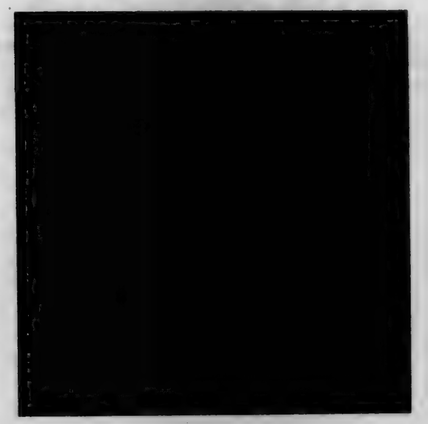
The ornamental design for textile fabric, as shown.

68,496. TEXTILE FABRIC. EDWARD SCHURMAN, New York, N. Y., assignor to Seneca Textile Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1925. Serial No. 14,642. Term of patent 3½ years.



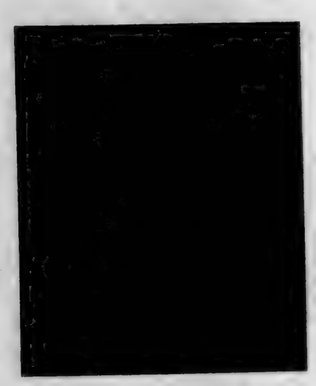
The ornamental design for textile fabric as shown.

68,497. TEXTILE FABRIC. EDWARD SCHURMAN, New York, N. Y., assignor to Seneca Textile Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1925. Serial No. 14,643. Term of patent 3½ years.



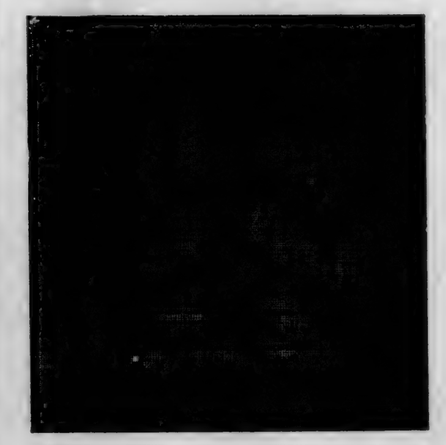
The ornamental design for textile fabric as shown.

68,498. TEXTILE FABRIC. EDWARD SCHURMAN, New York, N. Y., assignor to Seneca Textile Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1925. Serial No. 14,644. Term of patent 3½ years.



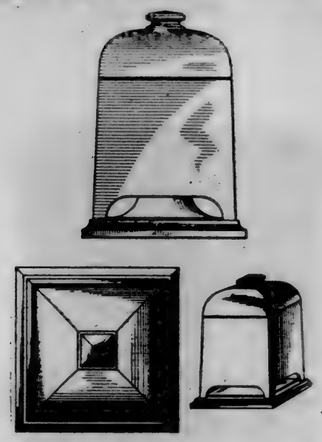
The ornamental design for textile fabric as shown.

68,499. TEXTILE FABRIC. EDWARD SCHURMAN, New York, N. Y., assignor to Seneca Textile Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1925. Serial No. 14,645. Term of patent 3½ years.



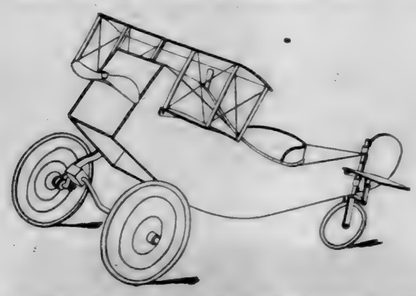
The ornamental design for textile fabric as shown.

68,500. LOUD SPEAKER. LESLIE STEVENS, Glen Ridge, N. J. Filed July 6, 1925. Serial No. 13,995. Term of patent 14 years.



The ornamental design for a loud speaker as shown.

68,501. TOY VEHICLE. ELMER C. VON GLAHN and EARL K. PECK, Corcoran, Calif. Filed Nov. 11, 1924. Serial No. 11,346. Term of patent 3½ years.



The ornamental design for a toy vehicle as shown.

68,502. BUTTON OR SIMILAR ARTICLE. OTTO WITTE, Vineland, N. J., assignor to Grushlaw & Sichel, a Firm composed of George Grushlaw and John Sichel, Germantown, Pa. Filed Sept. 18, 1924. Serial No. 10,825. Term of patent 14 years.

The ornamental design for a button or similar article substantially as shown.

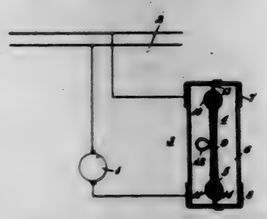
68,503. PANEL FOR BEDSTEAD ENDS. ANTONIO GOVERNALE, Brooklyn, N. Y. Filed Apr. 17, 1925. Serial No. 13,153. Term of patent 3½ years.

The ornamental design for a panel for bedstead ends as shown.

# PATENTS

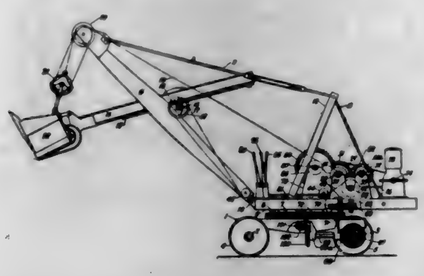
## GRANTED OCTOBER 13, 1925.

1,556,573. THERMAL RELAY AND CUT-OUT. NIELS K. ANDERSEN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 1, 1921. Serial No. 497,476. 8 Claims. (Cl. 200—113.)



1. A thermal relay comprising a closed receptacle containing a conducting material that decreases in volume at its fusing point and means responsive to the temperature thereof for controlling the conductivity of a portion of the material.

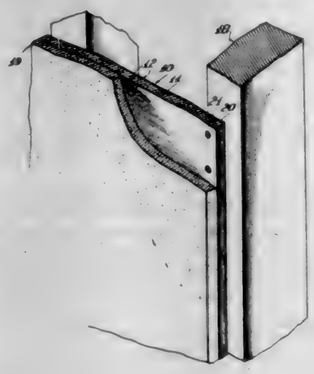
1,556,574. EXCAVATING MACHINE AND THE LIKE. EDWIN J. ARMSTRONG, Erie, Pa., assignor, by direct and mesne assignments, to Erie Steam Shovel Company, Erie, Pa., a Corporation of Pennsylvania. Filed Oct. 26, 1923. Serial No. 670,951. 8 Claims. (Cl. 214—135.)



1. In excavating machines and the like, the combination of an operating shaft; drive shafts gear connected to turn in opposite directions; a wheel on the operating shaft; a crowding shaft; a wheel on the crowding shaft; a driving connection between said wheels; and clutch controlled gear connections between the drive shafts and the wheel on the operating shaft.

1,556,575. PLASTER BOARD. MORGAN K. ARMSTRONG, Winnetka, Ill., assignor, by mesne assignments, to The Beaver Products Company, Inc., a Corporation of New York. Filed Oct. 1, 1921. Serial No. 504,755. 11 Claims. (Cl. 72—124.)

1. A composite board, comprising in combination a body of plaster or the like and covering material adhering to the surface thereof, said covering material having both surfaces of a character to receive and adhere to plaster but arranged to prevent any substantial penetration of moisture therethrough.



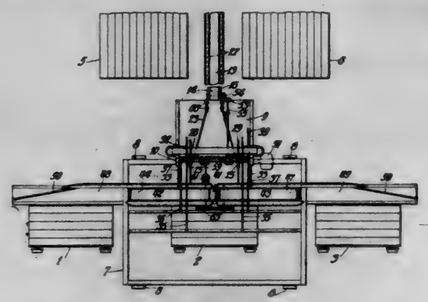
1,556,576. SOAP TABLET AND PROCESS OF MAKING THE SAME. CYRIL J. ATKINSON, Milwaukee, Wis. Filed Apr. 26, 1922. Serial No. 556,675. 3 Claims. (Cl. 87—23.)

1. As a new article of manufacture a porous soap tablet of a size for individual single use, permeated throughout with a dry moisture absorbent material in comminuted form, the particles of said material being held together by the soap in a manner to allow water to promptly permeate the entire mass, said material when wet being adapted to instantly expand and being in sufficient proportion to disintegrate the tablet by such expansion.

1,556,577. CROSSTIE HANDLER. JOHN H. BADE and CARLTON L. KITTLE, Lawrenceburg, Ind., assignors of one-third to Ernest J. Stocking, Evanston, Ill. Filed June 15, 1923. Serial No. 645,494. 23 Claims. (Cl. 214—11.)

1. An apparatus of the class described comprising, in combination, means for receiving cross-ties or the like and delivering them successively to position to be picked up; and loading mechanism including means for picking up the successively presented ties, and a plurality of

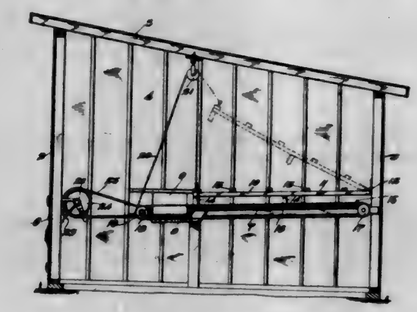
selectively operable means to which said ties are delivered by the picking-up means, one of said last named



means adapted for depositing ties sidewise; and means associated with other of said last named means for delivering ties endwise.

---

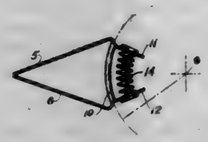
1,556,578. DROP-BOARD CLEANER FOR HENHOUSES. CHRISTIAN D. BAIER, Cissna Park, Ill. Filed May 28, 1925. Serial No. 33,354. 3 Claims. (Cl. 119—22.)



1. In a hen house, a drop board having a trough at its forward end, a roost hinged at its rear end to adapt it to be raised and lowered at its forward end, a cleaner bar movable over the surface of said drop board beneath said roost; and means to simultaneously raise and lower said roost and to move said cleaner bar.

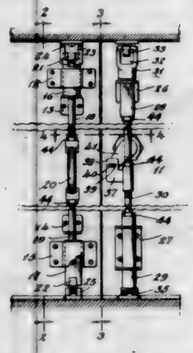
---

1,556,579. BINDER. LOUIS E. BALTZLEY, Glen Ridge, N. J. Filed Aug. 13, 1921. Serial No. 491,944. 2 Claims. (Cl. 24—68.)



1. A binder comprising cooperating jaw members slidingly connected at the rear by concentrically curved oversliding back portions arranged with the concave faces thereof to the rear of the binder and one having integral confining lips arched over the curved surfaces of the other to hold the curved back portions close together in sliding relation.

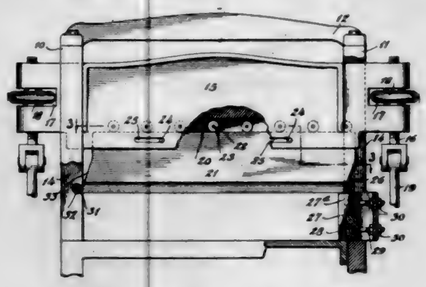
1,556,580. LOCK DEVICE. BENJAMIN ALBERT BOOTH, Odessa, Ontario, Canada, assignor of one-half to Nelson E. Booth, Brooklyn, N. Y. Filed June 15, 1922. Serial No. 568,378. 4 Claims. (Cl. 70—74.)



3. A device of the character described including a locking bar having a pair of end members provided with catches, means to slidably mount said locking bar on a door, a member carried by said bar and having a projecting portion, an actuating handle carried by said door, a connection between said bande and projecting portion having a movement relative to the latter and capable of actuating said locking bar when said handle is operated and keepers mounted on the door frame and capable of being engaged by said catches when said door is closed.

---

1,556,581. CUTTING MACHINE. NELSON E. BOOTH, Brooklyn, N. Y. Filed Aug. 3, 1922. Serial No. 579,508. 6 Claims. (Cl. 164—53.)



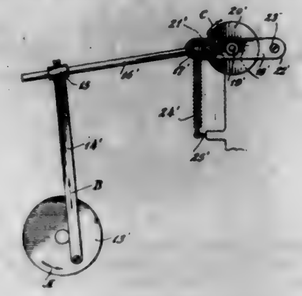
1. In a cutting machine, a frame, a knife carrier mounted for reciprocation therein, means to reciprocate said carrier, a knife slidably mounted within said carrier, said knife provided with an inclined cam surface, a cam block adjustably carried by said frame and having a cooperating inclined cam surface adapted to engage the inclined surface of said knife upon the cutting stroke and move said knife longitudinally of said carrier and resilient means to move said knife longitudinally in the opposite direction upon its upward stroke.

---

1,556,582. INTERMITTENT FEEDING DEVICE. NELSON E. BOOTH, Brooklyn, N. Y. Filed Aug. 8, 1922. Serial No. 579,509. 1 Claim. (Cl. 74—53.)

In an intermittent feeding device, a shaft, a rotatable feeding wheel provided with a smooth circumferential face mounted on said shaft, a toggle link pivoted upon said shaft, a second toggle link pivotally connected to

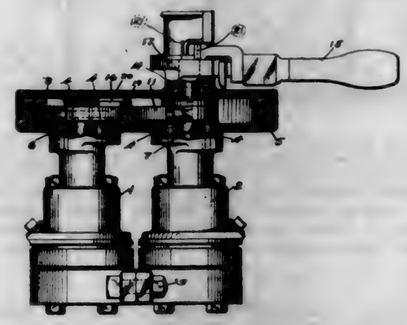
the first named toggle link adjacent the circumferential face of said wheel, said second link having a toothed end, and means having one end connected to a fixed



support and its other end to the pivotal connection between said links to normally force said links into alignment and said toothed end into engagement with said wheel.

---

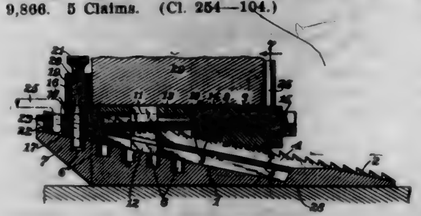
1,556,583. BRAKE AND DOOR CONTROL DEVICE. JOSEPH M. BOSENBURY, Peoria, Ill. Filed Aug. 29, 1923. Serial No. 659,939. 6 Claims. (Cl. 303—52.)



1. The combination with associated valve devices, one for controlling the car doors and the other for controlling the car brakes, of a handle for operating one valve device and an operating connection between said valve devices for operating the other valve device upon movement of said handle to certain positions, said connection being inoperative upon movement of the handle to other positions.

---

1,556,584. AUTOMATIC WEDGE. LORENZA N. BREEDEN, Montgomery, W. Va. Filed Feb. 17, 1925. Serial No. 9,866. 5 Claims. (Cl. 254—104.)

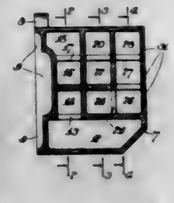


1. A device of the character described including complementary wedge elements having toothed engaging surfaces, a spring fixed in one of the wedge elements,

the other end of said spring being secured to an adjustable post, said post being slidable in the other wedge element.

---

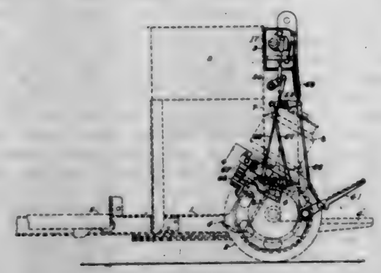
1,556,585. AIR-PREHEATING DEVICE. HERBERT R. BRUNNER, New York, N. Y., assignor to Combustion Specialties Corporation, a Corporation of Delaware. Filed May 29, 1924. Serial No. 716,594. 1 Claim. (Cl. 110—175.)



An air preheating device, comprising a chambered body of substantially rectangular formation having one side thereof of double concave formation, provided in the inner wall of said formation and near one end of said chambered body, with an air inlet port, a passage reservoir extending throughout the bottom part of said chambered body and in communication with said inlet port, means forming ported passages in said chambered body for conducting the air from the passage reservoir first in opposite directions to the top of the body, then in opposite directions toward the bottom of the body, means forming a chamber in the opposite side of the body from the double concave side, the outer wall of said chamber provided throughout its area with discharge vents and means for distributing the heated air evenly to said vents.

---

1,556,586. INDUSTRIAL TRUCK. WILLIAM C. CARR, Buffalo, N. Y., assignor to The Automatic Transportation Company, Buffalo, N. Y., a Corporation of Arizona. Filed Jan. 20, 1923. Serial No. 613,944. 31 Claims. (Cl. 172—179.)

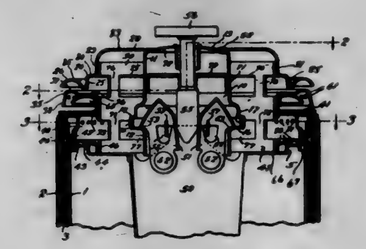


1. In an industrial truck, in combination, an electric propelling motor, a source of electrical energy, a reversing switch, a variable resistance element normally in circuit with said motor, switch and source, a short circuiting switch in the circuit of the motor and main switch, a foot operated controlling element, and operative connections between said controlling element and said short circuiting switch and resistance element whereby in either direction of its movement said controlling element operates said resistance element progressively to increase or decrease the resistance and as it approaches or recedes from the limit of its movement

in one direction closes or opens said short circuiting switch, the latter being closed by said controlling element only when the resistance has been reduced to minimum.

---

1,556,587. AIR DISTRIBUTOR FOR LIQUID-FUEL BURNERS. LEE S. CHADWICK, Shaker Heights Village, Ohio, assignor to The Cleveland Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 29, 1922. Serial No. 571,672. 13 Claims. (Cl. 158—94.)

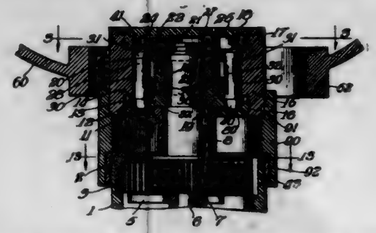


13. In combination with a burner of the class described, including inner and outer wick tubes and a supporting spanner situated within the inner wick tube and spaced downwardly from the upper end thereof, the edge portion of the spanner being spaced from the inner tube to provide an air passage, and having its central portion provided with air openings, and an air distributor adapted to repose within the upper end of the burner and rest upon said spanner, said distributor comprising a central tubular element, a top applied to the upper end of the element and extending outwardly therefrom, a tube depending from the top in concentric relation to the tubular element and between the same and the edge portion of the top, a flange carried by and extending outwardly from the tube in spaced relation to said edge portion of the top, and a body surrounding the lower end of the tube and spaced below the flange, said body comprising a peripheral wall that is flanged inwardly at its upper end and enlarged at its lower end to provide an intermediate shoulder, and an annular bottom wall that is formed at its inner edge with a flange that fits and is secured to, the lower end of the tube, the bottom being provided at its outer edge with an annular depressed bead into which the lower edge of the peripheral wall of the body engages and beyond such bead with an upwardly extending flange that is turned inwardly at its upper edge above said shoulder thereby to bind the peripheral wall and the bottom wall of the body together, the bead of the bottom wall forming a seat for engagement with the spanner, and the outer flange of the bottom wall being of lesser diameter than the internal diameter of the inner wick tube whereby a space is provided between said flange and said tube in register with the aforesaid air passage, the bottom wall having air openings and the peripheral wall being provided with a series of apertures above said shoulder, while the aforesaid tube is provided with series of air openings in the plane of the space between the peripheral portion of the top and the flange and in the plane of said body.

---

1,556,588. LOCKING MEANS FOR AUTOMOBILES AND THE LIKE. EMIL A. CHRISTOPH, Chicago, Ill. Filed Dec. 12, 1921. Serial No. 521,636. 9 Claims. (Cl. 70—129.)

1. In combination, a steering gear, including a spindle member and wheel member adapted for operative connection, a collar adapted for connection with one of said members, a sleeve adapted for connection with the other of said members, a pair of tumbler members mounted in one of said members and adapted for cooperation with the other to operatively connect the same, said tumbler



members having opposed edges for cooperation with an actuating member, and a tumbler actuating member having cam arms movable between said edges.

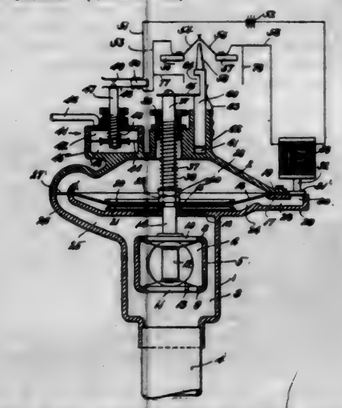
---

1,556,589. METAL WING SPAR. VIRGINIUS E. CLARK and KENNETH M. LANE, Dayton, Ohio, assignors to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 13, 1922. Serial No. 543,166. 5 Claims. (Cl. 189—37.)

1. A metal spar comprising: tubular longitudinal tension and compression members, struts and diagonal tie members extending therebetween, said tension and compression members each having a flattened portion and cut away at the edge of said flattened portion at spaced points to permit the struts and tie members to extend within said flattened portion for connection thereto.

---

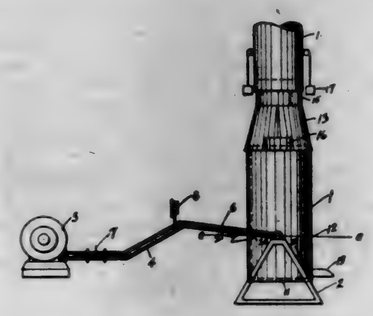
1,556,590. PNEUMATIC POWER CONTROL. JAMES T. COWLEY, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed July 12, 1923. Serial No. 651,064. 20 Claims. (Cl. 243—9.)



1. Power control apparatus for pneumatic dispatch systems comprising a main valve, a motor for operating it, means operative upon the occurrence of a slight decrease in pressure in the system to initiate operation of the motor to open the valve, and independent means operative upon a slight subsequent increase in pressure in the system for initiating operation of the motor to close the valve.

---

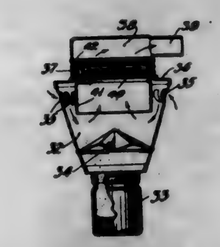
1,556,591. PROCESS FOR MELTING AND REFINING OF NONFERROUS METALS. DANIEL CUSHING, Lowell, Mass., assignor to The Barrett Company, a Corporation of New Jersey. Filed Dec. 7, 1923. Serial No. 679,107. 9 Claims. (Cl. 75—17.)



1. The process which comprises melting a non-ferrous metal while in direct contact with incandescent pitch coke which is substantially free from ash and materials that would have a deleterious effect upon said metal.

---

1,556,592. AIR CLEANER. FRANK A. DONALDSON, St. Paul, Minn. Filed Nov. 12, 1921. Serial No. 514,628. 2 Claims. (Cl. 183—67.)

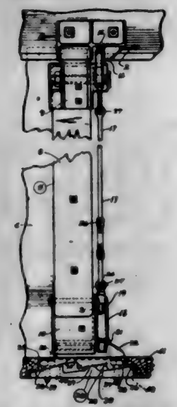


1. A combined gravity and filter-operating dust collector comprising a casing provided at its upper portion with circumferentially spaced air intake passages and provided at its bottom with a dust receptacle, an upper shell to which said casing is detachably secured and from which it depends, and a filter-equipped tube of considerably less diameter than the upper portion of said casing, applied through the top of said casing and extended within said casing to a plane below the air intake passages thereof.

---

1,556,593. SIDE-DOOR CONSTRUCTION. CARL E. EKLIND and WILLIAM W. DARROW, Chicago, Ill., assignors to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 24, 1924. Serial No. 751,771. 12 Claims. (Cl. 20—22.)

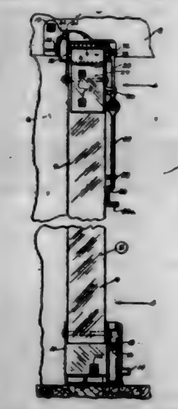
10. In a car, relatively stationary car structure, a movable jamb, means for locking said jamb to said relatively stationary car structure, said means being located both at the top and bottom of said jamb, and a



member adjustable in length for simultaneously controlling said locking means.

---

1,556,594. SIDE-DOOR CONSTRUCTION. CARL E. EKLIND, Berwyn, and WILLIAM W. DARROW, Chicago, Ill., assignors to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 18, 1924. Serial No. 738,325. 11 Claims. (Cl. 20—22.)



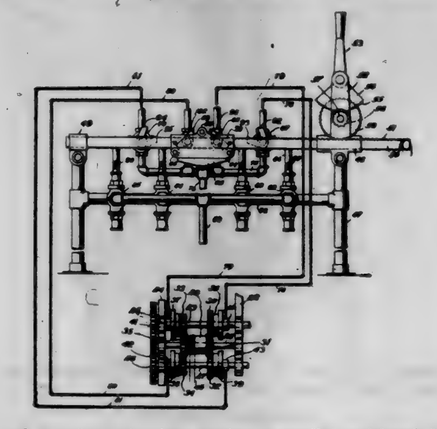
2. Car construction, comprising stationarily mounted keeper means, said keeper means providing a latch receiving recess, a movable door-jamb, a casting mounted at an end of said door jamb, said casting having a portion adapted to move into wedging relationship with said keeper means, a rotatable latch member carried by said casting, said latch member having a latch portion adapted to be located within said recess, operating means for said latch member, and common means for guiding said operating means and for supporting said operating means to hold said latch member out of latching position.

---

1,556,595. EXCAVATOR-CONTROLLING APPARATUS. WILLIARD R. EWING, Chicago, Ill., assignor to McWilliams Dredging Company, Chicago, Ill., a Corporation of Illinois. Filed June 8, 1923. Serial No. 644,088. 7 Claims. (Cl. 74—59.)

3. In apparatus of the class described, the combination of a rotary member, a forward and a reverse driving shaft for said rotary member, a low speed and a

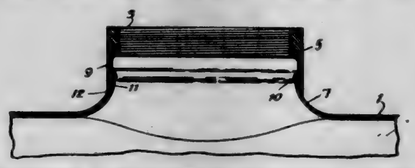
high speed transmission train between each shaft and said rotary member, a pneumatic clutch mechanism for each train, an air valve for each clutch mechanism, said valves being arranged in a row with those for the clutch mechanism of the low speed trains in the middle;



and a valve actuating member normally positioned between said middle valves and shiftable between said normal position and the ends of said row whereby either high speed train can be connected for operation only after its associated low speed train has been operated.

---

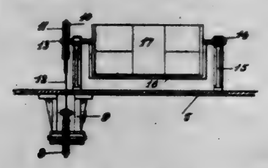
1,556,596. MANHOLE OR LIKE STRUCTURE. ANTHONY B. FEY, Cincinnati, Ohio, assignor to Augustine Davis, jr., Covington, Ky. Filed Mar. 19, 1923. Serial No. 625,938. 1 Claim. (Cl. 220—39.)



A manhole or like construction on a sheet metal tank or shell comprising a tapered flanged-out neck on the shell, and a ring the upper portion of which is of relatively massive section to receive a closure and the lower comparatively thin portion of which is tapered on the inside to a feather edge, said feather-edged lower portion fitting down on the outside of the tapered neck forming a smooth external joint and being connected by a weld on the inside with the upper edge of the neck.

---

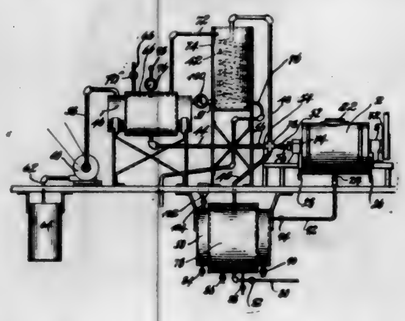
1,556,597. AMUSEMENT DEVICE. RENÉ GIBERT, Paris, France. Filed Apr. 10, 1922. Serial No. 551,305. 2 Claims. (Cl. 272—48.)



2. In an amusement device, a platform having seat supports which project upward from said platform, hangers depending from the under side of the platform, seats maintained in oscillatory engagement with the seat supports, means projecting beyond one of the seat supports to carry and aline a gear with a gear maintained between the depending hangers, connecting means for the gears comprising chains and rods which connect the chains and pass through apertures in the platform, and means for imparting an oscillating motion to the gears during the movement of the platform.

---

1,556,598. LEATHER-DEGREASING PROCESS. ALBERT J. HANGLIN, Newark, N. J. Filed Dec. 6, 1919, Serial No. 343,065. Renewed Mar. 5, 1925. 1 Claim. (Cl. 87—6.)



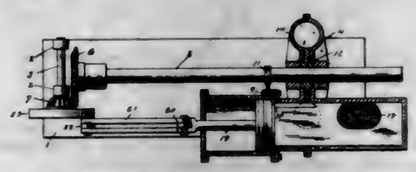
That improvement in the art of degreasing raw wet skins or hides of animals and fish, which consists in enclosing the material to be degreased and a readily volatilizable grease solvent in a drum, sealing the drum air tight, raising the temperature of the drum contents to a degree to insure the production of substantial pressure in the drum, the initial temperature of the drum contents being such that the temperature required to produce such pressure will not be so high as to injure the skins or hides, then agitating the drum contents, while maintaining the internal pressure, to effect a solution or emulsion of the grease, and then removing the solvent with its contained grease and water.

---

1,556,599. RELAY. HERMAN H. HARBECKE, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 16, 1923. Serial No. 657,660. 8 Claims. (Cl. 188—96.)

1. In a dashpot relay, the combination of a piston with a shouldered piston rod carrying a steel valve ball, said shoulder and ball being spaced to operate loosely a limited distance independent of said piston, thus giving the latter a slight blow at the start of each directive movement, substantially as described.

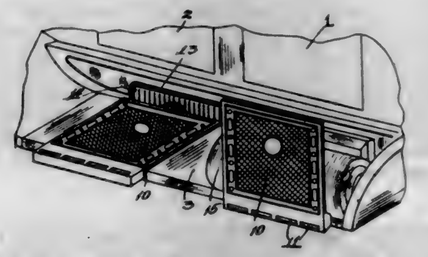
1,556,600. ROTARY GASOLINE MOTOR. BENJAMIN LOMAX HARDY, Mobile, Ala. Filed June 28, 1924. Serial No. 721,759. 2 Claims. (Cl. 123—14.)



1. A rotary motor including an explosive chamber, a shaft journaled transversely therein, pistons operatively connected with the shaft and housed within the explosive chamber, a compression chamber, a piston mounted for reciprocation in the compression chamber, means operatively connecting the piston with said shaft, a valve controlled conduit for leading the fuel into the compression chamber, means carried by the shaft for operating the valve, a plate abutment carried by the last mentioned piston and adapted to move transversely across the explosion chamber and having a duct formed in one longitudinal edge adapted to transmit the gas from the compression chamber into the explosion chamber and provided with a recess through which the first mentioned pistons may pass.

---

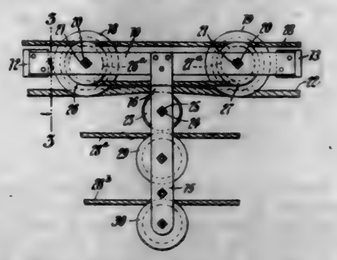
1,556,601. LUGGAGE CARRIER. ISAAC ARTHUR HILLS, Grand Rapids, Mich. Filed Sept. 7, 1923. Serial No. 661,372. 5 Claims. (Cl. 224—29.)



5. In a vehicle having a running board, a foot pad hinged to the outer margin of said running board and swingable from horizontal to vertical position, and means depending over the outer margin of said running board for supporting said foot pad in vertical position.

---

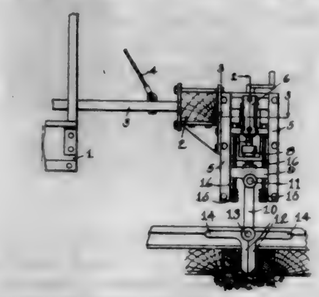
1,556,602. FALL-ROPE CARRIER. JOHN T. HORTON, Brooklyn, N. Y. Filed Jan. 24, 1922. Serial No. 531,347. 2 Claims. (Cl. 212—120.)



1. A fall rope carrier including in combination two supporting cable traverse wheels rotatably mounted in fixed relation to each other for engaging the upper side of a supporting cable, a tension wheel for engaging the under side of the supporting cable between the points of engagement of said traverse wheels, two traction line wheels one of which is in operative relation to one of said traverse wheels, and a traction line forming a bight surrounding said two traction line wheels and in operative relation thereto.

---

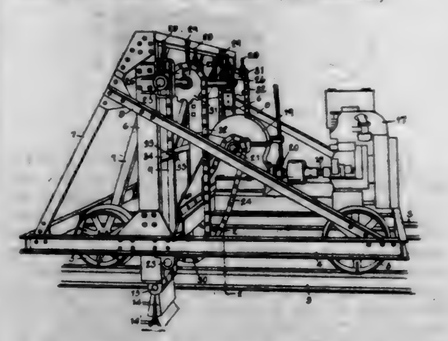
1,556,603. TAMPING OR BALLASTING MACHINE. CORWILL JACKSON, Chicago, Ill. Filed July 25, 1924. Serial No. 728,099. 14 Claims. (Cl. 104—12.)



1. In a structure of the class described, the combination with a supporting head provided with vertical ways, of an impact means comprising an impact member mounted for vertical adjustment in said ways, a tamper crosshead reciprocating in said ways below said impact means, buffer springs for said tamper crosshead carried by said impact means, means for raising and lowering said impact means, a tamper arm pivotally mounted on said tamper crosshead, tamper blades pivotally mounted on said arm in coacting pairs to pass between a pair of adjacent ties and provided with laterally projecting arms adapted to engage the tie members whereby the blades are separated, and means for raising and lowering said supporting head.

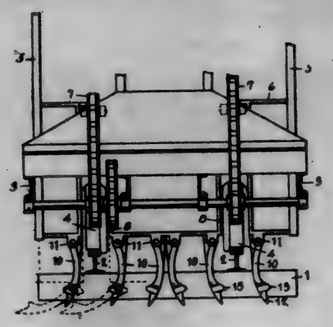
---

1,556,604. TAMPING OR BALLASTING MACHINE. CORWILL JACKSON, Chicago, Ill. Filed Dec. 29, 1924. Serial No. 758,658. 28 Claims. (Cl. 104—12.)



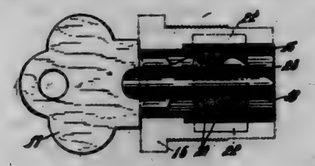
1. In a machine of the class described, the combination with a truck adapted to travel upon a railway track, vertical ways on said truck, a crosshead mounted to reciprocate in said ways and recessed on its upper side to receive the rails of the track, tamper blades pivotally mounted on said crosshead in coacting pairs, there being a pair of blades at each side of said recesses in said crosshead, the ends of the blades being outwardly directed so that they tend to separate upon contacting with the material to be tamped, and means for actuating said crosshead.

1,556,605. RAILWAY-ROADBED WORKING TOOL. CORWILL JACKSON, Chicago, Ill. Filed Dec. 29, 1924. Serial No. 758,659. 18 Claims. (Cl. 104—12.)



1. In a machine of the class described, the combination of a truck adapted to travel upon a railway track, vertical ways on said truck, a crosshead constituting a drop hammer reciprocatingly mounted on said ways and recessed on its under side to receive the rails of the track, means for actuating said crosshead, and tools pivotally mounted on said crosshead in opposed laterally facing sets, the tool pivots being disposed longitudinally of the truck, there being a plurality of tools in each set, said tools having laterally directed points so that the tools tend to swing laterally upon contacting with the ballast of a track, said tools having forwardly facing shoulders spaced from their tips.

1,556,606. LOCK. EDWARD N. JACOBI, Milwaukee, Wis., and FRANCIS W. LAWRENCE, Detroit, Mich., assignors, by mesne assignments, to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 26, 1917. Serial No. 151,011. 2 Claims. (Cl. 70—46.)

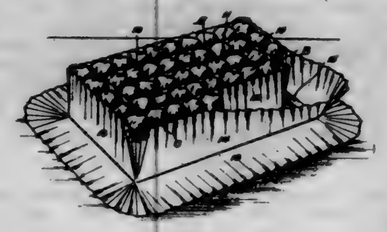


1. A lock, comprising a rotary lock barrel having a longitudinal key opening and a transverse tumbler opening, a key fitting in the key opening and crossing the tumbler opening, sheet metal tumbler blades slidably fitting in the tumbler opening and capable of sliding longitudinally therethrough for removal and each provided with an opening pierced by the key and means for preventing the loss of the tumbler blades from the lock barrel when the key is removed comprising a rib in the lock barrel projecting into the tumbler opening, said tumbler blades being provided with notches in the side thereof to receive the projecting edge of said rib without interfering with the key-produced movements of the tumbler blades.

1,556,607. HANGER. THOMAS H. KANE, Youngstown, Ohio. Filed Sept. 9, 1920. Serial No. 409,233. 14 Claims. (Cl. 72—105.)

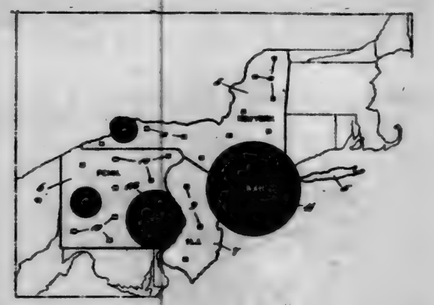
1. A hanger of the class described, comprising a hollow member having a slot in its lower wall of less width than the interior distance between its side walls, and provided at opposite sides throughout the length thereof with upstanding inclined prongs of which those at one side are inclined oppositely to those at the other side of the member for the purpose specified.

1,556,608. PACKAGE FOR DATES, FIGS, CANDIES, AND LIKE PRODUCTS. KARL G. KARSTEN, New York, N. Y. File Feb. 17, 1922. Serial No. 537,165. 2 Claims. (Cl. 206—46.)



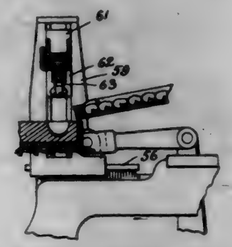
1. A package for more than two parallel rows of articles intended to be separated one at a time from the package, said package comprising a plurality of open top cups, disposed one within the other in telescoping relation, each succeeding outer cup having a greater area when considered in plan than the next adjacent inner cup thereby to provide a space between the sides of adjacent cups to accommodate an endless line of the articles and the innermost cup adapted to contain a single row of the article.

1,556,609. MAP. KARL G. KARSTEN, New York, N. Y. Filed Apr. 3, 1923. Serial No. 629,569. 6 Claims. (Cl. 35—6.)



1. A map of a plurality of territories having their boundary lines so distorted as to make their included areas represent graphically the relative importance of a given factor other than land area of one area with respect to another area, the boundaries being distorted without losing their familiar and significant features certain cities of said territories indicated on said map by a geometric form having inscribed areas proportionate to the valve of said factor present in said cities.

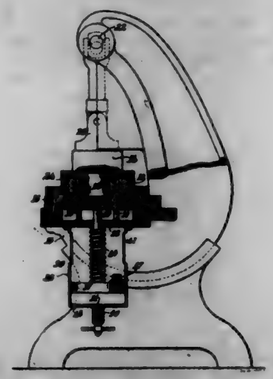
1,556,610. CANDY-MAKING MACHINE. WILLIAM C. KNISE and JOHN KALLENBERG, Brooklyn, N. Y., assignors to E. Greenfield's Sons, a Corporation of New York. Filed Sept. 21, 1922. Serial No. 589,528. 10 Claims. (Cl. 107—1.)



1. In a candy making machine, a conveyor adapted to transport a tray having a series of depressions therein, means adapted to operate said conveyor, means adapted to feed a liquid coating into said depressions at a given point in the movement of said conveyor, and second means adapted to feed cherries or the like to be coated into said depressions at a subsequent point in the movement of said conveyor, said second means having a plurality of parts, one of said parts being adapted to move in a direction substantially parallel to the direction of movement of said conveyor, and another part being adapted to independently move in a direction substantially perpendicular to said conveyor.

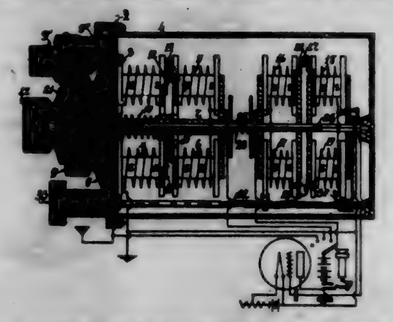
2. In a candy making machine the combination with means adapted to support a tray or the like, of a hopper adapted to have articles fed therein, a series of inclined movable bars located above an inclined bottom member and having spaces between them, said spaces being in communication with said hopper, means adapted to oscillate said movable bars in order to cause said articles to enter into said spaces and move in the direction of the lengths of said bars, and means adapted to seize said articles from said spaces and transport them away from said spaces.

1,556,611. DRAWING PRESS. WILLIAM KLOCKE, Woodhaven, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Nov. 21, 1922. Serial No. 602,470. 9 Claims. (Cl. 113—46.)



1. A drawing press of the type having three forming parts, two of which are relatively oppositely movable male and female parts for producing a cup or shell from a blank, and the third adapted to make contact through said blank with one of said two oppositely movable parts and to yield to the movement thereof, comprising a vatuum producing means connected to and adapted to resist the movement of said yielding part.

1,556,612. VARIABLE INDUCTANCE AND COUPLER. AUGUST J. KLONECK, New York, N. Y. Filed Dec. 15, 1921. Serial No. 522,597. 3 Claims. (Cl. 171—242.)

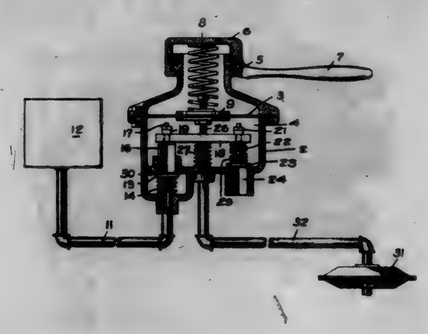


2. A variable inductance element comprising independent coil sets, each coil set including revoluble coil parts and non-revoluble coil parts, means for rotating said revoluble coil parts, means for electrically interconnecting revoluble and non-revoluble coil parts of each set and means for inductively separating said independent coil sets, said last means comprising a spiral shafting, the coils of each part being arranged in planetary formation about the axis of rotation of the revoluble part.

1,556,613. SAFETY-RAZOR-BLADE HOLDER. CHARLES RAYMOND LADEWEBB, Providence, R. I. Filed Sept. 9, 1924. Serial No. 736,707. 1 Claim. (Cl. 30—9.)

A blade holder comprising a handle having one end directed laterally at an obtuse angle and being split longitudinally to provide two opposed clamping plates, said plates having substantially parallel side edges arranged at obtuse angles with the handle, said plates also having end edges arranged substantially at right angles to the handle, the inner faces of said plates being formed with opposed blade receiving grooves, a pair of such grooves extending along and substantially parallel to each of the herein-mentioned edges of said plates, all of said grooves extending throughout the entire lengths of such edges whereby a blade can be slid longitudinally in and out of any pair of grooves, and adjustable means for drawing said plates together to clamp a blade in place.

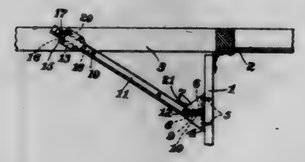
1,556,614. VARIABLE-CONTROL VALVE. GEORGE S. LANE, San Francisco, Calif., assignor, by mesne assignments, to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1921. Serial No. 448,884. 11 Claims. (Cl. 303—54.)



1. A variable control valve for fluid pressure operated mechanism, comprising a casing, a diaphragm forming a pressure chamber in said casing, an inlet and an exhaust valve in said casing for controlling the flow of pressure fluid into and out of said chamber, a cap threaded on said casing, a spring interposed between said cap and diaphragm, whereby rotation of the cap varies the tension of said spring, and means controlled by the diaphragm for opening and closing said inlet and exhaust valves.

---

1,556,615. DOOR HOLDER. GEORGE LANE, Poughkeepsie, N. Y., assignor to Lane Brothers Company, Poughkeepsie, N. Y., a Joint Stock Association of New York. Filed Sept. 12, 1923. Serial No. 662,249. 3 Claims. (Cl. 292—262.)

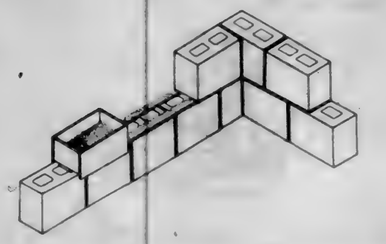


1. A device of the character described, including a keeper secured to a door lintel, a bar sliding in a slot in said keeper, said bar being pivotally carried on a door, and means having fixed engagement with said bar, and a fixed and sliding engagement with said door and responsive to a horizontal pull for transmitting vertical motion to said bar.

---

1,556,616. MORTAR STRINGER. LEVI LANDKAMER, Alexandria, Nebr. Filed June 5, 1922. Serial No. 565,875. 2 Claims. (Cl. 72—129.)

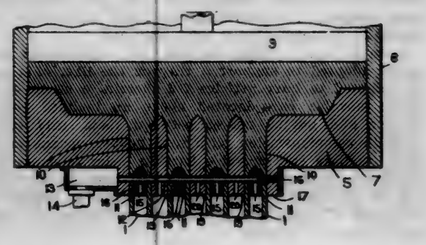
1. A mortar stringer comprising a rectangular receptacle, means at each end of said receptacle for pulling the receptacle along the upper edge of a masonry wall, a bottom for said receptacle, said bottom being provided with longitudinal openings extending from end to end thereof, one of the sides of the said receptacle having its lower edge in the horizontal plane of the said bottom so that the lower edge of the said side is adapted to ride on the upper edge of the wall, the other



of the sides of the receptacle having a depending portion which is adapted to bear against the side of the wall.

---

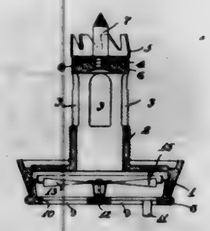
1,556,617. POROUS CANDY AND METHOD OF AND APPARATUS FOR MAKING IT. PHILIP B. LASKEY, Marblehead, Mass., assignor to The Chocolate Sponge Co., Inc., New York, N. Y., a Corporation of New York. Filed May 17, 1923. Serial No. 639,520. 5 Claims. (Cl. 107—54.)



5. An apparatus for making candy comprising a die having a plurality of separate annular openings which are connected on the delivery face of the die by grooves formed in said face, and means to force candy material through said annular openings.

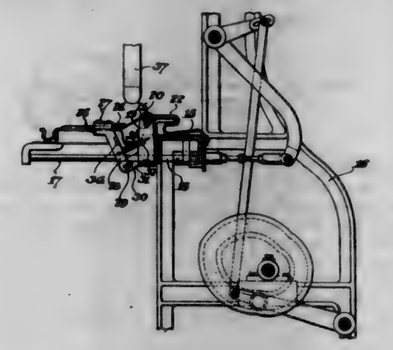
---

1,556,618. VENTILATING DEVICE. WILLIAM LAWRENCE, Chicago, Ill. Filed Feb. 13, 1922. Serial No. 536,000. 1 Claim. (Cl. 98—27.)



In a device of the class described a ventilator comprising a hollow cylindrical member, a cap member threaded in said hollow cylindrical member, said cap having vents, a bearing pin supported by said cap, a shutter rotatable on said pin for closing said vents, said pin extending through said shutter, and a sensitive fan rotatably mounted on said pin.

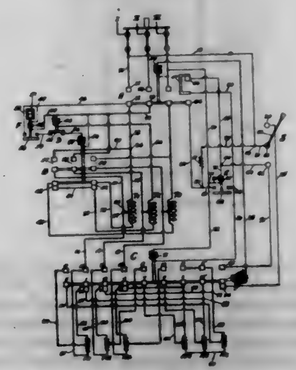
1,556,619. METHOD AND MEANS FOR CIGAR BUNCHING. BERNARD LIEBERMAN, Philadelphia, Pa. Filed Dec. 6, 1920. Serial No. 428,547. 6 Claims. (Cl. 131—42.)



3. In a cigar bunching machine, the combination with a bunching table, a roller and apron, of a smoothing element comprising a brush having a plurality of independently yielding bristles or similar elements, forming a binder-engaging surface, means operating said smoothing element to engage the binder prior to and during the rolling operation, and adjustable means for controlling the pressure of said engagement.

---

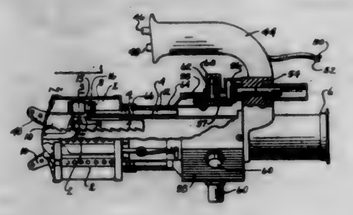
1,556,620. CONTROL SYSTEM FOR ALTERNATING-CURRENT MOTORS. DAVID L. LINDQUIST, Hartsdale, and JACOB D. LEWIS, Yonkers, N. Y., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 30, 1923. Serial No. 677,696. 5 Claims. (Cl. 172—179.)



2. A multi-speed alternating current motor control system comprising an alternating current motor having its windings arranged to be alternatively connected through one set of connections for one speed in one direction of rotation and through another set of connections for a different speed in the other direction of rotation, a motor control switch for connecting the line to one of said sets of connections when in one position and to the other of said sets of connections when in another position, means for causing said motor control switch to move from one position to another, and means for preventing the functioning of said causing means while the line current is flowing to said switch.

---

1,556,621. COTTON PICKER. ROBERT L. MCGEHEE, New York, N. Y. Filed Feb. 3, 1923. Serial No. 616,799. 16 Claims. (Cl. 56—37.)

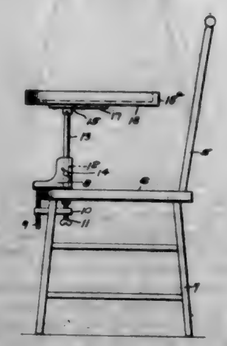


1. In a cotton picker, a reciprocating picker finger having at its picking end a part adapted to oscillate, a weight having a positively limited lost motion connection with the reciprocating part of said finger permitting movement of said weight on said finger in the same direction at the end of the positive movement of the said weight by said finger, the cooperating stop surfaces on said weight and the reciprocating part of said finger by which the lost motion is positively limited being all located substantially in a straight line and in the line of reciprocation, and connections between the weight and the oscillating part of said finger whereby the aforesaid movement of said weight on said finger both effects and limits the oscillation of said oscillating part.

10. In a cotton picker, a reciprocating toothed finger having at its end guards for the endmost teeth.

---

1,556,622. TRAY ATTACHMENT FOR DINING CHAIRS. ANDREW S. MEHAREY, Springdale, Pa. Filed Mar. 25, 1925. Serial No. 18,170. 1 Claim. (Cl. 45—82.)

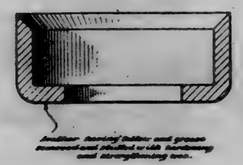


An attachment of the character described, for the purpose of converting an ordinary dining chair into a child's chair, comprising, in combination, a block having a horizontal base portion and an inner vertically elongated portion, the whole adapted to lie above the seat of a chair, a rigid bolt depending from the outer end of the horizontal portion, a plate threaded upon said bolt, a binding screw carried by said plate adapted to engage the underside of the chair seat, a rod mounted for vertical and horizontal turning movement in the ver-

tically elongated portion of the block, a set screw for binding said rod in its adjusted position and a horizontal tray having a concave inner edge, eccentrically mounted upon the upper end of said rod.

---

1,556,623. PACKING. WILLIAM A. MINOR, Rochester, N. Y., assignor to Luitwieler Pumping Engine Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 29, 1924. Serial No. 752,963. 5 Claims. (Cl. 69—21.)



1. A leather packing in molded form having the tallow and grease removed and stuffed with a hardening and strengthening wax.

---

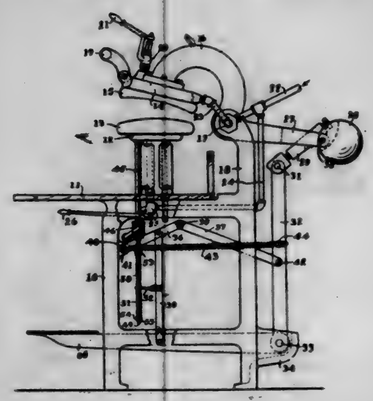
1,556,624. SUPPORTING FRAME. ABRAHAM PAVENICK, New York, N. Y. Filed Mar. 15, 1923. Serial No. 625,278. 1 Claim. (Cl. 5—180.)

In a support of the character described, an end supporting and clamping means comprising a bearing block having a journal opening therein adapted to demountably support a cross member, a pair of legs pivoted to the said bearing block below said opening, concaved bearing surfaces formed at the ends of said legs adjacent said opening for clamping against the corresponding end of said cross member, and a cross brace pivoted to collapse between said legs, said brace being effective to secure the legs in a spread position and to simultaneously cause the said concaved bearing surfaces at the ends of the legs to clamp the cross bar between said surfaces and against the upper portion of the rim of said opening.

---

1,556,625. PRESSING MACHINE. GEORGE O. POMEROY, Lakewood, Ohio. Filed Dec. 18, 1924. Serial No. 756,724. 9 Claims. (Cl. 68—9.)

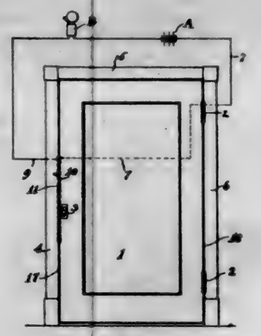
1. In apparatus of the class described, the combination of a pair of pressing members, actuating means therefor, a suction pipe connected with one of said members, a valve in said pipe, and operating means for said valve



actuated by the first-mentioned means to close said valve when said members are closed and to automatically hold said valve open when said members are opened.

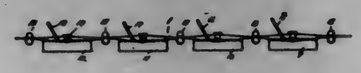
---

1,556,626. BURGLAR ALARM. JOHN J. POPE, Brooklyn, N. Y. Filed June 7, 1922. Serial No. 566,613. 2 Claims. (Cl. 177—314.)



1. The combination of, a frame having an opening; a member adapted for closing said opening and movable from closing position to open position; an electric contact member on a face of said closing member; an electric contact member on a face of the frame in opposed relation to the first contact member; source of supply of electricity; means for conducting an electric current from said source to the first contact member; means for conducting an electric current from said source to the second contact member, said members normally being out of contact and the circuit open; and an electrically operated alarm means in one of said conducting means; said contact members being made active for closing the circuit and operating the alarm means by forcible insertion of an implement of conducting material between opposed faces of said closing member and frame while the closing member is maintained in closing position in said frame.

1,556,627. METHOD OF FORMING TUBING AND APPARATUS THEREFOR. WILLIAM S. PRITCHARD, Detroit, Mich., assignor to Motor Products Corporation (1923), Detroit, Mich., a Corporation of New York. Filed May 28, 1923. Serial No. 642,121. 10 Claims. (Cl. 113—38.)



9. In the method of forming tubing, the advancing of a metallic ribbon and during the advancement the successive steps of tinning a longitudinally extending portion of the ribbon, forming the ribbon into tubing, and applying heat sufficient to melt the tinning material.

10. In a machine for forming tubing, the combination with an open upper-ended receptacle containing a suitable adhesive material, of horizontal means at the ends of said receptacle for guiding the ribbon, and vertically extending means above the receptacle and engageable with the portion of the ribbon intermediate the adjacent horizontally extending ribbon guiding means for warping or rotating the ribbon and deflecting an edge thereof into said adhesive material.

---

1,556,628. FRUIT PICKER. ALVAH T. RAMSDELL, Dover, N. H. Filed Sept. 14, 1922. Serial No. 588,167. 3 Claims. (Cl. 56—336.)

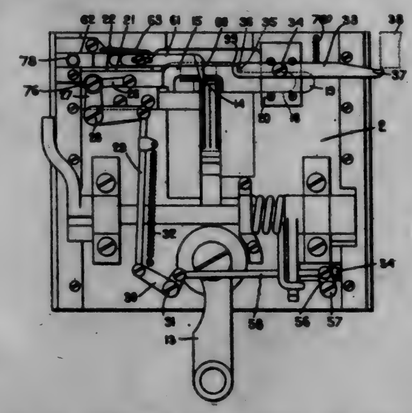
1. A fruit picker comprising a pole, a device thereon for severing fruit from its stem, a fabric tube extending along the pole having an opening at the upper end thereof for receiving the fruit from the severing device and an opening at the lower end of the tube for delivering the fruit, means to secure the inner edge of the lower end of the tube to the pole to hold the delivery opening substantially vertical and form a fruit receiving and holding pocket, and means connected to the pole to catch up a portion of the tube at a short distance above the lower end thereof to form a fruit checking and holding pocket, the latter being adapted to deliver fruit to the receiving pocket on upward pull on the tube, and the receiving pocket being adapted to discharge fruit from the delivery opening on further upward pull on the tube.

1,556,629. TRACTION MAT. RUSSELL J. KRANEY, Ottawa, Ontario, Canada. Filed Sept. 23, 1924. Serial No. 739,821. 3 Claims. (Cl. 238—14.)

1. A traction mat of the character described comprising a wedge end block, trapezium form in cross section, and a plurality of flexibly connected traction blocks aligned therewith.

---

1,556,630. THREAD-TRIMMING DEVICE FOR BUTTONHOLE-SEWING MACHINES. FRANKLIN A. REECE, Chestnut Hill, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed June 14, 1919. Serial No. 304,224. 47 Claims. (Cl. 112—252.)



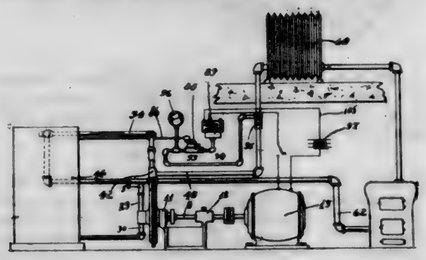
47. In a buttonhole sewing machine the combination with stitch-forming mechanism constructed to concatenate an upper and an under thread, of a throat-plate provided with an opening through which the stitch-forming mechanism operates, means operative at the completion of a buttonhole to cut and clamp the thread which extends from the work through the opening in said throat-plate, said means operating to release the clamped end when the sewing starts on the next buttonhole and before the relative movements of the throat-plate and the cutting and clamping parts have placed an appreciable strain on said clamped end.

---

1,556,631. VACUUM PUMP. VICTOR ROSENHAGEN, Bellevue, Ky., assignor to The Hydro High Vacuum Pump Company, Bellevue, Ky., a Corporation of Kentucky. Filed July 8, 1922. Serial No. 573,567. 11 Claims. (Cl. 230—13.)

1. In a device of the class described the combination of a housing having a chamber within it, a rotor revolubly contained within the chamber having a recessed center and spiral ducts extending from the recess to the periphery thereof, the housing having a discharge channel into which the ducts in the rotor may discharge, a valve block extending into the housing having its one end disposed within the recess in the rotor, and having a pair of ducts, formed in it, the ducts being disposed in a

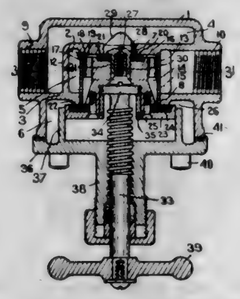
substantially vertical relation and being adapted to be placed in alternate communication with the ducts in the rotor, a fluid supply tank, a supply pipe adapted to establish communication between the supply tank and the lower duct in the valve block, a connection extending above the valve block establishing communication between the supply pipe and the upper duct in the valve block, a discharge nozzle mounted on the housing communicating with the discharge channel and having a re-



duced discharge end, a coupling having a chamber formed within which chamber the discharge end of the nozzle is disposed, and a pipe extending into the chamber in the coupling into which the discharge nozzle is adapted to direct the flow of fluid which passes thru said nozzle, the pipe being spaced from the nozzle and having a bore which is gradually enlarged as it recedes from the nozzle, and means to establish communication between the chamber in the coupling, and a container within which the pressure is to be reduced.

---

1,556,632. MIXING VALVE. WILFRED J. ROULEAU, Quincy, Mass. Filed Aug. 22, 1923. Serial No. 658,800. 8 Claims. (Cl. 277—18.)



1. A mixing valve comprising a casing, two transverse ported partitions dividing the interior of the casing into hot water, cold water, and outlet chambers, an annular longitudinally extending ported sleeve stationarily mounted within the cold water chamber with its ends joining the two partitions, said sleeve forming within it a mixing chamber communicating with the hot water, cold water, and outlet openings, and a valve having a portion within the sleeve for controlling the flow of hot water and a portion exterior to the sleeve to control cold water into the mixing chamber and the flow of water from the mixing chamber.

---

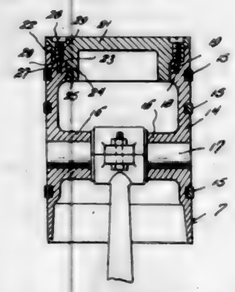
1,556,633. ELECTRICAL CONTROL METHOD. SAMUEL RUBEN, New York, N. Y. Filed Sept. 13, 1924. Serial No. 737,601. 4 Claims. (Cl. 250—2.)

1. A system for the operation of a control device, comprising, in combination, a source of high frequency oscillations, an electrical receiving apparatus selectively responsive to said oscillations, and arranged and adapted to actuate said control device, and a stationary conducting means in electrostatic connection with said source

and receiving apparatus and adapted to serve as a tuning element in he circuit thereof by the relative movement thereof.

---

1,556,634. PISTON CONSTRUCTION. JOHN H. RYALLS, Charlottesville, Va., assignor of one-third to L. G. Hoxton and one-third to Chas. H. Page, both of Charlotteaville, Va. Filed Aug. 26, 1924. Serial No. 734,323. 1 Claim. (Cl. 74—108.)



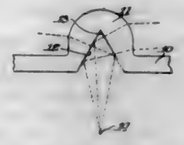
A piston comprising a skirt portion formed with wrist pin bearings intermediate the ends, the upper end of said skirt portion being formed with an inwardly directed annular flange having the inner periphery screw threaded and formed with a shoulder on the upper end, the upper end of the skirt portion being formed with an internal diameter of enlarged size above said shoulder portion extending through the upper end of said skirt portion, a cap having an external diameter equal to that of the skirt portion, and an annular projection of reduced diameter to fit the enlarged diameter of the upper end of the skirt portion, and a reduced extension from said annular projection of reduced diameter and threaded for cooperation with the threaded portion of the flange of the skirt portion, and locking screws adapted for threaded cooperation with the cap portion, and projecting into openings in the flange of the skirt portion for locking said cap portion after threaded application on the skirt portion against movement thereon.

---

1,556,635. METALLIC CLIP. PERCY SATTERLEE, Detroit, Mich. Filed Oct. 13, 1924. Serial No. 743,250. 4 Claims. (Cl. 72—118.)

1. Furring and lath clips made of a single piece of wire bent to close zigzag formation with parallel rows of hooks and the wire adapted to be severed to provide the clips, said close zigzag formation being adapted for extension from one end thereof so that the clips are separated from the close zigzag formation to be severed one at a time for individual use.

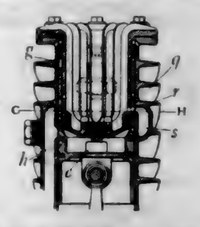
1,556,636. LUMINOUS SIGN CHARACTER. RICHARD SCHULZ, Danville, Ill. Filed Sept. 19, 1923. Serial No. 663,687. 2 Claims. (Cl. 40—134.)



2. A sign character presenting a semi-cylindrical surface to represent a transparent sign element and an inner angular groove underlying said surface, the apex thereof extending along the axis of said surface.

---

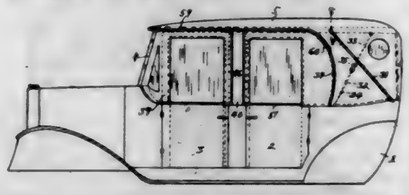
1,556,637. TWO-STROKE-CYCLE INTERNAL-COMBUSTION ENGINE. HIERONYMUS PAUL SCHUTTLER, Charlottenburg, Germany. Filed Jan. 25, 1924. Serial No. 688,576. 4 Claims. (Cl. 123—69.)



4. In a two-stroke cycle internal combustion engine, a cylinder, a head extending into the cylinder and having a portion spacing from the latter to provide an annular recess between the head and cylinder, a piston in said cylinder having a sleeve thereon working in the annular recess, two inlet ports in said sleeve at diametrically opposite points, two exhaust ports in said sleeve also at diametrically opposite points and spaced circumferentially between the said inlet ports, two inlet ports, a crank chamber, transfer passageways in the cylinder leading from the crank chamber and adapted to introduce a compressed combustible mixture from the crank chamber through said inlet ports into the cylinder, a spark plug port arranged centrally within the cylinder head, and means whereby the piston sleeve causes the circulation of atmospheric air through the cylinder head and controls the passage of the combustible mixture from the transfer passageways to the interior of the cylinder.

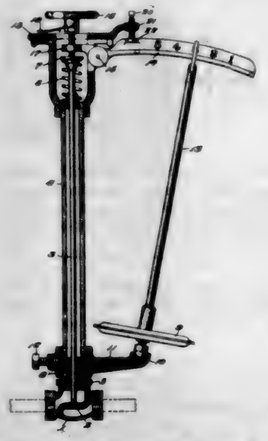
---

1,556,638. MOTOR-VEHICLE TOP. HALSTEAD H. SEELEY, Ann Arbor, Mich., assignor to Motor Products Corporation (1923), Detroit, Mich., a Corporation of New York. Filed Jan. 30, 1922. Serial No. 532,554. 15 Claims. (Cl. 296—103.)



1. The combination with a motor vehicle body, of an attachable top having standards pivotally mounted upon said body to permit of lateral adjustment of said top relative to said body, and tension members connected to said top and body for laterally adjusting said top relative to said body to align the former with the latter.

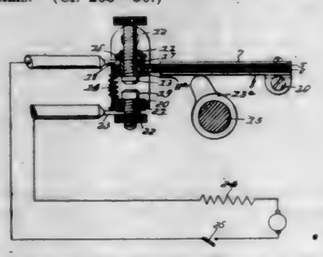
1,556,639. THERMOSTATIC CONTROL FOR VALVES. HENRY M. SHEER, Quincy, Ill., assignor to H. M. Sheer Company, Quincy, Ill., a Corporation of Illinois. Filed Jan. 9, 1923. Serial No. 611,677. 5 Claims. (Cl. 236—99.)



1. A thermostatic control for valves including a valve-chamber, a valve-seat, a needle-valve, a thermostat, a quadrant, the latter operated by the thermostat and in position to actuate the valve, adjustable means connected with the quadrant for adjusting the initial position of the valve, and adjustable means for limiting the movement of the quadrant in one direction.

---

1,556,640. CIRCUIT CONTROLLING AND INTERRUPTING APPARATUS. CLARENCE E. SILVER, Blackwell, Okla. Filed Feb. 21, 1921. Serial No. 446,638. 3 Claims. (Cl. 200—30.)



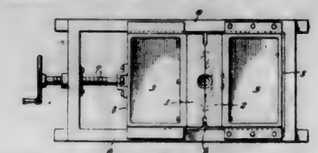
2. A device of the class described, including a pivoted bracket, an insulating arm or member secured to the bracket and comprising a plurality of strips of insulating material and backing strips of metal, an interiorly threaded sleeve piercing the insulating strips and carried by the said arm or member, an adjustable screw mounted in the threaded sleeve and provided with a contact or electrode, a fixed contact or electrode arranged to be engaged by the said contact or electrode, insulating means for supporting the fixed contact or electrode and means for moving the arm or member to carry the movable contact or electrode into and out of engagement with the fixed contact or electrode.

---

1,556,641. PLASTIC COMPOSITION. MAX SKOLNIK, Minneapolis, Minn., assignor to Annie Skolnik, Minneapolis, Minn. Filed Dec. 24, 1921. Serial No. 524,764. 1 Claim. (Cl. 106—39.)

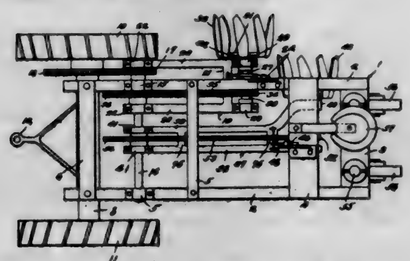
A composition for use in making a plastic composition comprising the following ingredients in substantially the proportons specified: corn and similar stalks, 25 pounds reduced to a pulp with 2 pounds of alkali, and an adhesive 5 pounds.

1,556,642. PROCESS OF CASTING MALLEABLE CASTINGS. WILLIAM H. SMITH, Dearborn, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Delaware. Filed Apr. 10, 1924. Serial No. 705,409. 1 Claim. (Cl. 22—211.)



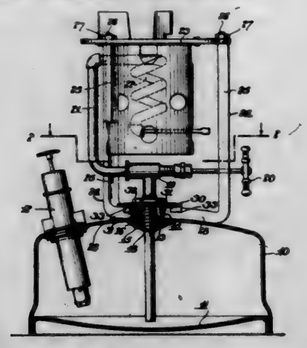
The method of casting malleable castings which consists in providing a mold, introducing molten metal into the mold to form a casting, and in maintaining a body of tin in fluid state in contact with the mold walls.

1,556,643. FARM MACHINE. OAK B. SPRAGGINS, Haleyville, Ala. Filed Apr. 8, 1924. Serial No. 705,080. 2 Claims. (Cl. 97—40.)



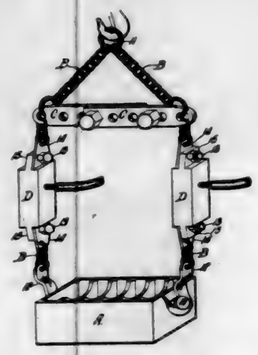
1. In a device of the class described, a frame, a ground wheel journaled on the frame, radius arms mounted to swing vertically on the frame, means for swinging the radius arms vertically, one radius arm being of greater length than the other, soil engaging members journaled on the radius arms, the soil engaging member of one radius arm being located in alinement with the other radius arm and inwardly of the soil engaging member of said other radius arm, and means for connecting the soil engaging members operatively with the ground wheel.

1,556,644. PLUMBER'S FURNACE. CHARLES STICHLER, Philadelphia, Pa. Filed Nov. 17, 1924. Serial No. 750,284. 14 Claims. (Cl. 126—226.)



1. In a furnace of the character described, a base tank, and framework mounted thereon including a plurality of separate standards each substantially L-shaped, the lower portions of said standards conforming to the top surface of the base tank and projecting inwardly toward the central axis of the structure, and means for clamping said lower portions of the standards on the top of the base tank.

1,556,645. METHOD OF VIBRATING OBJECTS. JOHN T. STONEY, Lakewood, and KLEMENS PUHWIN, Cleveland, Ohio, assignors to The Stoney Foundry Engineering and Equipment Co., Cleveland, Ohio, a Corporation of Ohio. Original application filed Sept. 12, 1921, Serial No. 500,193. Divided and this application filed Apr. 18, 1924. Serial No. 707,396. 7 Claims. (Cl. 22—94.)

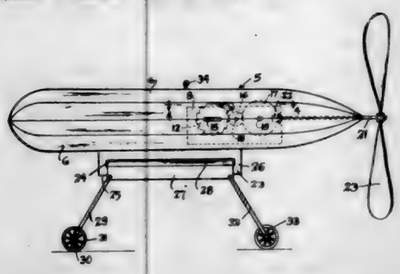


1. The method of vibrating objects, comprising, suspending an object to be vibrated, and creating vibrations in the means on which said object is suspended.

1,556,646. TYPE-COMPOSING STICK. WILLIAM H. STOREY, Leicester, England. Filed Sept. 4, 1924. Serial No. 735,746. 3 Claims. (Cl. 276—37.)

1. In composing sticks for loose types of the character specified means for automatically retaining the types in the stick when the stick is tilted, the said means comprising balls which roll into the path of the type.

1,556,647. MECHANICAL TOY. FERDINAND STRAUSS, New York, N. Y. Filed Jan. 14, 1925. Serial No. 2,242. 1 Claim. (Cl. 46—48.)

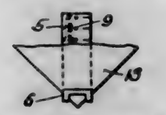


A toy airship comprising a body member having an elongated groove depending portion, a propeller on the body member, a motor for driving said propeller, a running gear comprising a frame having resilient side walls having elongated projected portions in said walls adapted to snap into and be retained in said grooves, and wheels on said running gear for permitting travel of said toy on the ground.

1,556,648. LIGHT-ABSORBING FILTER FOR AUTOMOBILES. CHARLES D. SYMMS, Sioux Falls, S. Dak., assignor to Mabel L. Symms, Sioux Falls, S. Dak. Filed Mar. 28, 1924. Serial No. 702,521. 2 Claims. (Cl. 296—97.)

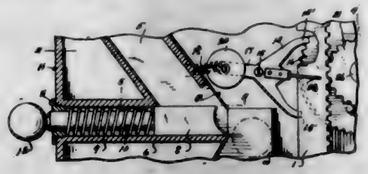
1. A glare shield for automobiles, comprising a disk of translucent material, and an enclosing frame of yielding resilient material, said frame comprising an annular head within which the disk is held, and a skirt joning one edge of the head, curved outwardly and laterally from the head, and an annular bead inside the skirt where it joins the head for contact with a flat surface when the skirt has been flattened.

1,556,649. SHINGLE GAUGE AND CLAMP. JOHN A. TOPPING, Nyack, N. Y. Filed Sept. 24, 1923. Serial No. 664,420. 1 Claim. (Cl. 108—33.)



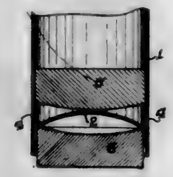
A device for gauging the extent of lap of the shingles of a roof and for permanently holding the butt ends of the shingles in place, comprising a relatively long narrow flat strip having indicia of linear dimensions extending from near one end towards the other end, and having a rectangular aperture in one end adapted to receive the point of a shingle, said apertured end initially bent on a curve to define the clamping bend to be subsequently made when applied, and to place the perforate end in a plane angularly related to the body part of the device whereby the point of the shingle may be entered in said aperture before the final bend.

1,556,650. CHECK-CONTROLLED MECHANISM. HARRY M. WALKER, New Orleans, La. Filed Mar. 11, 1924. Serial No. 698,478. 2 Claims. (Cl. 194—60.)



1. In combination with a rack pump rod for a gasoline tank, a manually operated pinion actuating the pump rod, a toothed wheel rotating with the pinion, said toothed wheel being of a diameter to overlie one of the faces of the pump rod, a substantially V-shaped dog pivotally supported opposite the pinion and adjacent the pump rod, the arms of the dog alternately engaging the toothed wheel, an arm secured to the apex portion of the dog and overlying the face of the pump rod remote from the toothed wheel, check controlled means for swinging the dog in one direction, and means carried by the pump rod for swinging the dog in the opposite direction.

1,556,651. PROCESS OF MAKING METAL CONTAINERS. JAMES P. WALKER, Chicago, Ill., assignor to Solar-Sturges Mfg. Co., a Corporation of Illinois. Filed Nov. 1, 1924. Serial No. 747,311. 6 Claims. (Cl. 113—116.)

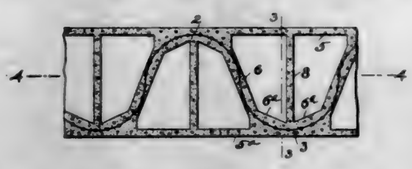


1. The method of applying a bottom to a receptacle consisting in, initially forming the bottom member with an upward dish and a depending flange, inserting said member in the receptacle, welding said member to the receptacle along the line where the flange and dish portions of the bottom member meet, and then dishing the bottom member downwardly relative to the receptacle.

1,556,652. PULL-SWITCH SOCKET. CHESTER E. WARNER, Berwyn, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 7, 1920. Serial No. 408,579. 6 Claims. (Cl. 173—354.)

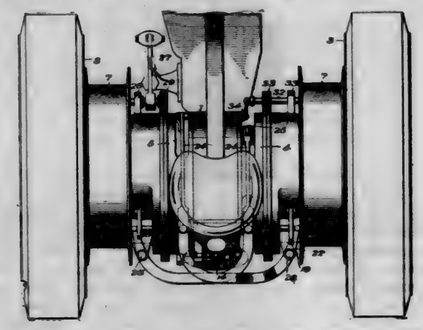
4. A switch mechanism comprising a switch blade oscillatable back and forth, a spring acting on said switch blade, and means for shifting said spring back and forth to cause oscillation of the switch blade comprising a rotatable member having a cylindrical surface provided with a cam track having a helical portion, said surface and cam track being part of and being rotatable with said rotatable member.

1,556,653. BULKHEAD CONSTRUCTION. WILBUR J. WATSON, East Cleveland, Ohio, assignor of one-half to Edward M. Graves, Cleveland, Ohio. Filed May 20, 1922. Serial No. 562,292. 7 Claims. (Cl. 61—39.)



2. A bulkhead, comprising piles driven into the ground in a row with regularly spaced inwardly and outwardly turned portions forming a corrugated wall, and a cap beam, of a uniform width substantially corresponding to the depth of the corrugations, secured upon the upper edge of the wall.

1,556,654. POWER DELIVERING OR HOISTING WINCH. HENRY H. WHITE, Muskogee, Okla., assignor of forty-nine one-hundredths to Oklahoma Engineering & Foundry Co. Filed Nov. 1, 1923. Serial No. 672,072. 19 Claims. (Cl. 254—166.)



1. A power-delivering attachment for motor vehicles including a drive axle having outer and inner sections, axle housings, a drum rotatably mounted on one of the housings, and means for connecting the drum to a section of the drive axle for rotating said drum.

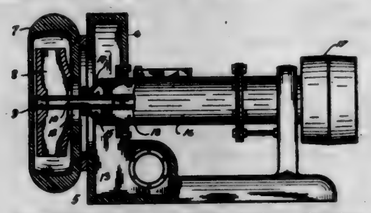
---

1,556,655. METHOD OF MAKING AUGER BITS. LARNED S. WHITNEY, Fiskdale, Mass. Filed Nov. 11, 1924. Serial No. 749,114. 7 Claims. (Cl. 26—102.)

1. The method of making auger bits from a bar of round stock, which consists in the following steps taken in substantially the given order: turning on the end of the bar the part for the lead screw and spurs, cutting from the bar a length equal to the finished bit, forming the tang, turning down the shank, milling the spiral slot, cutting the lips and spurs, and threading the screw.

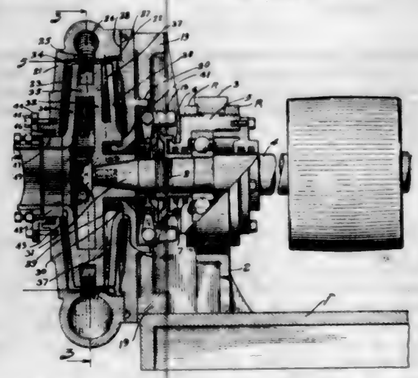
---

1,556,656. CENTRIFUGAL PUMP. ARTHUR R. WILFLEY, Denver, Colo. Filed Apr. 6, 1922. Serial No. 549,969. 2 Claims. (Cl. 286—9.)



1. In combination, a rotatable shaft, a chamber adapted to contain a shaft bearing, a second chamber adjacent thereto and adapted to contain a liquid, means between said chambers for preventing the liquid from flowing from the second mentioned chamber to the first mentioned chamber, comprising a partition member rigidly secured to the end walls of the first mentioned chamber and provided with an opening adapted to receive the shaft, said opening being larger than the shaft, the walls of said opening being provided with an annular recess and the partition member being provided with an opening extending from said recess to the outer surface of said member, and a member rigidly secured to said shaft and provided with a plurality of fan blades in the side nearest the partition member.

1,556,657. CENTRIFUGAL PUMP. ARTHUR R. WILFLEY, Denver, Colo. Filed June 9, 1924. Serial No. 718,850. 5 Claims. (Cl. 103—103.)



5. In a centrifugal pump, in combination, a casing forming a runner chamber having an intake opening on one side and a circular shaft-receiving opening on the other side, a shaft projecting through the shaft-receiving opening and into the chamber, said shaft being of a smaller diameter than the opening whereby a passageway is formed about the shaft, a runner secured to the shaft and mounted for rotation within said chamber, said runner having a central imperforate flange provided with a set of main pumping blades on the side nearest the intake opening and a set of auxiliary sealing blades on the side nearest the shaft-receiving opening, and means for closing the passageway about the shaft when the pump is inoperative and for opening said passageway when the pump operates, said last-named means comprising a centrifugal device operatively connected to the shaft.

---

1,556,658. BEARING MATERIAL. HARRY M. WILLIAMS, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 24, 1922, Serial No. 546,478. Renewed Apr. 6, 1925. 7 Claims. (Cl. 75—1.)

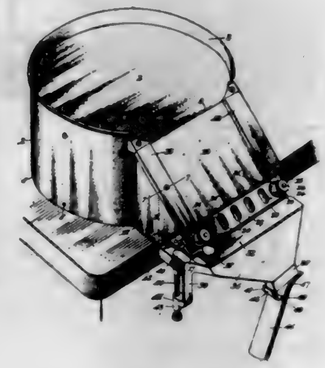
1. The method of producing bearing compositions which comprises intimately mixing finely divided copper, tin and graphite; compressing the mixture into the desired form under very high pressure; packing the formed material in lamp black and sealing in a container; and heating the formed material to 1100° to 1400° F. for 5 to 7 hours.

---

1,556,659. TREE CARRIER. EDGAR D. WILLIAMSON, Memphis, Tenn. Filed Feb. 19, 1925. Serial No. 10,376. 3 Claims. (Cl. 214—3.)

1. In a tree carrier, having raising and carrying means, a tree supporting frame comprising a beam adapted to be carried in an upwardly and rearwardly inclined position, a root and earth embracing cradle at the lower end of said beam, and a trunk supporting member, comprising a block, means hinging said block to the upper end of said beam and tree fastening means attached to said block and movable therewith.

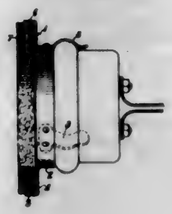
1,556,660. COIN-COUNTING MACHINE. JOHN A. WILLIAMSON, Denver, Colo., assignor to The Automatic Coin Stacker Corporation, Denver, Colo., a Corporation of Colorado. Filed Nov. 4, 1924. Serial No. 747,832. 6 Claims. (Cl. 133—8.)



1. In a device of the character described, a coin holder and said pivotally mounted member, and means of channels adapted to receive a fixed number of coins, a downwardly inclined slideway adapted to connect said holder and said pivotally mounted member, and means for tilting said member to discharge the coins therefrom, said member when tilted acting to cut off the supply of coins from the slideway.

---

1,556,661. EAR-PHONE ATTACHMENT. JOHN E. WOOD, Pittsfield, Mass. Filed Jan. 23, 1925. Serial No. 4,286. 2 Claims. (Cl. 179—182.)

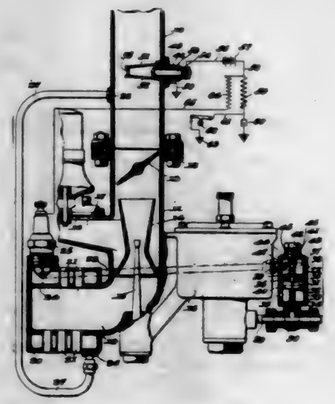


1. An ear-phone attachment, comprising a body portion having integral oppositely disposed circular flanges of substantially Z-shaped formation, spring clips secured to one of said flanges for attachment to the ear-phone, said ear-phone attachment being provided with a soft bearing surface for contact with the head of the user and adapted to entirely surround the ear of the user, substantially as described.

---

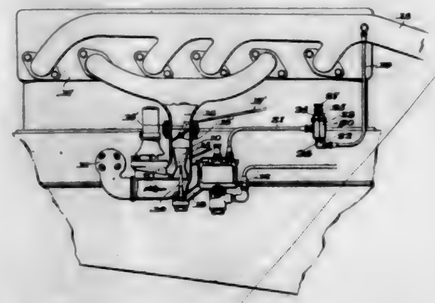
1,556,662. HYDROCARBON MOTOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 5, 1919. Serial No. 335,805. 6 Claims. (Cl. 123—122.)

1. In a hydrocarbon motor, the combination with the motor intake pipe and a carburetor connected to the intake pipe and having a fuel nozzle and an air intake, of a combustion heater connected to discharge into said intake pipe above the carburetor nozzle and having heat applying means to heat the air as it enters said air intake, said heat applying means being located at a point in advance of the fuel nozzle.



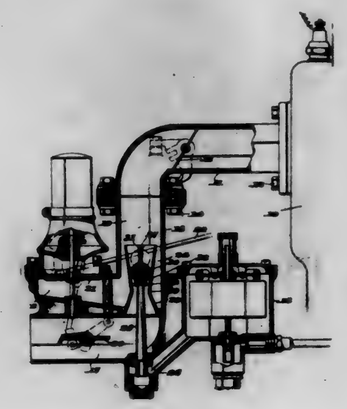
---

1,556,663. HYDROCARBON MOTOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 17, 1919. Serial No. 345,586. 9 Claims. (Cl. 123—119.)



5. In combination, a hydrocarbon motor having an intake manifold and an exhaust manifold, a carburetor communicating with said intake manifold and having a throttle valve, a mixing chamber, a float chamber and a fuel inlet leading from said float chamber to said mixing chamber, a conduit connecting said exhaust manifold with said float chamber for communicating the pressure in said exhaust manifold to said float chamber and a regulating valve in said conduit having means operable upon predetermined pressure in said exhaust manifold to move said valve and substantialy interrupt the communication between said exhaust manifold and said float chamber.

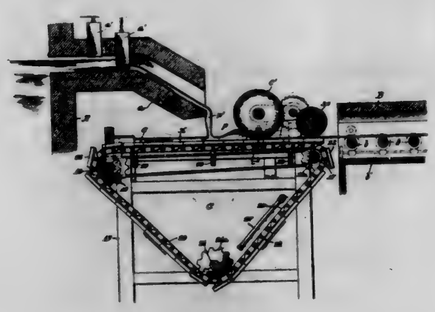
1,556,664. CARBURETOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 26, 1920. Serial No. 391,954. 7 Claims. (Cl. 261—41.)



1. In a carburetor, the combination with means forming an air passage and a fuel nozzle extending into the air passage and having upper and lower outlets, of a valve movable on the nozzle between said outlets.

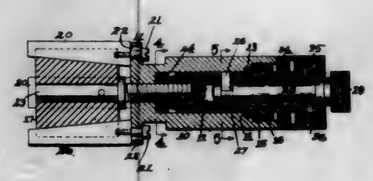
---

1,556,665. ART OF PRODUCING CONTINUOUS SHEET GLASS. CLARENCE W. AVERY and EDWARD T. BROWN, Detroit, Mich., assignors to Ford Motor Company, Detroit, Mich., a Corporation of Delaware. Filed Apr. 13, 1922. Serial No. 552,095. 25 Claims. (Cl. 49—3.)



1. In the art of producing continuous sheet glass, the method of forming the sheet which consists in establishing an unconfined pool of the molten metal on a flat traveling surface in advance of and leading to a forming pass with the pass dimensions substantially equal to the thickness of the sheet and greater than the width of the sheet, and continually passing metal from the pool through the pass to form the sheet, whereby the unconfined characteristic of the pool will be maintained within the pass with respect to the sheet edges, the pool characteristic being maintained by a continuous supply of metal thereto, the width of the sheet being produced by the natural flow of metal within the pool.

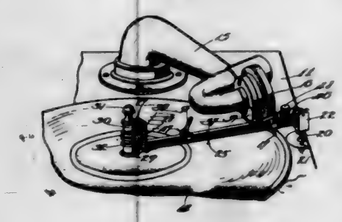
1,556,666. ADJUSTABLE INTERNAL GAUGE. JOHN BATH and STANLEY W. BATH, Worcester, Mass.; said Stanley W. Bath assignor to said John Bath. Filed Apr. 18, 1921. Serial No. 462,142. 8 Claims. (Cl. 33—178.)



1. An adjustable internal gauge comprising an elongated body, an internally threaded sleeve mounted for angular movement only in said body, a head having a projection threaded into said sleeve and having dovetailed guide ways therein inclined toward the axis of the gauge, a plurality of gauge bars mounted in said guide ways, and means to prevent axial movement of said gauge bars relative to said body.

---

1,556,667. RECORD REPEATER FOR SOUND-REPRODUCING INSTRUMENTS. RUDOLPH BLASCHKE, now by change of name Rudolph Frederick Blash, Chicago, Ill., assignor, by mesne assignments, to Edgar S. Byers, trustee, Cleveland, Ohio. Filed Apr. 2, 1919. Serial No. 286,819. 6 Claims. (Cl. 274—15.)



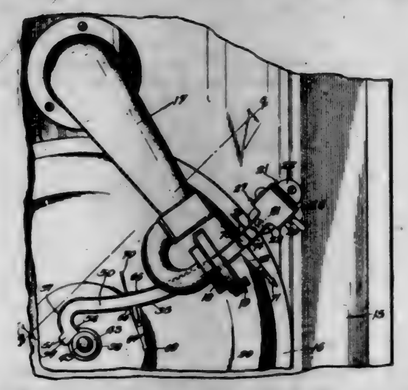
6. An attachment for sound reproducing machines of the type having a spindle driven turn-table adapted to accommodate a disk record and having a swinging tone arm and a sound box, said attachment comprising a device adapted to be fitted onto the upper end of the turn-table spindle centrally of the turn-table so as to rotate with the latter, and said attachment comprising two arms, one above the other, and adapted to be pivotally supported at the side of the turn-table and to extend inwardly toward the center thereof, the lower arm being a pilot arm having a loose connection with the lower part of the elevating member, and the upper arm being a track arm having means adapted to engage the elevating member so that said arm will be inclined and engage a part movable with the sound box to restore the tone arm to starting position.

---

1,556,668. RECORD REPEATER FOR SOUND-REPRODUCING INSTRUMENTS. RUDOLPH BLASH, Chicago, Ill., assignor, by mesne assignments, to Edgar S. Byers, trustee, Cleveland, Ohio. Filed Sept. 18, 1919. Serial No. 324,542. 7 Claims. (Cl. 274—15.)

8. The combination with a sound reproducing instrument having a turn table and a sound box, of means

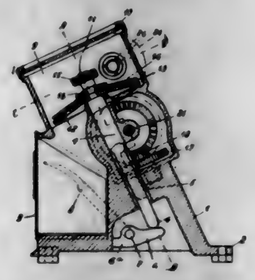
extended over the turn table below the sound box adapted to raise and lower the sound box, said means being hinged about a horizontal axis to a frame that is secured



to the instrument, and a spring device for holding said means in elevated position when swung upwardly above the turn table, substantially as described.

---

1,556,669. DEVICE FOR SHARPENING PENCILS. JOHANN JAKOB BÖHM, Zurich, Switzerland. Filed July 7, 1924. Serial No. 724,680. 2 Claims. (Cl. 120—95.)



1. In a pencil sharpener a casing, a rotatable pencil holding means journaled in said casing, a spindle journaled in said casing, a disk of abrasive material on said spindle, means to move the spindle endwise and common rotating means for the pencil holding means and the pencil sharpening means.

---

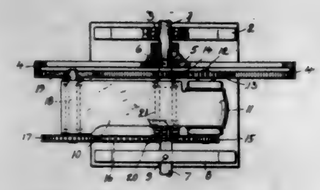
1,556,670. PROCESS OF PRODUCING AND SEASONING HYDRATED LIME. DAVID R. BONE, Oglesby, Tex. Filed Sept. 21, 1923. Serial No. 664,069. 4 Claims. (Cl. 23—188.)

1. The process of hydrating lime, comprising placing lump-lime in a screen-bottom car, dipping the car in water, and draining the excess water from the lump-lime through the screen-bottom of the car.

---

1,556,671. SPEED-CONTROLLING AND DRIVING APPARATUS FOR VARIABLY-LOADED WORKING MACHINES. MADS LIE BOSCHGREVINK, Christiania, Norway. Filed Feb. 1, 1924. Serial No. 690,035. 4 Claims. (Cl. 74—34.)

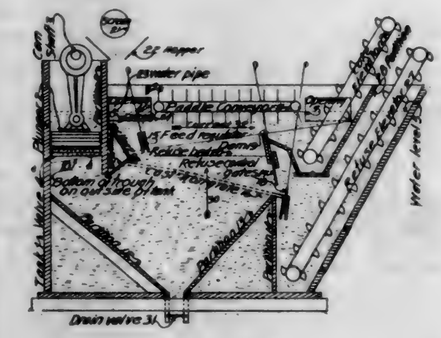
3. A speed controlling and driving apparatus for variably loaded working machines including a main support, a shaft journaled therein, a wheel, the hub of which is rigid with the shaft while the rim is provided with internal teeth, a stationary shaft having one end mounted in the motor and the other end operably mounted in the hub of the wheel, a secondary support rotatably mounted on the stationary shaft, a motor carried by the



support and including a shaft, gearing between the motor shaft and the stationary shaft, another shaft mounted in the secondary support opposite the motor, a gear on the last mentioned shaft meshing with the internal teeth of the wheel, and means for operably connecting the last mentioned shaft and the motor shaft.

---

1,556,672. APPARATUS FOR SEPARATING UNBURNED COKE FROM THE PRODUCTS OF COMBUSTION. CHARLES I. BOYER, Ridgway, Pa. Filed Apr. 14, 1922. Serial No. 552,638. 10 Claims. (Cl. 83—79.)

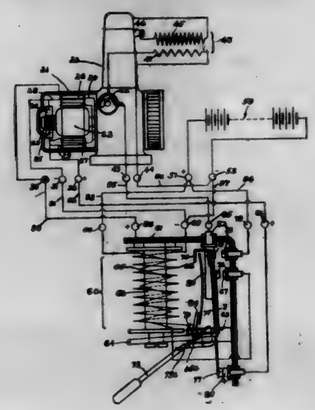


1. In an apparatus for separating substances of different specific gravities, a tank adapted to hold a liquid and having a pump chamber at one end, said pump chamber being open at its lower end and terminating above the level of the bottom of the tank, a vertically reciprocating plunger working in the pump chamber, said pump chamber having an opening in a side wall thereof below the level of the plunger when at the end of its downward stroke, said tank also having a lateral opening adjacent to its end remote from the pump chamber, said second named opening being located at a higher level than the first named opening, a conduit leading from the second named opening to the first named opening, an inwardly opening flap valve controlling said first named opening, a grating disposed within said tank between the lower end of said pump chamber and said second named opening, means for discharging a mixture comprising substances of different specific gravities into the tank above the grating, and means for discharging

liquid under pressure into the tank at the first named end of the latter in such manner as to cause a horizontal movement of the liquid in the tank above the grating toward the second named end of the tank.

---

1,556,673. ELECTRICAL SYSTEM. HENRY P. BRABUTIGAM, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed May 12, 1919. Serial No. 296,503. 13 Claims. (Cl. 290—35.)



1. In an electrical system, the combination with an engine; of a dynamo operable as a motor to start the engine, or as a generator driven by the engine; a storage battery; and a controller comprising a support of conducting material, means establishing a circuit through said support for connecting the battery with the dynamo to operate the same as a motor, and means for establishing a second circuit, not including said support, for connecting the battery with the dynamo when operating as a generator.

6. In an electrical system, the combination with an engine; of a storage battery; a dynamo adapted to operate with either shunt or compound characteristics, and operable as a motor to crank the engine or as a generator driven by the engine to charge the battery; means including a controller for connecting the dynamo with the battery, said controller having a shunt winding, manually controlled means movable from a first position into a second position for establishing a main circuit between the battery and dynamo and for connecting said shunt winding in parallel with the dynamo, and magnetic means controlled by said shunt winding for conditioning another main circuit between the battery and dynamo whereby said second-mentioned main circuit may be established upon the return of said manually-controlled means to its said first position to change the operating characteristics of the dynamo.

---

1,556,674. ELECTRICAL APPARATUS. JOHN G. CAMPBELL, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 24, 1923. Serial No. 621,092. 4 Claims. (Cl. 172—279.)

1. A commutator short-circuiting device for an electric motor comprising, in combination, a rotatable member including a plate carried by the rotatable member and located adjacent the commutator of the motor, a second plate longitudinally movable with respect to the shaft of the motor, one of said plates being provided with a camming surface; a weight interposed between said plates and pivotally mounted upon said rotating member, a member carried by said weight and adapted to engage one of said plates and the camming surface of the other

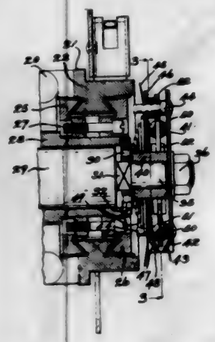


plate for moving said movable plate, and a contact operated by the movable plate for engaging the bars of the commutator.

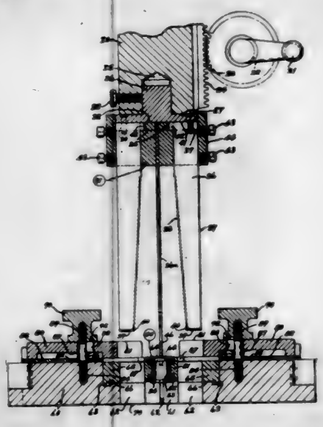
---

1,556,675. COMMUTATOR-SLOTTING APPARATUS. JOHN J. CARTER, Anderson, Ind., assignor to General Motors Corporation, a Corporation of Delaware. Filed Oct. 31, 1923. Serial No. 672,008. 2 Claims. (Cl. 90—33.)

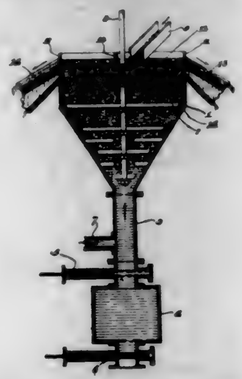


1. Commutator slotting apparatus comprising in combination, a plurality of tools each adapted to slot a commutator segment, a tool holder adapted to be connected with said tools and maintain them in spaced relation, a work holder including a clamping member having a portion movable laterally toward the commutator and movable longitudinally thereof to clamp the commutator in position, and a common operating member for moving said clamping member in both directions.

---

1,556,676. METHOD FOR SEPARATING MATERIALS. THOMAS M. CHANCE, Philadelphia, Pa. Filed Aug. 31, 1923. Serial No. 660,428. 2 Claims. (Cl. 83—85.)

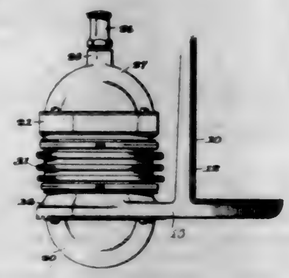
1. A method for separating materials of different specific gravities which consists in immersing said materials in a maintained suspension in liquid of comminuted solid matter of greater specific gravity than said liquid and substantially insoluble therein, and constituting a fluid mass having a specific gravity materially greater than that of the lightest of said materials, the quantity of said materials so immersed being sufficient to form a zone of floating materials of such thickness as to permit said floating materials to stratify in the order of their relative specific gravities; in maintaining the lower portion of said zone of floating materials as a baffle to prevent the heavier falling materials from carrying down the lightest of said materials floating at the top of said fluid mass; in causing materials of greater



specific gravity than said fluid mass to sink to the lower part of said fluid mass; in removing the lighter materials floating in the upper portion of said zone of floating materials and in separately removing the materials comprising the lower parts of said zone of floating materials, whereby differential separation of the said floating materials is effected into grades of different specific gravities, and in separately removing said heavier materials from the lower part of said fluid mass.

---

1,556,677. MOTOR VEHICLE. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 6, 1919. Serial No. 302,125. 11 Claims. (Cl. 267—29.)

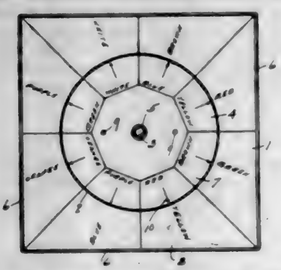


1. A spring shackle having spherically curved surfaces on the parts to be connected and having a shackle member provided with spherical members interfitting with the corresponding spherical surfaces of said parts and resilient means carried by said shackle for seating said interfitting parts.

---

1,556,678. GAME. WILFRID E. DIBBLE, River Rouge, Mich. Filed Aug. 5, 1925. Serial No. 48,187. 2 Claims. (Cl. 273—142.)

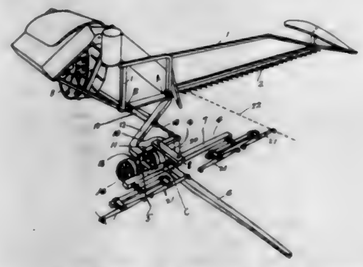
1. A game comprising a base having a central circular recess; a disc wheel rotatably mounted within the recess the upper surfaces of the wheel and base falling in the same plane and being divided into a plurality of radially aligned sections, the said section of the wheel



and base being colored, and individually distinguished, by like colors, but arranged in diverse order as between the wheel and base.

---

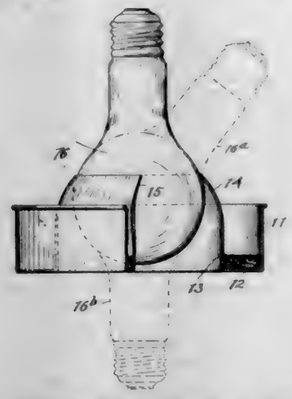
1,556,679. DRAFT-HITCHING DEVICE. JOHN THOMAS DOOLAN, Vancouver, British Columbia, Canada. Filed Oct. 20, 1922. Serial No. 595,859. 4 Claims. (Cl. 280—82.)



1. The combination with a binder, of a crossbar disposed in front thereof and connected thereto by a connection extending between its inner end and the binder, said crossbar being adapted to permit hitching of the draft thereto at a point between the inside of the binder truck and the grain line.

---

1,556,680. COMBINED AIR PURIFIER AND REFLECTOR. FRANK C. DORMENT, Wellington, Ohio. Filed Sept. 21, 1923. Serial No. 663,969. 6 Claims. (Cl. 219—45.)

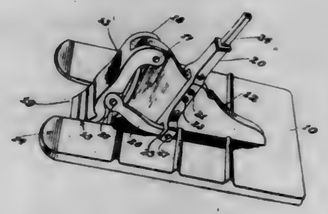


2. A vaporizing pan comprising an annular trough having an outer substantially circular wall and an inner wall concentric with the outer wall, the major

portion of the inner wall being of a diameter materially greater than the enlarged portion of an electric light bulb and tapering inwardly adjacent its upper edge to an opening of less diameter than at the bottom whereby the upper edge portion of said wall forms a supporting seat engageable with a rounded portion of a lamp bulb to support the pan therefrom at various angles with respect to the axis of the bulb.

---

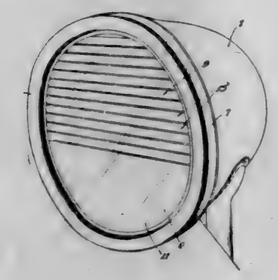
1,556,681. TRACK LINER. JOHN F. ELLIOTT, Allerton, Iowa. Filed May 20, 1924. Serial No. 714,658. 3 Claims. (Cl. 254—44.)



3. In a track liner, the combination of a base plate provided at its forward end with a notch and having a bracket plate rising therefrom to overhang said notch, a hand lever pivoted at a point between its ends upon the bracket plate, a lifting arm pivoted at its upper end upon the bracket plate above the notch and provided at its lower end with a toe normally accommodated in the notch, and means secured to the forward end portion of the lever and to the lower end portion of the arm connecting the lever and arm to swing in unison and movable to closely approach an alined position with respect to the lever as the lower end of the arm is swung upwardly.

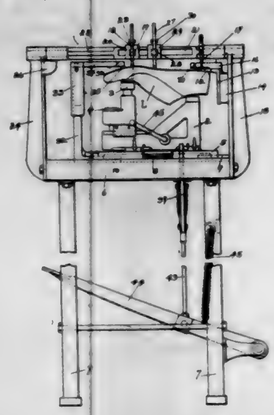
---

1,556,682. HEADLIGHT SCREEN. WILLIAM A. FARISH, Norfolk, Va., assignor to Owl Headlight Screen Co., Inc., Norfolk, Va., a Corporation of Virginia. Filed Nov. 7, 1922. Serial No. 599,567. 4 Claims. (Cl. 240—48.4.)



1. A headlight screen comprising a frame having spaced corrugated flanges, and louver slats seated and supported at their ends in the valleys of the corrugations in said flanges.

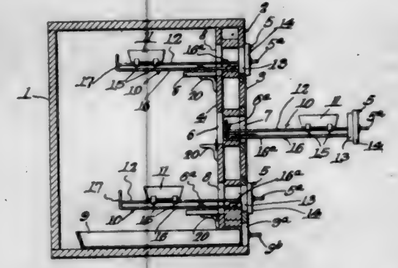
1,556,683. WORK-POSITIONING APPARATUS. MARK E. FERNALD, Saugus, Mass., assignor to C. C. Blake, Incorporated, Boston, Mass., a Corporation of New York. Filed Nov. 22, 1918. Serial No. 263,741. 14 Claims. (Cl. 33—180.)



4. In an apparatus for gaging the position of work consisting of a last, shoe, or the like, a device for engaging a lateral face of the work, and a carrier supporting said device and mounted for reversal to enable said device to engage either side of the work.

---

1,556,684. DISTRIBUTING TRAY. CLAYTON M. GARDNER, St. Regis Falls, N. Y. Filed Dec. 10, 1924. Serial No. 755,112. 3 Claims. (Cl. 24—9.)

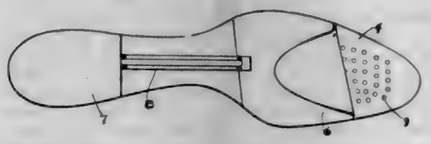


1. A refrigerating chamber having a double wall with registering openings in the sections thereof, a tray mounted to slide through said openings, a closure for the opening in the outer section carried by the outer end of said tray, a hinged closure for the opening in the inner section, cooperating means carried by said hinged closure and said tray to be engaged on the outward movement of the tray so that said closure will be positively closed by the movement of the tray to its extreme outward position, the closure carried by the tray being adapted to close the opening in the outer section when the tray is moved to its extreme inward position.

---

1,556,685. INNERSOLE. THOMAS M. GUNAN, Lebanon, Ohio. Filed Feb. 26, 1924. Serial No. 695,317. 1 Claim. (Cl. 36—44.)

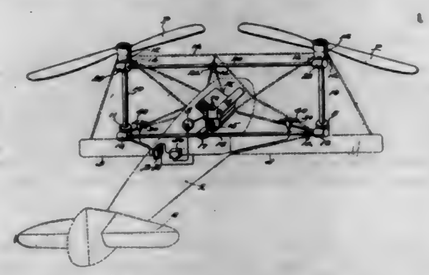
An integral inner sole for sewing onto the bottom soles and uppers of shoes in the course of construction, comprising a relatively flexible body portion having the ball and toe thereof for length-wise and side-wise flexibility perforated with cylindrical apertures at substantially uniform distances from the edge to provide a rim for the reception of stitches for attachment to



the bottom sole and upper of a shoe, a moisture proof layer of material to lie between the bottom sole and inner sole, an arch supporting element attached to the bottom, and a layer of material upon the upper portion of the inner sole used as a finisher thereof.

---

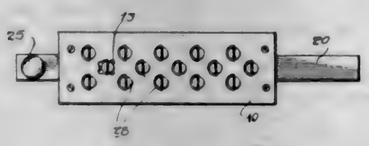
1,556,686. AIRPLANE. RANDOLPH F. HALL, Ithaca, N. Y., assignor of one-fourth to Theodore P. Hall, Wallingford, Conn. Filed Oct. 8, 1924. Serial No. 742,400. 38 Claims. (Cl. 244—25.)



1. In aircraft, a plurality of propellers, a power plant, a main drive mechanism from said power plant to each of said propellers, respectively and an auxiliary drive mechanism connecting the main drive mechanism to said propellers, said auxiliary drive operative to drive any one of said propellers upon failure in the respective main drive mechanism therefor.

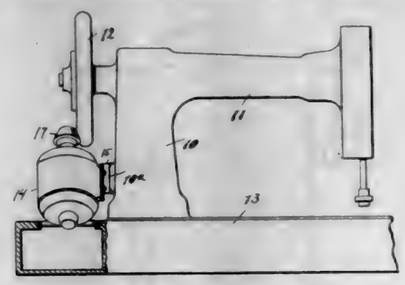
---

1,556,687. LOCK. DRED P. HAYNES, Anniston, Ala. Filed Nov. 11, 1924. Serial No. 749,349. 4 Claims. (Cl. 70—53.)



1. A base plate having a longitudinal channel extending therealong, a liner seated in said channel and having a similar longitudinal channel, a cover plate extending over said liner, said liner, base plate and cover plate being secured together to form a longitudinal slot, a locking bolt slidable in said slot, said base plate, liner and cover plate being provided with aligned openings, said openings being arranged to lie with their centers on the edges of the longitudinal slot, the bolt having semi-circular recesses spaced to conform to said openings, cylindrical pins extending through said openings and cutaway diametrically opposite said bolt, heads on said pins having combination indicia thereon, and means to hold said pins in said openings.

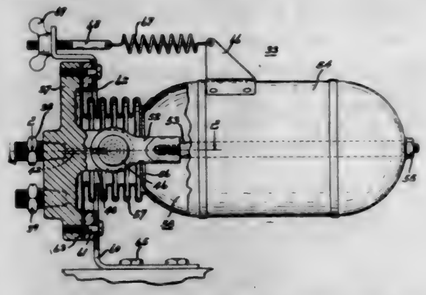
1,556,688. MOTOR ATTACHMENT FOR SEWING MACHINES. FOSTER F. HILLIX, Cleveland, Ohio, assignor to White Sewing Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 5, 1922. Serial No. 549,830. 2 Claims. (Cl. 74—26.)



1. In combination with a sewing machine having a head with a hand wheel, a motor, and a bracket securing the motor to the head, said motor having a tapered pulley frictionally engaging the hand wheel and secured on the motor shaft so that it may be adjusted lengthwise thereof to vary the pressure of the pulley on the hand wheel.

---

1,556,689. REFRIGERATING APPARATUS. HARRY B. HULL, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 23, 1923. Serial No. 670,353. 4 Claims. (Cl. 137—68.)



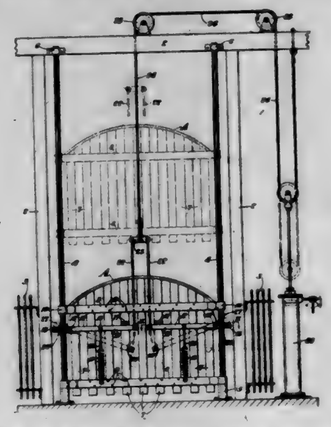
1. In a liquid flow controlling device of the class described, a stationary end plate; a hollow oscillating liquid receiving member; a flexible connection between said member and said end plate and valve mechanism located within the space enclosed by said liquid receiving member and said flexible connection for controlling the flow of liquid into and out from said liquid receiving member.

---

1,556,690. SAFETY CATCH FOR MINE GATES. GUSTAVE E. HUTTLE, Scottdale, Pa. Filed Feb. 29, 1924. Serial No. 696,074. 2 Claims. (Cl. 39—63.)

1. The combination with a pair of cylindrical guide posts and a vertically movable gate having a sliding guide connection with said posts, of means for moving said gate vertically and means for preventing the falling of said gate if said lifting means should fail, said means comprising a pair of transverse levers pivotally mounted on said gate, a coil spring secured to each of said levers and to said gate for exerting a constant downward pull on said levers, a step secured to said gate above each of said levers and adapted to limit their upward movement to the horizontal, a pair of lifting rods having their lower ends pivotally connected to the inner ends

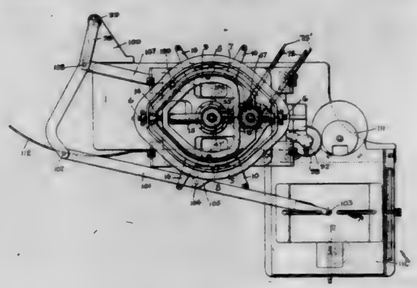
of said levers and having their upper ends pivotally secured to a suitable cross head, a lifting cable secured to said cross head and connected to a suitable power means for lifting said gate, said levers each being composed of two bars, one being disposed on each side of said gate, said bars being bent outwardly adjacent their



outer ends to form spaced jaws, and a relatively hard metal locking plate removably secured between said spaced jaws and encircling said posts, said plates having side lugs projecting through suitable slots in said jaws and having their ends bent at right angles to the main body portion of the plate, said ends being bent in opposite directions and serving as strengthening flanges.

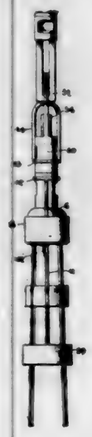
---

1,556,691. PUNCH-CUTTING MACHINE. MAURITZ C. INDAHL, Philadelphia, Pa., assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed Feb. 15, 1923. Serial No. 619,219. 12 Claims. (Cl. 90—13.1.)



1. A punch cutting machine comprising a tracer lever suspended to swing in all directions whereby its tracer may follow a pattern; a slidable member; adjustable means connecting the lever and member whereby movement of the lever in one direction will drive the member in said direction; a second slidable member, adjustable means connecting the lever and said second member whereby movement of the lever in a direction at right angles to said first named direction will drive the second member in said right angle direction; a holding device connected with said members to be driven thereby whereby the motion of said device will correspond to the motion of said tracer, the proportional degree of motion of the device in either of the two said directions being dependent upon the particular adjustment of said two connecting means.

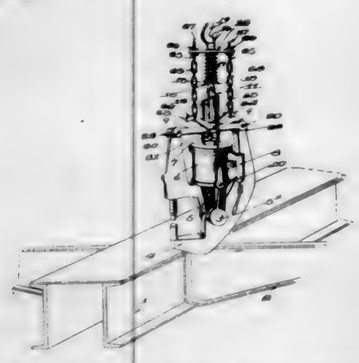
1,556,692. FISHING TOOL. EDWIN B. KARN and LAWRENCE J. LEUTHART, Osage, Wyo. Filed Apr. 18, 1922, Serial No. 554,847. Renewed Mar. 30, 1925. 9 Claims. (Cl. 294—100.)



1. A fishing tool comprising a head, a plurality of forwardly directed arms secured thereto and having gripping means, a sleeve surrounding said arms and having inwardly directed cam engaging the arms and adapted for moving the same inwardly, and means whereby to advance the sleeve, said arms being provided with slots having inclined walls engaging the edges of said cams.

---

1,556,693. LIFTING ATTACHMENT FOR RIVETING MACHINES. DAVID KENNEDY, Richmond, Va. Filed June 20, 1924. Serial No. 721,264. 4 Claims. (Cl. 78—19.)



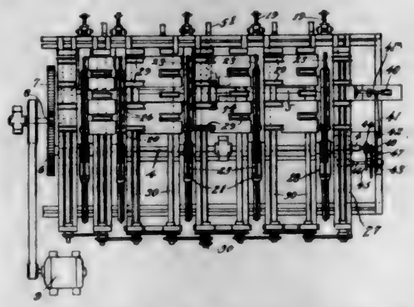
1. In combination, a vertically movable machine comprising a pair of elongated body members, a horizontal pivot element connecting said elongated members so that said members terminate at their upper ends above the level of the pivot element, a vertically reciprocable member disposed between the upper end portions of said elongated body members, a flexible suspension device having connection with said pivot element, toggle arms pivotally connected at their inner ends to said vertically reciprocable member and pivotally connected at their outer ends to the upper ends of said body members, and means for connecting said vertically reciprocable member to said suspension device at a point on the latter above the level of the upper ends of said body members.

1,556,694. PAINT AND VARNISH REMOVER AND PROCESS. CLAUDE A. KING and CARL M. WARLICK, Durham, N. C., assignors to Clean Wash Paint and Varnish Remover Co., Inc., Syracuse, N. Y., a Corporation of New York. Filed June 7, 1921. Serial No. 475,755. 6 Claims. (Cl. 87—5.)

3. A process of removing paint or varnish coating from coated surfaces, which comprises applying to the surface a liquid comprising a concentrated solution containing an alkali metal hydroxid, also containing an alkaline earth metal hydroxid, common salt, and oil capable of masking the odor, thereafter sprinkling the surface with a small amount of aqueous liquid, allowing chemical action to take place and thereafter removing the reaction products.

---

1,556,695. SHEET AND PLATE PILING DEVICE. KRISTIAN KRONBORG, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Oct. 25, 1923. Serial No. 670,795. 11 Claims. (Cl. 214—6.)



1. A device capable of lifting and conveying sheets or plates of a desired material from a suitable conveyor table, comprising lifting bars operating in a horizontal position, having a lifting movement, a transporting movement, and a return movement, carrying said sheets or plates in a horizontal position to an adjacent stack or pile upon a truck or other means of transportation, and means for operating said lifting bars, said operating means comprising rings operating upon eccentrics mounted upon rotatable shafts, and means for enforcing a parallel motion at one side of the rings, and connected to the lifting bars at the other side of said rings.

---

1,556,696. DENTAL FILLING MATERIAL. PAUL W. KRUGER, Boyett, Miss. Filed Feb. 6, 1925. Serial No. 7,408. 10 Claims. (Cl. 106—6.)

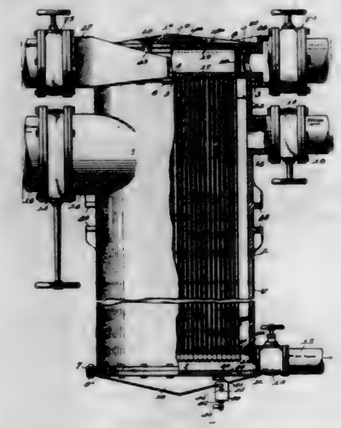
2. A dental cement composition consisting of a cement powder and a liquid in which guaiacol is the setting agent having setting reaction with said powder in forming a hardened mass.

10. A dental cement comprising a powder suitable for dental uses, which comprises kaolin and magnesium oxide, and a liquid in which guaiacol is a setting agent that reacts with the powder to harden with it.

---

1,556,697. STANDARD-UNIT MARINE CONDENSER. RICHARD L. LEACH, New Orleans, La. Filed Aug. 19, 1922. Serial No. 582,976. 3 Claims. (Cl. 257—221.)

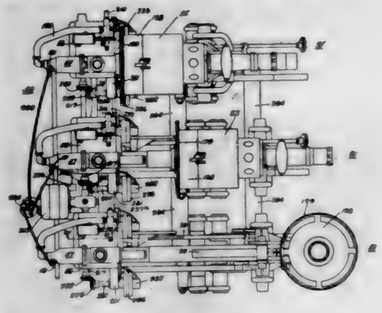
1. In an apparatus of the character described, a vertically disposed substantially cylindrical casing closed at its lower end, said casing having an outlet adjacent to its lower end and an inlet at a higher level, a header closing the upper end of the casing, said header being provided with a serpentine partition extending between the sides thereof and dividing the interior of the header into two compartments, one of said compartments being provided with an inlet and the other compartment being provided with an outlet, and a plurality of con-



ducting tubes of substantially U-shaped formation, each of said tubes being connected with the header to provide communication between the two compartments of the header.

---

1,556,698. FURNACE. CHARLES L. LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 3, 1922. Serial No. 572,504. 100 Claims. (Cl. 266—5.)



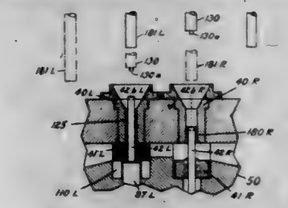
6. In a furnace, the combination with a shell and a cover therefor, said shell and cover adapted to support a hollow body to be treated with its exterior walled off from the interior, said cover having an opening providing access to the interior of the body; of a burner having a flame tube adapted to project through said burner and into said body; and means providing for retracting said shell from said tube to permit opening said cover and removal of said body.

---

1,556,699. MOLDING MACHINE. CHARLES L. LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 9, 1923. Serial No. 637,819. 43 Claims. (Cl. 18—16.)

2. In a machine of the kind described, the combination with means for receiving finely-divided material, including a mold and a removable end member therefor; means

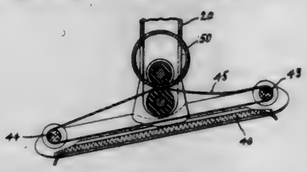
for periodically moving the end member against the mold; a wedge periodically operable to clamp said member rigidly against the mold; a plunger for compressing the



material in the mold while said end member is rigidly clamped against the mold; and another plunger for ejecting the compressed material from the mold when the member is separated from said mold.

---

1,556,700. DOMESTIC APPLIANCE. RALPH L. LEE, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 15, 1923. Serial No. 675,016. 3 Claims. (Cl. 68—32.)



3. In a wringer, the combination with a pair of rolls for engaging articles to be wrung, one of said rolls being provided with spaced annular grooves; of a supporting frame having grooves in alignment with the grooves in the grooved roll; and rings of greater diameter than that of the grooved roll received by the grooves in said roll and in the supporting frame and movable with the articles for preventing articles sticking to the grooved roll.

---

1,556,701. MECHANICAL PENCIL. JOHN G. LIDDELL, Everett, Mass., assignor to The Moore Pen Co., Boston, Mass., a Corporation of Massachusetts. Filed May 10, 1924. Serial No. 712,465. 1 Claim. (Cl. 120—18.)

In a mechanical pencil, a longitudinally slotted guide tube; a hollow screw revolubly mounted upon the tube and having a thread of one pitch from its rear end to near its forward end and a thread of a greater pitch for the balance of its length; a slotted carrier mounted within the tube and having an actuating stud passing through the slot of the tube into the hollow screw-thread; a plunger mounted within the slotted carrier and having a stud projecting through the carrier slot, the tube slot and into the hollow screw thread, in advance of the carrier stud, the carrier and plunger being independently and positively actuated by the hollow screw, as and for the purpose described.

---

1,556,702. METHOD OF SECURING A METALLIC COMPOSITION TO METAL MEMBERS. EVRAH C. LIPPS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 10, 1924. Serial No. 685,361. 10 Claims. (Cl. 219—10.)

1. The process of attaching alloy tips to metal members which consists in first positioning the tip on the member; then in passing a heating current through the member to heat the tip by conduction; and thereafter passing welding current through the member and the tip.

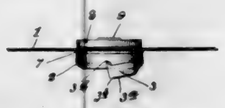
---

1,556,703. PROCESS OF FIBRATING ASPHALT. ALAN R. LUKENS, Wyoming, Ohio, assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed Jan. 4, 1923. Serial No. 610,704. 3 Claims. (Cl. 106—31.)

1. A process of hardening and toughening asphalt or the like bituminous body, which consists in mixing a bitumen and finely divided matter having abrasive qualities, independently thereof, mixing a bitumen and fibrous material, and finally placing the two mixed masses together and mixing them, whereby the abrasive quality of the matter against the fibrous material is reduced in said final mixing.

---

1,556,704. DIAPHRAGM FOR MECHANICAL HORNS. WILLIAM H. MCBARRON, Orange, N. J., assignor to Klaxon Company, a Corporation of Delaware. Filed May 3, 1922. Serial No. 558,150. 4 Claims. (Cl. 116—142.)

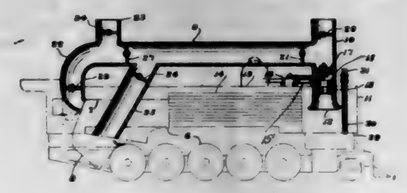


3. A diaphragm of thin spring steel and riveted thereto, a wear piece comprising a head portion having an integral shank riveted through the diaphragm and through a washer on the rear side thereof, the shank and head element being formed with a fillet at the base of the shank, in combination with a spacing washer between the head and the diaphragm, having a thickness at least as great as the height of the fillet and an internal diameter at least as great as the base diameter of the fillet.

---

1,556,705. MEANS FOR PROMOTING COMBUSTION AND ECONOMIZING IN FUEL CONSUMPTION. ROLAND A. MELVIN, Wilmington, Del. Filed Mar. 18, 1922. Serial No. 544,874. 1 Claim. (Cl. 110—49.)

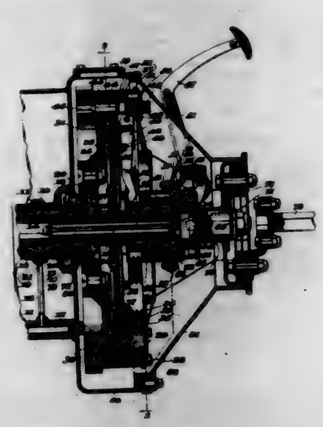
The combination with a boiler structure including a fire-box, ash box, smoke box, and a smoke outlet stack for atmospherical communication, a branch pipe communicating with said outlet stack and having communication with the interior of said fire-box, a second branch pipe formed on said first named branch pipe and having communication with said ash box, a relatively short branch pipe having communication with said first named branch pipe and having atmospherical communi-



cation, and valves arranged one in each of said branch pipes and one in said stack and other valves arranged in said first named branch pipe whereby either the second mentioned or relatively short branch pipe may be cut off from active communication with the major portion of the first named branch pipe.

---

1,556,706. DRIVING MECHANISM FOR MOTOR VEHICLES. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 26, 1920. Serial No. 391,988. 7 Claims. (Cl. 192—113.)

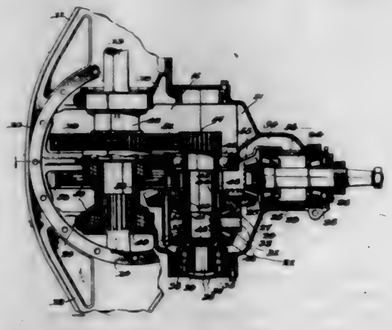


4. In combination, a hollow driving shaft, a driven shaft, a clutch to connect said shafts having a release bearing, a source of lubricant, means to lubricate the release bearing from said source through the hollow shaft, and means to return lubricant from the bearing to said source.

---

1,556,707. MOTOR VEHICLE. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 21, 1921. Serial No. 471,519. 9 Claims. (Cl. 74—99.)

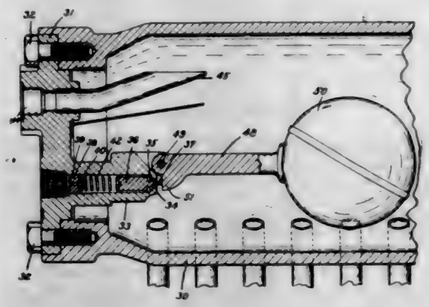
1. In a driving axle, a drive shaft, driven shafts, differential gearing operatively connected to said drive shaft, spur gears splined on the driven shafts operatively connected to the differential gearing, and bearings on



each side of each of said spur gears and adjacent thereto, the gears being mounted in the bearings independently of the shafts.

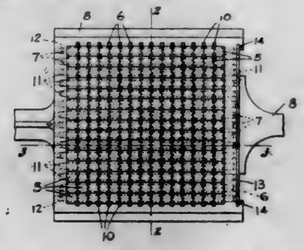
---

1,556,708. REFRIGERATING APPARATUS. ROBERT G. OSBORN, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 8, 1923. Serial No. 666,248. 1 Claim. (Cl. 137—104.)



In refrigerating apparatus of the class described, a vessel adapted to contain a liquefied refrigerating material, a boss carried by a wall of said vessel and extending thereinto, and having a liquid supply duct extending therethrough and through which liquid is supplied to the interior of said vessel, said duct being screw threaded at its outer end, and having a valve seat at its inner end, a valve arranged within said duct and adapted to cooperate with said valve seat, a spring located within said duct and one end of which acts upon said valve, a threaded abutment arranged within said duct and in engagement with the threaded portion thereof, and against which the other end of said spring abuts, and a float member located within said vessel and supported from the inner end of said boss and cooperating with said valve to control the same, said duct being internally threaded exteriorly to the adjustable abutment aforesaid to permit a liquid supply conduit to be detachably connected therewith.

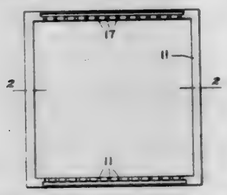
1,556,709. MATRIX-CASE EQUIPMENT FOR TYPE-CASTING MACHINES. FRANK HINMAN PIERPONT, Salfords, Horley, England, assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed June 21, 1923. Serial No. 646,980. 6 Claims. (Cl. 199—76.)



1. A die case equipment comprising a series of parallel bars, a series of parallel rods arranged at right angles to the bars and passing through openings therein and a series of matrices each provided on two opposite sides with grooves to receive the bars and with a central transverse opening to receive one of the rods said matrices being supported by both bars and rods.

---

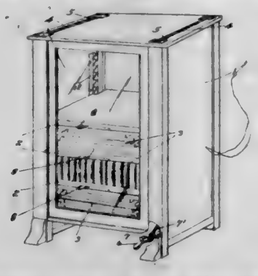
1,556,710. EQUIPMENT FOR HANDLING TYPE MATRICES. FRANK HINMAN PIERPONT, Salfords, Horley, England, assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed June 21, 1923. Serial No. 646,981. 10 Claims. (Cl. 199—76.)



1. Apparatus for facilitating the handling of type matrices comprising a transferring frame adapted to enclose a group of matrices, a receiving or assembling tray or plate adapted to receive the matrices and retain them in position and a lifting bar or holder adapted to engage and separately support a line or series of matrices.

---

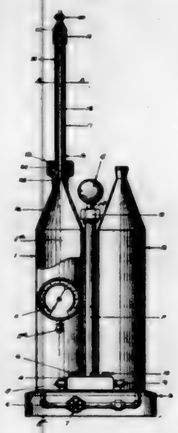
1,556,711. SHELF CABINET. ZIEGMUND PETERS PIETRZYCKI, Klamath Falls, Oreg. Filed Mar. 17, 1924. Serial No. 699,922. 3 Claims. (Cl. 211—14.)



1. A rectangular cabinet having sides, top and back, said sides being loose panels vertically slidable, loose superimposed shelves within the cabinet each having means thereon for engaging the panels for vertical movement therewith, and means for moving both panels simultaneously, said panels being accessible through openings in the top of the cabinet and adapted therethrough to work the similar panels of a similar cabinet placed on top thereof.

---

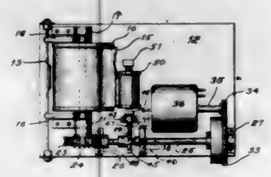
1,556,712. PORTABLE GAS TESTER FOR THE DETERMINATION OF GASOLINE CONTENT OF NATURAL GAS. ROSCOE PONSLER, Tulsa, Okla., assignor of one-fourth to Benjamin Estell Allison, Tulsa, Okla. Filed June 14, 1921. Serial No. 477,489. 2 Claims. (Cl. 23—256.)



1. A gas tester comprising a water vessel, a compression vessel, a pump having a pump base provided with suction and discharge valves and suction and discharge pipes connecting the pump base with the vessels and a bypass connection having a valve and connecting the vessels.

---

1,556,713. CHANGEABLE EXHIBITOR. MYRICK W. PULLEN, Baltimore, Md. Filed May 12, 1922. Serial No. 560,341. 5 Claims. (Cl. 40—53.)



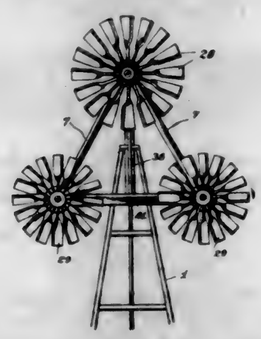
1. In a changeable exhibitor, the combination with means for exhibiting signals and mechanism for operating said means, of a spring secured at one end to said mechanism for moving said mechanisms, a source of power for moving the other end of said spring and a magnet for controlling the movements of said mechanism, said source of power continuously applying a force to said last named end greater than the force of said spring.

---

1,556,714. COMPOSITION FOR PREVENTING ACCUMULATION OF MOISTURE. RICHARD V. RIDGELY, Cumberland, Md. Filed Aug. 20, 1924. Serial No. 733,283. 2 Claims. (Cl. 134—27.)

1. A coating paste to prevent the accumulation of moisture upon the exposed surface of glass panes comprising a mixture of soap, glycerine, water glass, and water.

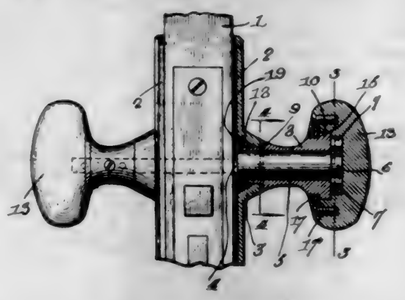
1,556,715. WINDMILL. WILLIAM MONROE RIGGS, Willcox, Ariz. Filed July 17, 1924. Serial No. 726,624. 2 Claims. (Cl. 170—38.)



1. In a windmill construction, an inverted V-shaped frame formed of a plurality of connected tubular housings and comprising an upper horizontal housing, a housing extending downwardly and outwardly from each side of the upper housing, and a horizontal housing connected intermediate its ends to the lower end of the downwardly extending housing, and a shaft housing extending vertically downward from the upper horizontal housing and forming a rotatable support for said frame, operating means connected in the housings and driving windmills connected to the operating means at each end of the horizontal housings.

---

1,556,716. DOORKNOB. EUTROP ROBICHAUD, Chatham, New Brunswick, Canada. Filed Sept. 27, 1924. Serial No. 740,419. 1 Claim. (Cl. 292—348.)



A door knob comprising in combination with a lock plate having a conical abutment, a sleeve having a threaded end received in said abutment, a conical nut applied to said threaded end, a shank rotatably mounted in said sleeve, a spindle carried by said shank, a plurality of lugs extending from the outer end of said shank, a bulb applied over said lugs in locking engagement therewith, and a locking ring loosely surrounding said sleeve and secured to said bulb.

---

1,556,717. SNUBBER FOR VEHICLES. ZEPHANIAH ROBINSON, Mineral Wells, Tex., assignor to Steer Esy Snubber Company, Dallas, Tex., a Corporation of Texas. Filed Aug. 18, 1924. Serial No. 732,624. 4 Claims. (Cl. 267—69.)

1. A snubber for vehicles comprising a master spring and a seat formed by said spring in the lower end thereof, means for connecting the said spring to a rigid portion of the vehicle body, tensioning means consisting of a headed tension rod within said spring and projecting from the lower end of said spring and a supplemental

inner spring mounted on said tension rod between the head of said rod and said seat and supported by said seat, and means for connecting said tension rod to the axle of the vehicle.

---

1,556,718. PNEUMATIC CONVEYER. ANDREAN G. RONNING and ADOLPH RONNING, Minneapolis, Minn. Filed Aug. 20, 1923. Serial No. 658,364. 11 Claims. (Cl. 302—37.)

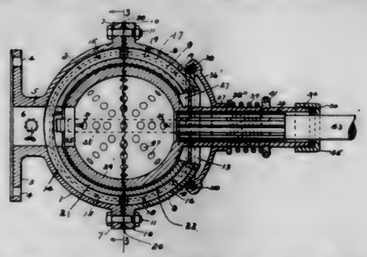
1. The combination with a pipe for filling silos and the like, of a blower at the lower end of the pipe and connected therewith, means carried by the blower for delivering material thereto from a relatively lower level, and means for adjusting the position of the blower vertically with respect to the pipe.

---

1,556,719. UNIVERSAL BALL JOINT. JAMES K. ROBINSON, Jacksonville, Fla. Filed Sept. 4, 1923. Serial No. 660,925. 1 Claim. (Cl. 64—91.)

In a universal joint, of the class described; an outer, hollow, spherical member consisting of two parts bolted together, one of said parts provided with a hollow attaching means, the other provided with a conical opening; an intermediate, hollow, spherical member also consisting of two parts, one of said intermediate parts provided with an opening aligning with the said attaching means, the other intermediate part provided with a conical opening aligning with the conical opening in the outer member; an inner, hollow, spherical member provided with an opening communicating with its interior and aligning with the openings in the intermediate part and the attaching means, for the purpose of lubrica-

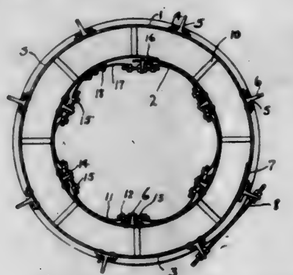
tion; an operating shaft rigidly attached to the said inner member and projecting through the conical openings in the other members; co-operating grooves formed



in the outer, intermediate and inner members, the said grooves in the outer and inner members being at right angles to each other; and keys operating in said grooves forming a driving connection therebetween.

---

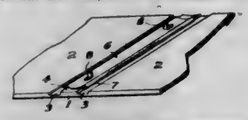
1,556,720. ADJUSTABLE FORM FOR CONCRETE STRUCTURES. CURTIS C. SANER, Houston, Tex. Filed May 31, 1923. Serial No. 642,428. 4 Claims. (Cl. 25—127.)



1. A form for molding concrete walls comprising inner and outer spaced walls made up of a series of oblong rectangular plates, having a predetermined number of regularly spaced plates tapered upwardly, means to hold said plates together and means to brace the plates of the inner wall radially outward, comprising straps of metal secured along the line of connection between the plates and means to compress said straps longitudinally thereof and thus force the said straps into supporting position against the plates in the manner described.

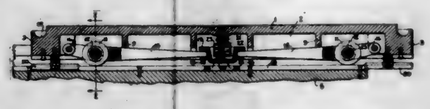
---

1,556,721. BOOK COVER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership, having as trustees F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson. Filed Apr. 28, 1925. Serial No. 26,371. 3 Claims. (Cl. 129—24.)



1. A book cover for a loose leaf structure, comprising a single piece of material having longitudinal channels extending throughout the length of the book between the back portion and the cover portions, whereby a ridge is formed constituting the inner face of the back portion, said ridge having slits formed in its opposite side edges, and a metal sheath upon the face of this ridge and having inturned flanges extending within said slits and provided with means for attachment to a loose leaf structure.

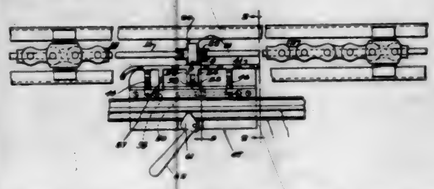
1,556,722. PROFILING MACHINE. HOWARD B. SCOTT, Dayton, Ohio, assignor, by mesne assignments, to Pratt & Whitney Company, Hartford, Conn., a Corporation of New Jersey. Filed Mar. 2, 1923. Serial No. 622,426. 8 Claims. (Cl. 90—59.)



1. In a machine of the class described, the combination of a sliding table, stationary ways upon which said table is adapted to be moved, and a plurality of rollers adapted to relieve said ways of a portion of the load and means to compensate the load taken by each of the rollers.

---

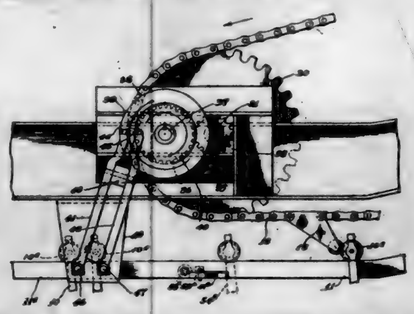
1,556,723. CONVEYER SYSTEM. ALFRED H. SHAFFER, Riverside, Ill., assignor to The Allbright Nell Company, Chicago, Ill., a Corporation of Illinois. Filed July 19, 1923. Serial No. 652,518. 5 Claims. (Cl. 198—38.)



1. In a conveying system, in combination with a carriage having load releasing means thereon, an actuating device for said load releasing device comprising a tripping member movable into and out of cooperative position respective to said load releasing means, tension means normally retaining said tripping member in inoperative position, and an elongated shoe depressible bodily by selective means on said carriage and having operative connection with said tripping member to positively move the latter into operative position.

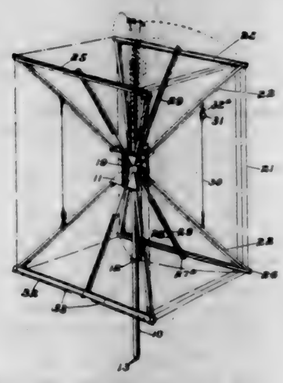
---

1,556,724. SPACING DEVICE FOR CONVEYER SYSTEMS. ALFRED H. SHAFFER, Riverside, Ill., assignor to The Allbright Nell Company, Chicago, Ill., a Corporation of Illinois. Filed July 26, 1923. Serial No. 653,896. 10 Claims. (Cl. 198—26.)



1. In a conveyer system, a track, a plurality of carriages, a conveyer adapted for engagement with said carriages, and a spacing device for said carriages comprising a rotary cam device operable in timed relation with said conveyer and a pair of rocking arms actuated by said cam device and controlling the movement of said carriages along said track.

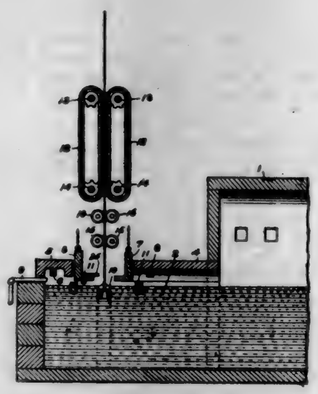
1,556,725. SUPPORT FOR RADIOANTENNÆ. DEWESE H. SHALLCROSS, Clarendon, Va. Filed Jan. 31, 1922. Serial No. 538,093. 7 Claims. (Cl. 250—33.)



1. An antenna support including a shaft, a frame supporting member carried by said shaft, and a collapsible coil frame including a plurality of members hingedly connected to said frame supporting member and a plurality of collapsible bars connecting the outer terminals of a portion of said hinged members carried by said frame supporting member.

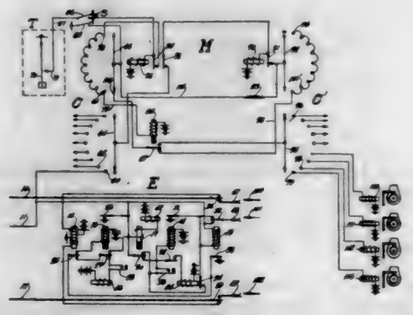
---

1,556,726. GLASS-DRAWING APPARATUS. HARRY G. SLINGLUFF, Mount Vernon, Ohio, assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Feb. 26, 1923. Serial No. 621,183. 6 Claims. (Cl. 49—17.)



1. In combination in apparatus for drawing sheet glass, a glass drawing tank adapted to carry a bath of molten glass, at a particular level, means for drawing a sheet upward from the bath and a refractory bar in the bath and extending transversely across the tank below said level of the bath and the line of generation of the sheet, said bar having its upper portion of varying width, widest at the center portion and decreasing in width toward the end portion.

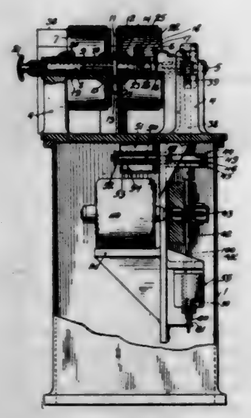
1,556,727. TRAFFIC RECORDER FOR TELEPHONE SYSTEMS. ARTHUR BESSEY SMITH, Evanston, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 1, 1921. Serial No. 497,773. 22 Claims. (Cl. 179—9.)



1. In a telephone system, a group of trunk lines, means for making any number of said trunk lines busy, and means operated and reoperated automatically for recording at intervals the exact number of busy trunk lines in said group reguardless of the number of trunk lines busy.

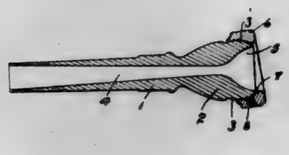
---

1,556,728. TRAVELING APRON. HENRY MONROE SMITH, Paterson, N. J. Filed Feb. 19, 1923. Serial No. 620,099. 14 Claims. (Cl. 271—2.4.)



1. A device for receiving a product from a machine, including a traveling apron on which the product is adapted to be received, means for operating said apron and means actuated by the product which is being fed upon said apron for controlling the operation of the apron by its said operating means, said controlling means being adapted to cause the starting and stopping of said apron whereby it will receive the product at the rate at which it is delivered thereto by the machine.

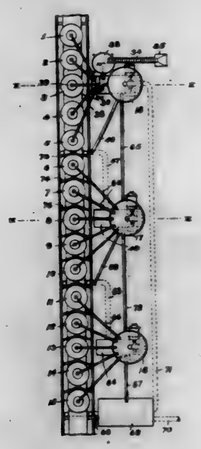
1,556,729. ADJUSTABLE MOUTHPIECE. SIDNEY S. SMITH, Grand Rapids, Mich. Filed Mar. 17, 1923. Serial No. 625,691. 6 Claims. (Cl. 84—399.)



1. In a device of the class described, an elongated member having a passage therethrough, and a member mounted thereon for angular adjustment with respect to the longitudinal axis of said member, said member being shaped for engagement by the lips, substantially as described.

---

1,556,730. GRINDING APPARATUS FOR PLATE GLASS. JACOB SODERBERG, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed July 28, 1923. Serial No. 654,477. 6 Claims. (Cl. 51—264.)

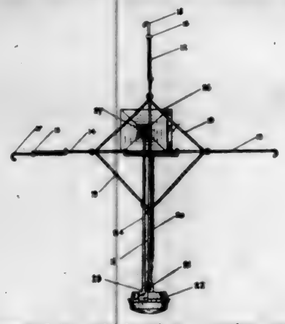


1. In combination in grinding apparatus, a series of sets of grinding machines, means for carrying sheet glass continuously beneath the series of machines, a series of grading tanks, one for each set of machines, means for causing an upward flow of liquid through each of the tanks to grade the abrasive therein, means for supplying the graded abrasive from each tank to its set of grinding machines, and means for supplying the used abrasive and water from the first set of grinding machines to the tank for the next set of machines.

---

1,556,731. WATER-PAN ALARM. LEO SOMMER, St. Lin, Quebec, Canada. Filed Feb. 16, 1925. Serial No. 9,650. 1 Claim. (Cl. 116—111.)

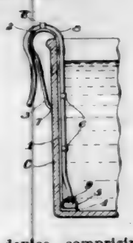
In a water pan alarm, a frame formed of cross arms and slidable arms on certain of said cross arms and suitably held together, a bracket reinforcement from one of said arms, an alarm bell having a push button



and supported by said bracket, a rocker arm pivoted on said frame and extending into contact with said push button, and a float suspended from said rocker arm.

---

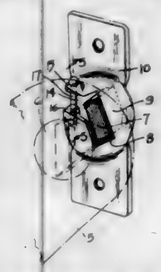
1,556,732. HOSE AND FILTER HOLDER FOR DRAW-OFF DEVICES. HARRISON D. STERRICK, Pittsburgh, Pa. Filed Sept. 20, 1924. Serial No. 738,800. 2 Claims. (Cl. 137—20.)



2. A draw-off device comprising in combination, a metal one-piece support, comprising a loop at one end adapted to engage the wall of a container, an extended portion beyond said loop adapted to lie inside the container, a cup adapted to retain a strainer attached to the lower end of the support, and means on the support to retain a hose extending from said cup around the loop in the support.

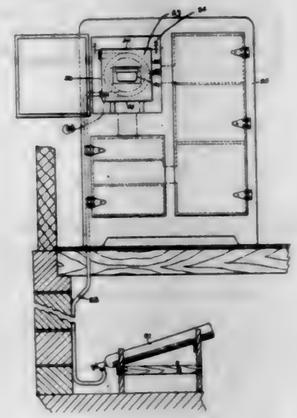
---

1,556,733. SHADE BRACKET. WILLIAM P. TALBOT, Millbrook, N. Y. Filed Jan. 23, 1925. Serial No. 4,138. 5 Claims. (Cl. 156—24.)



1. A window shade bracket having an opening adapted to receive the end of the shade roller shaft, said opening having an extended portion, a pin member disposed across the extended portion of said opening and movably held in said bracket, and means constituting a shaped end on said pin for preventing its accidental removal from position across said opening.

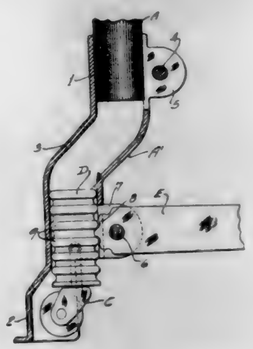
1,556,734. REFRIGERATION. WILLIAM J. TAYLOR, Detroit, Mich. Filed Jan. 26, 1924. Serial No. 688,642. 12 Claims. (Cl. 62—92.)



1. In combination with the outlet of a refrigerating system expansion chamber, a porous member adapted to normally permit the passage of refrigerant fluid therethrough and to become clogged by frost, and means adapted to secure said member in position over the opening in said outlet.

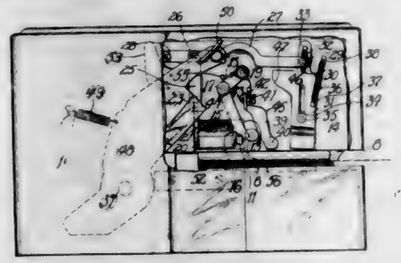
---

1,556,735. ADJUSTABLE STAND. HIRAM G. TIFFANY, St. Louis, Mo., assignor to Tiffany Adjustable Stand Company, St. Louis, Mo., a Corporation of Missouri. Filed May 29, 1922. Serial No. 564,467. 7 Claims. (Cl. 16—32.)



1. A stand provided with legs, rollers or casters associated with said legs, vertically-movable members carrying said rollers and combined with the legs in such a way that they can turn or rotate relatively to the legs, rockable actuating devices, and cooperating teeth or racks on said vertically-movable members and actuating devices constructed so as to provide for the turning or rotation of said vertically-movable members.

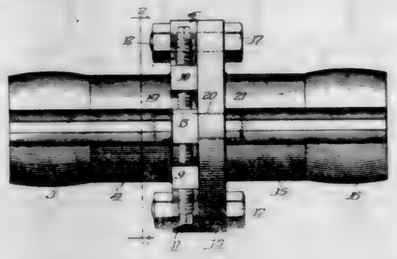
1,556,736. MECHANISM FOR INSURING CORRECT STARTING POINT IN FABRIC-MEASURING MACHINES. JOHN L. WHEELER and EDWIN T. NUGENT, St. Louis, Mo., assignors to The Measuregraph Company, St. Louis, Mo., a Corporation of Delaware. Filed Apr. 4, 1924. Serial No. 704,126. 15 Claims. (Cl. 33—132.)



1. In a fabric measuring machine of the class described, having means for measuring from a fixed starting point on the machine, and means for placing the machine in operative or inoperative condition for measuring, means in line with said fixed starting point and movable in placing the machine in operative condition for measuring and operating to prevent the machine from being placed in such condition when the end of the fabric to be measured projects beyond said latter means in the direction of the measuring movement of the fabric.

---

1,556,737. ADJUSTABLE SPINDLE FOR MERCHANT MILLS. HENRY W. WILSON, Duluth, Minn. Filed Nov. 24, 1920. Serial No. 426,173. 5 Claims. (Cl. 64—90.)



5. A composite spindle adapted for use in rolling mills, the spindle comprising a pair of radially divided portions having juxtaposed flanges, a portion of the first flange being cut away, the second flange carrying a lug interposed in the cut away portion of the first flange, set screws carried by the first flange adapted to coact with the lug on the second flange and to vary and maintain the rotary adjustment of the two spindle portions, and axially extending bolts connecting the two flanges and adapted to maintain them in juxtaposition.

---

1,556,738. AIR FILTER. CHARLES WOOD, Nordman, Idaho. Filed Mar. 13, 1922. Serial No. 543,528. 2 Claims. (Cl. 261—122.)

1. An air filter comprising a casing having an air inlet opening in the forward portion of its upper wall, vertically disposed supporting plates in the lower portion of said casing having slots leading from their upper edges, an air deflecting plate extending into the

casing through the opening in the upper wall thereof and having its lower end portion fitting into the slots of said supporting plates whereby said air deflecting plate may be supported and braced by said supporting plates, upper and lower filtering plates disposed horizontally in said casing between the air deflecting plate and rear wall of the casing with the lower filtering

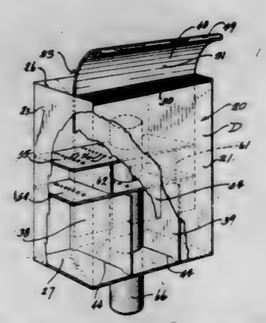


plate resting upon the upper edges of said supporting plates, supports for the upper filtering plate positioned between the upper and lower filtering plates, and an air outlet pipe extending into the casing through the bottom thereof and extending upwardly through the filtering plates to a point above the upper filtering plate.

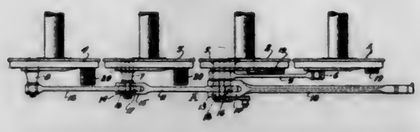
---

1,556,739. LOCOMOTIVE ROD AND COUNTERBALANCE MECHANISM. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed May 2, 1925. Serial No. 27,433. 4 Claims. (Cl. 105—84.)

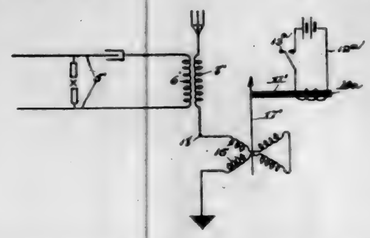


1. The combination with a locomotive having more than two sets of drivers, a main crank pin on an intermediate driver, an articulated main rod coupled to said main pin and to the wheel or wheels to the rear of the wheel carrying such main pin, the parts of the main rod extending in the same vertical plane, rod means coupling the main pin carrying wheels to the wheel or wheels in advance thereof, said means extending in a plane inside the plane of the main rod, a rotating counterbalance block on the wheel or wheels in advance of main crank pin carrying wheel, and a rotating and reciprocating counterbalance block on the wheel or wheels to the rear of said pin carrying wheels.

---

1,556,740. TRANSMISSION OF RADIOSIGNALS EMPLOYING UNDAMPED WAVES. ROBERT B. WOOLVERTON, Washington, D. C. Original application filed July 25, 1921, Serial No. 487,247, Patent No. 1,504,462, dated Aug. 12, 1924. Divided and this application filed Dec. 10, 1923. Serial No. 679,850. 1 Claim. (Cl. 250—19.)

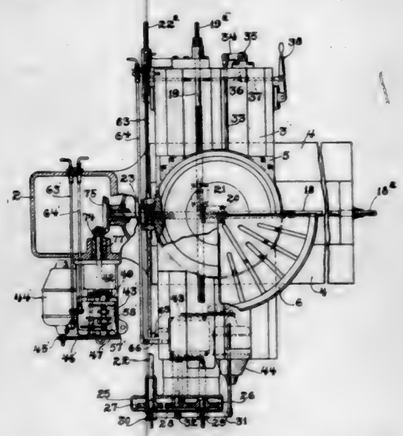
In radio transmitting apparatus for undamped waves, an intelligence forming circuit including a solenoid, a tuned oscillaory circuit, shunted about the generator of said transmitting apparatus, an antenna circuit inductively coupled to the tuned oscillatory circuit, said circuits being in exact resonance, a variable inductance connected in series in the antenna circuit, an arm for connecting said variable inductance with said solenoid, and means for varying the relative positioning of the elements of said variable inductance for the purpose of



energizing said solenoid and destroying the exact resonance between said oscillatory and antenna circuits, and thereby forming signals in said intelligence circuit.

---

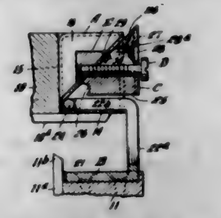
1,556,741. CONTOUR-MILLING MACHINE. EDWARD H. WRAY, Philadelphia, Pa., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 13, 1924. Serial No. 692,527. 8 Claims. (Cl. 90—20.)



1. In a machine tool, the combination of a bed, an upright thereon, tool supporting means on the upright, power means for operating the tool, a saddle longitudinally slidable on the bed, a slide transversely slidable on the saddle, a work table rotatably mounted on the slide, a screw for moving the saddle longitudinally, a second screw for moving the slide transversely, a shaft extending parallel with the second screw and operatively connected to the table for rotating the same, electric motor means, means including change speed gearing between the motor means and the screws and shaft whereby to selectively operate the saddle, slide and table, and a portable switch adjacent the table for controlling the motor means.

6. In a machine tool, the combination of a bed, an upright thereon, tool supporting means on the upright, power means for operating the tool, a member slidably supported by the bed, a work table rotatalby supported by the member, a screw for sliding the member, a shaft for rotating the table, electric motor means, means including change speed gearing between the motor means and the shaft and screw whereby to operate the member and table, and a switch adjacent the table for controlling the motor means.

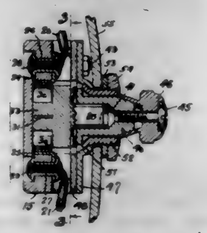
1,556,742. CONCEALED DOOR HINGE. JOHN W. ANDERSON, Chicago, Ill., assignor of one-half to Clarence Poffenberger, Chicago, Ill. Filed Oct. 19, 1921, Serial No. 508,805. Renewed Apr. 10, 1924. 13 Claims. (Cl. 16—135.)



1. In a concealed hinge for doors and the like, the combination with a housing adapted to be recessed into one of the members to be hinged, said housing being provided with a partial journal bearing at its bottom corner on the outer side; of a plate adapted to be secured to the other of the members to be hinged, said plate having an arm rigid therewith and extending therefrom, first substantially at right angles and then substantially parallel to the plate proper, the outer end of said parallel portion of said arm being provided with a journal section arranged parallel to and extending lengthwise of the plate and adapted to be seated within said partial journal bearing of the housing; and detachable means, secured within the housing, having a cooperable partial journal bearing fitting over said journal section to retain the same in place.

---

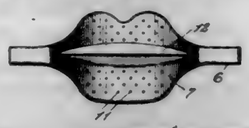
1,556,743. ELECTRIC SWITCH. CARL ERIC ANDERSON, Stratford, and HARRY U. BADEAU, Bridgeport, Conn., assignors to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 14, 1925. Serial No. 30,198. 6 Claims. (Cl. 200—63.)



1. An electric switch comprising a rotary switch bar of spring flat metal, a rotary insulating block having a boss projecting from one face thereof and slotted to straddle said switch bar, and a driving ratchet operatively engaging said block at the opposite side thereof from the switch bar.

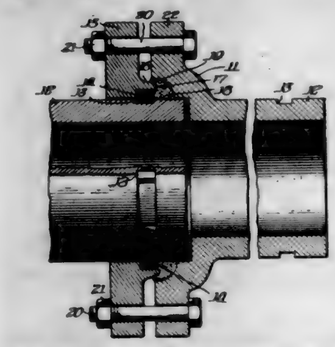
---

1,556,744. APPLICATOR. BENJAMIN ANSELL, St. Louis, Mo., assignor of one-half to Anthony J. Gutweiler, St. Louis, Mo. Filed Nov. 11, 1922. Serial No. 600,390. 2 Claims. (Cl. 132—1.)



1. An applicator, constructed of soft rubber and comprising an imprinting surface and a hollow body in communication with the imprinting surface, and means for interrupting said surface.

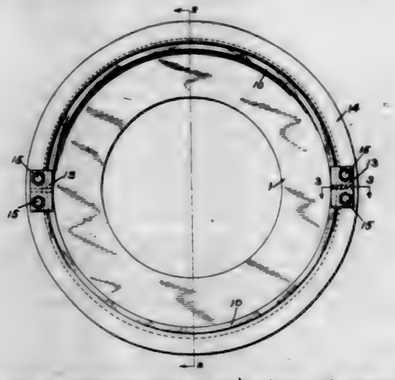
1,556,745. PIPE CONNECTION. ROBERT R. BANTA. Chicago, Ill. Filed Jan. 5, 1924. Serial No. 684,498. 2 Claims. (Cl. 285—134.)



1. In a pipe coupling, the combination with a spigot-end and a bell-end of a flange separate from and embracing the spigot-end and having a circumferential lip extending towards the bell-end, a locking ring embracing the spigot-end and seated in an external groove therein and snugly embraced by the lip, said lip projecting beyond the outer face of said ring, the bell-end having a recess receiving the projecting portion of the lip, packing within the recess and engaged by the lip and the locking ring, and means for drawing together the spigot and bell-ends.

---

1,556,746. BRAKE-DRUM CONSTRUCTION. JOHN B. BARTHOLOMEW, Montclair, N. J., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Original application filed Nov. 28, 1922, Serial No. 603,775. Divided and this application filed Jan. 4, 1924. Serial No. 684,333. 3 Claims. (Cl. 188—218.)



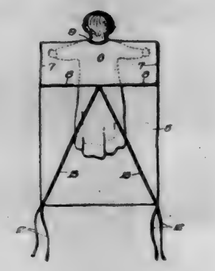
1. The combination with a brake drum, of renewable liners mounted within said drum and comprising segments presenting an internal cylindrical braking surface within the drum and means for securing said segments to the brake drum, the segments being removable by a movement parallel to the axis of the drum.

---

1,556,747. INFANT'S RETAINING GARMENT. ALBERT J. BATES, Jr., Chicago, Ill. Filed Apr. 4, 1925. Serial No. 20,615. 3 Claims. (Cl. 2—114.)

2. An infant's retaining garment of the character and for the purposes described, comprising an envelope formed with a long front piece extending from the neck

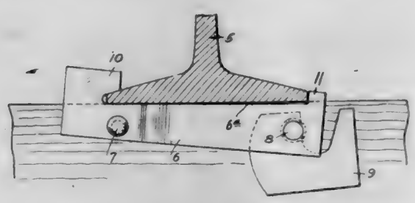
below the feet and a short back piece extending at its transverse center from the neck substantially to the waist region and joined at its top and side edges to the top and side edges of said front piece, thereby forming



with the latter spacious arm and shoulder pockets; said envelope having a neck opening in its upper edge, fastening means attached to said front piece, and tapes connecting the lower edge of said back piece with the lower corners of said front piece.

---

1,556,748. RAIL ANCHOR. FREDERICK W. BAUMANN, Pittsburgh, Pa., assignor to Oliver Iron & Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 3, 1925. Serial No. 374. 8 Claims. (Cl. 238—317.)

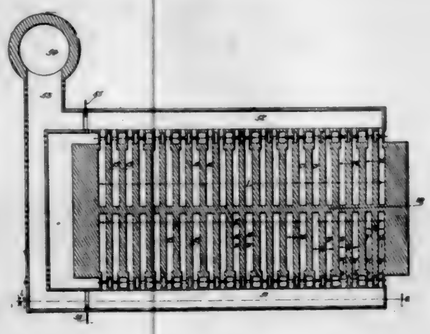


1. A rail anchor comprising gripping plates for transverse disposition beneath a rail and each provided with an overhanging rail base gripping jaw at one end, and at its other end with a vertically disposed gripping jaw, the plates being secured together at their first named ends, and at their other ends provided with means for supporting a rail-engaging clip.

---

1,556,749. COKING-RETORT OVEN. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 5, 1921. Serial No. 490,085. 11 Claims. (Cl. 202—9.)

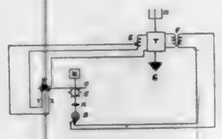
1. In a coke oven battery, in combination: a plurality of coking chambers; heating walls contiguous to such coking chambers and respectively constituted of vertical combustion flues operatively disposed into two groups of consecutive similarly-operating flues; reversible regenerators on both sides of the battery located below the coking chambers and the heating walls and parallel therewith, said regenerators being communicably connected with the flues and operatively disposed into inflow and outflow groups, the inflow groups alternating with the outflow groups on each side of the battery; a producer gas supply; reversing valve connections between said producer gas supply and one regenerator of each group on both sides of the battery; reversing air valve connections for the other regenerator of each group on both sides of the battery; waste gas tunnels located respectively on opposite sides of the battery; and valve connections for establishing communication concurrently between the outflow regenerators on each side of the battery respectively with the waste gas tunnels on the same sides of the battery as the regenerators; substantially as specified.



11. A coke oven battery provided with a plurality of coking chambers, heating walls having consecutive similarly-operating flues, inflow and outflow regenerators located on both sides of said oven, and waste gas tunnels also located on both sides of said oven and communicably connected concurrently with all the outflow regenerators; substantially as specified.

---

1,556,750. ELECTRICAL SIGNALING. LOUIS B. BENDER, Washington, D. C. Filed Aug. 29, 1923. Serial No. 659,971. 2 Claims. (Cl. 250—10.)

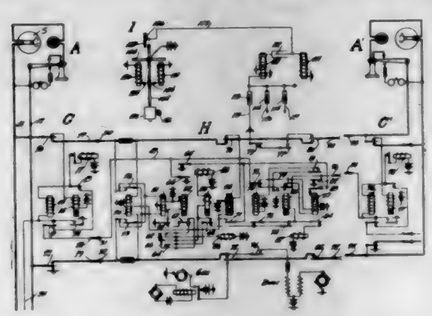


1. In a system of telegraphy, means for transmitting and receiving two radio frequency currents modulated by a low frequency alternating current of constant amplitude, said means consisting of a C. W. radio transmitter and automatic tape transmitter, a sine wave generator of low frequency, means for maintaining said generator in synchronism with said tape transmitter, and a receiving apparatus consisting of two receivers tuned to receive signals of different carrier frequencies, both of said receivers being connected to a single relay of the suspended double coil type having a contact maker moving over a double contact block, each of the two sections of said block being connected through vacuum tube relays, to a single siphon recorder for recording on a tape the received signals.

---

1,556,751. AUTOMATIC TELEPHONE SYSTEM. WILLIAM A. BENSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 13, 1921. Serial No. 477,183. 3 Claims. (Cl. 179—18.)

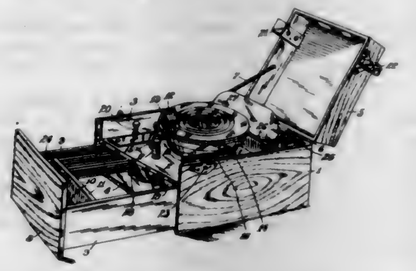
3. In a telephone system, a calling and a called line, an automatic switch controlled over said calling line to connect with said called line in an attempt to establish a talking connection therewith, a test relay in said switch effective to prevent the completion of such talking connection if the called line is busy, a source of busy signalling current, another source of signalling current, circuits for connecting the first of said sources to the



calling line and the second of said sources to the called line, and contacts on said test relay included in both said circuits for closing the same when the test relay is energized.

---

1,556,752. DENTIST'S PLATER. ROBERT W. BLAKE, Indianapolis, Ind. Filed Feb. 28, 1924. Serial No. 695,668. 4 Claims. (Cl. 204—5.)

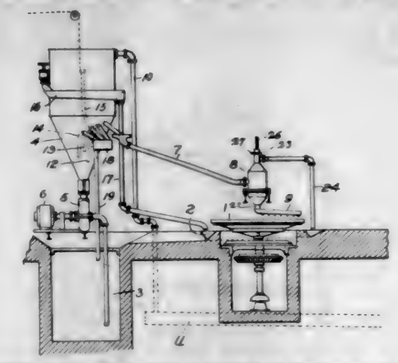


1. A portable self-contained electro-plating apparatus, comprising an enclosing casing divided horizontally into an upper and lower compartment and provided with a hinged cover and with a removable end wall, said container being divided into two compartments by a horizontally disposed shelf, an electro-plating container mounted in the upper compartment upon said shelf and provided with electrode terminals extending through the walls thereof and having binding posts on the exterior, a pair of binding posts mounted upon the upper surface of said shelf, electric batteries mounted in the bottom compartment of the container and having their terminals respectively connected to said binding posts, said end member and cover being arranged, when closed, to completely enclose and protect all of the parts of the apparatus within the casing and when open, to permit access respectively to the batteries in the bottom compartment and to the electro-plating container.

---

1,556,753. PROCESS AND APPARATUS FOR APPLYING ABRASIVE TO GRINDING APPARATUS. CHRISTOPHER BROWN, Charlerol, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Feb. 8, 1923. Serial No. 618,100. 4 Claims. (Cl. 51—264.)

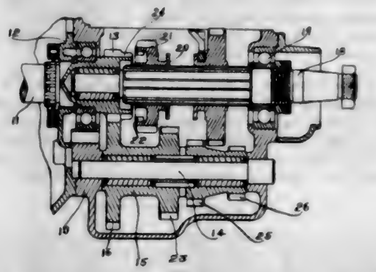
1. The process of applying abrasive to a grinding machine, which consists in collecting the abrasive and water from the machine, returning the mixture to a grader and separating the abrasive into a series of grades, withdrawing therefrom first the coarsest grade of abrasive mixed with water, flowing it to the grinding



machine, and eliminating a portion of the water in such withdrawn mixture as it flows from the grader to the machine.

---

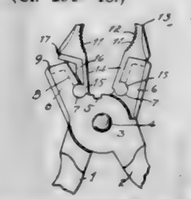
1,556,754. TRANSMISSION. EARLE BUCKINGHAM, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 26, 1924. Serial No. 702,161. 6 Claims. (Cl. 74—58.)



1. A change speed mechanism comprising in combination, two pairs of selectively operative intermeshing gears drivingly connecting aligned shafts, means to connect driving and driven shafts directly together or through one of said pairs, one of said gears in each pair having equal tooth numbers but being of different diameter so that equal numbers of teeth of each pair are intermeshed in equal units of time.

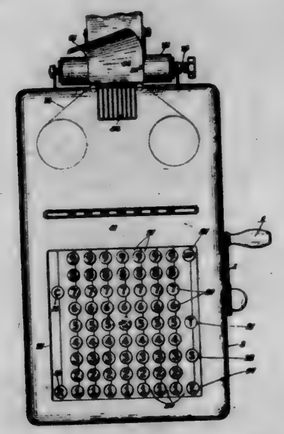
---

1,556,755. MULTIFORM TOOL. PETER M. BURMAN, Preston, Wash. Filed Mar. 7, 1925. Serial No. 13,907. 5 Claims. (Cl. 294—48.)



1. In combination with a tool of the plier type having integral extensions formed with cylindrical recesses and with channels above said recesses, removable jaws having extensions capable of engagement with said recesses, by relative lateral movement of the first mentioned extensions and jaws, and ribs to cooperate with said channels.

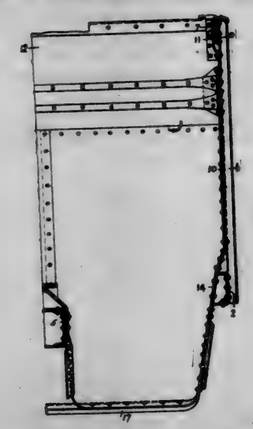
1,556,756. ADDING MACHINE. EDGAR MAYNARD CAMP, Newark, N. J., assignor, by mesne assignments, to Bleick Syndicate, composed of William D. Bleick and D. H. Connor, both of Newark, N. J., and F. J. Parker and J. J. Harris, both of Montclair, N. J. Filed Nov. 17, 1919. Serial No. 338,600. 31 Claims. (Cl. 235—60.)



1. The combination with accumulating means, of means for determining the extent of movement of said accumulating means, said last named means comprising key actuated stops, indexing means adapted to coact therewith and movable into engagement with a stop which has been set, means for holding said stop in set position, an initial stop for said indexing means, means to render said initial stop inoperatve, and means for operating said stop holding means to release any stop in set position, said initial stop having means adapted to hold said indexing means in different postions.

---

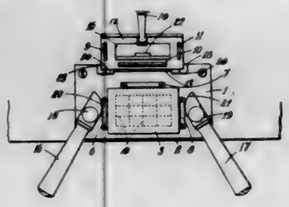
1,556,757. RAILWAY CAR. ANDREW CHRISTIANSON and HARRY T. ANDERSON, Butler, Pa., assignors to Standard Steel Car Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 554,786. 4 Claims. (Cl. 105—247.)



1. In a metallic open-top car, side-frames comprising top and bottom-chords, vertical and diagonal members connecting said chords, an inside plate connected to the top-chord, side container-sheets connected to said plate along their upper edges, and hopper-sheets to which the lower ends of said container-sheets are directly connected.

---

1,556,758. INKING DEVICE. WALTER CLARK, London, England, assignor to Caribonum Limited, Leyton, England. Filed Aug. 23, 1924. Serial No. 733,788. 7 Claims. (Cl. 91—18.)



1. In apparatus for impregnating inking pads, the combination with an open supporting frame, an open reservoir frame, a hinge connecting the said two frames, allowing a vertical play at the hinge, pivoted cam members on one frame co-acting with a surface on the other frame, whereby the said frames are pressed together independently of the hinge, and means for applying suction to the opening of the supporting frame.

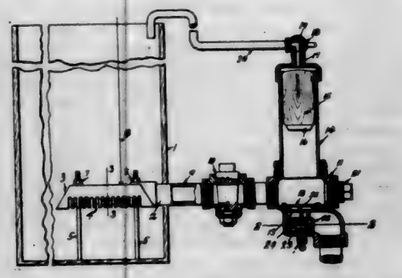
---

1,556,759. CONCRETE PRODUCT AND PROCESS OF MANUFACTURING THE SAME. JAMES J. CONNELLY, Chicago, Ill. Filed Sept. 5, 1923. Serial No. 661,107. 2 Claims. (Cl. 106—35.)

1. As a new article of manufacturing a homogeneous product colored throughout and consisting of a dried, pulverised and colored vegetable fibrous body formed from a semi-pulpy mixture of wood and paper with the addition of a mineral color, a colored, hardened and finely crushed tenacious body formed from a mass of clay colored to correspond to the color of the fibrous body and subsequently hardened and crushed, and a cementitious substance.

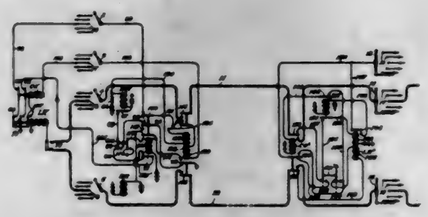
---

1,556,760. TANK-DISCHARGE DEVICE. RUDOLPH CONRADER, Erie, Pa. Filed May 24, 1921. Serial No. 472,043. 3 Claims. (Cl. 137—68.)



1. In a tank discharge device, the combination of a discharge pipe; a cut-off valve on said pipe comprising a casing and valve seat; a closed float chamber; a float in the chamber; a valve seating on the seat and controlled by the float, said float chamber being in communication with the tank through the discharge pipe to permit the introduction of air from the tank prior to the uncovering of the valve seat; and a guard over the discharge pipe preventing a vortex leading to the discharge pipe.

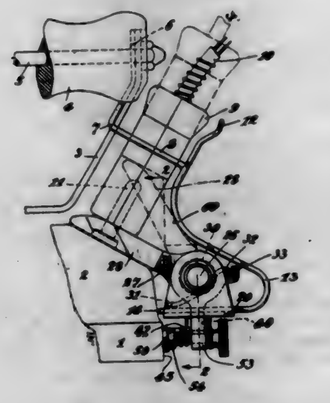
1,556,761. TRUNK CIRCUITS. HIRAM D. CURRIER, Chicago, Ill., and GEORGE R. EATON, Oak Park, Ill., assignors to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1920. Serial No. 356,262. 45 Claims. (Cl. 179—27.)



39. A telephone system including a plurality of lines and link circuits for use in interconnecting them, automatic selecting switches for extending the link circuits, an operator's plug and apparatus effective on the connection thereof to render a plurality of previously selectable circuits unselectable.

---

1,556,762. SAFETY DEVICE FOR ELECTRIC IRONS AND THE LIKE. NATHAN A. CURTISS, Ramsey, N. J., assignor to Miller Reese Hutchinson, New York, N. Y. Filed Jan. 22, 1924. Serial No. 687,738. 9 Claims. (Cl. 219—25.)

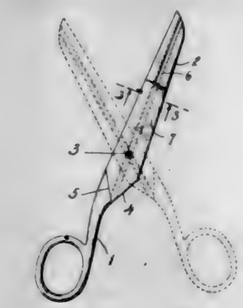


1. A heat generating electrical device having a fixed terminal thereon and a flexible conductor having a terminal non-positively engaging said fixed terminal, in combination with a knock-out lever rockingly mounted on the device with one end projecting between said terminals, an actuating spring for the lever and a trigger device for restraining and releasing the lever.

---

1,556,763. CUTLERY. BENJAMIN DADD, New York, N. Y. Filed June 27, 1921. Serial No. 480,512. 1 Claim. (Cl. 30—13.)

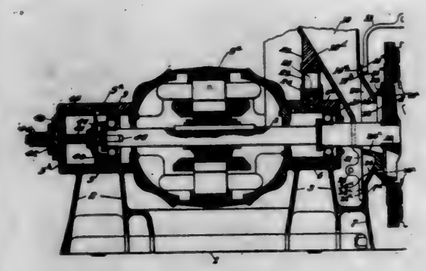
In scissors construction, a pair of blades pivoted together, each blade being provided with a handle portion, each blade being formed with a longitudinal dovetail groove which extends from the tip of the blade to a position adjacent the handle portion, each blade being provided with a plate co-extensive with and covering the blade on one side thereof, the said plates having cutting edges acting as the cutting edges of the scissors and the said cutting edges of the plates being arranged closely contiguous to the edges of the said blades, the said plates



having each an under-cut rib extending from end to end of the plate and slidably engaging with the said dovetail grooves in the blades whereby the exposed faces of the plates are wholly continuous throughout and uninterrupted by depressions or recesses, and a pivotal screw passing through both the blades and the plates to hold all the parts in operative positions.

---

1,556,764. ATTRITION MILL. ALLAN P. DANIEL, Springfield, Ohio, assignor to The Bauer Brothers Company, Springfield, Ohio, a Corporation of Ohio. Filed Apr. 4, 1922. Serial No. 549,479. 3 Claims. (Cl. 83—8.)



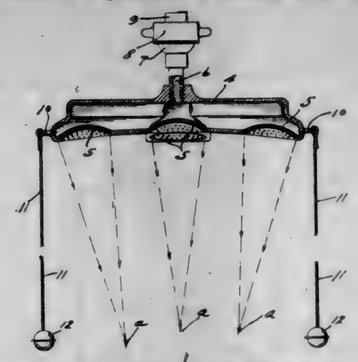
1. In an attrition mill, a main supporting base, a shaft mounted on said base, a grinding member connected with said shaft, a wear ring carried by said grinding member in concentric relation with said shaft, a supporting face formed on said base in concentric relation with the axis of said shaft, and a seal ring mounted on said supporting face in concentric relation with the axis of said shaft and cooperating with said wear ring.

---

1,556,765. HYDROPATHIC SPRAYING DEVICE. WILLIAM DECHMANN, Minneapolis, Minn. Filed Nov. 26, 1923. Serial No. 676,936. 3 Claims. (Cl. 4—145.)

1. A hydropathic spraying device comprising a hollow shell connected to a source of water supply and having

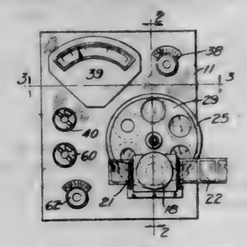
a plurality of perforated nozzle-forming spraying zones each arranged to precipitate a plurality of fine streams



of water on downwardly converging lines concentrating in approximately a single stream.

---

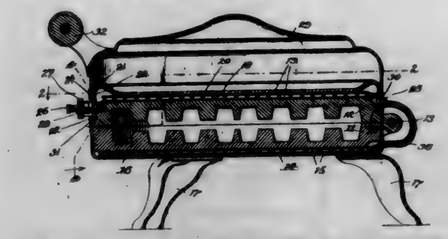
1,556,766. DEVICE FOR MEASURING THE OPACITY OF TRANSLUCENT MATERIALS. VINCENT C. DE YBARRONDO, Los Angeles, Calif. Filed Oct. 24, 1921. Serial No. 509,875. 2 Claims. (Cl. 88—14.)



1. In a device for measuring the opacity of translucent substances, the combination of: a cell of changeable resistance under the influence of light rays; a luminous body; means for interposing a body of translucent substance between said cell and said luminous body; a source of electric current in circuit with said cell; an indicating instrument in said circuit; and a variable resistance shunted across said source of electric current to form a branch circuit of variable resistance for controlling the flow of electric current in the circuit of said cell.

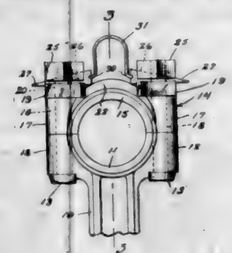
---

1,556,767. WAFFLE IRON. WILLIAM W. DODGE, Jr., Asheville, N. C. Filed Nov. 24, 1923. Serial No. 676,786. 5 Claims. (Cl. 219—19.)



1. The combination with a waffle iron composed of conacting sections, each provided with electrical heating means, of a griddle permanently mounted on the back of the section in close heat-conducting relation with said heating means.

1,556,768. SELF-ADJUSTING BEARING. FREDERICK C. DOODY, St. Onge, S. Dak. Filed Oct. 13, 1923. Serial No. 668,812. 4 Claims. (Cl. 308—68.)



1. The combination with a bearing including a relatively stationary body and a mating movable and removable cap held thereto by bolts passing through the body and cap in parallel relation to the longitudinal axis of the body, of automatic adjusting means comprising plate members disposed against the outer side of the cap and apertured for engagement upon the bolts, said plates cooperating with portions of the cap whereby to be incapable of rotary movement with respect thereto, said plates being formed with grooves, nuts threaded onto the bolts and having their faces toward the plates formed with grooves registering with said first named grooves, the grooves in the nuts increasing in depth toward the confronting edges of the nuts, wedges forked for straddling engagement upon the bolts and slidably engaged within the registering grooves, the wedges having their thicker ends disposed toward each other, and a spring interposed between and urging said wedges outwardly.

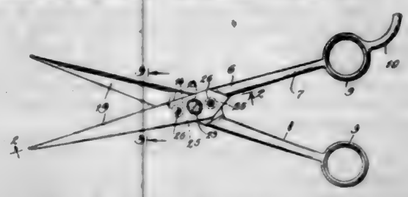
---

1,556,769. SHEARS. CHARLES DRIEST, Jr., Marlboro, N. J. Filed Nov. 18, 1922. Serial No. 601,781. 5 Claims. (Cl. 30—13.)

1. A pair of shears of the class described comprising pivotally connected handle members which when coupled together form a unitary structure, the coupling of said handle members being formed by bushings mounted in said handle members, a screw passed through said bushings and provided with a nut for retaining said handle members against displacement, and blade members detachably mounted in connection with said unitary structure and provided with apertures adapted to receive and pass freely over the heads of the screw and nut mounted thereon.

---

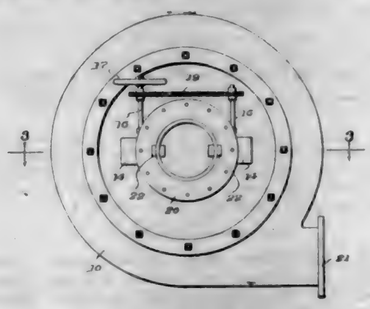
1,556,770. SHEARS. CHARLES DRIEST, Jr., Marlboro, N. J. Filed Aug. 4, 1923. Serial No. 655,608. Renewed Apr. 15, 1925. 13 Claims. (Cl. 30—13.)



1. A tool of the class described comprising pivotally connected handle members, blade members formed independently of said handle members, and adapted to be secured to the separate handle members, means passed through said blade members and into said handle members for detachably connecting said blade members with said handle members, said blade members overlying the pivotal connection of the handle members and being detachably mounted in connection with the handle members without removing the pivotal connection of said handle members.

---

1,556,771. ROOT CUTTER. BENJAMIN F. DUPONT, Miami, Fla. Filed July 13, 1923. Serial No. 651,357. 6 Claims. (Cl. 103—111.)



1. In combination with a dredge pump comprising a casing having an extension projecting from one side thereof, of a plurality of cutting bars arranged within the extension and mounted for sliding movement toward and away from the impeller of said pump, teeth formed on the outer side of each cutting bar, a pinion meshing with the teeth of each bar, and means including a single operating element for simultaneously actuating all of said bars for the purpose specified.

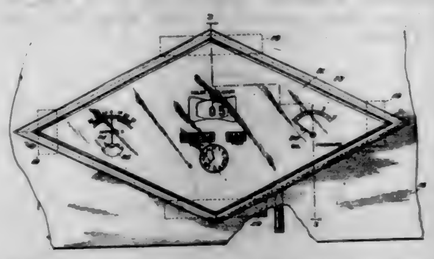
---

1,556,772. PROCESS OF MANUFACTURING SEASONINGS OR LIKE FOODSTUFFS FROM FISH OR SHELLFISH. TOSHIICHIRO ENDO, Iwaki-gun, Fukushima-ken, Japan. Filed July 19, 1922. Serial No. 576,127. 2 Claims. (Cl. 99—11.)

2. A process of manufacturing food stuffs, which consists in steaming animal flesh, forming it into small lumps after squeezing out water and oil therefrom sprinkling a dilute acid solution thereon and mixing it with cereal refuse and converting said lumps into "koji" in a hot house by covering them with spores of aspergillus oryzæ.

---

1,556,773. COMBINATION MOUNTING FOR DIAL MECHANISMS. FRANK J. FEELY, Elgin, Ill., assignor, by mesne assignments, to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Nov 10, 1919. Serial No. 337,060. 12 Claims. (Cl. 180—90.)



1. A mechanism for mounting a combination of instruments upon a dash-board, comprising a frame adapted to fit substantially a suitable opening in the board and having a flange extending beyond the edge of the opening on its front face, a plurality of instruments mounted on said frame, and a plurality of spring clips secured at intermediate points on said frame and bearing at their ends on the rear face of the board.

---

1,556,774. AUDIPHONE. CHARLES FENSKY, St. Louis, Mo. Filed May 2, 1923. Serial No. 636,067. 5 Claims. (Cl. 181—23.)

1. An audiphone comprising a hollow curved member having an opening in one side and adjacent one end, a hollow spherical portion formed integral with the other end of said member, and a hollow tapered member projecting from said spherical portion, said tapered member and the opening in the curved member being on the same side.

---

1,556,775. AUDIPHONE. CHARLES FRENSKY, St. Louis, Mo. Filed Oct. 4, 1923, Serial No. 666,477. Renewed May 28, 1925. 4 Claims. (Cl. 181—23.)

1. An audiphone comprising a hollow curved member having an opening in one side adjacent one end, a hollow globular portion formed integral with the other end of said member, a tapered tubular member formed integral with the globular member and projecting therefrom at right angles to the curved member, and a web formed integral with the curved member and globular member on the side opposite the tube for forming in connection with the inside of the ear, a chamber for the reception of sound waves.

---

1,556,776. MATERIAL FOR RESISTING OXIDATION AT HIGH TEMPERATURES. RUDOLPH F. FLINTERMANN, Detroit, Mich. Filed Feb. 14, 1921. Serial No. 444,766. 3 Claims. (Cl. 75—1.)

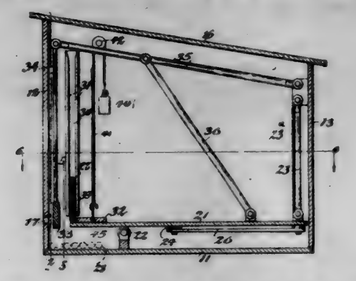
1. An alloy for resisting oxidation at high temperatures containing nickel or cobalt in an amount greater than 20% and less than 60%, silicon in an amount greater than 3% and less than 9% and the balance principally of iron.

---

1,556,777. NEWSPAPER-VENDING MACHINE. ROY R. FOGELSONGER, Clarence, N. Y. Filed Mar. 27, 1923. Serial No. 628,024. 5 Claims. (Cl. 211—8.)

1. A newspaper vending machine comprising an enclosing casing adapted to contain a stack of newspapers and provided with an outlet for the same, a plurality of movable feeding rods arranged in a tier within the casing and each adapted to engage the inner side of the turn in one of the newspapers, and means for successively engaging the several rods and moving the same

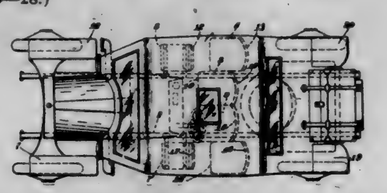
with the respective newspapers to the outlet of the casing comprising a feeding table which supports said stack and is movable toward and from said outlet,



and push blocks arranged on said table on opposite sides of the stack and adapted to engage with the end portions of said rods.

---

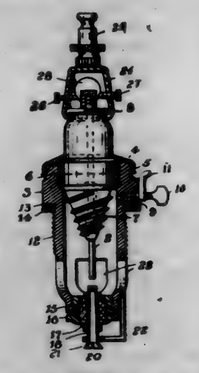
1,556,778. AUTOMOBILE BODY. PAUL FOROSTOVSKY, Jr., Baltimore, Md. Filed Jan. 14, 1922, Serial No. 529,113. Renewed Aug. 11, 1925. 6 Claims. (Cl. 296—28.)



1. An automobile body and frame construction comprising longitudinal beams of the chassis, floor members at each side of the chassis spaced below and suspended from said longitudinal beams and seats at the side directly over said floor members.

---

1,556,779. SPARK PLUG. JOSEPH G. GAVLAK, Monongahela, Pa. Filed Aug. 10, 1923. Serial No. 656,625. 5 Claims. (Cl. 123—169.)



1. A spark plug comprising a main electrode, a peripherally threaded tubular electrode co-acting with, spaced from and arranged in lengthwise alignment with respect to the main electrode, an inner electrode associating with said tubular electrode, a pair of spaced cores of insulation, one of said cores carrying the main electrode and the outer of said cores having a threaded core through which extends the tubular electrode, the latter having threaded engagement with the wall of the bore, a metallic shell supporting the core carrying the main electrode and carrying said inner electrode, and a bushing secured in the inner end of said shell and supporting said threaded core.

---

1,556,780. BUMPER FOR AUTOMOBILES. CHRISTIAN GIRL, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Jan. 9, 1924. Serial No. 685,144. 8 Claims. (Cl. 293—55.)

1. A bumper comprising a plurality of vertically spaced front or impact bars and a rear or auxiliary bar, the said bars being of the same length and arranged parallel with each other, and means additional to said bars for connecting the ends of the same.

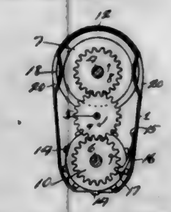
---

1,556,781. RESILIENT GRIP. THOMAS EMIL GJORUP, Chicago, Ill., assignor of one-half to Louis Hansen, Chicago, Ill. Filed Apr. 19, 1923. Serial No. 633,193. 1 Claim. (Cl. 273—81.)

The combination with a substantially cylindrical handle member of a tape having adhesive and elastic properties, said tape being provided with a longitudinally disposed, relatively flat rib on one side thereof extending continuously throughout the length of said tape, said tape being wrapped around said handle member in spiral fashion with said rib in contact with said handle whereby a grip having a spiral raised portion is provided for said handle.

---

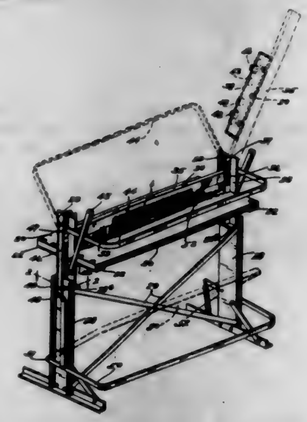
1,556,782. MARKING DEVICE. DAVID W. GLASGOW, Albion, Nebr. Filed Dec. 8, 1924. Serial No. 754,558. 2 Claims. (Cl. 101—110.)



1. A marking machine comprising a casing having a sight opening in the upper end thereof, rotatable setting wheels in the upper end of the casing and provided with indicia provided to register with the sight opening, said setting wheel being rotatably mounted on a shaft, rotatable number wheels, said number wheels being rotatably mounted on a shaft in the lower end of the casing, an intermediate shaft, gears carried by the intermediate shaft, gears carried by the setting wheels and meshing with the gears on the intermediate shaft, gears carried by the number wheels and meshing with the gears on the intermediate shaft, spring detent members disposed within the casing and cooperating with the gears of the number wheels and removable type disposed in recesses of the number wheels.

---

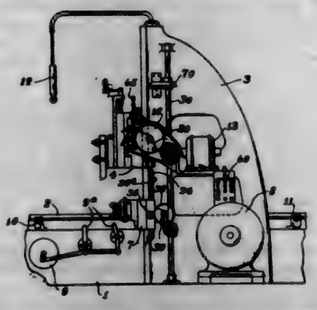
1,556,783. BRUSH-MAKING MACHINE. CARL C. GRAY, Minneapolis, Minn., assignor to Gopher Brush Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 21, 1923. Serial No. 646,823. 18 Claims. (Cl. 300—12.)



1. A machine for assembling the elements of floor brushes, comprising a table having an assembling channel adapted to receive a channel-like brush head, the table itself adapted to support brush material laid crosswise of said head, and means for pressing a clamping bar against the brush material and for buckling and forcing the same into said head, said assembling channel having a yieldingly supported depressible bottom strip.

---

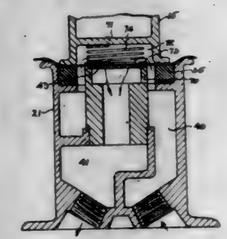
1,556,784. TOOL-OPERATING MECHANISM. GEORGE E. GREENLEAF, Plainfield, HAROLD L. BLOOD, North Plainfield, and ROSWELL H. RAUSCH, Plainfield, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed June 7, 1923. Serial No. 643,944. 19 Claims. (Cl. 90—48.)



1. In a planer or the like, the combination of a base, a reciprocating work table mounted thereon, two uprights respectively at opposite sides of the table, a cross rail mounted to slide vertically on the uprights over the table, a tool support movably mounted on the rail, a motor, and mechanism operated by the motor for intermittently feeding the tool support synchronously with the table reciprocation, for traversing the tool support continuously, for moving the rail on the uprights and for clamping the rail to the uprights.

---

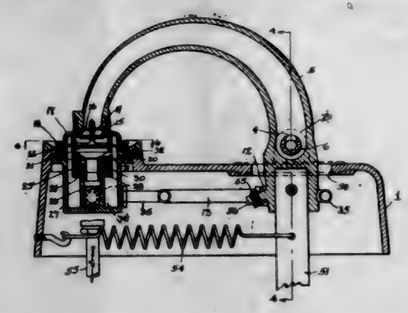
1,556,785. METHOD OF AND APPARATUS FOR DRY CLEANING. THOMAS GRISWOLD, Jr., Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Nov. 2, 1921. Serial No. 512,242. 25 Claims. (Cl. 8—8.)



11. In a method of cleaning a fabric or like permeable material, the step which consists in flowing a cleansing medium successively through a portion of such material surrounding the portion to be cleaned and then through such last-mentioned portion.

---

1,556,786. DRY CLEANING. THOMAS GRISWOLD, Jr., Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Apr. 5, 1923. Serial No. 629,988. 18 Claims. (Cl. 8—8.)



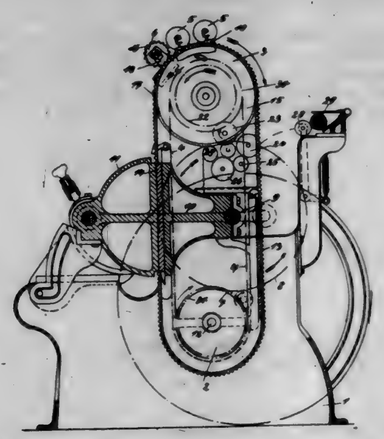
18. In an apparatus of the character described, the combination of a cylindrical shell, a casing surrounding said shell and leaving an annular space therebetween, and a relatively movable cup-member provided with rings adapted to co-operate with the ends of said shell and casing respectively to clamp a piece of fabric or like material thereagainst, the foregoing parts being self-centering.

---

1,556,787. PRINTING MACHINE. EDUARD GROSSE, Wachwitz, near Dresden, Germany. Filed May 5, 1921. Serial No. 467,187. 2 Claims. (Cl. 101—360.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In improvements in platen-printing machines, a platen, a setting plate and an elastic flat form, paint-rollers, paint-applying-rollers and a transmission roller, an endless band carrying both said paint-applying-rollers and said transmission roller around the middle-por-

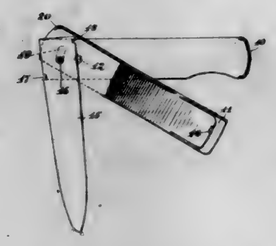
tion of the printing press, disks in the upper and lower part of said middle-portion of the printing press for guiding said band, means for rotating said disks with said carrying means and means for moving said platen,



each driving means cooperating with the other in such a manner as to accommodate the rotation of the carrying means around the middle-portion of the printing press, to the to-and-fro-movement of the platen, substantially as described.

---

1,556,788. COMBINATION TOOL. PETER WILLIAM HALLVERSON, Black Diamond, Alberta, Canada. Filed July 7, 1924. Serial No. 724,675. 4 Claims. (Cl. 7—16.)

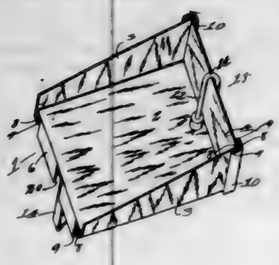


1. A combination tool comprising a handle, said handle including two sections pivoted to each other adjacent to one end, means additional to the pivots of the handle sections to pivot various implements to the handle, and coacting and interengaging means embodied in said implements and appurtenant to one of the handle sections to lock the implements either in a folded position within the handle or in an extended position for use.

---

1,556,789. PACKER'S COLLAPSIBLE PAPER HOLDER. WILBUR H. HARDY, Freewater, Oreg. Filed Sept. 29, 1923. Serial No. 665,005. 8 Claims. (Cl. 211—29.)

5. In a paper holder, a holder comprising a plate, a back slidably mounted on said plate, side pieces slidably mounted on said plate, said side pieces positioned to lock said back in place, slidingly mounted corner irons joining the corners formed by the juncture of said back and side pieces, a lip depending from one side of said holder, an interchangeable brace removably attached



to said plate and positioned to coact with said lip to support said holder, and a needle holder removably and operably attached to said back.

---

1,556,790. HYDRAULIC SHOCK ABSORBER. RALL E. HELFINSTINE, Dayton, Ohio. Filed Mar. 20, 1924. Serial No. 700,511. 18 Claims. (Cl. 188—89.)

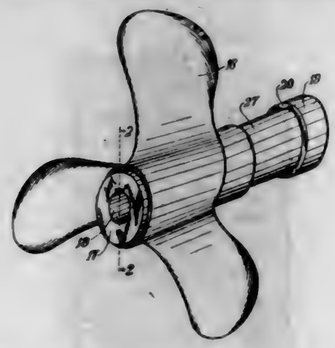
1. In a fluid pressure governor, a fluid chamber, an oscillatory dasher dividing the chamber into high and low pressure compartments, having an intercommunicating port, said dasher being of arcuate form and flexible, the wall of the chamber being concentric with the center of oscillation of the dasher and into approximate relation with which the free end of the dasher extends, the oscillation of the arcuate dasher in the direction of its convexity against the resultant pressure of the fluid contents of the chamber serving to flex the dasher away from the chamber wall to permit limited bypass of the fluid under pressure, the oscillation of the dasher in the opposite direction and in the direction of its concavity serving to distend the dasher into wiping relation with the wall of the chamber to prevent bypass leakage, the passage of the fluid under pressure from one compartment to the other being thru the intercommunicating port.

---

1,556,791. PROPELLER. MARCELLUS HENDERSON, West Hoboken, N. J. Filed Oct. 4, 1922. Serial No. 592,228. 2 Claims. (Cl. 115—34.)

1. The combination with a ship having a propeller shaft, of a propeller, removable means for fixedly securing said propeller to said propeller shaft, an extension secured to said propeller, said extension being provided with an opening for reception of the propeller shaft

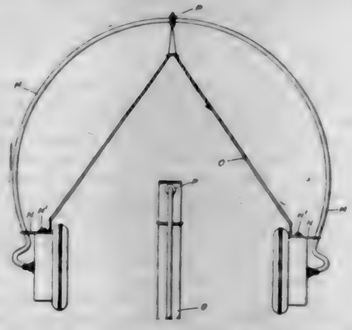
and means carried by the ship for rotatably normally freely receiving said extension and for retaining the same in the event of breakage of the propeller shaft,



said mounting means comprising a removable portion to permit said extension to be removed from said mounting means.

---

1,556,792. HEADBAND FOR HEAD PHONES. THOMAS LINFORTH JONES, London, England; James Simpson Jones, executor of said Thomas Linforth Jones, deceased, assignor to John MacDougall, Prestwick, Scotland. Filed Mar. 27, 1923. Serial No. 627,963. 3 Claims. (Cl. 179—156.)

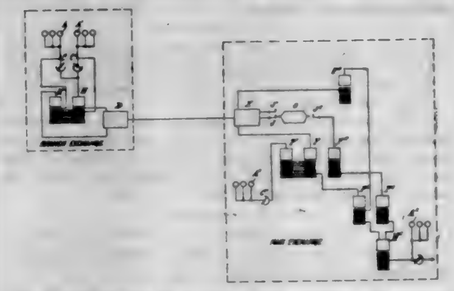


3. Means for supporting a pair of telephone receivers on the head comprising a resilient curved member of approximately at semi-circular shape, each end of which is adapted to have a receiver attached thereto, and a flexible band of elastic material attached to and located within said resilient curved member and capable of adapting itself to the contour of the top part of the head of the wearer substantially as described.

---

1,556,793. AUTOMATIC TELEPHONE SYSTEM. FRED T. MADSEN, Green Bay, Wis., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed July 3, 1920, Serial No. 393,963. Renewed Mar. 16, 1925. 23 Claims. (Cl. 179—27.)

1. In a telephone system, a main exchange having an operator's position, a branch exchange having a toll connector, a trunk line extending from said operator's position to said toll connector, selector connectors in said branch exchange having access to said trunk line, special lines in said branch exchange accessible to said toll connector but inaccessible to said selector connectors, other telephone lines in said branch exchange, means controlled from one of said other telephone lines for operating one of said selector connectors to connect with said trunk line and call the operator thereover for the purpose of obtaining connection with



one of said special lines, and means whereby the operator at said position can operate said toll connector to establish a connection with one of said special lines locally.

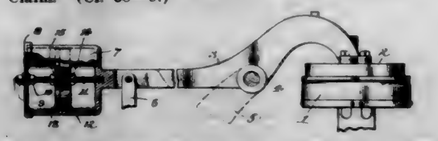
---

1,556,794. TOY. ADOLPH L. MANSON, New York, N. Y. Filed June 21, 1923. Serial No. 646,859. 1 Claim. (Cl. 213—98.)

A toy including a block having a central longitudinal bore of uniform diameter throughout its length, said bore being closed at one end and having its other end flared, a handle, a stem projecting therefrom of a diameter slightly less than that of the bore, said stem being tapered at its free end, there being an annular collar upon the stem adapted to snugly engage the flared end wall of the bore when the stem is seated in the block, and a cord threaded through and secured within the closed end of the bore, the other end of the cord being attached to the handle.

---

1,556,795. PRESS. WILLIAM C. MARSHALL, Syracuse, N. Y., assignor to United States Hoffman Machinery Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 4, 1922. Serial No. 579,684. 1 Claim. (Cl. 68—9.)



In a pressing machine, the combination of a fixed pressing element; a movable pressing element; a lever to one end of which said movable element is attached;

an open ended box formed as an integral extension of the lever; at least one weight mounted in the box and adjustable toward and from the fulcrum of the lever; and a closure for the box.

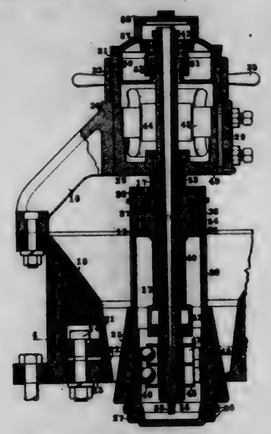
---

1,556,796. PROCESS OF ETCHING GLASS OR THE LIKE. CLARKE C. MINTER, New York, N. Y. Filed May 27, 1921, Serial No. 473,010. Renewed Mar. 2, 1925. 10 Claims. (Cl. 41—42.)

4. The process of etching glass or the like comprising heating the glass or the like to be etched, heating an alkali salt of carbonic acid to at least the fusion of said salt, and causing contact of said fused salt with the surface of said glass or the like to be etched.

---

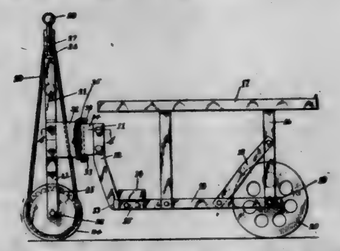
1,556,797. CRUSHER. BENJAMIN A. MITCHELL, Westerleigh, N. Y. Filed Dec. 8, 1921. Serial No. 520,794. 14 Claims. (Cl. 83—10.)



1. In a crusher, the combination with relatively movable crusher members, one of said crusher members being suspended within the other, of a rotating system, a balanced impeller secured to said system and revolving therewith, and an intermediate body having a mass center eccentric to the axis of rotation and adapted to be urged by said impeller in a closed path about said axis.

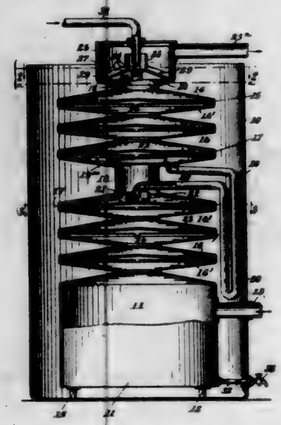
---

1,556,798. CHILD'S ROAD ROLLER. JOHN MONTANARO, Philadelphia, Pa. Filed May 7, 1925. Serial No. 28,660. 4 Claims. (Cl. 208—42.)



1. A toy vehicle of the character described simulating a road roller and having a supporting frame and seat thereon, a rear roller upon which the rear end of the supporting frame is mounted, a front steering post pivotally connected to the supporting frame, a front roller carried by the steering post, and manually operable means carried by the steering post whereby the front roller may be driven.

1,556,799. CARBURETOR. GEORGE ELLIOTT MORRISON, Sayville, N. Y. Filed June 6, 1922, Serial No. 566,329. Renewed Mar. 14, 1925. 10 Claims. (Cl. 261—21.)



1. An apparatus of the character described comprising a vaporizing receptacle composed of a plurality of connected parts, and provided with an inlet and an outlet, and means arranged exteriorly of said vaporizing receptacle parts forming a container for receiving and temporarily retaining the unvaporized liquid in contact with a medium for raising its temperature and serving to conduct said liquid from one of said vaporizing receptacle parts to the other of said parts, substantially as specified.

4. An apparatus of the character described comprising a casing, a vaporizing receptacle composed of a plurality of parts having an inlet and an outlet, said parts each consisting of a series of connected elements, means connecting said parts, and means arranged exteriorly of said parts and connecting one of said vaporizing receptacle parts with the other thereof and forming an extended receptacle for receiving and temporarily retaining the unvaporized liquid in contact with a medium for raising its temperature, and serving to conduct said liquid from one of said parts to the other thereof, substantially as specified.

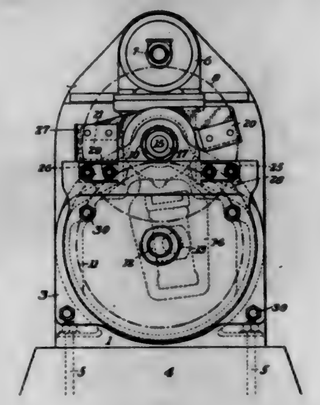
9. An apparatus of the character described comprising an outer casing, a vaporizing receptacle composed of a plurality of superposed parts having an inlet and an outlet, said parts each consisting of a series of connected shallow elements having downwardly and outwardly inclined tops and downwardly and inwardly inclined bottoms, a deflecting plate arranged in each of said parts, a tubular member connecting the series of connected parts with the lower series of connected parts, a receptacle disposed below and communicating with the lower of said vaporizing receptacle parts, and a pipe extending from the bottom of the upper vaporizing receptacle part downwardly within said outer casing to a point below the bottom of the lower vaporizing receptacle part and thence upwardly and inwardly and communicating at its upper end with the top of the lower receptacle part, substantially as specified.

---

1,556,800. SHEARS. RICHARD W. MOSES, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 28, 1922. Serial No. 571,491. 5 Claims. (Cl. 164—44.)

1. A shear, comprising a frame, a pair of fixed shear blades mounted on the frame, a lever pivoted to said frame and carrying a pair of shear blades on opposite

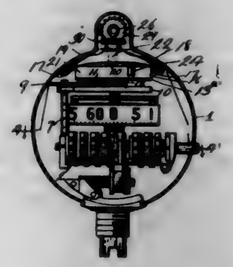
sides of its longitudinal axis for cooperation with the fixed blades, said lever having a slot therein, and means for oscillating said lever, comprising a crank shaft, a



block carried by the crank pin and slidably mounted in said slot, and means for rotating said shaft in either direction, substantially as described.

---

1,556,801. SPEEDOMETER ATTACHMENT. ROLLAND R. OTIS, Omaha, Nebr. Filed Aug. 14, 1923. Serial No. 657,331. 3 Claims. (Cl. 116—115.)



3. The combination with a speedometer, of a signalling device carried thereby, said device comprising a constantly rotated disc, a split sleeve carried by said disc, a flanged disc mounted on the constantly rotated disc, said flanged disc being provided with a sleeve in which the split sleeve is disposed and frictionally engages, a pivoted yoke above the flanged disc, a lug carried by the pivoted yoke in the path of a recess in the flanged disc, means whereby said pivoted yoke may be moved and held in raised position and the flanged disc simultaneously rotated, said lug when in the recess of the flanged disc registering with a sight opening and forming a signal.

---

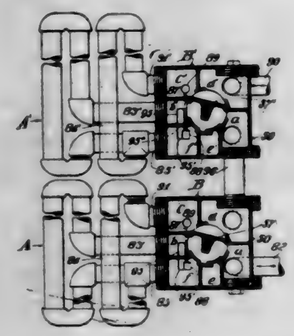
1,556,802. MEANS FOR AND METHOD OF MAKING PLASTER CASTS OF FEET. ARTHUR A. PAGE, Racine, Wis., assignor to Racine Shoe Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 29, 1924. Serial No. 758,656. 4 Claims. (Cl. 18—55.)

1. A device for making a cast of a foot, consisting of a box arranged to receive plastic material, said box having a removable back, locking members for removably securing said back, and hinged sides whereby formed plastic material within the box may be entirely removed or in part removed, and means insertable ver-

tically and transversely in and between said plastic material to permit easy separation of the same when formed into sections.

---

1,556,803. HEATING SYSTEM. PAUL B. PARKS, Oak Park, and JOHN VAN VULPEN, Chicago, Ill., assignors to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed May 19, 1923. Serial No. 640,133. 8 Claims. (Cl. 237—40.)



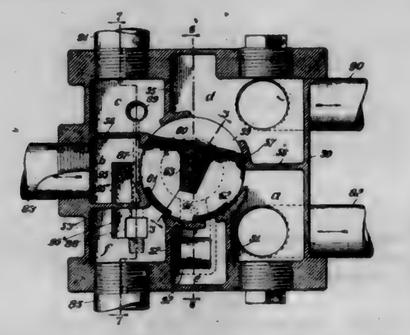
2. In a heating system, the combination of two radiators and valves associated with said radiators, respectively, constructed and connected so that steam may be introduced into one of said valves, circulated successively through said radiators and the water of condensation discharged from the other valve, said last named valve comprising a casing having an outlet and a valve body which in one position directs the incoming steam to the radiator associated with said valve, and the water of condensation from said radiator to said outlet, said valve being provided with means which, when the valve body is in the position mentioned, permits water entering said valve from the other radiator to pass directly to said outlet instead of being circulated with the steam through the radiator associated with said valve while preventing the steam entering said valve from following the same course.

---

1,556,804. VALVE. PAUL B. PARKS, Oak Park, and JOHN VAN VULPEN, Chicago, Ill., assignors to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Original application filed May 19, 1923, Serial No. 640,133. Divided and this application filed Apr. 18, 1924. Serial No. 707,435. 15 Claims. (Cl. 251—104.)

1. A valve comprising, in combination, a casing having a plurality of chambers, a revoluble valve body in

said casing provided on the top with a circular rib formed with diametrically arranged slots, a bonnet for the top of the casing, and a valve stem having a trans-



verse head bearing against the under surface of the bonnet and against the top of said valve and extending into said slots.

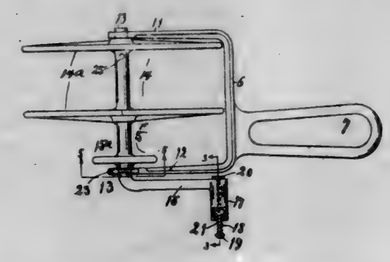
---

1,556,805. RAILROAD TIE. ELLERY PERRY, Olean, N. Y., assignor of one-half to Roy E. Vance, Olean, N. Y. Filed Dec. 23, 1924. Serial No. 757,723. 1 Claim. (Cl. 238—30.)

A railroad tie having slots, an inverted U shape brace in each end of said tie under each slot, each brace having a groove, a screw threaded member resting in said groove, means on the member for engaging a rail and means to hold a rail at each end of the tie in parallel alinement.

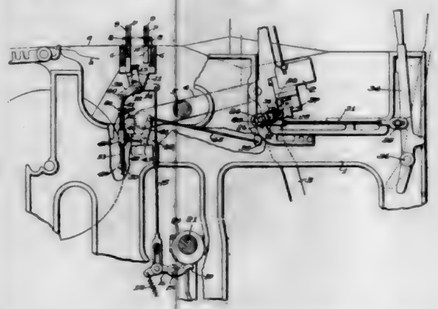
---

1,556,806. CLOTHESLINE STRETCHER AND REEL. PHILIP G. PETERSON, St. Paul, Minn. Filed July 31, 1924. Serial No. 729,409. 1 Claim. (Cl. 68—3.)



A clothes line winding and stretching device comprising a frame adapted to be secured to a stationary object, a winding reel journaled in the frame and having at one end a crank by which to rotate it; said reel comprising a main drum for the bulk of a clothes line, and at one end of said drum a second drum adapted to receive but a few final coils of the line for stretching it with extra force.

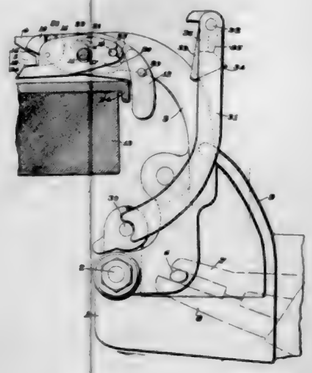
1,556,807. WARP STOP MECHANISM FOR LOOMS. GEORGE W. REID, Lawrence, and ALFRED DURAND, Methuen, Mass., assignors to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 1, 1925. Serial No. 19,801. 10 Claims. (Cl. 139—367.)



1. In a warp stop mechanism for looms, the combination of a series of drop wires, a detector, means for imparting detecting movement thereto, the lay having a bunter, a dog for cooperation therewith, stopping means operated by the dog when it is engaged by the bunter, connections between the dog and detector independent of the operating means for moving the dog on each detecting movement of the detector and arresting the dog for engagement by the bunter when the detector is arrested by a drop wire, and means in said connections for relieving the drop wire from injurious pressure by the detector due to movement of the dog by the bunter.

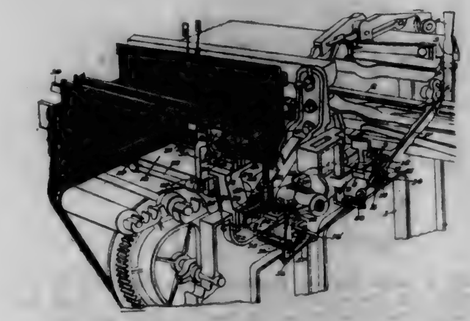
---

1,556,808. SHUTTLE-FEELER THREAD CUTTER. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 17, 1925. Serial No. 3,051. 11 Claims. (Cl. 139—264.)



1. In a loom, the combination of a shuttle feeler, a thread parter mounted on the shuttle feeler to part the outgoing filling between the shuttle and cloth selvage and comprising a pivoted primary parter member adapted to be pivotally operated by frontward movement of the lay, a secondary parter member independently pivoted on the shuttle feeler, and eccentric connections between said parter members for causing pivotal thread parting movement of the primary member to effect thread parting movement to the secondary member.

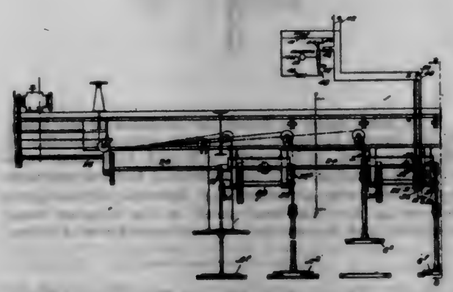
1,556,809. WARP STOP MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 13, 1925. Serial No. 22,660. 8 Claims. (Cl. 139—331.)



1. In a warp stop mechanism for looms, the combination of a series of drop wires, a drop wire guide normally stationary during weaving and having projections for engaging a drop wire when it fails to be supported by a warp thread, a detector having a detecting movement transversely of the series of drop wires, loom stopping means for stopping the loom when the detector is arrested in its movement transverse to the series of drop wires, a push bar actuated by movement of the loom stopping means, a shaft connected to the drop wire guides and rocked by the push bar to impart warp fault locating movement to the drop wire guide.

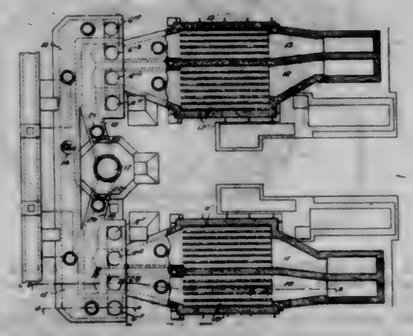
---

1,556,810. MECHANISM FOR OPERATING THE REVERSING VALVES OF REGENERATIVE FURNACES. CHARLES PRENTICE TURNER, Steelton, Pa. Filed Nov. 2, 1921. Serial No. 512,308. 15 Claims. (Cl. 277—6.)



1. In apparatus of the class described, the combination of a plurality of valves to be opened in sequence, a motor, mechanism driven by the motor for opening the valves sequentially, and means for retarding the speed of the motor during a predetermined period of the operation of said mechanism, whereby the lag between times of opening the valves may be increased.

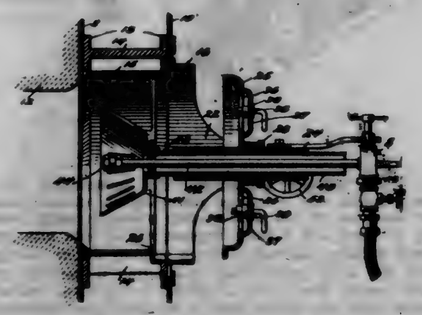
1,556,811. VALVE-OPERATING MECHANISM FOR REGENERATIVE FURNACES. CHARLES PRENTICE TURNER, Steelton, Pa. Filed Nov. 2, 1921. Serial No. 512,304. 13 Claims. (Cl. 277—6.)



1. The combination with a furnace having air and gas regenerators, of valves for controlling passages for conducting products of combustion from the furnace to the regenerators, separate motors for operating the valves, and means for rendering the motors effective to open the valve in the passage leading to the gas regenerator before the valve is opened in the passage leading to the associated air regenerator.

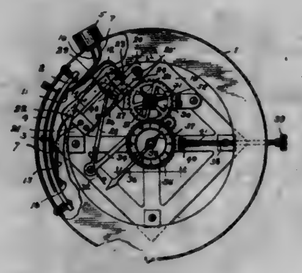
---

1,556,812. OIL-BURNING-FURNACE FRONT. WILLIAM S. WILKINSON, Elizabeth, N. J., assignor to Bethlehem Shipbuilding Corporation, Ltd., a Corporation of Delaware. Filed Apr. 25, 1923. Serial No. 634,574. 13 Claims. (Cl. 158—2.)



13. In a fuel burner, the combination of spaced front and back rings defining an annular forced-draft air inlet, a tubular valve for controlling the inlet, a frame hinged to the front ring, a tubular member carried by the frame and disposed axially thereof, a disc valve slidable on the tubular member for controlling the admission of atmospheric air through the tubular valve to the burner, means for connecting and disconnecting the tubular and the disc valves, and means for moving the disc valve longitudinally of the tubular member.

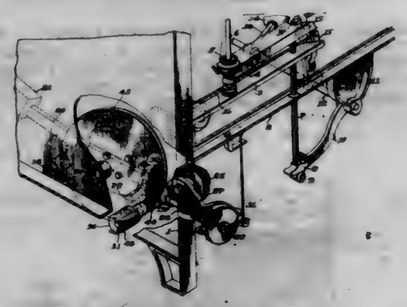
1,556,813. ALARM CLOCK. HARRY WONG, Duluth, Minn. Filed Feb. 28, 1925. Serial No. 12,193. 2 Claims. (Cl. 161—1.5.)



1. The combination with an alarm clock having an electric circuit cooperatively associated therewith and a switch therefor, of a setting dial concentric with the hand shaft of the clock and normally rotated thereby, a cam cooperatively connected with the dial, means intermediate of the cam and the switch whereby the latter is controlled, and means at the side of the clock and externally thereof for manually setting the dial.

---

1,556,814. BUILDER MECHANISM FOR YARN-WINDING MACHINES. HORACE H. BURDETT, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 1, 1925. Serial No. 27,177. 20 Claims. (Cl. 242—43.7.)

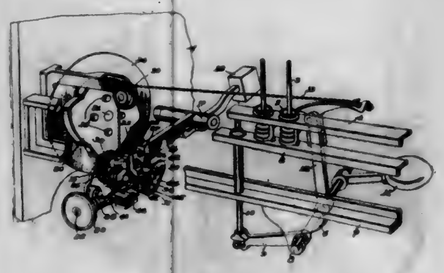


1. In a builder mechanism, the combination of a main builder cam, a builder arm, a bunch building member mounted on the builder arm, means normally tending to move said member transversely of said arm into bunch building position, a bunch building device rotating with the main builder cam and acting to restrain the said member from such movement during main traverse winds until the builder arm is depressed and thereupon permitting said member to be moved by said normally acting means into bunch building relation with the bunch building device.

---

1,556,815. BUILDER MECHANISM. HORACE H. BURDETT, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 21, 1925. Serial No. 31,231. 12 Claims. (Cl. 242—43.7.)

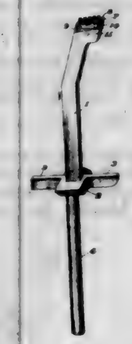
1. In a builder mechanism, the combination of a main builder cam, a builder arm, a bunch builder worm carried by the builder arm, operator operated means carried by the builder arm for moving the worm into bunch building position, a rotating bunch building device for engaging the worm and restraining it from movement



out of bunch building position until such device is rotated and thereupon acting directly upon the worm to progressively move it out of bunch building position.

---

1,556,816. FEELER TIP. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 2, 1925. Serial No. 6,292. 8 Claims. (Cl. 139—287.)

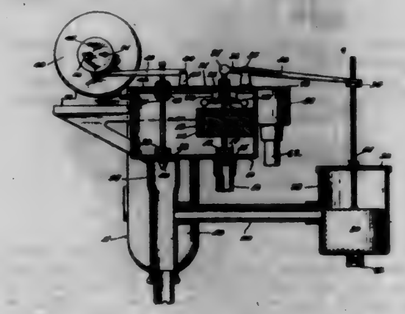


1. A filling feeler to detect the condition of the filling in the shuttle having a tip provided with a plurality of relatively fixed and closely arranged horizontal rows of filling engaging teeth, the individual teeth of one horizontal row being arranged in a different vertical plane relative to the individual teeth of the adjacent fixed horizontal row to cooperate with different kinds of filling.

---

1,556,817. REGULATING DEVICE FOR COMBUSTIBLE FURNACES. WILLIAM L. HIGGINS, Buffalo, N. Y. Filed Nov. 28, 1923. Serial No. 677,549. 7 Claims. (Cl. 158—38.)

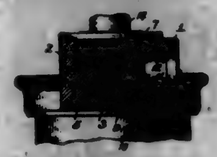
1. A regulator for oil comprising a reservoir having inlet and outlet ports, said inlet port being connected with an oil supply and said outlet port opening into a pipe line, a valve seat in said inlet port having axial and radial passages for admitting oil into said reservoir, a needle fitting said valve seat and adapted to close said passages, a float in the reservoir, a sleeve on said needle, a two-armed lever fulcrumed in the reservoir and engaging with said sleeve, said float being adapted to contact with said lever to depress said needle upon the oil



in the reservoir rising above a predetermined level, and other means independent of said lever and sleeve controlled by the liquid in the pipe line for seating said needle.

---

1,556,818. LOCK. GEORGE S. HILL and AUGUSTUS C. SAXTON, Chicago, Ill., assignors, by direct and mesne assignments, to H-R Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 24, 1921. Serial No. 509,907. 3 Claims. (Cl. 70—90.)

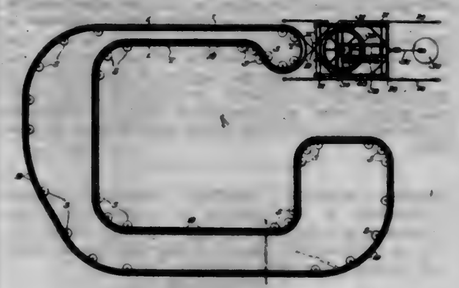


1. In a structure of the character described having a lock, a steering post, a steering column, a rotatable locking cylinder in said lock, a lock bolt for positively connecting certain of said elements to prevent relative rotation thereof, and means for actuating said bolt including a pinion, said pinion having certain of its teeth cut away to provide an angular integral extension cooperatively connecting with the said locking cylinder to form a rotatable driving connection between said cylinder and said pinion.

---

1,556,819. CABLE-OPERATED CONVEYER. JOHN EDGAR HIBBS, Langhorne, Pa., assignor to Cook Pottery Company, a Corporation of New Jersey. Filed Oct. 9, 1924. Serial No. 742,527. 11 Claims. (Cl. 104—173.)

1. A cable operated conveyer comprising an endless track, a plurality of cars adapted to travel on the track and each provided with cable gripping means, a cable having spaced stops cooperative with the gripping means of the cars and extending adjacent the track, and means, comprising a carriage movable relative to the track, a



driving sheave carried thereby and a counterpoise connected to the carriage, operative to drive the cable and maintain a uniform tension thereon.

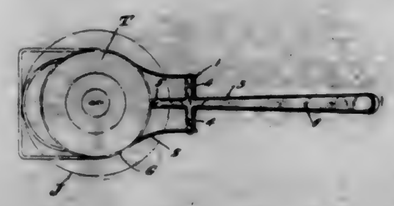
---

1,556,820. MANUFACTURING RED LEAD. HENRY HOCKING, Budapest, Hungary, assignor of one-half to Orion Reskoho-es Részálicgyár Részvenytársaság, Budapest, Hungary. Filed Aug. 5, 1924. Serial No. 730,298. 1 Claim. (Cl. 23—146.)

The process of making red lead which comprises enclosing lead containing material in a pressure tight vessel, simultaneously enclosing in the said vessel rolling bodies made of material the melting point of which is considerably higher than that of lead, maintaining within the said vessel a raised pressure by means of an oxidizing gas under pressure, and rotating the said vessel while the charge therein is being heated to a temperature above the melting point of lead.

---

1,556,821. FRUIT-JAR OPENER. MARY L. HODGE, Franconia, N. H. Filed Dec. 26, 1922. Serial No. 608,936. 1 Claim. (Cl. 81—3.1.)



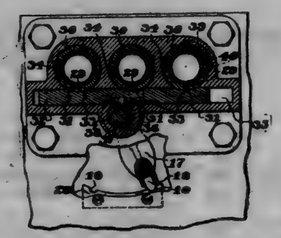
A jar opener comprising a lifting element in the form of a lever having an elongated shank thickened at its rear end to form a hand grip and having its front end beveled to form a chisel-like point to facilitate its insertion under the gasket of a jar, laterally extending oppositely disposed arms spaced inwardly from said point, a yoke member for embracing the jar neck and having its ends pivotally connected to the free ends of said arms, the pivotal connection of the ends of the yoke with the terminals of the arms enabling the lifting element to oscillate in a plane passing through the longitudinal axis of the jar so that the lever may move up and down for forcing the top off the jar.

**1,556,822. MULTIPLE-ROAST CHLORIDIZING PROCESS.** OSCAR B. HOSTETTER, Salt Lake City, Utah. Filed Apr. 18, 1922. Serial No. 555,860. 6 Claims. (Cl. 75—17.)

6. A multiple-roast chloridising process for ores, the said process being practiced in two or more roasting stages, each stage embracing the mixing of the ores or the product of a previous roasting stage, as the case may be, with suitable quantities of salt, sulphur and coal, and then roasting the mixture in the presence of air, the quantity of sulphur employed in each of the said stages being so proportioned that on combustion of the sulphur, a sintering of the mixture shall not take place.

---

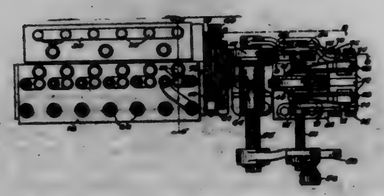
**1,556,823. ELECTRIC SWITCH.** MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 22, 1917, Serial No. 197,792. Renewed May 22, 1924. 59 Claims. (Cl. 200—3.)



1. In an electric switch, a movable switch element, a connector comprising a single plug, and means for locking the former in open position actuated by the latter upon a removal movement thereof.

---

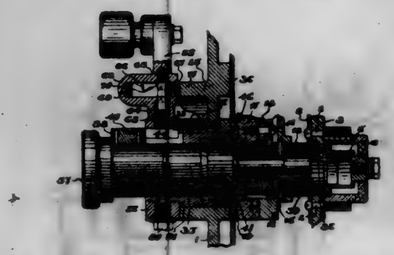
**1,556,824. ELECTRIC CONTROLLER.** CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Corporation, a Corporation of Massachusetts. Filed May 10, 1918. Serial No. 233,724. 25 Claims. (Cl. 200—6.)



1. In a motor controlling mechanism, a rotary circuit controller, a rotary reversing switch arranged with its axis extending in a direction transverse to the direction of the axis of said controller and disposed at one end of the latter, operating means for said reversing switch, and operating means for said controller adjacent the operating means for said reversing switch.

25. In an electrical controlling device, a rotatable disc, a pair of contacts at each side of the plane of said disc, and a pair of conducting members carried by said disc but wholly insulated from each other operative when said disc occupies different positions selectively to connect the contacts of each pair or to connect the contacts of one pair with the contacts of the other.

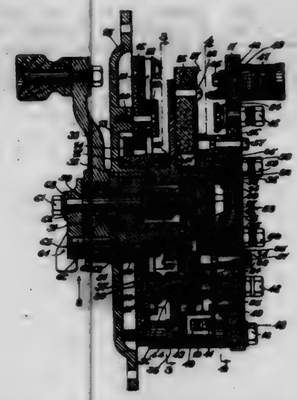
**1,556,825. ELECTRICAL CONTROLLER.** CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 14, 1918. Serial No. 240,035. Renewed May 19, 1924. 85 Claims. (Cl. 200—3.)



25. The combination of a casing, electrical controlling means including a handle, a connector for introduction into said casing, means for locking said connector against removal resiliently biased to locking position, and means rotatable as said handle rotates for positively retracting said locking means.

---

**1,556,826. ELECTRICAL CONTROLLER.** CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Corporation, a Corporation of Massachusetts. Filed July 22, 1918. Serial No. 246,219. 23 Claims. (Cl. 200—14.)

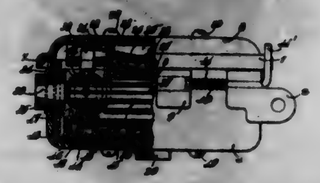


1. In an apparatus of the character described, in combination, a casing, contact members therein, a brush cooperating with said contact members, a hollow shaft by which said brush is carried, said shaft being journaled in the wall of said casing, an operating handle carried by said shaft at the exterior of said casing, and a reversing switch comprising contact members within said casing, a disk cooperating with said contact members and loosely and rotatably mounted within said casing, a shaft arranged concentric with said first named shaft and journaled within the same, an operating handle carried by said last named shaft at the exterior of said casing, means for loosely connecting said last named shaft and disk for rotation in unison, and a spring interposed between said last named shaft and disk for pressing the latter into engagement with its cooperating contact members.

2. Controlling mechanism comprising a circuit controller movable in different directions to effect different connections, and means for controlling the movement of said circuit controller including means necessitating movement from said neutral position in one of said directions prior to movement in the other direction, said movement controlling means also including means cooperating with said second mentioned means in locking said controller in said neutral position, said second and third mentioned means each preventing movement of said circuit controller from its neutral position in a single direction only.

---

**1,556,827. FUSE.** CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 16, 1919. Serial No. 297,531. 48 Claims. (Cl. 200—133.)



1. In a fuse box, a fuse and container therefor, a cover therefor, and common means automatically operative in all positions of the box to prevent closure of the container by the cover when the latter is moved toward closed position and to prevent said fuse being operative until said container is substantially closed.

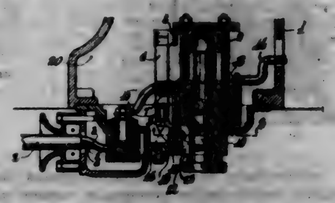
---

**1,556,828. ELECTRICAL CONTROLLING DEVICE.** CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 16, 1919. Serial No. 297,583. Renewed Feb. 18, 1925. 18 Claims. (Cl. 200—11.)

1. In a reversing switch, a support, a plurality of contacts thereon, a guiding and retaining means carried by said support, an open ended insulating member surrounding said contacts and held in position on said support by said guiding and retaining means, a plurality of movable contacts, and a unitary element closing the open end of said insulating member and freely insertable therethrough for controlling the movement of said movable contacts.

---

**1,556,829. INTERLOCKING MECHANISM.** CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 28, 1920. Serial No. 385,012. 19 Claims. (Cl. 200—3.)

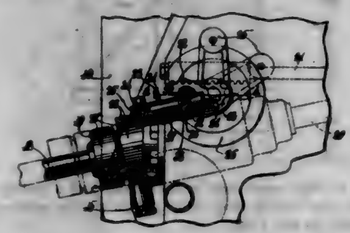


2. In an interlocking mechanism, a switch, a plurality of separately removable cooperating connectors, and plunger mechanism for locking said switch upon removal of any connecter.

18. In an electrical apparatus, a fuse plug, a stationary contact adapted to receive said plug longitudinally upon insertion of the latter, and a knife switch contact, said contacts having a common immediate support and said second contact being adapted to cooperate with a switch blade moving in a plane parallel to the direction of insertion of said plug.

---

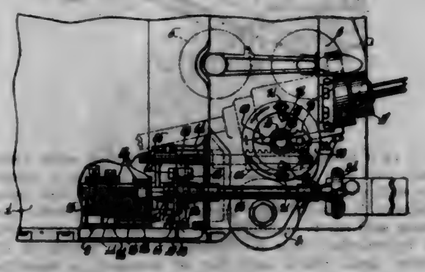
**1,556,830. CONTROLLER INTERLOCK.** CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 30, 1921. Serial No. 481,695. 22 Claims. (Cl. 200—16.)



2. The combination with a controller, a controller handle, and a plug in circuit with said controller, of a locking device for said plug controlled by said handle and a leaf spring carrying said locking device and determining the path of movement thereof, said leaf spring normally holding said locking device in unlocked position.

---

**1,556,831. ELECTRIC CONTROLLING MEANS.** CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov. 23, 1921. Serial No. 517,621. 22 Claims. (Cl. 200—18.)



1. In an electric controlling mechanism, a controller member movable in opposite directions from a given position to produce different circuits, and means including movable means comprising only a single rectilinearly movable element for selectively controlling the direction in which said member may be moved.

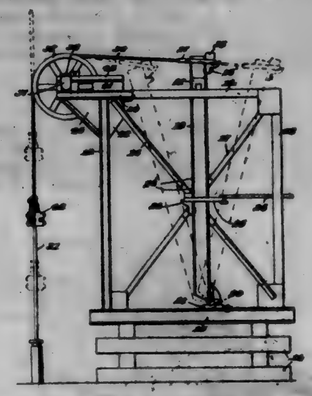
17. In an electric controlling mechanism, a controller, a connecting plug, and independently operable interconnected controlling means therefor operative on movement to release said plug to first lock said controller.

---

**1,556,832. PULL-ROD PUMP JACK.** JULIUS H. HOLMGREEN, San Antonio, Tex. Filed Sept. 22, 1924. Serial No. 739,411. 11 Claims. (Cl. 74—5.)

1. In a pull-rod pump-jack, a base, an upstanding beam pivoted at its lower end on the base, a fixed frame

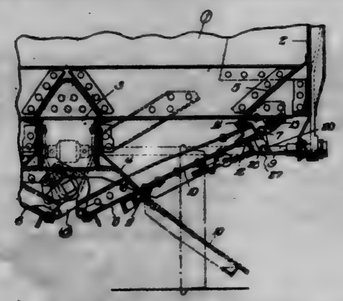
on the base providing lateral guides for the beam, a yoke on the beam for attachment of a pull-rod, a cable



connected to the upper end of the beam, and a pulley on the frame over which said cable passes to the pump-rod, substantially as set forth.

---

1,556,833. DOOR-CONTROL MEANS. WILLIAM JOSEPH HOSCHEIT and DAVID HINDAHL, Chicago, Ill., assignors to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 22, 1923. Serial No. 676,236. 9 Claims. (Cl. 105—251.)



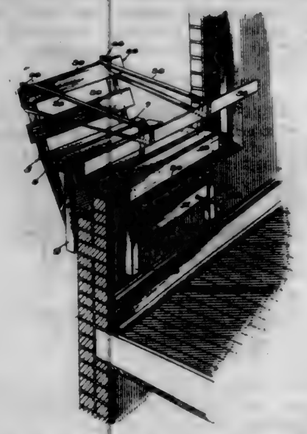
1. In a railway dump car, sloping bottom walls forming a part of a hopper, a swinging door forming a closure for said sloping bottom walls, said swinging door being disposed to direct lading intermediate of the tracks upon which said car is mounted, said door being provided with an intermediate door for directing lading outside of the tracks upon which said car is mounted, a mounting member rigidly united to said first mentioned door for swingingly supporting said door, said mounting member being provided with a swinging latch member biased to underlie said intermediate door, when said intermediate door is in closed position.

---

1,556,834. PRODUCT FOR AUTOMATICALLY SEALING PUNCTURES IN PNEUMATIC TIRES. EUGÈNE JULES HOUDRY, Paris, France, assignor to J. Houdry & Fils, Paris, France, a Limited Joint Stock Company. Filed Oct. 12, 1922. Serial No. 594,190. 3 Claims. (Cl. 134—125.)

2. The herein described method of manufacturing a product for sealing punctures in pneumatic tires, which consists in boiling bran and soda solution in a liquid, permitting the mixtures to cool, adding dissolved salicylic acid to said mixture and thereupon adding kieselguhr and asbestos to the mixture.

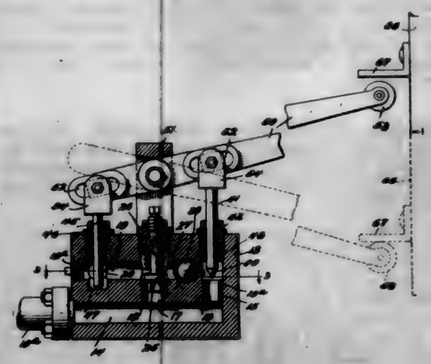
1,556,835. WINDOW SEAT. EMMA HUHN, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 638. 1 Claim. (Cl. 304—27.)



A chair for use by window washers comprising front and rear legs, a seat having horizontal rails rigidly secured to the upper portions of said legs, a back having inclined rails secured to the rear ends of the first named rails and to said rear legs, said front and rear legs being adapted to straddle a window frame, flexible loops extended about the upper portions of said second-named rails and forming flexible detachable sides for said chair, and a bar adapted to be passed through the forward portions of said loops and having its ends extended beyond the sides of the window frame at substantially the height of the chair back to hold the chair in position, said loops being located at opposite sides of the chair to prevent the occupant from falling out sideways.

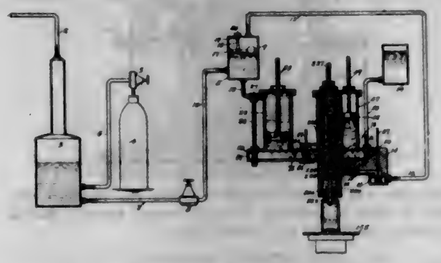
---

1,556,836. ACCUMULATOR-CONTROL MECHANISM. HOWARD H. HUMMEL, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed May 28, 1923. Serial No. 642,092. 18 Claims. (Cl. 103—222.)



1. In combination, an accumulator, means for supplying liquid thereto under pressure, a conduit through which liquid may flow from said accumulator, and means controlled by a preponderance of the pressure of the liquid on the inlet side of said conduit over the pressure on the outlet side thereof for restricting flow of the liquid from said accumulator through said conduit.

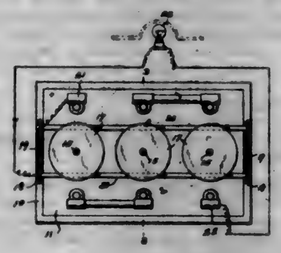
1,556,837. PACKAGING APPARATUS. GEORGE J. HUNTLEY, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, a Corporation of Maryland. Filed July 6, 1918. Serial No. 243,652. 60 Claims. (Cl. 226—77.)



1. In packaging apparatus, and in combination, a filling head, a bottle support, means for causing successive relative movements between the head and support to assemble the head and successive bottles in filling relation, container means, having a connection with the head, for a supply of carbonated liquid, means for establishing a substantial counterpressure in the bottles to be filled, and mechanically operated means for positively forcing uniform charges of said liquid into the successive bottles.

---

1,556,838. STORAGE-BATTERY INDICATOR. GEORGE A. JENSEN, Denver, Colo. Filed May 3, 1924. Serial No. 710,859. 1 Claim. (Cl. 177—311.)

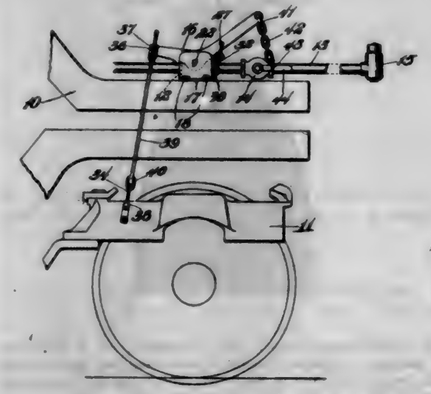


The combination with a storage battery having the usual cells, of a signal connected in an open circuit with the battery, and means operating upon a predetermined lowering of the levels of fluid in any of the cells of the battery for closing the circuit of said signal, comprising spaced bars extending longitudinally of the storage battery at opposite sides of the filling caps of the cells thereof, said caps having openings therein, floats arranged within each cell, an insulated bar connected with each float and extending through the opening of the cap, and a contact bar carried by each bar and adapted to connect the first named bars upon a predetermined lowering of the level of the liquid within the cell.

---

1,556,839. SAFETY DEVICE FOR LOCOMOTIVE TRUCKS. HARLY S. JOHNSON, Erwin, Tenn. Filed Mar. 8, 1925. Serial No. 12,960. 5 Claims. (Cl. 246—170.)

1. In a safety device for indicating derailment of locomotive trucks and the like, a lever pivoted intermediate its ends upon the main frame of the locomotive, a connection between one end of the lever and the locomotive truck permitting limited transverse and vertical movement of the truck without imparting such movements to the lever, comprising a link connected to the lever and depending from the truck and provided upon its lower end with a vertically elongated eye and an arm secured to the truck and provided upon its upper end



with a transversely extending head having a longitudinally extending slot in which the eye is engaged, a connection between the opposite end of the lever and a control element, a signal operated from the control element and means for limiting movement of the lever in a direction to operate the control element.

---

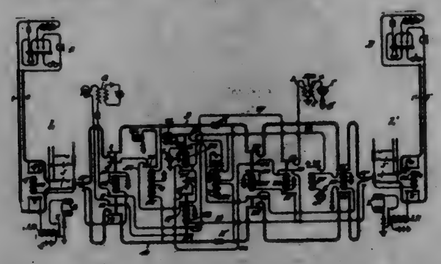
1,556,840. UNIVERSAL JOINT. WILLIAM H. KADESCH, Cedar Falls, Iowa. Filed Aug. 9, 1924. Serial No. 731,168. 4 Claims. (Cl. 64—91.)

1. A universal joint of the character described comprising a substantially annular member having an elongated opening therethrough, trunnions carried on said member, having their axes transverse to the axis of said opening, means for rotatably mounting said member upon a shaft, and a second shaft having a cross sectional contour adjacent its outer end, corresponding to the contour of said elongated opening, said shaft being projected through said opening, whereby rotation of the first named shaft would cause rotation of the second named shaft, and means associated with said member and said second named shaft for confining lateral movement of said shaft in said opening, said means comprising projections, diametrically opposed, extending inwardly from the side walls of said opening through said member in grooves provided in the side walls of said shaft extending longitudinally of said shaft.

1,556,841. BROOM. CHARLES M. KENNEY, Atlanta, Ga., assignor to W. H. Zachry, Atlanta, Ga. Filed July 13, 1923. Serial No. 651,354. 1 Claim. (Cl. 15—189.)

A broom comprising a body consisting of a plurality of stalks, a tubular member imbedded in said stalks and around which the butts of the stalks are clustered, said member having corrugations defining external ribs and internal threads, a binding wire surrounding said stalks below their butt ends and urging the same into interlocking engagement with the external ribs on said tubular member, the outer end of the tubular member being extended beyond the stalk butts and formed with a laterally projecting annular flange, and a cloth covering extending over the butt ends of said stalks, said covering confined at its center between said flange and the stalk butts and being held in position at its outer edge by said binding wire.

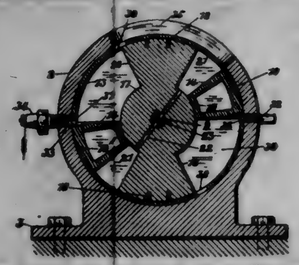
1,556,842. TELEPHONE SYSTEM. LEROY D. KELLOGG, Deerfield, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 19, 1921. Serial No. 501,752. 15 Claims. (Cl. 179—58.)



12. An operator's link circuit having a relay for energisation to disconnect ringing current from said link, a supervisory relay effective on its de-energisation to energise said relay, another supervisory relay effective on its energisation to energise said relay.

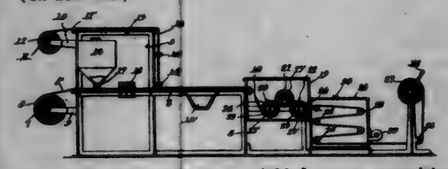
1,556,843. ROTARY ENGINE. CLOYD LELAND KINDER, Denver, Colo. Filed Mar. 29, 1923. Serial No. 628,632. 4 Claims. (Cl. 123—11.)

2. A rotary engine comprising a casing having a ported circular piston chamber, a piston element having a plurality of piston heads, a pressure element having a corresponding number of pressure heads, said elements being mounted to rotate in said chamber and adapted to hold a lubricant in alternate spaces between their



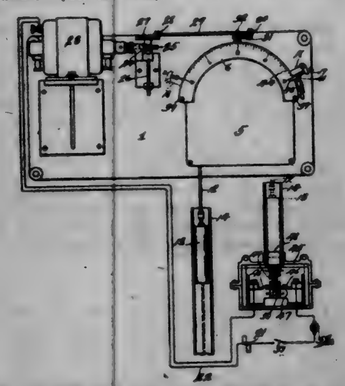
respective heads, and means to cause the pressure element to move periodically at an increased velocity during th rotary motion of the piston element.

1,556,844. APPARATUS FOR PRODUCING CRINKLED PAPER. EBERHARD KLEPPER, Crimmitschau, Germany. Filed Dec. 10, 1923. Serial No. 679,789. 1 Claim. (Cl. 154—35.)



Apparatus for producing a crinkled paper, comprising a table, a support for the table, means for supporting a roll of backing paper near one end of the table to deliver the same to the upper surface of the table, a tank arranged above the table for feeding a sizing to the upper surface of the paper, means for supporting a roll of crinkled paper in a manner to deliver the same to the upper coated face of the backing paper, a heating chamber, a plurality of heated cylinders mounted within the chamber about which the paper travels, a restoring chamber having means therein for supporting the paper in a plurality of runs, and means for effecting a circulation of fresh cold air within the restoring chamber.

1,556,845. PHOTOGRAPHIC LIGHT-TIMING DEVICE. ALEXANDER T. KOPPE, Chicago, Ill., assignor to Directoplate Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 26, 1923. Serial No. 676,982. 16 Claims. (Cl. 95—73.)



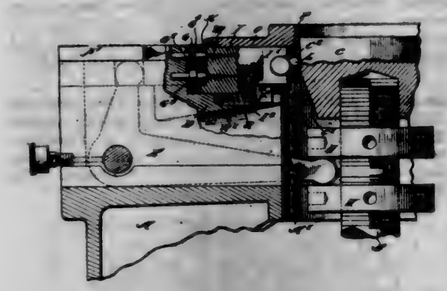
1. The combination with a photographic light circuit, a light carried by said circuit, a circuit maker and breaker carried by said circuit, of an automatically

controlled weight for opening said circuit maker and breaker, and means for controlling said weight in its speed of movement incident to the fluctuating voltage on the circuit.

1,556,846. TOY GUN. KALMAN KOVACS, Manbar, W. Va. Filed Nov. 20, 1922. Serial No. 602,306. 1 Claim. (Cl. 124—10.)

A toy of the character described comprising a body portion having a flat bottom, sides and a curved top, and a longitudinal bore opening at one end, a metallic sleeve lining said bore throughout its entire length, the forward edge of said sleeve being slotted to provide a plurality of bendable portions which increase in width toward their outer ends, said ends being adapted to be bent outwardly against the adjacent end of the body portion to protect the latter, a spring pressed plunger operating within the sleeve, a rod connected with the plunger and slidable through the other end of the body portion, and spaced sights rising from the curved top and arranged one at one end and the other at a point between the ends of said top for the purpose specified.

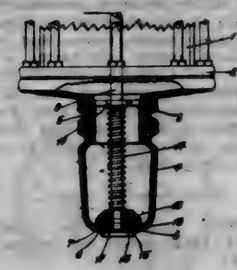
1,556,847. MACHINE FOR SIZING, CUPPING, AND PUNCHING RIMS. HARRY W. KRANS, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 24, 1920. Serial No. 383,765. 4 Claims. (Cl. 113—48.)



1. In a device of the kind described, the combination with the segments of the outer sectors and means for moving the same, of the inner sectors and means for moving them outwardly, said sectors being movable upon the segments, and a top plate resting upon the inner sectors and springs interposed between the inner sectors and the segments.

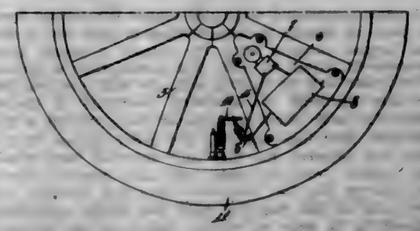
1,556,848. VALVE. CHARLES M. KRUGER, St. Louis, Mo., assignor to Parbee Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 28, 1922. Serial No. 546,113. 2 Claims. (Cl. 251—27.)

2. The combination with a discharge outlet passage having an outlet opening, of a valve having a portion of greater length than said opening and being movable to project said portion through and withdraw said portion from the opening, and a rib on the outer side of said portion extending well beyond the wall of the opening when the valve is closed, the lower edge of said



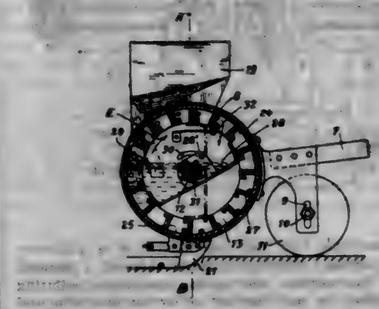
rib being beveled inwardly to form an attenuated lower edge and said portion of the valve having a chamber in its lower side surrounded by said rib.

1,556,849. AUTO TIRE PROTECTOR. THEODORE H. KRUSE, Arvada, Colo. Filed Dec. 9, 1922. Serial No. 605,939. 2 Claims. (Cl. 200—58.)



1. A signaling device adapted for use in connection with the air valve of a pneumatic tire, said signaling device comprising a tubular member in communication with the tire valve, a rod operating in the tubular member and having its upper end extended through the upper end of the tubular member, a plunger on the lower end of the rod and adapted to be moved by air pressure within the valve, a coiled spring disposed between the plunger and upper end of the tubular member, and connected with the plunger rod, and said contact arm extending at right angles with respect to the rod.

1,556,850. MACHINE FOR SOWING SEED. GEORG KÜHNE, Konigsberg, Germany. Filed Mar. 29, 1924. Serial No. 702,988. 12 Claims. (Cl. 221—185.)



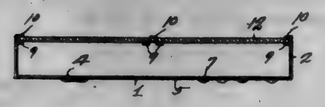
1. Machine for sowing seed comprising in combination a hopper, a bucket wheel rotatably mounted within a casing, a seed receptacle in communication with said

hopper, an adjustable partition for separating a plurality of buckets from the seeds in said seed receptacle and for emptying the seed receptacle.

12. A device of the character described comprising a circular casing, a bucket wheel in the form of an annulus, mounted for rotation therein and comprising a plurality of spaced buckets each having a seed carrying compartment and a yieldable element located inside of the bucket wheel and supported from the casing, the free end of which engages the inner ends of said buckets to snap past them as they rotate and thereby impart a series of blows to the bucket wheel to dislodge surplus seeds from the buckets.

---

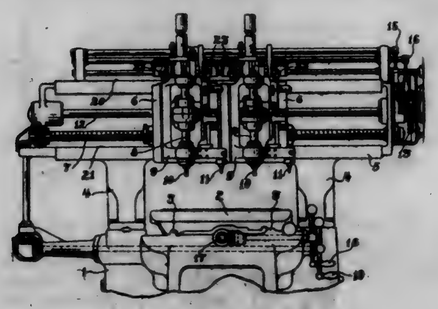
1,556,851. GAME. ANDREW KULAS, Marple, Nebr. Filed Mar. 24, 1922. Serial No. 546,260. 1 Claim. (Cl. 773—115.)



A game comprising a circular shaped box formed from one piece of flexible metal, a bottom in said box, a side wall formed integral with the bottom, a round glass top disposed within the box, lugs formed from a portion of said side wall by cutting said side wall and bending the lugs inwardly to horizontal positions in spaced relation to each other, and spaced from the top of the side wall, said lugs engaging the under surface of the glass top adjacent its edge and adjacent each other, lugs formed from the side wall and disposed above and between the first mentioned lugs and engaging the upper side of the glass top, said last named lugs being adapted to be bent to vertical positions for allowing removal of the glass top and to horizontal positions for holding the glass top securely in place.

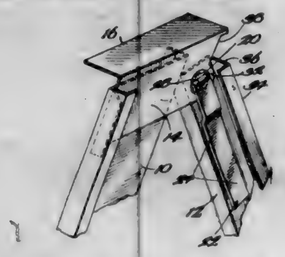
---

1,556,852. PROFILING MACHINE. JERRY J. LA DUCHE, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed June 9, 1923. Serial No. 644,387. 12 Claims. (Cl. 90—16.)



1. In a machine tool, the combination of a guideway support, a carriage slidably mounted thereon, a member pivoted to the carriage and having two arms radiating from the pivot, an anti-friction roller on one arm and in rolling contact with the guideway, and means engaging the other arm for adjusting the same about its pivot in a manner to transmit a portion of the weight of the carriage to the roller and guideway.

1,556,853. STEPLADDER HINGE. FERNANDO J. LE BEAU, Niles Center, Ill., assignor of one-third to Erick Blaine Thelin and one-third to Titus L. Thelin, both of Chicago, Ill. Filed Feb. 18, 1924. Serial No. 693,464. 6 Claims. (Cl. 228—68.)



5. A hinge construction comprising two adjoining plates provided with registering openings; and a strip secured at one end to one of said plates, the other end of said strip being bent to pass through both of said openings, substantially as described.

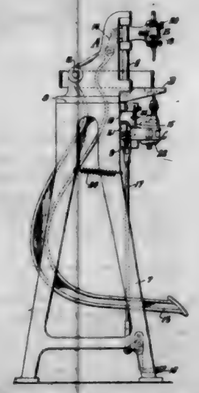
---

1,556,854. MANUFACTURE OF GRAPE SUGAR. ADOLPH W. H. LENDERS and JOHN M. WIDMER, Cedar Rapids, Iowa, assignors to Penick & Ford Ltd. Incorporated, Cedar Rapids, Iowa, a Corporation of Delaware. Filed May 23, 1923. Serial No. 641,020. 14 Claims. (Cl. 127—9.)

12. Method of converting starch into dextrose which consists in reducing the content of insoluble protein in the starch so that it is not substantially in excess of .35% (based on dry substances) and removing substantially all of the soluble protein; converting the starch by acid hydrolysis to substantially the glucose stage; neutralizing the liquor in the presence of the phosphoric acid and filtering the same to remove insoluble and coloidal protein matter; treating the liquor with tannic acid to coagulate the albuminoids made soluble by the converting acid, subjecting the liquor to an adsorption filtration; converting the purified liquor to a dextrose content of more than 90%, neutralizing the converted liquor and bringing about the solidification and cyrstallisation of the entire body of converted liquor.

---

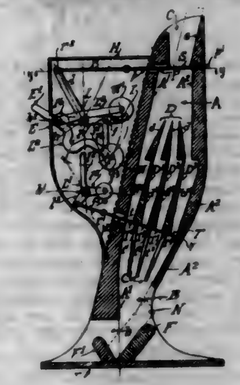
1,556,855. APPARATUS FOR RELINING BRAKE BANDS, CLUTCH DISKS, AND THE LIKE. JAMES R. LEWIS, Laurelton, N. J., assignor to Provident Machine Company, a Corporation of Delaware. Filed Aug. 31, 1923. Serial No. 660,301. 5 Claims. (Cl. 29—26.)



1. Apparatus for relining brake bands, clutch disks and the like comprising a standard, a body portion mounted on the standard, a work table carried rigidly by the body portion, a sliding turret head carried in vertical guide means on the body portion, a foot lever fulcrumed well up in the body portion, and a drilling mechanism carried in vertical guide means on the standard, said last mentioned guide means positioned to maintain the drilling mechanism in line with the tools in the turret head.

---

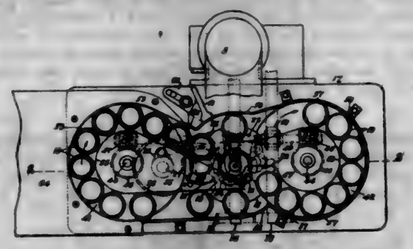
1,556,856. DEVICE FOR SHUFFLING CARDS. LOUIS P. LIPPS, Cleveland, Ohio, assignor to George C. Wing, trustee, Cleveland, Ohio. Filed Feb. 28, 1924. Serial No. 695,683. 15 Claims. (Cl. 273—149.)



1. In a shuffler for cards and similar articles, the combination of a casing, a series of transverse compartments for the reception of the cards during the process of shuffling rigidly affixed thereto, a supporting platform for the pack above said series in and movably related to the casing, and means for gradually moving said support backwardly beneath the pack in order to allow the cards to fall into the compartments below, substantially as shown and described.

---

1,556,857. PACKAGING APPARATUS. FRANK L. LLOYD, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed Aug. 16, 1922. Serial No. 582,169. 7 Claims. (Cl. 226—96.)

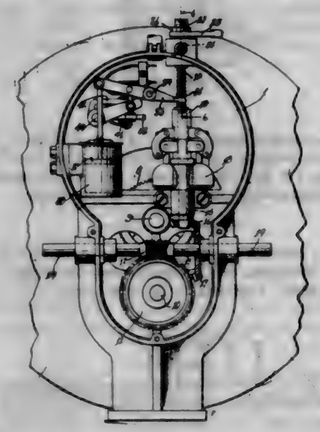


1. In a packaging apparatus, and in combination, a packaging head, a plurality of free adapter cups, a rotary spider having a plurality of cup-receiving pockets for centering said cups successively beneath the packaging head, means for giving said spider a step by step rotation, and means for feeding the cups successively into the spider pockets.

---

1,556,858. SHIELDED HOIST CONTROLLER. HENRY HAVELOCK LOGAN, Chicago, Ill. Filed May 16, 1924. Serial No. 713,868. 8 Claims. (Cl. 187—89.)

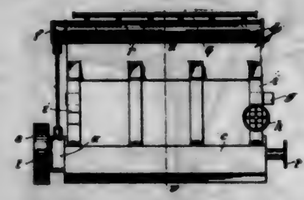
5. In a controller of the type described, a switch comprising a shaft, a switch member loosely mounted on said shaft and extending radially therefrom, a second switch member fixed to said shaft, said switch members each being provided with a contact member arranged to engage with one another, means for normally moving said switch members toward one another, an arm fixed to said shaft, cam operated means arranged for



operation by the hoist drum of a mine hoist for engaging with and moving said arm, thereby rotating said shaft, and means for retarding the movement of said switch member mounted loosely on said shaft, whereby rotation of said shaft may cause said switch members to move apart from one another.

---

1,556,859. INTERNAL-COMBUSTION ENGINE. PROSPER L'ORANGE, Mannheim-Freudenheim, Germany, assignor to Motoren-Werke Mannheim A.-G. vorm. Benz Abt. Stationärer Motorenbau, Mannheim, Germany, a Corporation of Germany. Filed Feb. 9, 1924. Serial No. 691,687. 1 Claim. (Cl. 123—59.)



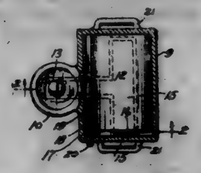
A vertical internal combustion engine having a number of fixed elements thereof disposed symmetrically on both sides of a median plane extending transversely of said engine, said engine being provided at its front and rear ends with similar fitting faces and a plurality of diverse elements adapted to be interchangeably secured to the corresponding fitting faces provided at each end of said engine, whereby said engine may be changed from a right hand to a left hand engine or vice versa by rotating it through an angle of 180° about its central vertical axis and changing said diverse elements from the fitting faces provided at one end of the engine to the corresponding fitting faces at the other end thereof.

---

1,556,860. FLASH-LIGHT TRAFFIC SIGNAL. JOHN M. LOVAAS, Minneapolis, Minn. Filed May 11, 1923. Serial No. 638,260. 2 Claims. (Cl. 177—329.)

1. A direction signal comprising a casing, and an electric circuit in the casing including a light bulb, a battery, a tube grounded through the casing, and a gravity-

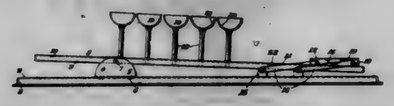
operated sliding plunger in the tube, said battery having a yielding terminal contact normally out of engagement with the tube and in position to make contact with the



end of the sliding plunger only when the signal is held in signaling position, and a non-conducting push button in position for moving the said yielding terminal contact into engagement with the end of the tube.

---

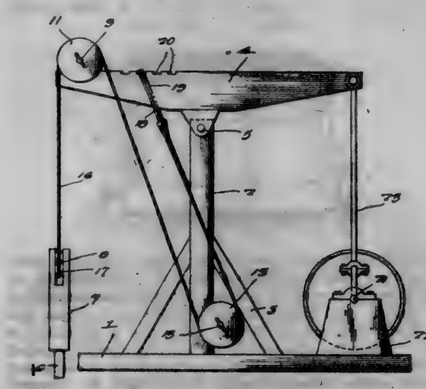
1,556,861. GAME APPARATUS. PATRICK J. MCGRATH, Brooklyn, N. Y. Filed Feb. 25, 1924. Serial No. 694,856. 4 Claims. (Cl. 273—101.)



1. A game apparatus embodying an up-and-down-moving member adapted for throwing objects obliquely upward, a movable finger member to move the first-mentioned member upward, and a member on the last-mentioned member in line with the direction of movement of such objects and adapted to receive them when thrown.

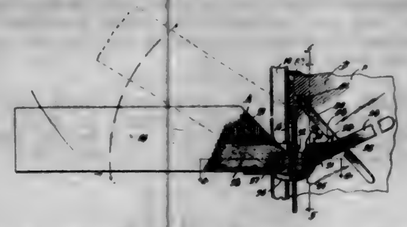
---

1,556,862. PUMPING OUTFIT. CLYDE MCKISSICK, Maxine, Okla. Filed Dec. 11, 1924. Serial No. 755,230. 4 Claims. (Cl. 74—5.)



1. In combination, a supporting standard, a walking beam pivotally supported intermediate its ends thereon, a pump rod, a pulley supported on the upper end thereof, a pair of pulleys on the forward end of the walking beam, an additional pair of pulleys supported on the lower portion of the standard, a cable looped intermediate its ends, the looped portions thereof being disposed over the pulley on the pump rod, the free ends of the cable extending over the aligning pulleys on the beam and standard respectively, means for securing the free ends of the cable to the forward portion of the beam, and means associated with the rear end of the beam for oscillating the same.

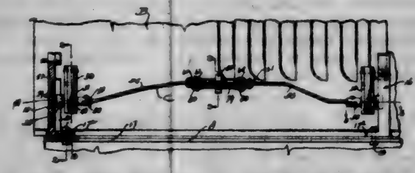
1,556,863. AUTOMOBILE SIGNAL. ADOLF MEISSNER, Grand Rapids, Mich. Filed Nov. 15, 1924. Serial No. 750,100. 3 Claims. (Cl. 116—52.)



1. In a direction signal for automobiles, a supporting plate, means associated with the plate for permitting the connection thereof with an automobile, a bracket secured to the plate and extending outwardly from one face thereof, a second bracket secured to the opposite face of the plate and extending outwardly therefrom, a semaphore arm pivotally secured to the first mentioned bracket, an operating lever pivotally secured to the second mentioned bracket and adapted to extend into the interior of an automobile, a double arm lever pivotally secured at a point intermediate its end to the second mentioned bracket, means pivotally connecting one arm to the operating lever inwardly of the pivot point of said lever, a link having its opposite terminals pivoted respectively to the semaphore arm at one side of the pivot point thereof and to the free end of the other arm of said two armed lever.

---

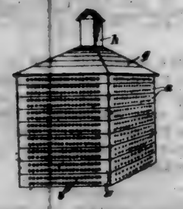
1,556,864. SECURING AND LATCHING MECHANISM FOR AUTOMOBILE HOOD LIDS. JAMES H. MANDENHALL, Nottingham, Pa. Filed June 13, 1924. Serial No. 719,854. 11 Claims. (Cl. 292—33.)



1. The combination with an automobile frame and a closure part of a hood, an elongated cam shaped track fixedly supported by the frame, and a resiliently supported member carried by the hood adapted to engage the track as the closure part of the hood is moving to closed position and ride therealong to urge the closure part snugly against said frame.

---

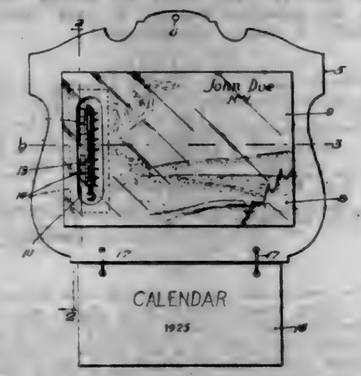
1,556,865. SUN-DRYING MEANS FOR VEGETABLE MATERIAL. BRUNO MÜLLER, Berlin-Neukolln, Germany. Filed Sept. 19, 1923. Serial No. 663,626. 8 Claims. (Cl. 34—41.)



2. Sun drying and curing apparatus, comprising a substantially closed metal casing adapted for the absorption of sun rays, a substantially roof-shaped hood forming the top of said casing, venting means in said hood, and lateral venting means in the sides of said casing opposite each layer of material, and means in said casing, adapted to support layers of material under treatment.

---

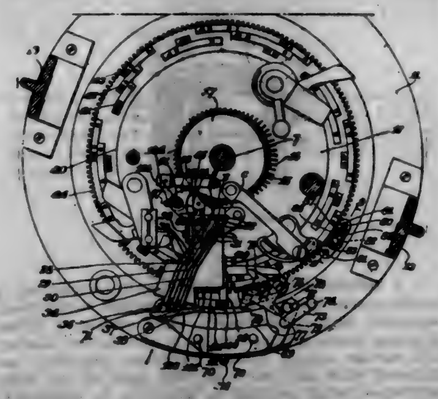
1,556,866. ADVERTISING NOVELTY. DANIEL G. MUELLER, Chicago, Ill., assignor to Mueller Brothers Art and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 17, 1925. Serial No. 23,816. 1 Claim. (Cl. 73—52.)



An advertising novelty, comprising a plaque having an elongated, upright opening formed therein, a sheet of material secured to said plaque and having an elongated upright opening formed therein and coinciding with the opening in the plaque, said sheet having space for receiving printed matter, a transparent plate covering the front of said sheet and opening and a thermometer having a cardboard bulb supporting member secured to the back of said plaque and covering the back of said opening and having its bulb contained in the chamber between said transparent plate and cardboard back and defined by the edges of said openings.

---

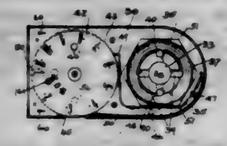
1,556,867. SELECTIVE-THREAD-FEEDING MECHANISM FOR CIRCULAR-KNITTING MACHINES. HARRY L. MUNS, Philadelphia, Pa., assignor to B. H. Rehbaum and F. M. Grauer, a Partnership trading as Resolute Knitting Mills, Philadelphia, Pa. Filed July 25, 1922. Serial No. 577,330. 33 Claims. (Cl. 66—12.)



1. In a circular knitting machine, the combination with a rotating cam cylinder, of three or more thread feeding members rotating with said cylinder, selecting mechanism moving concentrically with respect to the axis of said cam cylinder and automatically actuating any desired one of said members to feeding position, and pattern-controlled mechanism actuating said selecting mechanism at predetermined intervals.

---

1,556,868. CONVERTIBLE ROLL-FILM CAMERA. JOHN C. MURRAY, Lakewood, Ohio, assignor to The Burdette-Murray Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 18, 1919. Serial No. 345,812. 8 Claims. (Cl. 93—31.)



1. In a device of the character described, the combination of a member adapted to be mounted upon the winding key of a camera, and means carried by said member and adapted to indicate automatically successive film exposure positions upon operation of said winding key.

---

1,556,869. MOLDING CORE AND METHOD. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Oct. 24, 1923. Serial No. 670,423. 17 Claims. (Cl. 25—128.)

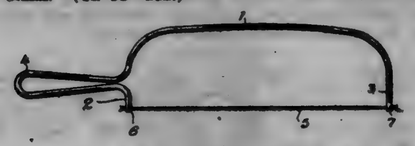
1. The method of molding conduits which consists in setting in place an elastic tubular core of sufficient strength to support the external pressures of the molded material and of such a composition that when extended in one direction it will contract in a transverse direction and when released it will resume its original shape and holding said core in place by external means engaging the top of it, molding the material about said core while thus held in place and, when the molded material has sufficiently hardened, pulling the core longitudinally and thereby contracting it sufficiently to free it and to cause it to yield and to be withdrawn.

---

1,556,870. GRINDING BURR. HARRY B. NELSON, Saginaw, Mich. Filed May 29, 1922. Serial No. 564,484. 1 Claim. (Cl. 83—8.)

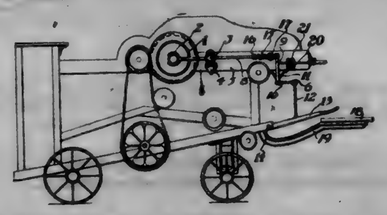
In a grinding disk, spirally disposed longitudinally interrupted ribs including channels therebetween, a plurality of series of baffles located in and extending diagonally across each of said channels, the individual baffles of each series spaced apart endwise from each other and positioned substantially radially with respect to the apex of said spiral channel as a center.

1,556,871. SAW BOW. HURON O. NICHOLS, Lowell, Ind. Filed Oct. 22, 1923. Serial No. 670,068. 1 Claim. (Cl. 84—282.)



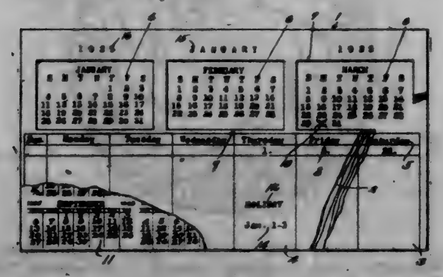
A bow for playing saws comprising a single integral piece of spring metal having approximately parallel end portions, one of said end portions having a loop handle formed therein, and horse hairs stretched across and secured in the ends of said parallel portions, said bow holding said hairs under tension.

1,556,872. SAFETY DEVICE FOR CORN SHREDDERS. THOMAS E. NICHOLSON, St. Paul, Minn. Filed Dec. 22, 1923. Serial No. 682,216. 1 Claim. (Cl. 192—129.)



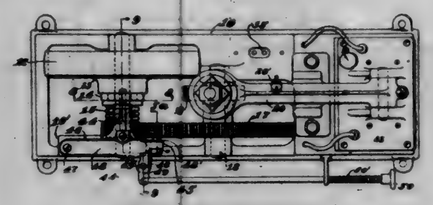
In a corn shredding mechanism, a frame, a rotary shredder mounted therein, a clutch operatively associated with the shredder, a bell crank lever pivotally connected to the frame having one arm thereof pivotally connected to the clutch, a link and lever means operatively connecting the other arm of the bell crank lever to the link and lever, a hand operated lever pivotally connected to the frame of the corn shredder, said hand operated lever having a normal position to resist operation of the bell crank lever, and a depressed position to permit operation of the bell crank lever, resilient means intermediate the hand operated lever and the frame to urge said lever to a normal position when depressed, said hand operated lever being positioned adjacent the means connecting an arm of the bell crank lever to the link and lever to be held in a depressed position upon actuation of the link and lever to operate the clutch.

1,556,873. PAD. WALTON ELBERT NICKLIN, Pryor, Okla. Filed Dec. 4, 1924. Serial No. 753,903. 1 Claim. (Cl. 283—4.)



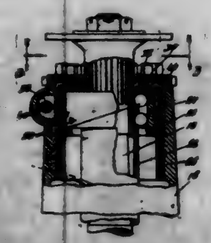
A pad comprising a lower leaf provided with a calendar including numerals designating the days of a month, and upper leaves superposed on the lower leaf, the upper leaves having registering openings disclosing the calendar, the upper leaves having appropriately designated spaces for memoranda, said spaces being marked with the days of the week and being marked with some of the numerals which designate the days of the month on the calendar.

1,556,874. CLUTCH MECHANISM. JOSEPH H. ORDWAY, Brookline, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Apr. 12, 1920, Serial No. 373,036. Divided and this application filed Jan. 25, 1923. Serial No. 615,447. 5 Claims. (Cl. 192—139.)



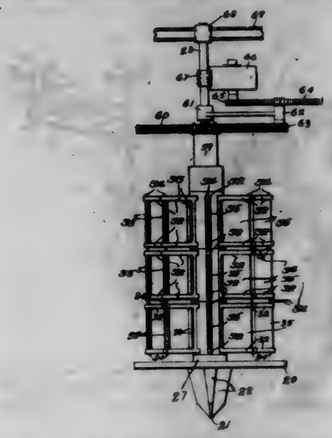
1. The combination with apparatus to be driven, having a rotating element which in an aliquot part of its complete revolution controls a complete cycle of operations of the apparatus, of a self closing clutch having a movable clutch member; actuating means on the element; and opening mechanism intervening between said actuating means and the clutch, comprising a pair of levers pivoted on a common axis, one of said levers being attached to the movable clutch member, and the second of said levers being engaged by said actuating means; a latch adapted to engage between the first and second levers, so that when the latch is engaged both said levers may be swung about the common axis to open the clutch; said actuating means being arranged to move said second lever in a direction to open the clutch, whereby the mechanism stops with the clutch held open; said latch being adapted to be dislodged manually thereby to disconnect the two levers.

1,556,875. DIFFERENTIAL CARRIER. DONALD DAMON ORMSBY, Syracuse, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 12, 1923. Serial No. 674,407. 9 Claims. (Cl. 74—99.)



1. A differential carrier comprising, in combination, a tubular carrier member having a cross-bore substantially tangential with respect to its inner surface, a pinion adjusting sleeve threaded inside of the tubular member, said tubular carrier having continuous peripheral engagement with said sleeve at both sides of the cross-bore, draw plugs arranged in said bore in engagement with the sleeve, and means for drawing said plugs toward one another to clamp the sleeve in adjusted position.

1,556,876. TIDE MOTOR. GEORGE ORTGIES, East St. Louis, Ill. Filed Nov. 20, 1922. Serial No. 602,104. 3 Claims. (Cl. 170—115.)

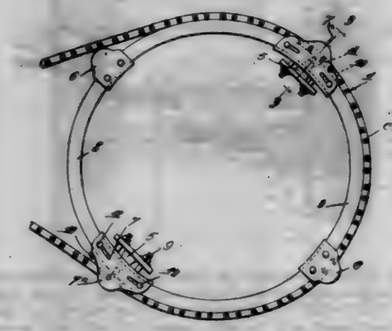


3. A tide motor comprising a circular plate, a centrally located substantially conical projection having vertical grooves formed integral with one face of said plate, a shaft rigidly secured in said plate and projection and extending outward from the face of the plate opposite the projection, a plurality of super-imposed interlocked cylindrical members rotatably mounted on said shaft, longitudinally extending ribs projecting from said cylindrical members, said ribs being of less length than said members and having their ends equidistant from the ends thereof, radially projecting arms formed integral with said members and at opposite ends of said ribs so as to be arranged in pairs, a shaft mounted in each pair of arms adjacent their ends, a paddle located between each pair of arms and secured at its outer edge to said shaft, said paddles adapted to swing free and unrestrained when moving against the current and to have their inner edges contact with the ribs when being operated on by the current, a gear carried by the uppermost cylindrical member, an arm carried by the rigid shaft, a shaft rotatably mounted in said arm, a pinion secured to said shaft and meshing with the gear carried by the cylindrical member, a gear carried by the rotatable shaft, a power transmitting device carried by the rigid shaft and adapted to be operated by the last mentioned gear, and a support for the upper end of the rigid shaft for steadying the same.

1,556,877. PRESSURE GAUGE. JOHN R. PADESKY, La Crosse, Wis., assignor to The National Gauge & Equipment Company, La Crosse, Wis., a Corporation of Wisconsin. Filed Apr. 28, 1924. Serial No. 709,408. 2 Claims. (Cl. 73—110.)

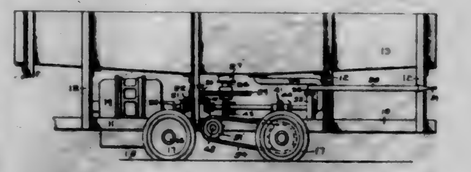
1. In a gauge, a pressure responsive element, a pivoted pointer, a crank arm connected with said pointer having an edge which lies in a horizontal plane when said pointer is in zero position, a pivoted finger operated by said pressure responsive element and having its free end cooperating with the horizontal edge of said crank arm, said finger being of a readily bendable metal to permit the same to be properly positioned with respect to said crank arm.

1,556,878. ADJUSTABLE SPROCKET WHEEL. GEORGE EDWARD PRITCHARD, Elizabeth City, N. C. Filed Feb. 9, 1924. Serial No. 691,841. 3 Claims. (Cl. 74—61.)



1. A sprocket wheel rim split transversely with the ends thereof beveled from the inner toward the outer face, and a wedge-shaped spreader located between said ends and insertbile from the inside and having means for adjusting it to vary the size of the wheel.

1,556,879. METHOD FOR DUSTING COAL MINES. WILLIAM J. REID, Wattis, Utah. Filed July 8, 1924. Serial No. 724,014. 2 Claims. (Cl. 169—2.)

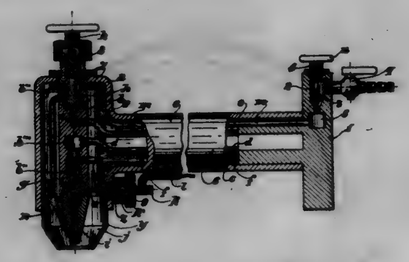


1. The method of protecting coal mines against coal dust explosions, comprising mixing a powdered argillaceous rock and water to produce a mud, and applying said mud to the walls of the mine, said mud being adapted to be reduced to an anhydrous state by evaporation of the water, and to thereupon yield dust to the currents of air passing through said mine.

1,556,880. OXYACETYLENE OR LIKE BLOWPIPE. EUGÈNE ROYER, Lyon, France, assignor to Societe Anonyme des Chalumeaux E. Royer, Lyon, France. Filed Sept. 18, 1923. Serial No. 663,400. 3 Claims. (Cl. 158—27.4.)

2. A multiple gas blow-pipe comprising a tubular member, a cylindrical head open at one end and closed at the other, integral with one of the ends of said member and arranged at right angles thereto, means for extending the length of said cylindrical head a disk at the other end of said member, a nozzle in said head, means for adjusting said nozzle axially of said head, a second nozzle adjacent thereto, means for conveying gases to

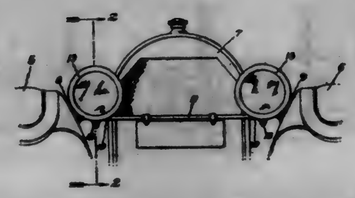
said nozzles, a third nozzle in said head, means for conveying gas thereto, means for producing an electric spark at the outlet of said third nozzle, a plurality of taps connected to said disk, a first pair of adjustable needle valves, an intermediate needle valve and a second pair of needle valves carried by said disk means connecting said first pair of adjustable needle valves to one of said taps, means connecting said second pair of



needle valves to another of said taps, means connecting said intermediate needle valve to another of said taps, pipes connecting the respective needle valves of said first mentioned pair to said concentric and said second nozzle, pipes connecting the respective needle valve of said second mentioned pair to said first nozzle and to said head, and a pipe connecting said intermediate needle valve to said head.

---

1,556,881. COMBINED LAMP-SUPPORTING AND FENDER-TIE-ROD MECHANISM. ERNEST W. SHAHOLM, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 21, 1921. Serial No. 516,794. 3 Claims. (Cl. 240—57.)

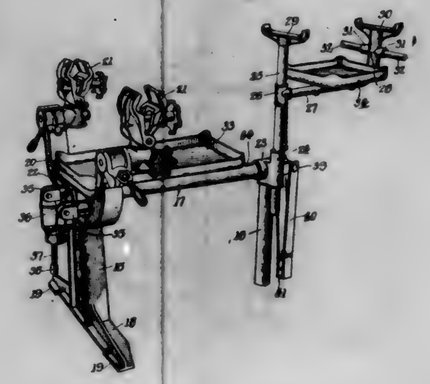


1. In combined lamp supporting and fender tie rod mechanism and in combination with two oppositely located fenders; two lamp supporting brackets carried one by each of said fenders, and having each a tubular portion; a tie rod extending between said brackets and the ends of which extend into the tubular portions thereof; two lamps supported by the tubular portions of said brackets; and two clamping devices associated one with each lamp and each of which is adapted by a single tightening operation to simultaneously secure said lamp to its supporting bracket, and said bracket and the adjacent end of said tie rod together.

---

1,556,882. AXLE STAND. GAILARD E. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed May 16, 1925. Serial No. 30,684. 9 Claims. (Cl. 29—85.)

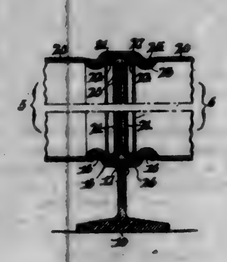
1. In a work stand of the character described, the combination with a frame including front and rear uprights and a tubular connecting member open at both ends, of a yoke hinged to one of said uprights, and a



screw mounted in said yoke and adapted to be swung by the latter into and out of a position in axial alinement with said tubular member.

---

1,556,883. TANK-VEHICLE CONSTRUCTION. AUSTIN L. WERTZ, Philadelphia, Pa. Filed May 12, 1923. Serial No. 638,478. 7 Claims. (Cl. 280—5.)

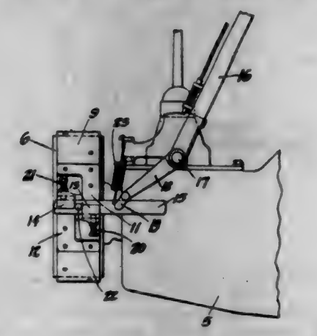


1. A structure of the character described including a tank comprising component, interchangeable flangeless units arranged end to end, and a mounting frame affording transverse members each adapted to directly support the contiguous flangeless ends of a pair of adjacent tank units, the unit ends and the transverse members being complementarily ridged and recessed for interengagement to prevent displacement of the tank units relative to each other and to the mounting frame.

---

1,556,884. TRANSMISSION-BRAKE MECHANISM FOR MOTOR VEHICLES. CLARENCE J. WHITACRE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 24, 1923. Serial No. 670,585. 2 Claims. (Cl. 188—18.)

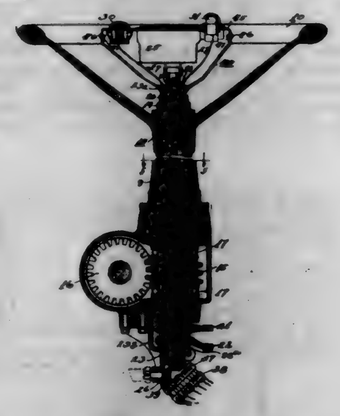
1. In brake mechanism of the class described and in combination with a rotatable brake drum, a brake band surrounding said drum and the ends of which are reduced in width and extend past one another; a floating lever overlapping the ends aforesaid and operatively connected with each of them; a brake applying lever oper-



atively associated with said floating lever; and an abutment intermediate the ends of said brake band for preventing the same from rotating with said brake drum.

---

1,556,885. STEERING-GEAR CONTROL UNIT. JOHN WHYTE, Chicago, Ill., assignor to Whyte Mold Products Company, a Corporation of Illinois. Filed May 17, 1920. Serial No. 381,791. 5 Claims. (Cl. 180—78.)

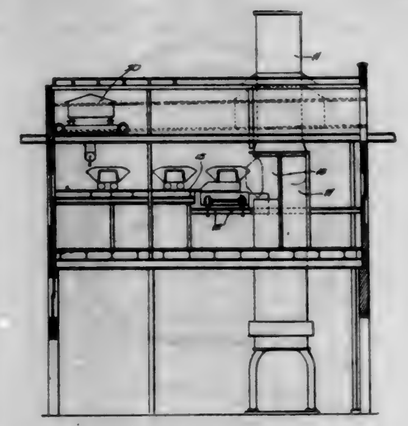


1. A steering wheel control unit, comprising a hollow steering column, a steering wheel, a sleeve attached to the steering wheel and rotatably positioned inside said hollow column, a throttle lever and a spark lever each having a sleeve rotatably positioned within said steering wheel sleeve, a fixed sleeve within said throttle and spark lever sleeves, a casing containing switches and indicators, including a speedometer, positioned on said inner fixed sleeve and disposed within the periphery of said steering wheel, and a speedometer driving shaft and a plurality of wires leading from said casing within said inner fixed sleeve.

---

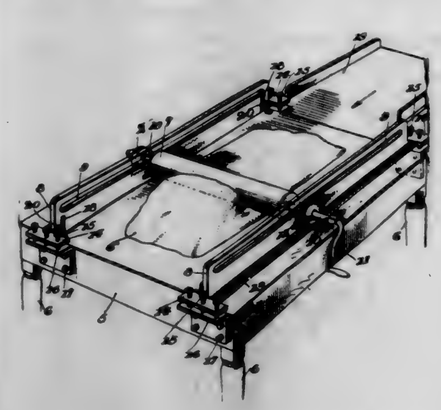
1,556,886. CHARGING MACHINE. ALCOT A. WICKLAND, Chicago, and FREDERICK K. VIAL, La Grange, Ill., assignors to Griffin Wheel Company, Chicago, Ill., a Corporation of Massachusetts. Filed Nov. 26, 1919. Serial No. 340,819. 15 Claims. (Cl. 214—18.)

1. In an apparatus adapted to charge cupolas, furnaces, or the like, the combination of a container for the charging material, a wheeled conveyer mounted beneath and supporting said container, and means including said conveyor for moving said container forwardly and backwardly and in sidewise direction for distributing the contents thereof while said contents are being discharged within the cupola, furnace, or the like.



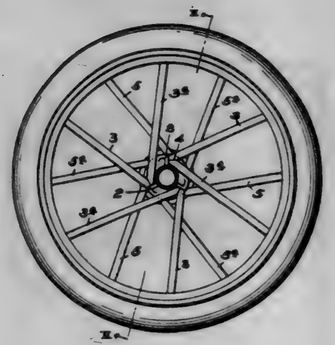
---

1,556,887. DOUGH-ROLLING MACHINE. MAY WINTERS, Burgoon, Ohio. Filed Aug. 30, 1924. Serial No. 735,137. 2 Claims. (Cl. 107—12.)



1. A machine of the character described comprising a base, spaced side pieces extending longitudinally of the base having longitudinal slots near the upper edge, a roller having a stub axle at each end extending through said slots of the side pieces, a rack bar secured to the outside of each side piece at the lower edge being disposed at right angles thereto, pinion gears mounted on the axles of said roller adapted to mesh with said rack bars, a crank for turning said roller and means for vertically adjusting said side pieces with respect to said base.

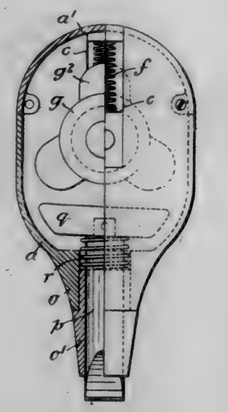
1,556,888. VEHICLE WHEEL. WARREN WORTHINGTON, Rushland, Pa. Filed Mar. 21, 1922. Serial No. 545,400. 4 Claims. (Cl. 301—74.)



2. A vehicle wheel comprising a hub, a felloe, and compression spokes arranged in two series extending toward each other from the ends of the hub, and the spokes of each series being arranged in pairs extending tangentially from and having their inner ends movably bearing upon the hub.

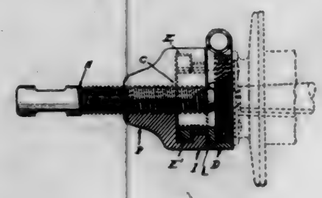
---

1,556,889. MEANS FOR CLEANING, SCALING, OR CHIPPING SURFACES. WILLIAM BRUCE WRIGHT, Liverpool, England. Filed Mar. 29, 1923. Serial No. 628,673. 1 Claim. (Cl. 78—38.)



Apparatus for cleaning, scaling or chipping surfaces comprising a casing, parallel guide ways in the sides of the casing, bearings mounted in the guide ways, cushioning springs arranged to act on the bearings, a rotary shaft mounted in the bearings, a rotary hammer mounted on the shaft and actuated thereby, and a reciprocating tool resiliently supported in the casing in the path of the hammer.

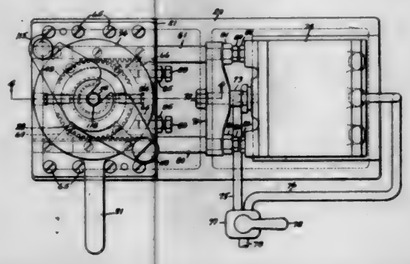
1,556,890. WHEEL PULLER FOR AUTOMOBILES. FRANK A. ZERBOLD, JAMES B. DUNCAN, and RUDOLPH F. FISHER, Bellefontaine, Ohio. Filed Jan. 8, 1923. Serial No. 611,487. 1 Claim. (Cl. 29—85.)



The combination in a device for removing automobile wheels, a carrying head comprising a chambered base having inturned arcuate flanges spaced apart and providing a channel in back of the same, a cap having an opening therethrough and having outwardly extending spaced flanges adapted to be passed between the arcuate flanges and into the channel and interlock with said arcuate flanges with a slight endwise free space between them, said cap having an interiorly threaded projection opposite the flanged portion and adapted to engage the threaded portion of the wheel hub, one of said outwardly extending flanges being provided with a stop lug to contact the flange on the base and limit the movement of the latter, and a thrust screw working through said head and cap and adapted to exert pressure on the wheel shaft.

---

1,556,891. APPARATUS FOR MAKING ARMATURES. ROBERT H. AHLERS and EARL M. POLK, Dayton, Ohio, assignors to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 20, 1923. Serial No. 675,969. 14 Claims. (Cl. 153—39.)

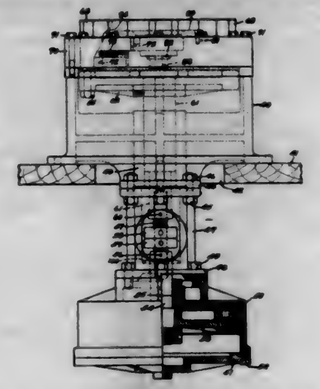


1. Apparatus for manufacturing armatures comprising, in combination, means for holding a bar wound armature having bar conductors extending through the slots of the armature core, means for bending the conductor portions outside the armature core simultaneously, and means for limiting the abruptness of curvature of said conductors produced by bending.

---

1,556,892. APPARATUS FOR MAKING ARMATURES. ROBERT H. AHLERS and EARL M. POLK, Dayton, Ohio, assignors to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 20, 1923. Serial No. 675,970. 6 Claims. (Cl. 29—84.)

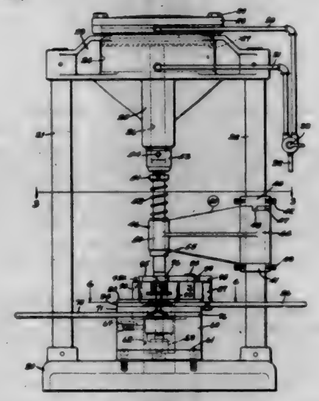
1. Apparatus for making an armature including a commutator, the risers of which include spaced deformable portions defining notches for receiving armature conductors which includes in combination, means for holding the armature, a plurality of riser deforming members supported for movement toward the commutator,



and means for simultaneously causing said riser deforming members to engage the risers and force them into engagement with their respective conductors.

---

1,556,893. APPARATUS FOR MAKING ARMATURES. ROBERT H. AHLERS and EARL M. POLK, Dayton, Ohio, assignors to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 20, 1923. Serial No. 675,971. 8 Claims. (Cl. 29—84.)

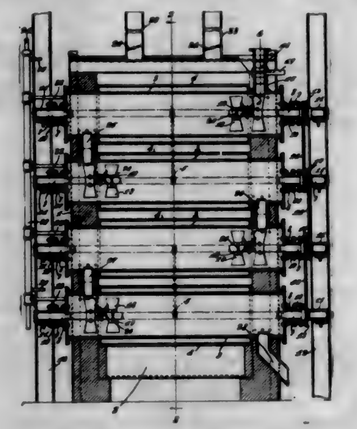


1. Apparatus for manufacturing armatures having conductor leads extending from the core and received by notched risers of the commutator, comprising in combination, means for holding an armature core with conductor leads extending therefrom, means for locating said leads so that they may be received by the commutator risers, and means for moving a commutator endwise along the armature shaft so that the commutator risers will receive all of the conductor leads simultaneously.

---

1,556,894. RETORT. WILLIAM H. ALCORN, Portsmouth, Ohio. Filed June 20, 1923. Serial No. 646,659. 1 Claim. (Cl. 202—14.)

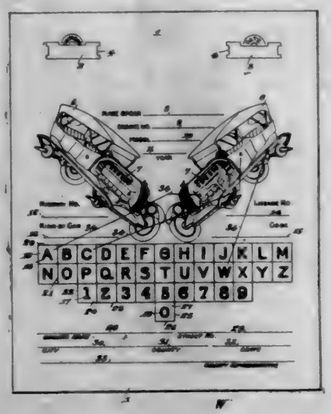
In a retort the combination with masonry walls forming a furnace structure, of stationary superposed cylinders extending through opposed walls and across the interior of the retort, ports within opposed walls of the retort for maintaining communication between adjoining cylinders, the inlet and outlet of each cylinder being located adjacent the respective ends of the cylinder, said inlets and outlets being formed by the respective ports, steam jackets abutting against opposed walls of the retort and concentric with and completely surrounding the cylinders, a steam pipe connecting the jackets, propelling blades mounted for rotation within each of the



cylinders, means for simultaneously rotating the blades for forcing material in the cylinders from the inlet to the outlet ports, a fuel supporting grate in the lower portion of the retort below all of the steam jackets, a condensing header, a water jacket thereon, and pipes connecting the condenser with one end of each of the cylinders, all of the steam jackets being exposed to heat generated within the retort.

---

1,556,895. IDENTIFICATION CERTIFICATE FOR MOTOR VEHICLES. WILLIAM C. AYERS, Arlington, Tex., assignor of one-fourth to Isaac B. Cantrell and eight one-hundredths to Tom L. Randolph, both of Dallas, Tex. Filed June 6, 1923. Serial No. 643,813. 2 Claims. (Cl. 283—7.)

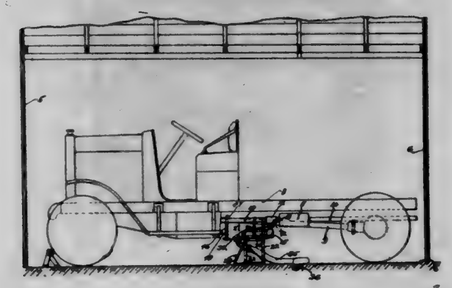


1. An identification certificate for motor vehicles comprising a body portion, means thereon to provide a code of selective identifying indicia, means on said body portion to constitute the pictorial representation of a

motor vehicle with the engine exposed for recording thereon indicia selected from said code at points corresponding to the points of a motor vehicle upon which have been applied like identifying indicia selected from said code, and said body portion further provided with conventionally designated means for the recording of the regular designations carried by a motor vehicle and further for the reception of the vehicle owner's name and his address.

---

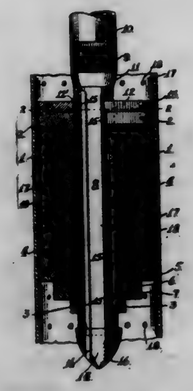
1,556,896. APPARATUS FOR CONVEYING THE EXHAUST GASES OF AN INTERNAL-COMBUSTION ENGINE FROM A GARAGE. FRANK S. BALATTA, St. Paul, Minn. Filed Apr. 16, 1925. Serial No. 23,549. 14 Claims. (Cl. 104—52.)



5. The combination with a garage and an exhaust conduit leading therefrom and having a yieldingly held intake head, of a vehicle having an internal combustion engine, and a cut-out in the exhaust pipe of said engine and having an exhaust nozzle arranged to automatically connect with said intake head by a movement of the vehicle in the garage.

---

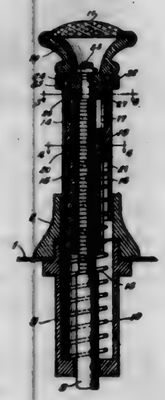
1,556,897. PERFORATION CLEANER FOR OIL-WELL CASINGS. REUBEN H. BARR and TOBE J. PIERCE, Taft, Calif. Filed Apr. 14, 1925. Serial No. 23,083. 8 Claims. (Cl. 166—20.)



8. A cleaner for well-casing perforations comprising a longitudinally apertured body member having a top flange; packing rings carried by said body member; a cap ring carried upon the top flange of said body member and having a laterally directed port opening at its periphery; a valve member slidably fitted through said body member, having means at its top for a suspending connection and a nut at its foot for suspending said body member, and having also a passage communicating below and above said body member with the casing interior and also communicating with the laterally directed port in the cap ring; and a head upon said valve member adapted to seat itself in and unseat itself from the cap ring, to control the communication of the valve member passage with the casing interior above said body member.

---

1,556,898. SIRUP PUMP. CHARLES L. BASTIAN and CARL G. JOHNSON, Chicago, Ill., assignors to The Bastian-Blessing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1925. Serial No. 18. 4 Claims. (Cl. 225—35.)



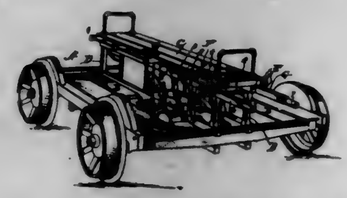
1. A pump comprising a plunger having a stem, a sleeve threaded on one end thereof, a second sleeve surrounding said threaded sleeve and rotatable therewith but capable of longitudinal movement relative thereto, means engaging said second sleeve and resiliently urging it longitudinally of said plunger stem, and means secured to said stem and engaging said sleeve to prevent said longitudinal movement.

---

1,556,899. COMBINED GRAIN-DRILL TOOTH AND HOE. ELVA L. BELL, Wenatchee, Wash. Filed Dec. 29, 1922. Serial No. 609,742. 3 Claims. (Cl. 111—84.)

1. In a grain drill, a trailing dragbar, a drill tooth unit supported at the lower end of the drag bar and comprising a furrow opener and a grain guide, and a hoe carried by said drag bar and operating at one side of said furrow opener, said hoe including a portion bent to provide a cutting edge lying in substantially the horizontal plane tangential to the periphery of the furrow opener and in advance of the open end of said grain guide.

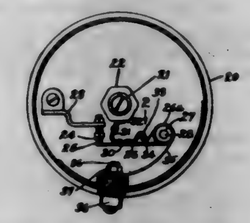
1,556,900. MOTOR CAR. CLYDE P. BENNING, Oak Park, Ill., assignor to Mudge & Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1925. Serial No. 11,004. 10 Claims. (Cl. 105—162.)



2. In a motor car of the class described, a raised seat frame including longitudinally arranged side bars and a plurality of cross bars, a handle bar member movably positioned at the side of each side bar capable of longitudinal movement relative thereto and, when extended, of lateral movement also, and means for limiting the spread apart lateral movement of the handle bar members.

---

1,556,901. IGNITION DEVICE. CHARLES EDWARD BERKDOLL, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed July 8, 1921. Serial No. 483,330. 5 Claims. (Cl. 200—30.)



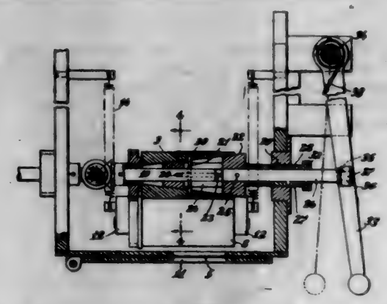
4. In a breaker arm for periodic circuit breakers, the combination with an apertured hub; of a strip of material having one end bent around said hub; a contact mounted adjacent the other end of said strip; and a member secured to said strip and carrying a cam rubbing block at one end and having a hook portion at the other end adapted to be engaged by the hooked end of a leaf spring.

---

1,556,902. COMBINED RAIN AND WIND SHIELD FOR AUTOMOBILES. ALFRED S. BEVILLE and ADELAIDE F. SCHRODER, Jacksonville, Fla. Filed Dec. 19, 1924. Serial No. 756,961. 2 Claims. (Cl. 296—95.)

1. A device of the class described comprising a plate having an upstanding flange at its rear edge for connection with the bow of an automobile top frame and having its front end upturned, said member having side and front flanges to form a gutter-like structure for receiving the rain water, and discharge spouts leading from opposite ends of said structure, a combined rain and wind shield hinged to the lower face of said gutter-like structure, supporting plates carried by said structure near the ends thereof, and means for adjustably mounting said auxiliary shield in relation to said plates.

1,556,903. MOVING-PICTURE MACHINE. GEORGE W. BINGHAM, New York, N. Y. Filed Sept. 6, 1924. Serial No. 736,205. 18 Claims. (Cl. 88—17.)



1. In moving picture apparatus, film advancing mechanism including means regulatable to vary the film feed while the machine is in operation, a registering device for effecting a fine adjustment of said means for registering purposes, an independently operable framing device for effecting coarser adjustments of said means for framing purposes and restoring means for automatically effecting return of the regulatable means to previously registered condition after each actuation of the framing device.

---

1,556,904. AUTOMATIC CALLING DEVICE. JOHN G. BLESSING, Oak Forest, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 22, 1921, Serial No. 494,281. Renewed Mar. 20, 1925. 14 Claims. (Cl. 179—90.)

1. In an impulse sending device, a mounting plate having a spring and roller device attached thereto, a finger hold dial having a shoulder affixed thereto, a gear driven cam, a source of power for driving said cam and dial, to move said shoulder over said spring and roller device to shift said cam from a non-impulse sending position to an impulse sending position, and for returning the same to a non-impulse sending position each time the finger hold dial is operated.

---

1,556,905. AUTOMATIC CALLING DEVICE. JOHN G. BLESSING, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 18, 1921. Serial No. 508,478. 22 Claims. (Cl. 179—90.)

1. In an impulse sending device, a spring for driving said device, a rotatable finger hold dial having a keyed shoulder thereon, a combined driving gear and spring

cup for holding said spring, said cup so machined and keyed as to tightly fit over said shoulder making said finger hold dial and gear and spring cup as a unit.

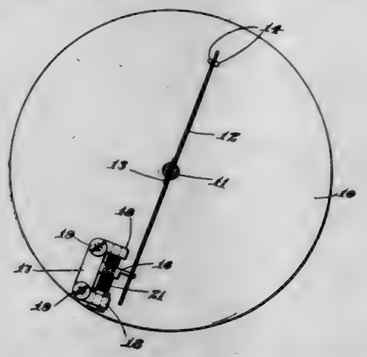
---

1,556,906. AUTOMATIC CALLING DEVICE. JOHN G. BLESSING, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1921. Serial No. 509,488. 19 Claims. (Cl. 179—90.)

1. In an impulse sending device, springs, a unit comprising a finger hold dial, a spring cup and a main driving gear, a second unit comprising, a shaft, a cam, a worm wheel and a worm carrying a clutch surface, said first unit manually operable in one direction to operate the worm of the second unit independent of any movement of said shaft and worm wheel, and means for operating said first unit thereafter in the opposite direction to make said clutch effective to cause said second unit to operate said springs.

---

1,556,907. SPRING REGULATOR. FREDERICK W. BOLD, Chelsea, Mass., assignor to Charles H. Pearson, Brookline, Mass. Filed Jan. 2, 1925. Serial No. 286. 2 Claims. (Cl. 102—36.)

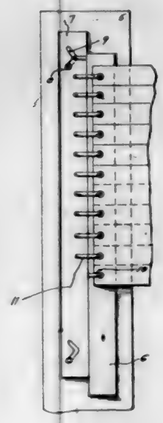


1. An improved regulating device for timing trains and the like, comprising a bridge, lateral extensions formed integral therewith and at each end thereof, an adjusting screw rotatably mounted in said extension, a saddle associated with said screw and movable longitudinally thereof by the rotation of the screw, and a spring, said saddle being slidably engaging with said spring.

---

1,556,908. BINDER FOR CARDS AND THE LIKE. CHARLES A. BRIGGS, Chino, Calif. Filed May 26, 1925. Serial No. 33,010. 3 Claims. (Cl. 129—9.)

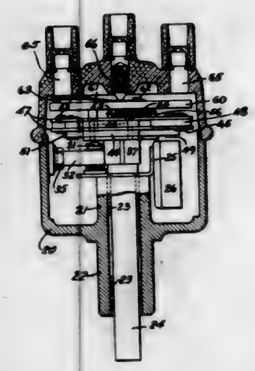
1. In a temporary binder two plates arranged one adjacent to the other and each provided with a plurality of prongs, said prongs being arranged in adjacent spaced relation on said plates and normally registering, one of said plates being adapted to move longitudinally and laterally outward with respect to the other of said plates to provide a lateral separation of the prongs and then move longitudinally in the same direction and laterally



inward to register the prongs thereof with successively disposed prongs on the other plate, said plates being provided with means for guiding the movable plate in its movements.

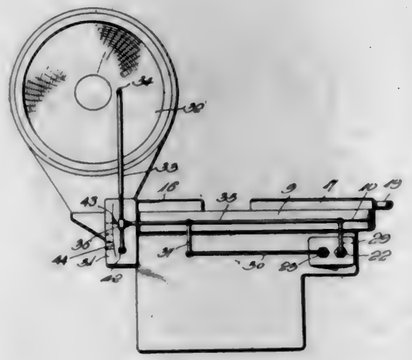
---

1,556,909. IGNITION SYSTEM. ALBERT M. BURGHER, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed June 30, 1921. Serial No. 481,655. 12 Claims. (Cl. 200—31.)



3. In an ignition timer, the combination with a distributor including a rotor; of a drive shaft; a speed responsive adjusting device located below the rotor and including a plate attached to the drive shaft, a weight member pivotally mounted upon said plate; a second plate supporting said rotor suspended from the weight member and shifted angularly relative to the drive shaft by the weight member.

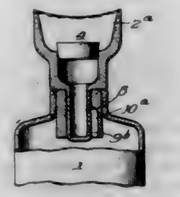
1,556,910. ORIFICE OR SIMILAR GAS METER. THOMAS D. CABOT, Boston, Mass. Filed June 21, 1923. Serial No. 646,913. 4 Claims. (Cl. 73—167.)



1. In a meter of the class described, the combination of a graduated clock-operated chart, an arm pivoted at one end and carrying a marking element at its other end to mark upon said chart, a differential pressure responsive mechanism movable proportionately to the differential pressure of the gas in a pipe line, a static pressure responsive mechanism movable proportionately to the static pressure of the gas in the pipe line, a link pivoted at one end to said differential mechanism and connected intermediate of its ends to the other mechanism, whereby it is moved longitudinally by one mechanism and swung transversely by the other mechanism, and a slidable and pivotal connection between the other end of said link and said arm, whereby the latter is swung so as to cause said marking element to move over said chart proportionately to the product of the differential and static pressures.

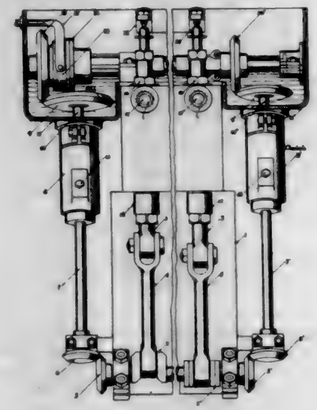
---

1,556,911. MEASURING STOPPER FOR BOTTLES. WALLACE V. CALLENDER, Chicago, Ill. Filed May 6, 1921. Serial No. 467,292. 1 Claim. (Cl. 215—57.)



In a bottle stopper having a chamber for measuring a portion of the contents of the bottle, and having a ported stem adapted by rotation in the bottle to bring the chamber into and out of communication with the bottle, a removable closure for the discharge end of the chamber, and a cup formed upon the wall of the chamber and projecting beyond said closure.

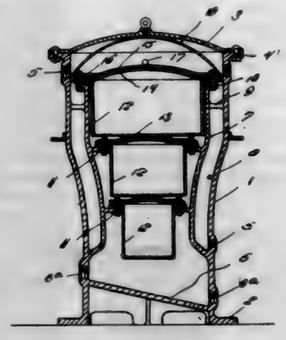
1,556,912. OIL PUMP. JOHN E. CANOOSE, Brooklyn, N. Y. Filed June 30, 1924. Serial No. 723,374. 22 Claims. (Cl. 103—40.)



1. In a fuel feed pump of the character described, in combination, a suction valve through which fuel oil is adapted to be passed and a rotating means adapted to vary the point of closing of said suction valve without affecting the amount of lift thereof.

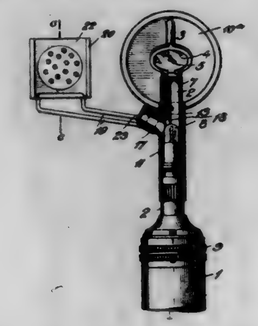
---

1,556,913. WATER FILTER. ANGELO MARIO CAPRA, Philadelphia, Pa., assignor to Fedele De Palma, Philadelphia, Penn. Filed Sept. 8, 1924. Serial No. 735,619. 2 Claims. (Cl. 210—149.)



1. In a filtering device of the class described, a basket for containing filtering material, said basket being provided at its bottom with a screen and at its top with a lateral supporting flange, a handle hingedly connected to said flange, an apertured cover resting upon said flange, filtering fabrics stretched across said cover and closing the apertures therein, and clamping means for said fabric and cover.

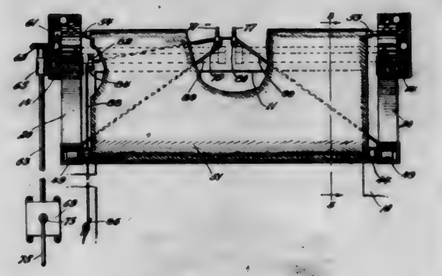
1,556,914. RETINOSCOPE. HANS CLEMENT, New York, and ELMER LE ROY RYER, Hawthorne, N. Y., assignors to General Optical Company, Inc., a Corporation of New York. Filed Feb. 15, 1922. Serial No. 536,784. 17 Claims. (Cl. 88—20.)



1. In a diagnostic instrument, a support, a retinoscope mounted on said support, and a chart holder pivotally mounted on said support for movement about a vertical axis whereby the holder may be moved through a horizontal path into or out of an operative position at one side of the retinoscope.

---

1,556,915. AWNING. ARTHUR P. COOLEY, Westerly, R. I. Filed Dec. 3, 1924. Serial No. 753,599. 3 Claims. (Cl. 156—44.)

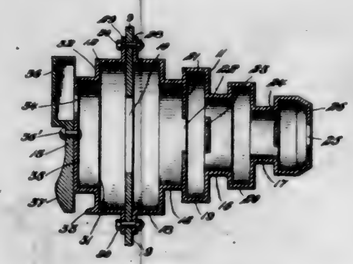


1. In an awning, attaching plates, downwardly inclined supporting arms comprising sections attached to the plates and sections pivotally connected with the attached sections, both the attached sections and the connected sections being provided with longitudinal guide slots registering with each other, a roll supported by the plates, an eave rod resting in the slots in the connected sections, an awning cover upon the roll attached to the rod, means for rotating the roll to elevate the cover, and means for laterally swinging the attached sections.

---

1,556,916. APPARATUS FOR PROMOTING FUEL COMBUSTION. JAMES W. CRAIG, Providence, R. I. Original application filed Dec. 21, 1922, Serial No. 608,225. Divided and this application filed May 2, 1924. Serial No. 710,552. 8 Claims. (Cl. 110—175.)

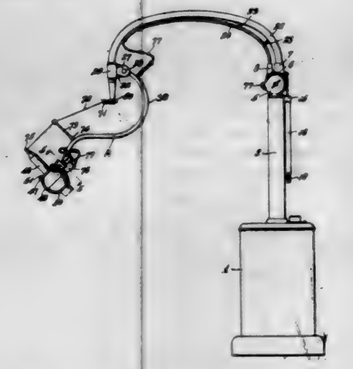
1. An apparatus for promoting fuel combustion which comprises, a combustion chamber, a preheater projecting within said combustion chamber for admitting air thereto, an air inlet mechanism for admitting unpreheated air directly to said preheater comprising a plate provided with a series of openings of varying size and having indicia located thereon correspondingly positioned relative to the several openings, and a movable shutter overlying said openings and serving as a closure therefor said shutter being provided upon the side adjacent to said openings with a segmental recess forming an air



passage for selectively placing each of said openings separately in communication with a supply of unpreheated air and having means for designating the indicia corresponding with the opening thus placed in communication with the air supply.

---

1,556,917. ELECTRICAL APPARATUS. WILLIAM C. DEE, Cleveland, Ohio, assignor to The Engeln Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 19, 1918. Serial No. 254,780. 12 Claims. (Cl. 250—344.)



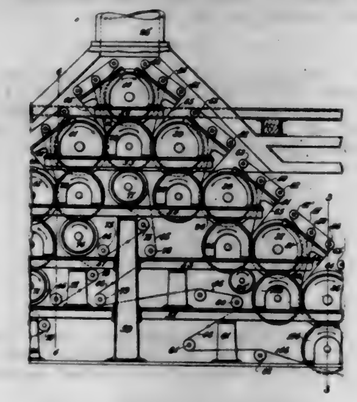
1. Apparatus for use in dental radiography comprising a support, a main drum pivoted thereto on a horizontal axis and having a bearing portion at its outer end, the longitudinal axis of which by tilting movement of said arm may be adjusted to various positions inclined to the vertical, a second arm rotatable around the axis of said bearing portion and having a manipulating portion crossing said axis, and an X-ray tube supporting frame carried by said arm, and electric connections therefor.

---

1,556,918. PAPER-DRYING MACHINE. HAROLD F. DUNBAR, Turners Falls, Mass. Filed Dec. 24, 1924. Serial No. 757,917. 12 Claims. (Cl. 34—48.)

9. In a paper drying machine, in combination, a supporting frame, a series of drier rolls, rotatably supported on the frame in pyramid formation, means for successively directing the web of paper about the series

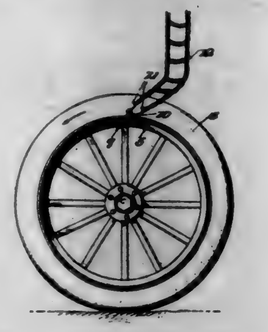
of drier rolls, the construction and arrangement being such that the drier roll at the apex of the formation serves the purpose of causing the same surface of the



web of paper to engage all of the drier rolls, a sizing tank and means for cutting and stocking the finished paper.

---

1,556,919. ATTACHING DEVICE FOR TIRE CHAINS. GEORGE H. DUKE, Chicago, Ill. Filed Apr. 24, 1924. Serial No. 708,808. 2 Claims. (Cl. 152—14.)

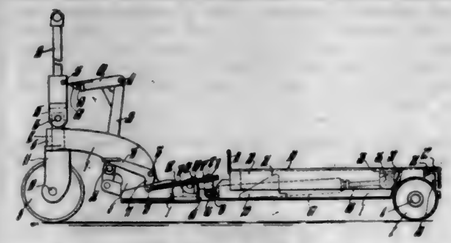


1. A chain attaching device comprising a bowed body having its end portions looped to form combined eyes and tire engaging knobs adapted to bear against opposite sides of a tire to hold the ends of the body in position, and combined handles and hooks having pivotal connection with said eyes.

---

1,556,920. ELEVATING TRUCK. FRANK L. EIDMANN, North Bergen, N. J., assignor to J. Lewis Wyckoff, Edward N. White, and James M. Eaton, all of Holyoke, Mass., trustees, doing business as Cowan Truck Company. Filed Feb. 18, 1921. Serial No. 445,924. 13 Claims. (Cl. 254—5.)

1. In an elevating truck in combination, a wheel supported base and a frame adapted to be elevated with respect to said base, pawl and ratchet mechanism for effecting the elevation of said frame comprising actuating and holding pawls, means for causing said actuating and holding pawls to become inoperative when the frame is fully elevated, a toggle lock between said base and said frame to hold the latter in elevated position when fully raised, and a loose play connection between said toggle lock, said base and said frame to permit an



overthrow of said actuating pawl with respect to said holding pawl after said toggle fully reaches its locking position.

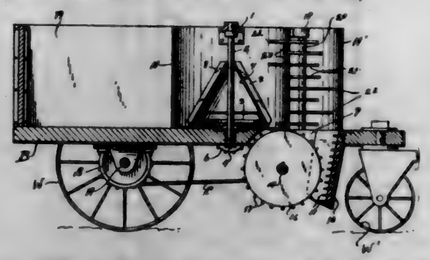
---

1,556,921. EXTENSION ATTACHMENT FOR AUTOMOBILE PEDALS. EDWIN O. EMERSON, Gananoque, Canada. Filed Mar. 10, 1925. Serial No. 14,577. 3 Claims. (Cl. 74—81.)

1. The combination with a pedal of the class described, of an extension therefor comprising a base shaped to fit the face of the pedal-tread, a pair of clamping arms arranged to secure an end of said base to the aforesaid tread, a plate, means for clamping said plate to the tread in the proximity of the other end of said base, members rigidly depending from the said base for abutment with the marginal edges of the said tread, and a tread mounted upon the base adjustable in the plane of the pedal.

---

1,556,922. FERTILIZER DISTRIBUTOR. GEORGE DAVID FENTIMAN, Stillwater, Okla. Filed Mar. 8, 1924. Serial No. 697,923. 1 Claim. (Cl. 275—2.)

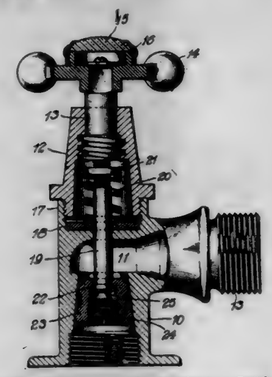


A fertilizer distributor comprising, in combination, a portable body, a hopper mounted thereon, a supplemental hopper, an opening in the wall of the first named hopper affording communication with the supplemental hopper, vertically spaced tearing members mounted in

the supplemental hopper and extending through the opening into the first named hopper, means for rotating said members, a discharge chute in communication with the supplemental hopper, and transversely disposed arms supported by the first named hopper and extending partially across the opening between the two hoppers, each of said arms being disposed between adjacent tearing members.

---

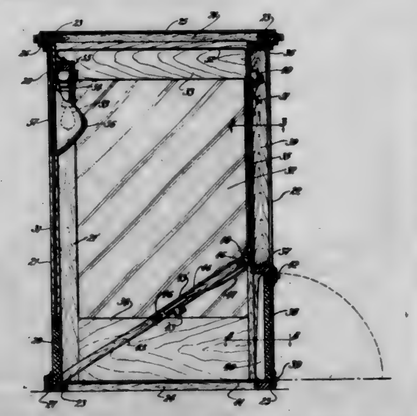
1,556,923. FAUCET. JOHN FLORENCE, Indianapolis, Ind. Filed Jan. 28, 1924. Serial No. 689,179. 2 Claims. (Cl. 251—27.)



2. A faucet comprising a body having a fluid passage, an opening in alignment with said passage, a valve stem extending through said opening closely fitting the wall of the same and projecting into said passage, a valve mounted on the inner end of said valve stem adapted to contact with the sides of said passage, said valve having a periphery with upper and lower convex surfaces joined by a concave surface, an abutment adjustably carried on the outer end of said valve stem, a spring confined between said abutment and said faucet body, a cap enclosing the end of said stem, and an operating element adjustably carried by said cap, substantially as set forth.

---

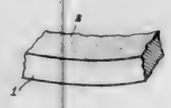
1,556,924. CRACKER CASE. JOHN B. FRANKE, Fort Wayne, Ind., assignor to Perfection Biscuit Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Jan. 26, 1924. Serial No. 688,874. 6 Claims. (Cl. 34—21.)



1. A cracker case, comprising a display holder having a door near the bottom thereof for removal of the crackers, a heater disposed within the holder adjacent said door, and a mounting for said heater extending diagonally across the lower part of the holder when positioned therein and having an open section permitting the crackers to pass therethrough into position to be scooped up from said door.

---

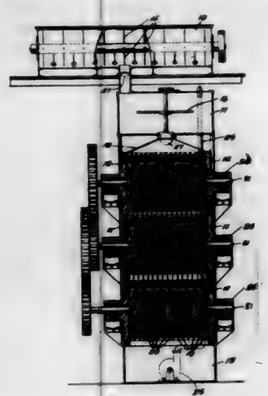
1,556,925. METALLIC MOLD FOR FORMING GLASS ARTICLES AND METHOD OF MAKING SAME. FRED JAMES FRINK, Lancaster, Ohio, and ROBERT LEONARDSON FRINK, London, England. Filed Mar. 31, 1922. Serial No. 548,323. 6 Claims. (Cl. 49—65.)



1. A mold for forming articles from molten glass, said mold being made of a metallic alloy and having its inner surface of a vascular or finely pitted character.

---

1,556,926. HYDRATING BEATING AND REFINING MACHINE. EDWARD BENTON FRITZ, Chicago, Ill. Filed Nov. 20, 1924. Serial No. 751,051. 12 Claims. (Cl. 92—20.)



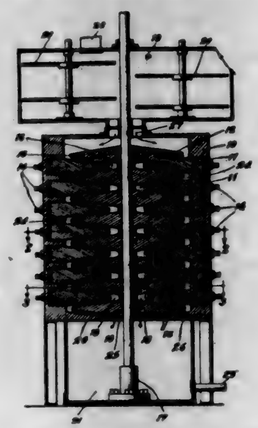
3. In a device of the character described, a plurality of substantially vertically aligned chambers, substantially vertically aligned rotary beaters in said chambers, said chambers having curved wall portions with inwardly tapering disc segments lying closely adjacent the surfaces of said beaters, said beaters consisting of a plurality of discs assembled on a shaft with surfaces lying closely adjacent the surfaces of said disc segments, and means for feeding material to the uppermost of said chambers, whereby said material is fed by gravity from each beater chamber to the adjoining lower beater chamber, said beaters and wall discs cooperating to beat, hydrate and refine the same into a uniform hydrated mass as it travels through said machine.

---

1,556,927. HYDRATING BEATING AND REFINING MACHINE. EDWARD B. FRITZ, Chicago, Ill. Filed Nov. 20, 1924. Serial No. 751,052. 8 Claims. (Cl. 92—20.)

1. In a machine of the character described a vertical chamber having an inlet at the top thereof and an outlet at the bottom, the inner walls of said chamber being

circumferentially channelled, and having disposed in said channels disc portions, a centrally located rotor consisting of a vertical shaft having thereon a plurality of discs the surfaces of said discs lying closely adjacent the surfaces of the wall discs, and means for feeding



material to the upper portion of the chamber, whereby said material is fed by gravity to each lower area while being thrown outwardly and inwardly the revolving discs cooperating with the stationary discs to hydrate, disintegrate and refine the fibrous material as it travels through said machine.

---

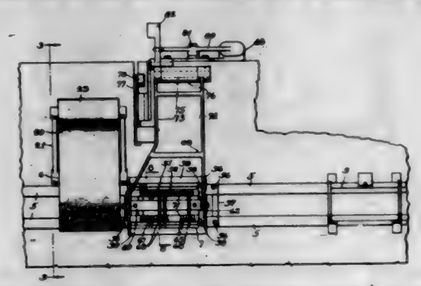
1,556,928. GOLF CLUB. FRED E. GANDERS, Walla Walla, Wash. Filed Apr. 6, 1925. Serial No. 21,235. 2 Claims. (Cl. 273—79.)

1. In a golf club, a head, said head being provided with an extended bearing portion, and containing an aperture through said head and bearing portion to form an elongated bearing therein, a toothed recess formed in said head and providing a continuation of said bearing, a blade provided with a toothed element and an elongated shank, said toothed element and shank being slidably registerable with said bearing and continuation thereof, and rotatable in said bearing when the toothed element is withdrawn from register with the toothed recess, a stop attached to said shank, and a yielding means operably mounted on said bearing portion between said head and said stop.

---

1,556,929. SELECTOR MECHANISM FOR ADDRESSING MACHINES. PAUL A. GOLLNICK and JOHN J. TOOLAN, Chicago, Ill., assignors to Spiegel, May, Stern Co., Chicago, Ill., a Corporation of Illinois. Filed June 5, 1924. Serial No. 718,087. 17 Claims. (Cl. 101—47.)

1. In a device of the class described, the combination with an electric circuit, of a selector mechanism comprising a carriage, an axially movable pin on said carriage, a guideway for stencils arranged adjacent one end of said pin, a terminal in said circuit located in spaced relation to said guideway, and a contact element on the other end of said pin and adapted to be shifted into and



out of contact with said terminal for controlling the circuit, said pin and terminal being located entirely on one side of said guideway.

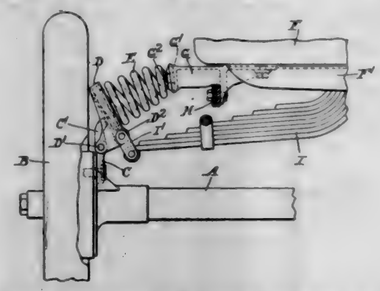
---

1,556,930. ELECTRICAL HEATER. HANS GRAU, Zurich, Switzerland. Filed July 15, 1924. Serial No. 726,129. 1 Claim. (Cl. 219—37.)

In an electric heater, a non-conducting body having closely arranged groove sections therein, an electrical resistance wire of larger diameter than the width of the groove, said wire having their lower arcs engaged in the groove sufficiently to space the adjacent sections of the wire and thereby leaving the major portions of the wire exposed, an insulating plate covering the wire, and a heating plate overlying the insulating plate and having marginal flanges embracing the non-conducting body and securing the several parts in position.

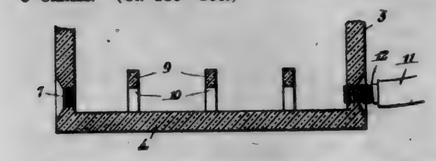
---

1,556,931. VEHICLE SUSPENSION. LEWIS P. HALLADAY, Decatur, Ill. Filed July 5, 1923. Serial No 649,404. 1 Claim. (Cl. 267—17.)



A spring suspension for a vehicle including an axle, a spring to take the vertical movements of the body, supports rising from the axle, bent levers pivoted to said supports, connections between the ends of the transverse springs and the levers, coil springs located between the levers and the body of the vehicle arranged to resist sidewise movements of the latter, spring seats for the upper ends of the coil springs connected with the body, spring seats for the lower ends of the coil springs, normal to the axes thereof, carried by the bent levers and located outside of and above the pivoted axes of the levers, whereby any rocking of a lever due to movement of the transverse spring tends to change the length of its coil spring in the direction of the axis of the latter and practically without lateral distortion thereof.

1,556,932. BATTERY CELL. EARL A. HARRIS, Scranton, Pa. Filed Oct. 2, 1924. Serial No. 741,168. 5 Claims. (Cl. 136—166.)



1. A battery cell having openings at the sides thereof alined with each other and disposed substantially at the floor of the cell.

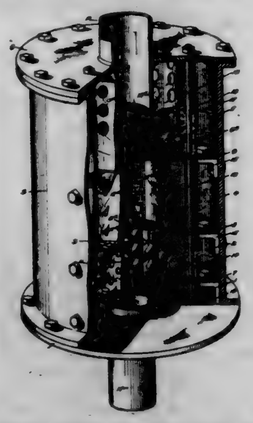
---

1,556,933. WEIGHING SCALE. HALVOR O. HOM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 3, 1923. Serial No. 678,081. 8 Claims. (Cl. 265—62.)

1. In a device of the class described, in combination, a weighing scale pendulum having a weight, a member fixed thereto, a fulcrum sector formed on said member, and a second member mounted for slidable adjustment on the first said member and having a face curved eccentrically with relation to the face of the fulcrum sector to form a power sector.

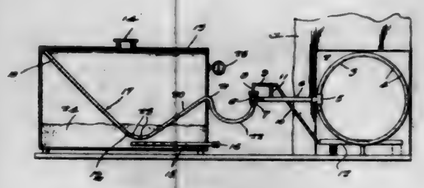
---

1,556,934. MUFFLER OR SILENCER. AXEL A. HILLDRING, San Francisco, Calif. Filed Feb. 20, 1922. Serial No. 537,699. 7 Claims. (Cl. 137—160.)



1. An exhaust muffler having a series of inner axially arranged chambers and a series of outer chambers providing for a zig-zag flow between the inner and outer chambers, and means in certain of the chambers for producing a circular flow of the gases.

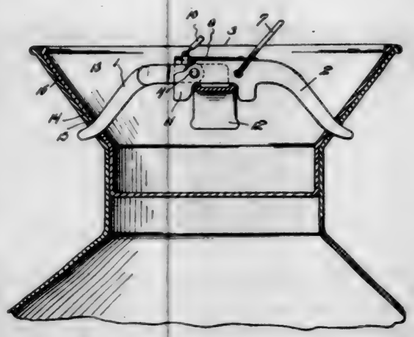
1,556,935. VERMIN EXTERMINATOR. GLENN A. HIXSON, Shawnee, Okla. Filed Feb. 20, 1925. Serial No. 10,553. 2 Claims. (Cl. 119—159.)



1. A vermin exterminator embodying an insecticide containing tank, an apertured air supply pipe extending in said tank, a conducting pipe extending into said tank, said conducting pipe having its intake located adjacent one end and the top of said tank, the intermediate portion of the conducting pipe being bent downwardly and disposed in close relation to the bottom of the tank and formed with intake apertures, and a valved controlling device for said conducting pipe.

---

1,556,936. CREAM-CAN LOCK. JOHN P. JARMAN, Sioux City, Iowa. Filed June 17, 1924. Serial No. 720,622. 2 Claims. (Cl. 220—55.)

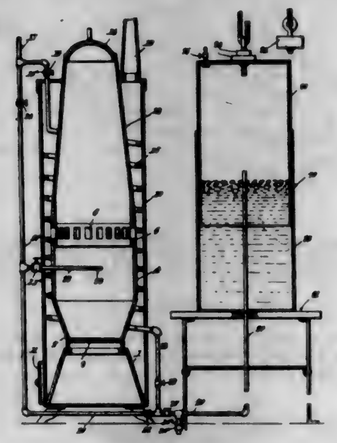


1. A can locking device including a pair of members, one of said members having at one end a recess for receiving one end of the other member, a pivot pin passing through the side walls of the recess and through the end of said other member disposed in the recess, and a leaf spring fixed at one end to the member having the recess and extending over the recess.

---

1,556,937. STOVE. WILLIAM JOHNSTON, Bowesmont, N. Dak. Filed Dec. 16, 1924. Serial No. 756,250. 3 Claims. (Cl. 126—77.)

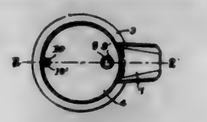
1. A stove of the class described including a fire box having a magazine arranged thereover, a casing surrounding the stove from a point near its top to its bottom, said casing being closed at both ends, a coiled pipe within said casing surrounding the magazine and fire box of the stove, the upper end of the pipe extending through the top of the casing and equipped outside said casing with a cut off valve, an air supply pipe connected with said pipe beyond said valve, the lower end of said



last mentioned pipe having a branch extending through the casing into the fire box and equipped with a cut off valve located outside said casing.

---

1,556,938. CLOSURE FOR LIQUID CONTAINERS. JOHN A. JONES, New York, N. Y. Filed Nov. 17, 1923. Serial No. 675,318. 10 Claims. (Cl. 221—20.)



1. In combination with a container having an opening, a member closing said opening and adapted to be perforated to form a pouring opening, a pouring element, and positioning means for said pouring element to force said element into sealing contact with said member in either pouring or closed position.

---

1,556,939. STEERING WHEEL. JULIAN B. LA PIERRE, Chicago, Ill. Filed June 12, 1925. Serial No. 36,657. 10 Claims. (Cl. 74—33.)

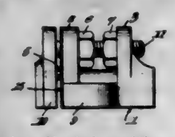
1. In a steering wheel, a spider comprising a pair of intersecting arms mortised together and arranged to form a housing between them at the intersection, and a metal hub embedded in said housing.

---

1,556,940. BEARING CAP. FRANK A. LEIS, Garden Plains, Kans. Filed May 3, 1924. Serial No. 710,898. 3 Claims. (Cl. 308—65.)

1. A bearing of the class described comprising two members movable longitudinally relative to each other,

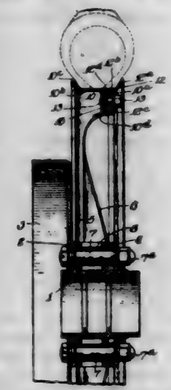
one having apertured flanges and the other a threaded stud for insertion through said flanges with means for



locking said stud in adjusted position, one of said members having guide studs and the other sockets to receive said studs.

---

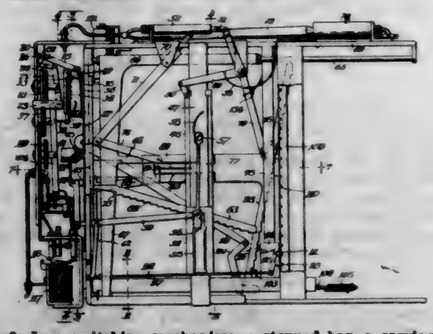
1,556,941. DISK WHEEL. MOSES VOLNEY LIDDELL, Mattituck, N. Y. Filed Dec. 20, 1920. Serial No. 432,159. 7 Claims. (Cl. 152—21.)



1. In a wheel, a rim comprising an annulus of channel sections having the web of the channel presented in substantially the radius of the wheel, and its outer flange assuming the position of a tread or tire-receiving member; said wheel having a separately formed disk overlapped upon and attached to the inner flange of its said rim and extending with said inner flange, and from the same, at a substantial angle to the radial plane of the wheel.

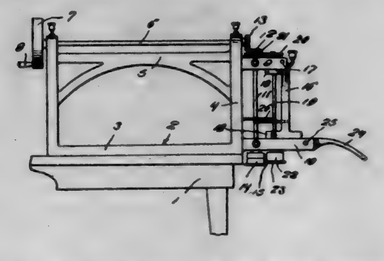
---

1,556,942. SWITCHING MECHANISM. FRANK A. LUNDQUIST and JOHN A. KROPP, Chicago, Ill., assignors, by mesne assignments, to Henry S. Conrad, trustee. Filed Apr. 25, 1921, Serial No. 464,218. Renewed Mar. 19, 1925. 14 Claims. (Cl. 179—27.5.)



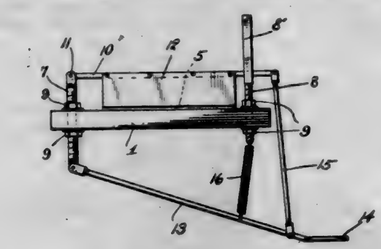
6. In a switching mechanism, a stepped bar, a carriage under tension to be moved but normally restrained by said bar, and a pneumatic motor for giving said bar a series of short movements to cause the release and subsequently the arrest of said carriage.

1,556,943. POWER-DRIVEN CAN OPENER. WILLIAM F. LINSTEDT, Plymouth, Wis. Filed Feb. 28, 1924. Serial No. 695,817. 1 Claim. (Cl. 30—3.)



A can opener including a frame having uprights, a power shaft rotatably mounted in said uprights, one of said uprights having upper and lower pairs of projections, a cutter shaft rotatable in said projections adjacent the uprights, a cutter head having an annular cutting blade mounted on the lower end of said cutter shaft, a power transmitting connection between the upper end of the cutter shaft and the power shaft, a member pivoted between the upper projection and movable between the lower projections, a shaft rotatably mounted in said member having driving connections with said cutter shaft for rotating said shaft in a direction opposite to said cutter shaft, a can receiving head mounted on the lower end of said last mentioned shaft, an operating lever pivotally mounted between said lower projection for moving said member toward the cutter head, whereby the can will be forced by said can receiving head against the annular cutting blade of the cutter head for severing the end of the can from the body thereof in the rotation of said shaft and a spring interposed between said one upright and said pivoted member for exerting an awkward stress on the lower end of the member.

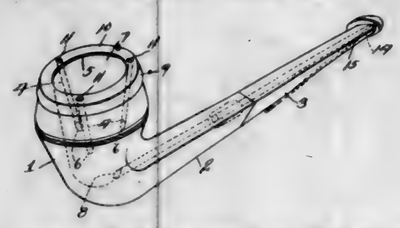
1,556,944. FOOT-POWER CIGAR-BINDER CUTTER. ANTONIO LÓPEZ, West Tampa, Fla. Filed Feb. 2, 1924. Serial No. 690,210. 1 Claim. (Cl. 164—44.)



A cutter of the class described comprising a base, a pair of posts carried thereby, one post having a guideway therein, means permitting the posts to be adjusted vertically and laterally on the base, a knife bar pivoted to one post and passing through the guideway of the other post, a foot pedal lever pivotally connected with the base, a link connecting the lever with the knife bar and a spring connected with the pedal lever for holding the parts with the knife in raised position.

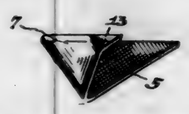
1,556,945. PIPE. HARRY LUCHOW, Council Bluffs, Iowa. Filed June 6, 1924. Serial No. 718,282. 2 Claims. (Cl. 131—12.)

1. The combination with a bowl of a pipe having a chamber therein and air passages extending from the upper end of the bowl and terminating in the chamber of the bowl; of an annular channeled member rotatably mounted on the upper end of the bowl, said channeled member having its upper flange horizontally disposed and provided with apertures normally registering with



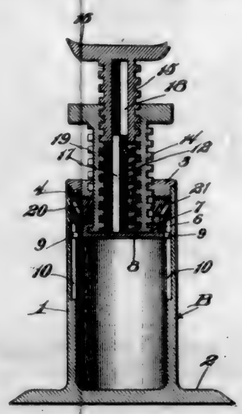
the upper ends of the air passages, said channeled member having its lower flange inturned and rotatably mounted in an annular groove in the outer periphery of the bowl.

1,556,946. BRAD. OSCAR LUND, Beverly, Kans. Filed June 27, 1924. Serial No. 722,816. 1 Claim. (Cl. 85—15.)



A brad of the class described including a triangular shaped base plate and a triangular shaped back plate formed on one edge thereof to be extended therefrom at an acute angle and terminating in an offset apex in a plane substantially parallel to the base plate.

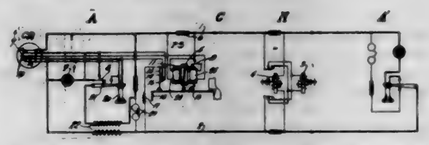
1,556,947. JACK. CARL C. MADSEN and JESS A. KALTOFT, Ruthton, Minn. Filed Oct. 11, 1924. Serial No. 743,047. 1 Claim. (Cl. 254—102.)



A jack comprising, in combination, a tubular base having its upper end open and provided in its side wall with an opening, an arm supported by the base exteriorly thereof and disposed across the opening, a head closing the open end of the base, a tubular pack screw threaded through said head, a plate in swiveled connection with the inserted end portion of the jack screw, coacting means carried by said second named plate and the wall of the member for holding the plate against rotation independently of the member, a second jack screw threaded into the first jack screw through the outer end thereof said second jack screw having its inserted

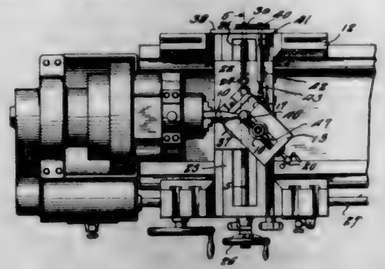
portion provided with a bore, an upstanding post carried by the second plate and extending within the bore of the second jack screw, said post and bore being angular in cross section to hold the second jack screw against rotation when the post is engaged within the bore of said second jack screw, said post having its upper end terminating inwardly of the outer end of the first named jack screw, a gear within the first member and surrounding said first named screw, means for keying said gear to the first named screw for rotation with said screw but permitting said screw to run therethrough, a gear rotatably supported by the arm extending across the opening in the side wall of the first named member and in mesh with the first named gear, and means for rotating the second named gear in either direction.

1,556,948. MEASURED-SERVICE TELEPHONE SYSTEM. FRED T. MADSEN, Maywood, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 5, 1923. Serial No. 636,836. 6 Claims. (Cl. 179—6.3.)



1. In a telephone system, calling and called lines, means including automatic switches for interconnecting calling line, said paystation mechanism being provided said lines, paystation mechanism associated with the calling line, said paystation mechanism being provided with a polarized relay, said polarized relay having a high impedance winding and a low impedance winding, contacts in the calling telephone operated by the removal of the receiver for completing a circuit for one winding of said polarized relay, means effective when the called subscriber removes his receiver to cause current to flow through said relay in the proper direction to operate it, contacts on said relay closed when the same is operated to complete an operating circuit through the other winding of said relay, and means for making said last circuit ineffective while the calling subscriber has his receiver off the hook.

1,556,949. LATHE ATTACHMENT. HENRY C. MALL, Indianapolis, Ind. Filed Aug. 4, 1924. Serial No. 729,997. 2 Claims. (Cl. 82—12.)



1. A radius generating device comprising a cross-slide presenting a raised circular portion flanged adjacent its upper edge and having a circular recess and a communicating pocket tangent to the recess a worm gear loosely seated in the said recess and having a square upwardly extending hub, a worm screw within the said pocket and engaging the said worm gear, means for rotating the said worm screw, a rotatable slide base seated upon the said raised portion of the cross-slide, said slide base having a flange adapted to bear on the said flange of the said raised portion and also having a squared recess in its underside to accommodate the square hub of the said worm gear, a longitudinally adjustable slide carried by the said slide base, and a removable clamping ring embracing the said flanges and holding the cross-slide and slide base against separation while permitting relative rotation thereof.

1,556,950. MUSICAL WIND INSTRUMENT. LOUIS R. MANN and DONALD I. BOHN, Madison, Wis. Filed May 9, 1921. Serial No. 467,912. 3 Claims. (Cl. 84—380.)

1. A reed instrument of the character described comprising a mouthpiece carrying a reed, a flaring tubular body portion provided with a longitudinally extending elongated opening therein, and a slidably mounted closure member for said opening vary the effective length of said instrument, said body portion being provided with a guideway for said closure member and with means for holding said closure member in snug engagement with said body portion.

1,556,951. TOBACCO-MOISTENING MEANS. JAMES A. MARSHALL, Mingo Junction, Ohio. Filed Aug. 1, 1923. Serial No. 654,973. 2 Claims. (Cl. 131—30.)

1. Tobacco moistening means embodying a mixture of ammonium acetate and common dry sand, and a sheet of moisture absorbent material placed upon said mixture.

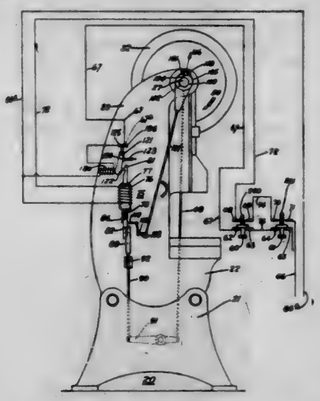
1,556,952. FAUCET. CLARENCE B. MICHEL, St. Paul, Minn. Filed Sept. 22, 1923. Serial No. 664,226. 4 Claims. (Cl. 299—9.)

1. In a combined faucet and drinking fountain, a spout rotatably connected to a supply pipe and having an opening in a side thereof with a channeled groove extending around the periphery of the pipe at the point of said opening, an offset portion at the end of the spout having a central opening, a chamber surrounding the central opening, having a plurality of perforations therein, and a hollow cylinder rotatably mounted in the spout adjacent the offset portion, said hollow cylinder having a pair of perforations in a side thereof, one of said openings being positioned to register with the central opening in the offset portion of the spout, the other of said openings being positioned to register with an opening in the perforated chamber surrounding the central opening, to cause a fluid passing through the device to be discharged through the central opening or through the perforated chamber, as desired.

1,556,953. ALLOY. SAMUEL W. PARR, Urbana, Ill. Filed Dec. 22, 1924. Serial No. 757,401. 12 Claims. (Cl. 75—1.)

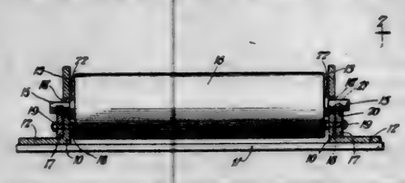
1. An alloy comprising nickel, cooper and aluminum, substantially as described, to which has been added manganese not less than $\frac{1}{8}$ per cent nor more than 1% and tantalum in an effective amount not exceeding 8%.

1,556,954. SAFETY CONTROL FOR PUNCH PRESSES. EARL M. POLK, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 25, 1921. Serial No. 455,457. 8 Claims. (Cl. 192—131.)



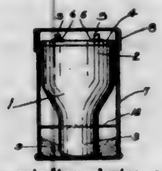
7. In a controlling system for a machine having a driving and a driven member normally disconnected, the combination with a clutch device operable to connect said members; of means for controlling the clutch device including two manually operable members, said control means requiring the operation of both manual members to a certain position for effecting a single cycle of machine operation, and restoring means operable only when both manual members are moved to a second position for restoring the control means to its normal arrangement before a subsequent cycle of machine operation can be performed.

1,556,955. CONVEYER. AUGUST JOSEPH REBSTOCK, St. Louis, Mo., assignor to The Rebstock Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 23, 1923. Serial No. 658,957. 6 Claims. (Cl. 193—37.)



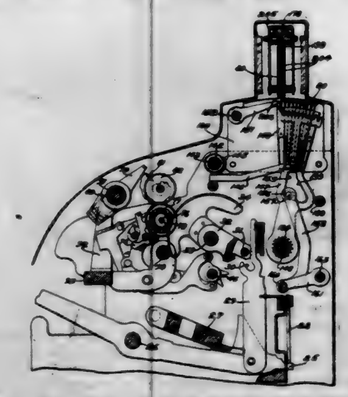
1. In a device of the character described, a plurality of members having shaft-like portions projecting axially therefrom and means for supporting said members for rotation, comprising a pair of side members having openings therein for loosely receiving said shaft-like portions, and members each having bearing portions therein for receiving a plurality of said shaft-like portions, said shaft-like portions being journalled solely in said bearing portions.

1,556,956. VALVE-GRINDING OUTFIT. WILLIAM RITCHIE, Port Orchard, Wash. Filed June 12, 1922. Serial No. 567,549. 3 Claims. (Cl. 51—29.)



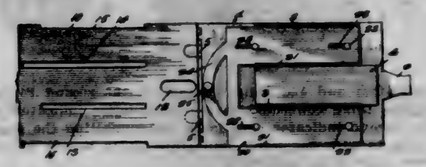
1. In a valve grinding device a cylindrical shaped piece of material with the upper portion of a somewhat smaller diameter than the lower portion, a fibrous disk at the end of the lower portion, and pins with washers around them that project beyond the fibrous disk.

1,556,957. CASH REGISTER. WILLIAM H. ROBERTSON, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio. Filed June 7, 1923. Serial No. 643,919. 18 Claims. (Cl. 235—23.)



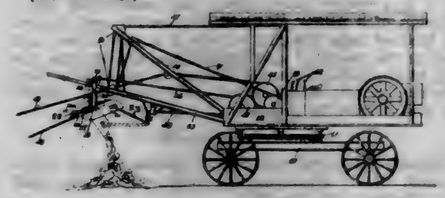
1. In a machine of the class described, the combination of a totalizer, means for entering items in said totalizer, an operating device operable only independently of the item entering means, indicating elements, adjustable supporting means for said indicating elements, connections intermediate of the totalizer and said supporting means rendered effective by an operation of the operating device to adjust said supporting means to select indicator elements, corresponding to the amount on the totalizer, and means actuated by said operating device for moving selected indicating elements into displaying position.

1,556,958. MARCEL WAVER. BLANCHE LENORE ROBINSON, Topeka, Kans. Filed Sept. 19, 1924. Serial No. 738,612. 1 Claim. (Cl. 132—31.)



A Marcel waver comprising a comb carrying plate having longitudinally extending laterally spaced combs secured thereto, a sliding plate mounted on said first mentioned plate and having transversely spaced combs to alternate with those on the fixed plate, said plates one having slots and the other headed studs to form guides for the movable plate, a longitudinally extending bail-like brace carried by said movable plate having a laterally extending button, a hinged plate carried by said first mentioned plate and having a slot to fit over said button, said hinged plate being also provided with longitudinally extending transversely spaced spots to fit over the fixed and movable combs, the slots for the movable combs being longer than those for the fixed combs.

1,556,959. SCRAPER. GEORGE T. RONK, Fairfield, Iowa. Filed Jan. 25, 1921. Serial No. 439,855. 5 Claims. (Cl. 37—115.)

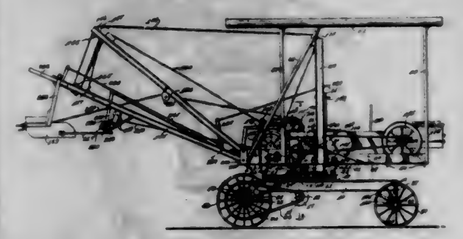


1. A scoop having a bottom, sides and a back, a bail pivoted to the forward lower ends of said sides, a returning bail, a lifting bail, said returning and lifting bails being formed integral, and pivoted near the upper edge of said side members and back of the center of gravity of said scoop member, means for locking said lifting and returning bails at a predetermined angle relative to the side members of said scoop, and means for releasing said locking means.

1,556,960. EXCAVATING MACHINE. GEORGE T. RONK, Leon, Iowa. Filed Jan. 11, 1922. Serial No. 528,587. 12 Claims. (Cl. 37—116.)

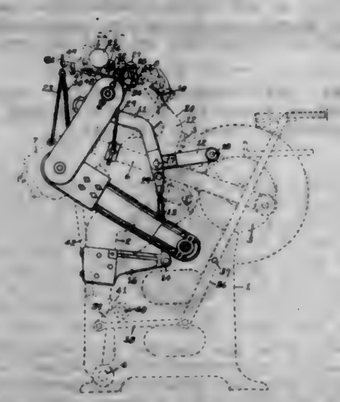
2. A wheel supported truck, driving means for advancing said wheel supported truck, a supporting frame pivoted for rotation on said truck, a prime mover on said supporting frame, means operated from said prime mover for swinging said supporting frame in either direction, means for throwing the last said means into operation with said driving means whereby said main truck may be advanced in either direction at a speed different from that produced by the first said driving means.

4. An excavator frame, a prime mover on said excavator frame, a boom pivotally mounted on said excavator frame, means operated by said prime mover for raising and lowering the free end of said boom, a scoop, an outhaul cable device for moving said scoop from and beyond said boom, and an inhaul cable for moving said scoop toward said boom, means connected with said prime mover for operating the outhaul cable, and means



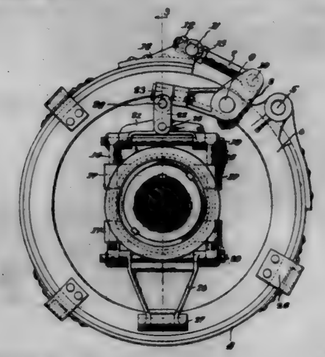
connected with said prime mover for operating said inhaul cable, the scoop being designed to engage said boom when its free end is at its lower position of movement, and to be carried thereby when it is in its elevated position of its movement, and means for automatically throwing the means which control the inhaul cable out of operative relation with said prime mover when the said scoop has engaged said boom.

1,556,961. PRINTING PRESS. FREDERICK P. ROSBACK, Benton Harbor, Mich., assignor to F. P. Rosback Company, Benton Harbor, Mich. Filed Mar. 28, 1924. Serial No. 702,566. 10 Claims. (Cl. 101—361.)



1. The combination in a printing press including a pivotally mounted plow, of means for oscillating said plow, an inking cylinder, a form roller frame pivotally mounted on said plow, form rollers carried by said frame, means for actuating said form roller frame comprising an arm on said plow disposed above its pivot, a pair of pivotally connected links, one of which is pivotally connected to said frame and the other to a fixed support, a third link pivotally connected to one of said links and to said arm on said plow whereby the said roller frame is actuated with a speed decreasing on its upward stroke so that the form rollers are maintained in engagement with the inking cylinder for a substantial period, and means for supplying ink to said inking cylinder.

1,556,962. CLUTCH MECHANISM. LESLIE A. RUSSELL, Chicago, Ill., assignor, by mesne assignments, to F. C. Austin Machinery Company, a Corporation of Illinois. Filed Oct. 22, 1919. Serial No. 332,528. 2 Claims. (Cl. 192—80.)



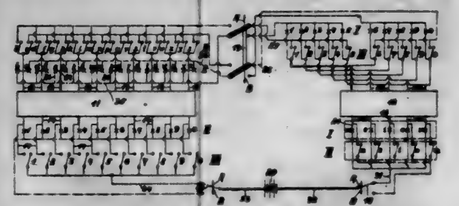
1. Clutch mechanism, comprising a shaft, fixed and loose members on said shaft, a friction clutch band surrounding said loose member, an actuating member connected with one end of said band and pivoted on said fixed member, and toggle mechanism between said actuating member and the fixed part of said fixed member, said mechanism comprising a collar slidable with respect to said shaft, said collar having apertured lugs projecting therefrom, a yoke formed with side rods freely slidable through said lugs, and toggle elements connected with the opposite ends of said rods and connecting said ends respectively to said actuating member and said fixed member, whereby said fixed member takes the thrust of the toggle mechanism when the clutch is closed.

1,556,963. WATCH-HOLDING DEVICE. GEORGE F. RUMBERGER, Dubois, Pa. Filed Nov. 10, 1922. Serial No. 600,079. 1 Claim. (Cl. 224—4.)

A device of the class described comprising a plurality of segmental channel shaped elements adapted to partly surround a watch case, and each being movable with reference to the other, about a pivotal point, a bracket secured to one of said elements and adapted for connection with a stationary member, a hinge connecting the segmental elements, and a spring having approximately the curvature of the segmental elements, secured to one of the elements and bearing against the other at a point opposite the hinge connection.

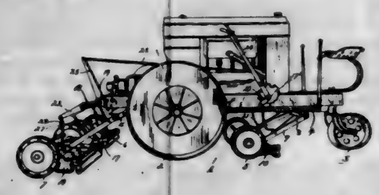
1,556,964. ELECTRIC CIPHERING APPARATUS. ARTHUR SCHERBIUS, Berlin, Germany, assignor to the Firm Gewerkschaft Securitas, Berlin, Germany, a Company of Germany. Filed Apr. 20, 1922. Serial No. 555,678. 8 Claims. (Cl. 35—13.)

1. A ciphering or deciphering machine for the transformation of a succession of figures into a succession of letters or inversely, consisting of two rows of contacts of equal length for the figures and of two rows of indicators for the letters, the first contact row for the figures being subdivided into groups, the corresponding figure contacts of the several groups being connected with a common letter indicator of the first row of letter



indicators and one figure contact of the second row of figures being connected with several letter indicators of the second indicator row, leads for connecting the figure contacts with the letter indicators and a source of current inserted in said leads.

1,556,965. TRACTOR LAWN MOWER. FAYETTE M. SEELEY, Lansing, Mich., assignor to Ideal Engine Company, Lansing, Mich., a Corporation of Michigan. Filed Jan. 16, 1922. Serial No. 529,444. 7 Claims. (Cl. 56—7.)



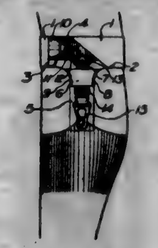
1. In a tractor lawn mower, the combination with a tractor, of a mower unit and downwardly and forwardly inclined links pivotally connected to said mower units and to the frame of said tractor, one of said links having bifurcations pivotally connected to the tractor frame whereby lateral movement of said mower unit relative to said tractor is prevented.

1,556,966. PROTECTIVE TIP. FRANK SELIG, Cleveland, Ohio. Filed Jan. 19, 1925. Serial No. 3,409. 5 Claims. (Cl. 74—33.)

1. In a device of the character described, a handle, and a protective tip having axially spaced resilient handle receiving and centralizing elements conjointly with said handle and tip forming an annular air cushioning chamber.

1,556,967. GARTER. JOHN SIGGELKOW, New Castle, N. Y. Filed Apr. 19, 1923. Serial No. 633,065. 7 Claims. (Cl. 241—6.)

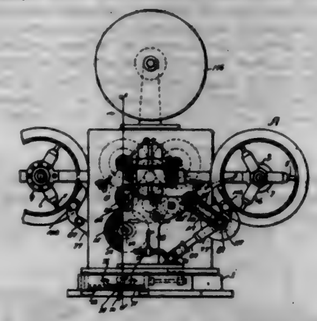
1. In a garter, the combination with a washable casing member adapted to completely encircle the leg just below the knee, and an elastic member within said casing member, one of said members having adjustable interengaging fastening means at its opposite ends to hold it around the leg, of a supporter detachably secured to one of said members, hose gripping means on the supporter, and a washable strip separable from said supporter and composed entirely of textile fabric to separate the supporter from the leg.



1,556,968. FLUX. JOSEPH A. SMITH, Hornell, N. Y. Filed May 14, 1925. Serial No. 30,859. 4 Claims. (Cl. 148—23.)

1. The herein described flux consisting of borax, powdered carbon, graphite, silicon, calcium phosphate, and superphosphate.

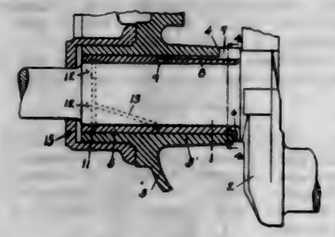
1,556,969. TIRE-MAKING MACHINE. CLAUS SPRECKELS, San Diego, and HOWARD I. MORRIS, Los Angeles, Calif.; said Morris assignor to said Spreckels. Filed Nov. 29, 1918. Serial No. 264,891. 22 Claims. (Cl. 154—10.)



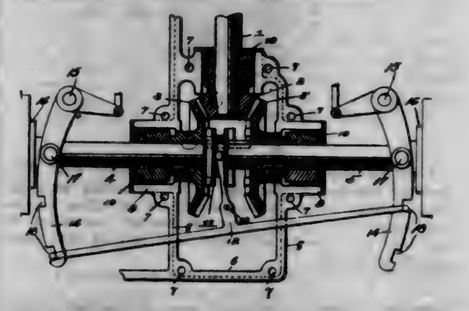
1. In a tire making machine, the combination with a revoluble core, of means for feeding tire material to the core, tread forming means, a frame supporting the tread forming means in operative relation to the core, rocking members carried by the frame at the sides of the core, and bead and tire forming rolls carried by the said rocking members in a balanced relation to each other.

1,556,970. LUBRICATOR MEANS FOR CRANK SHAFTS IN INTERNAL-COMBUSTION ENGINES. HARRY J. SPROAT, Lansing, Mich., assignor to New Way Motor Company, Lansing, Mich. Filed May 20, 1922. Serial No. 562,810. 4 Claims. (Cl. 184—11.)

1. The combination with the crank case for an engine having bearing supporting bosses therein, a bearing bushing for the shaft having a longitudinal groove in the top side of said bushing connecting to an oil hole at the center with diverging grooves in the bearing surface leading from the oil hole in the direction of the rotation of the crank, an annular oil groove in the bearing surface toward the outer end of the said bushing with inwardly inclined indentations in the bearing surface beyond the same, a diagonal groove leading from the annular oil groove across the bottom portion of the bushing to the interior of the crank case one branch of the diverging grooves leading to a point in close proximity to the cooling groove and return groove, and a cross groove in the bottom portion of the bearing surface leading from near the middle outwardly to the annular groove for the collection of oil and the delivery of the same thereto whereby the lubricant may be distributed over the bearing surface and returned effectively and quickly to the crank case, being thereby effectively circulated over the bearing surface, all coacting as specified.

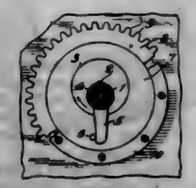


1,556,971. TRANSMISSION MECHANISM. EDWARD K. STANDISH, Stoughton, Mass. Filed Jan. 8, 1920. Serial No. 349,265. 2 Claims. (Cl. 180—17.)



1. In a transmission mechanism, a drive shaft carrying a gear fast thereon, an alined drive shaft carrying a gear loose thereon, a power shaft carrying a pinion meshing with said gears, and a clutch keyed to and slidable on the alined drive shaft and engageable with either of said gears to rotate said drive shafts in the same direction or in opposite directions, or movable out of engagement with both of said gears to rotate the first mentioned drive shaft and leave the other drive shaft free.

1,556,972. AUTOMATIC CLUTCH. HARRY P. STEVENS and WINTHROP S. HORTON, New York, N. Y. Filed Nov. 8, 1924. Serial No. 748,638. 7 Claims. (Cl. 192—8.)



1. An automatic clutch, comprising a rotary driving member, a member adapted to be rigidly connected therewith, an intermediate curved wedging member, said wedging member being adapted to become operative when

said driving member is moved in one direction, and means carried by said driving member for holding said wedging member out of operative positions when said driving member is rotated in the opposite direction.

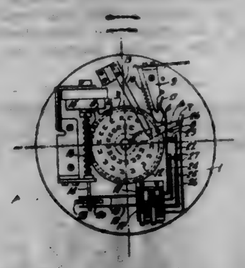
---

1,556,973. ASBESTOS COMPOSITION. NATHAN SULZBERGER, New York, N. Y. Filed Oct. 3, 1921. Serial No. 505,097. 9 Claims. (Cl. 92—21.)

6. A translucent film made of asbestos and colloidal aluminum-silicate and coated with spar varnish.

---

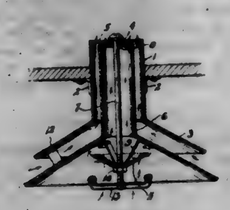
1,556,974. IMPULSE TRANSMITTER OF THE DIAL TYPE. EMIL TANKE, Falkenhagen b/Seegefeld Kreis Osthavelland, Germany, assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1921. Serial No. 518,723. 9 Claims. (Cl. 179—90.)



1. In an impulse sending device, a finger hold dial, impulse springs, springs for short circuiting said impulse springs, other springs for short circuiting substation apparatus, and a common member controlled by said dial for directly operating both sets of said short circuiting springs.

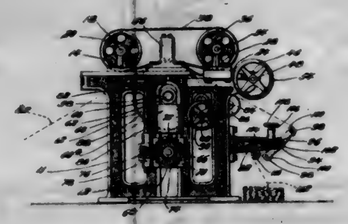
---

1,556,975. VENTILATOR. RICHARD S. TEMPEST, Mount Pleasant, Pa. Filed Apr. 8, 1925. Serial No. 21,635. 1 Claim. (Cl. 98—27.)



A device of the class described comprising a chimney-like member having a flaring lower end and a cross piece at its upper end, a second member of similar shape to the first mentioned member but smaller, said second member being spaced from the first member, a spider at the lower end of the second member, a bolt passing through the cross pieces at the tops of the members and through the spider, a deflector plate on the bolt, a nut on the bolt holding the parts together and a handle on the second member for turning the same to adjust its cross piece in relation to the other cross piece to control the flow of gases through the same.

1,556,976. FABRIC-PRINTING MACHINE. NORMAN C. THACKERAY, Pawtucket, R. I., assignor to Imperial Printing & Finishing Co., Pawtucket, R. I., a Corporation of Rhode Island. Filed Mar. 9, 1925. Serial No. 14,236. 22 Claims. (Cl. 101—115.)



1. The process of printing fabrics which comprises feeding by gravity alone a plurality of colors from a plurality of different color reservoirs simultaneously through a perforated stencil on to the upper surface of a moving fabric.

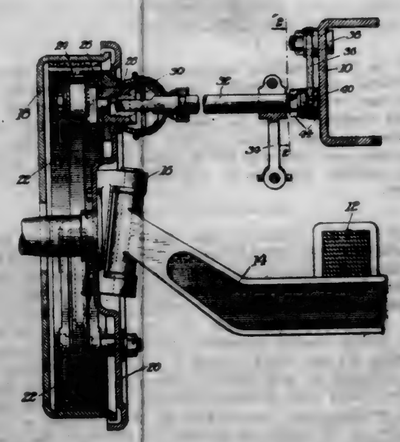
---

1,556,977. METHOD FOR THE PREPARATION OF A VEGETABLE MILK. GASTON D. THÉVENOT, New York, N. Y. Filed Dec. 8, 1923. Serial No. 679,472. 5 Claims. (Cl. 99—11.)

1. A process of preparing a milk substitute from soya beans which comprises grinding the beans, removing the husks from the ground product, soaking the beans in a solvent comprising substantially equal parts of alcohol and water, drying the product at a low temperature to remove the solvent therefrom, thereafter pulverizing the mass and adding sugar and mineral matter thereto in proportions to attain a milk powder having substantially the composition of that derived from cows' milk.

---

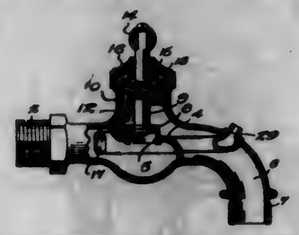
1,556,978. BRAKE-OPERATING MECHANISM. GEORGE JOSEPH THOMAS, South Bend, Ind., assignor to The Bendix Corporation, Chicago, Ill. Filed Apr. 13, 1925. Serial No. 22,733. 5 Claims. (Cl. 188—194.)



1. Operating mechanism for a brake acting on a front wheel swivelled at the end of an axle supporting a chassis frame, and comprising, in combination with said parts, a rockshaft operating the brake and arranged above and generally parallel with the axle, and fabric secured to the chassis frame and supporting the inner end of the rockshaft, the fabric being sufficiently flexible to compensate for movements of the rockshaft.

---

1,556,979. FAUCET. WILLIAM FRANK USCHMAN, Atlanta, Ga. Filed Apr. 21, 1925. Serial No. 24,808. 4 Claims. (Cl. 277—53.)

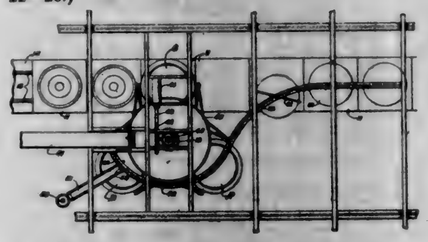


1. A faucet having a main passage, an inlet opening and a main outlet opening, a valve seat arranged between said inlet and outlet opening, a valve cooperating with said seat, said casing being provided with an auxiliary passage in one of its walls substantially parallel to said main passage having an auxiliary outlet opening, and means independent of said valve for controlling the flow of liquid from said auxiliary outlet opening.

4. A faucet having a main passage, an inlet opening and a main outlet opening, a partition arranged in said main passage forming a valve seat, a valve cooperating therewith, said faucet being provided with an auxiliary passage communicating therewith rearwardly of said partition and extending through one of the walls thereof substantially parallel to said main passage, the other end of said auxiliary passage forming an auxiliary outlet opening, and a valve arranged in said auxiliary passage to control the flow of fluid from said auxiliary outlet opening.

---

1,556,980. MOLDING MACHINE. FREDERICK K. VIAL, La Grange, Ill., assignor to Griffin Wheel Company, Chicago, Ill., a Corporation of Massachusetts. Filed Apr. 4, 1921. Serial No. 458,401. 13 Claims. (Cl. 22—20.)

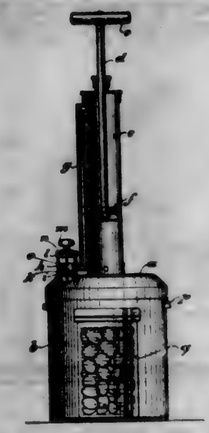


1. A foundry equipment, comprising in combination, a conveyer, a molding machine arranged adjacent thereto and having a rotatable member moving past a plurality of molding stations, said rotatable member moving above said conveyer at one point in its travel and adapted to deposit finished molds thereupon.

---

1,556,981. DEVICE FOR CLOSING PRESERVE JARS. OTTOMAR VOIGT, Duesseldorf, Germany. Filed Aug. 19, 1924. Serial No. 732,983. 4 Claims. (Cl. 226—82.)

1. In a device for closing preserve jars, cans, and the like, an accessory receiver, an air pump connected thereto by a passage for rarefying the air contained in the receiver, and inlet and outlet valves for the pump arranged outside the same and in the connecting passage with the receiver, both of said valves adapted to be actuated to open the receiver to the atmosphere.



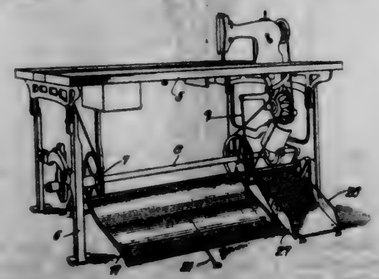
---

1,556,982. MEANS FOR SOFTENING THE CONTOURS OF THE IMAGES OF PHOTOGRAPHIC OBJECTIVES. FRANZ WEINERT, Zehlendorf, near Berlin, Germany, assignor to the Firm of Optische Anstalt C. P. Goerz Aktiengesellschaft, Friedenau, near Berlin, Germany. Filed Sept. 3, 1921. Serial No. 498,466. 5 Claims. (Cl. 88—57.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. The combination of an objective for a photographic camera, a tubular casing for said objective, a chromatic compound lens which is afocal for a special wave length, and means for detachably connecting said chromatic lens with said tubular casing in front of said objective.

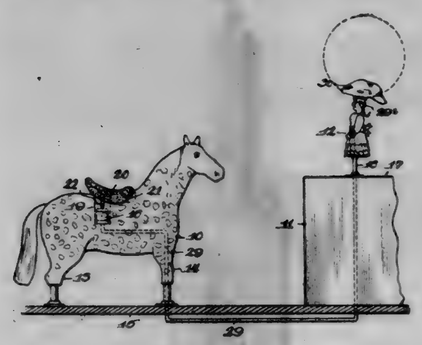
---

1,556,983. SEWING-MACHINE GUARD. HARRY WEINTRAUB and ISSEL SMITMAN, New York, N. Y. Filed July 15, 1925. Serial No. 43,823. 5 Claims. (Cl. 74—56.)



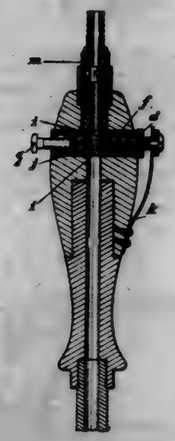
1. A machine guard of the class described comprising a shield, a supporting rod, means for connecting the shield to the rod whereby it may be lowered to render a machine foot pedal inoperative and means for supporting said rod to the front of a machine frame.

1,556,984. GAME. GUSTAV WOLKENHAUER, Chicago, Ill., assignor to Riverview Park Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1924. Serial No. 755,814. 4 Claims. (Cl. 273—86.)



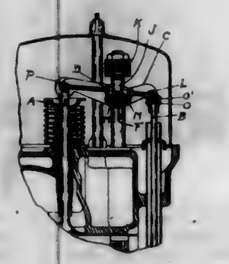
1. A game comprising the combination of a support, a plurality of dummies thereon simulating forms to be entered in a race, each dummy including a part which is movable with reference to said support, a plurality of bellows devices, one for each dummy, each operably connected to said movable part, a plurality of puppets there being a puppet associated with each dummy, a pipe connecting each bellows device to the associated puppet, and provided with a discharge nipple at its puppet end, and a plurality of exansible devices, one for each uppet attached to said nipples.

1,556,985. HANDLE FOR HAND GLASS-BLOWING CONTRIVANCES. KARL BARTL, Komotau, Czechoslovakia. Filed Feb. 8, 1924. Serial No. 691,519. 1 Claim. (Cl. 49—21.)



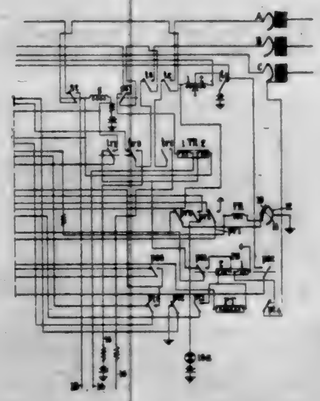
In combination: a hollow handle for hand glass-blowing contrivances, a compressed-air supply pipe connected to one end and a blowing pipe connected to the other end of the handle, a spring-pressed valve in the handle for a control of the compressed-air supply, and a knob on said valve for its operation from outside the handle; said handle consisting of two parts in rotatable connection with one another, so that it can be held at one part, to which the air supply pipe is attached, by one hand with one finger on the operating knob of the valve while the other part, to which the blowing pipe is attached, can be freely turned on said first part by the other hand of the operator.

1,556,986. ROCKER ARM FOR VALVE-OPERATING MECHANISMS. ALANSON P. BRUSH, Detroit, Mich. Filed Apr. 1, 1920. Serial No. 370,614. 19 Claims. (Cl. 123—90.)



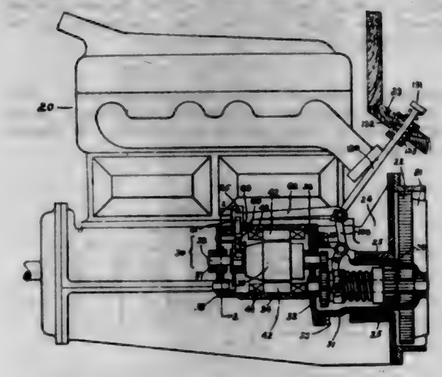
5. In a valve operating mechanism, a rocker and a cooperating bearing, the one having a cylindrical segment and the other a non-parallel surface, and a pintle on one of said members engaging a recess in the other, compelling a relative rolling movement.

1,556,987. AUTOMATIC AND SEMIAUTOMATIC TELEPHONE SYSTEM. DAVID ADAM CHRISTIAN, London, England, assignor to Siemens Brothers & Company, Limited, London, England, a British Company. Filed Sept. 7, 1923. Serial No. 661,427. 22 Claims. (Cl. 179—18.)



1. In a telephone system a selector having two directional motion, wipers which execute a first movement and a second movement, means for causing release as regards the second movement on a predetermined contact being reached in that movement and for returning the wipers to the starting position for that movement and means automatically operating for re-starting the first movement on the return of the wipers.

1,556,988. CONNECTING MECHANISM. FREDERICK J. HARDMAN, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed July 28, 1919. Serial No. 313,716. 12 Claims. (Cl. 74—7.)

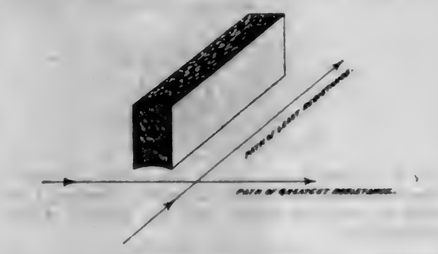


3. In a mechanism for connecting a rotatable device with a gear, the combination with a shaft driven by said device and a pinion splined thereto, and shiftable into engagement with said gear; of manual means for shifting said pinion into engagement with said gear, said means including provisions which operate in case the pinion collides with the gear to produce rotation of said pinion while said pinion is pressed against the gear whereby said pinion will be brought into enmeshing relation with said gear.

1,556,989. TABLE KNIFE. CARL H. HEMMING and FRANK P. HEMMING, New Haven, Conn. Filed July 16, 1924. Serial No. 726,276. 1 Claim. (Cl. 30—9.)

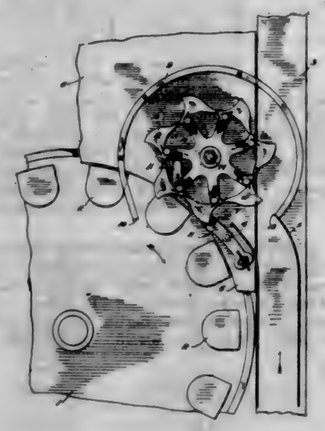
A knife including a handle having a channel in a side edge thereof extending through the inner end of the handle to form a support parallel to the axis of the handle and a locating seat extending at an incline to the support, and a blade having a relatively long tang completely enclosed by the handle and formed with a longitudinal edge abutting said support and with an inclined shoulder at the juncture of a side edge of the blade and tang conformably abutting the seat, the seat and shoulder being of similar degrees of inclination and of such length so that when in engagement with one another the rear edge of the knife and the adjacent part of the neck of the handle will be held alined.

1,556,990. COMMUTATOR BRUSH. RALPH L. HENRY, Brooklyn, N. Y., assignor to Albert C. Henry, Inwood, Long Island, N. Y. Filed Oct. 12, 1922. Serial No. 594,088. 6 Claims. (Cl. 171—325.)



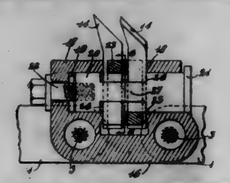
3. An electrical brush or contact, comprising an electrically conductive material mixed with not to exceed approximately twenty-five per cent of a non-conductive or high resistance binder consisting of an infusible condensation product, said mixture being molded by pressure applied in one direction and solidified by heat, whereby the elements thereof are relatively disposed throughout the mass to form an internal physical structure having a path of least resistance substantially parallel to one plane of the mass.

1,556,991. TRANSFERRING MECHANISM FOR BOTTLE-FILLING MACHINES. IRVING R. HIPPENMEYER, Waukegan, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 3, 1924. Serial No. 703,910. 1 Claim. (Cl. 198—22.)



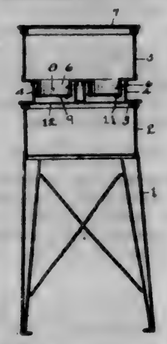
In a bottle filling machine, bottle transferring mechanism comprising a revoluble wheel, a concentric series of bottle engaging members normally extending radially outward from said wheel and pivotally mounted thereon to swing in the plane of rotation of said wheel, the outer sides of said series of members normally presenting a substantially continuous lateral contour, each of said members having convex front and rear faces forming a bottle engaging pocket between each adjacent pair of members, and resilient means for normally maintaining said members in outward position, said means permitting said members to swing inwardly and past a bottle engaged thereby in case of obstruction to the passage of said bottle.

1,556,992. CUTTER CHAIN. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 6, 1919. Serial No. 281,029. 16 Claims. (Cl. 262—33.)



1. In a cutter chain, a cutter link having a lateral extension thereon, and means for rigidly clamping a plurality of cutter bits thereto each in a plurality of angular positions.

1,556,993. STRAINER. WILLIAM T. HULSCHER, Battle Creek, Mich. Filed Oct. 6, 1924. Serial No. 741,962. 8 Claims. (Cl. 210—155.)

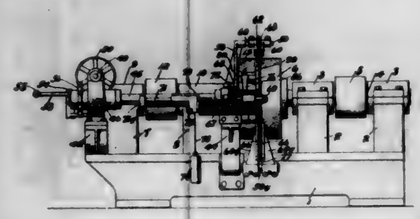


1. In a strainer, the combination of a receiving receptacle, a cover therefor provided with a plurality of flanged openings, a screen common to all of said openings disposed on the under side of said cover, a supply receptacle provided with a plurality of discharge necks depending into said flanges of said cover, filtering pads disposed over the ends of said necks, foraminated supporting members for said filtering pads, and means for removably clamping said supporting members in position.

1,556,994. AIMING DEVICE WITH OPTICAL REFLECTING SYSTEM FOR MOVING STATIONS. HEINRICH JACOB, Friedenau, near Berlin, Germany, assignor to the Firm Optische Anstalt C. P. Goers Aktiengesellschaft, Friedenau, near Berlin, Germany. Filed Aug. 23, 1921. Serial No. 494,452. 3 Claims. (Cl. 88—1.)

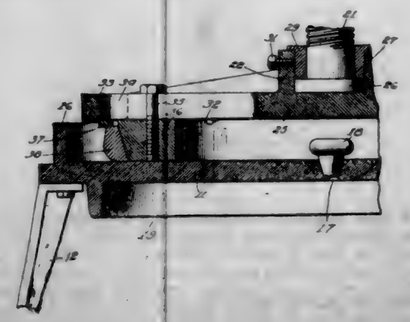
1. Aiming device for aircraft and stations movable with relation to the direction of gravity, comprising an optical system adapted to produce an image of a target and a level having a spherical surface and a bubble moving in contact therewith, said spherical surface and bubble of the level located substantially in an image plane of said optical system, the radius of curvature of the spherical surface of the level being equal to the equivalent focal length of the optical system provided between the target and the level, the bubble of the level forming the sight of the instrument.

1,556,995. PISTON-RING ROUGH-GRINDING MACHINE. CHARLES B. JOHNSON, Muskegon, Mich. Filed Jan. 9, 1922. Serial No. 528,077. 10 Claims. (Cl. 51—118.)



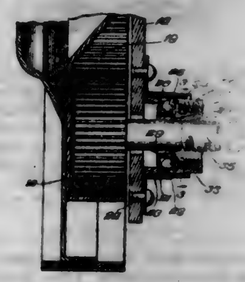
1. In combination, a ring carrying hopper for holding a quantity of ring castings, a disk rotatably mounted at one side of the hopper, pairs of ring carrying members mounted on the disk and extending radially therefrom, said ring carrying members being movable across an open end of the hopper and each pair being adapted to receive a ring casting from the hopper as it passes thereby, two rotatably mounted grinding wheels located with adjacent faces parallel between which the ring carrying members pass in their movements, said grinding wheels acting on the ring castings to grind opposite parts thereof, means for driving the grinding wheels, side guide plates between which the ring carrying members pass going to and away from the grinding wheels, and means on one of said plates for automatically ejecting the ring castings from the ring carrying members after grinding thereof.

1,556,996. APPARATUS FOR AND PROCESS OF TRUING COOPERS' TRUSS HOOPS. WALTER O. JOHNSON, Chicago, Ill., assignor to T. Johnson Company, Chicago, Ill., a Corporation of Illinois. Filed July 7, 1921. Serial No. 482,898. 11 Claims. (Cl. 78—81.)



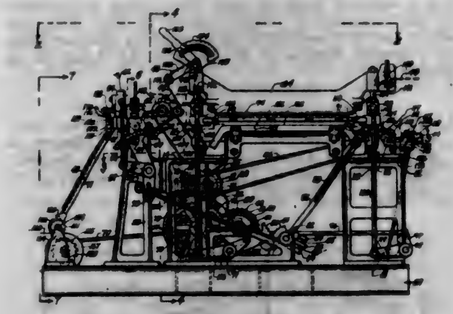
1. An apparatus for truing coopers' truss hoops, comprising, a size determining means insertable into a hoop, clamping means for securing the hoop against axial movement, and means for shrinking the hoop against said size determining device.

1,556,997. LAWN MOWER. ALLEN JOHNSTON, Ottumwa, Iowa, assignor to Johnston Pressed Gear Company, Ottumwa, Iowa, a Corporation of Iowa. Filed Mar. 24, 1919. Serial No. 284,636. 10 Claims. (Cl. 308—189.)



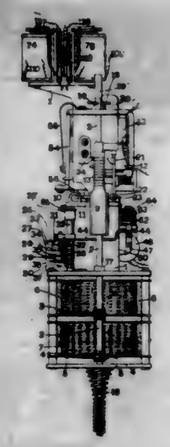
1. In a lawn mower, the combination of a main frame, a reel shaft, and bearings for said shaft, said bearings comprising a sleeve secured to the main frame, a bevel ring disposed within said sleeve and forming an outer race ring, and a unitary bearing assembly on the shaft, comprising a sleeve secured to the shaft and having an outer upset flange, anti-friction balls disposed within said flange, and a series of spiral springs forcing said balls into contact with the bevel face of said ring.

1,556,998. EMBROIDERY-STAMPING MACHINE. MORRIS KATCHER, New York, N. Y., assignor to J. B. Kaufman Co., New York, N. Y. Filed Jan. 17, 1925. Serial No. 3,033. 32 Claims. (Cl. 101—126.)



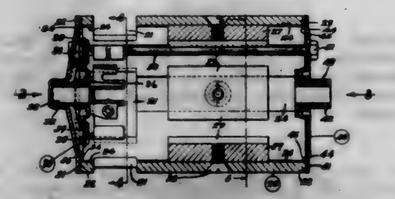
1. In an embroidery stamping machine, the combination of a stencil suitably mounted for vertical reciprocation, a platen, means for guiding the fabric to be stamped along the under side of said platen, said stencil adapted to be in position against the under side of said fabric at the upper end of its stroke, means for reciprocating said stencil, a printing roll adapted to roll under said stencil and means for rolling said roll under the stencil, said rolling and reciprocating means adapted to operate in timed relation, whereby said stencil is maintained in its upper position during the rolling by of said printing roll.

1,556,999. AUTOMATIC TELEPHONE EXCHANGE. ALEXANDER E. KEITH, JOHN ERICKSON, and CHARLES J. ERICKSON, Chicago, Ill., assignors, by mesne assignments, to Automatic Electric Company, a Corporation of Illinois. Filed June 18, 1902. Serial No. 112,224. 101 Claims. (Cl. 179—18.)



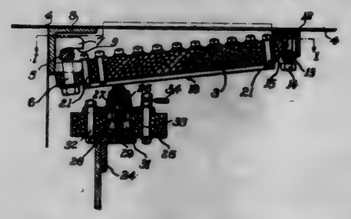
53. The combination of three groups of selecting devices and interconnecting lines therefor, electromagnetic operating means for each of the devices, switching mechanism for each device of the first group for disabling its operating means and completing connection to a device of the second group, and switching mechanism for each device of the second group for disabling its operating means and completing connection with a device of the third group.

1,557,000. DYNAMO FRAME. ERNEST R. KUHLS, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 18, 1924. Serial No. 750,645. 4 Claims. (Cl. 171—252.)



2. A dynamo frame comprising, in combination, a tubular member having parallel end surfaces and, interiorly thereof, a plurality of spaced, longitudinally extending parallel grooves at right angles to the end surfaces having bottom surfaces equidistant from the axis of the shaft which the frame is intended to support; a plurality of identical pole pieces each having a shank bottoming in a groove; and end frames each secured against an end surface of the tubular member and having a shaft bearing at right angles to the end surface and having spaced locating members terminating in surfaces equidistant from the shaft bearing and each adapted to bottom in one of the grooves of the tubular member.

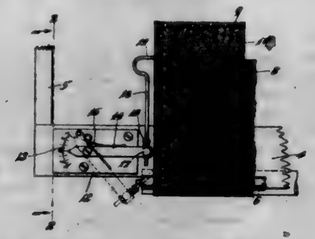
1,557,001. SWITCH MECHANISM. HERMAN K. ANSINGH, Toronto, Canada, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 20, 1923. Serial No. 620,150. 9 Claims. (Cl. 175—298.)



1. A distributing panel for truck-panel circuit breakers comprising an insulating base having parallel feed conductors on one side and parallel distributing bars on the other side of the base intersecting the feed conductors and adapted for engagement with a contact member and means for selectively connecting the distributing bars to the feed conductors.

---

1,557,002. ATTACHMENT FOR LOOMS. ARTHUR J. ASTLE, Middletown, Conn. Filed Apr. 17, 1923. Serial No. 632,643. 3 Claims. (Cl. 139—1.)



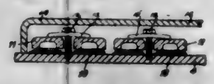
1. A loom including mechanism for weaving a fabric therein, said mechanism including means for forming a shed, a tensioned horizontally swinging element normally displaced from the shed and adapted to engage within said shed, and an indicating member operatively connected with said element to denote its position.

---

1,557,003. ELECTRIC SWITCH. WALTER M. AUSTIN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 2, 1920. Serial No. 421,231. 3 Claims. (Cl. 200—16.)

1. In combination, in an electric switch, a tubular casing member, longitudinally-disposed stationary contact studs extending through the wall of the casing member, a movable contact member having longitudinally-spaced engaging surfaces and adapted to simultaneously engage a plurality of the stationary contact members, a tubular carrier for the movable contact member slidably mounted in the casing member, a plunger also slidably supported in the casing and connected to the carrier, and a spring for normally maintaining the plunger in one of its extreme positions.

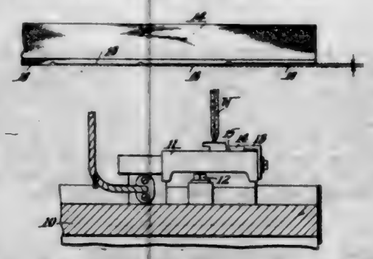
1,557,004. APPARATUS OR MACHINE FOR MAKING AND COOKING WAFER BISCUITS, CUP WAFERS, CORNETS, AND THE LIKE. THOMAS OWEN BATES, Liverpool, England. Filed Dec. 9, 1924. Serial No. 754,838. 1 Claim. (Cl. 219—19.)



An electrically heated plate for apparatus or machines for making or cooking wafer biscuits, cup wafers, cornets or other confections, the combination of a plate proper, a plurality of separate flat heating elements, each consisting of a thin sheet of insulating material wound with a wire conductor, metal strips on the hinge side of the plates having a hinge connection, the axis of which is coincident with the axis of the said plate hinge.

---

1,557,005. GAUGE BAR FOR GRINDING MACHINES. JOHN BATH, Worcester, Mass. Filed Oct. 7, 1924. Serial No. 742,233. 3 Claims. (Cl. 51—239.)

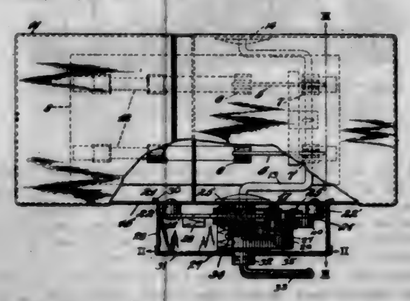


1. In a thread grinding machine, a gauge bar for thread chasers having a plurality of parallel gauge surfaces spaced transversely from each other by equal fractions of the pitch of the thread to be ground.

3. In a thread grinding machine, a work table and a grinding wheel, one travelling relatively to the other, and a series of stops on said table spaced transversely to the direction of relative travel of said table and wheel, and each stop being off-set from its adjacent stops by a selected friction of the pitch of the thread to be ground.

---

1,557,006. SWITCH BOX. HAROLD G. BAXTER, Baldwin, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 9, 1920. Serial No. 415,801. 10 Claims. (Cl. 200—67.)

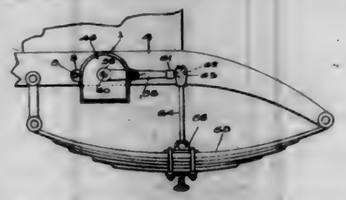


1. Switch mechanism comprising a pair of stationary contact members, a movable contact member for engagement therewith, separate pairs of toggle links pivotally connected to the movable member and alternately

movable to made positions for holding the movable member substantially in the extreme limits of its movements and yielding means for retaining the toggle links in made position.

---

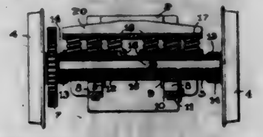
1,557,007. FLUID DOUBLE-ACTION SHOCK ABSORBER. SAMUEL P. BENNETT, San Francisco, Calif. Filed Sept. 24, 1924. Serial No. 739,618. 6 Claims. (Cl. 188—88.)



1. A device of the character described, comprising an attaching frame and suitable housing therefor forming an oil chamber, of a plurality of cylinders mounted upon said frame, a pivotal yoke carried by said frame, pistons mounted within said cylinders, link connections between the yoke and pistons, outlet ports formed in said cylinders, check valves mounted in said cylinders, and means whereby the alternate oscillation of said yoke causes the pistons to bypass fluid through the outlet ports of one cylinder into the check valves of the other cylinder.

---

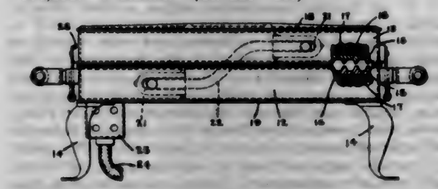
1,557,008. JOURNAL-BEARING CASING. CLAUDE BETHEL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 22, 1923. Serial No. 664,236. 9 Claims. (Cl. 105—140.)



1. The combination, in a vehicle truck, of a supporting frame, a plurality of axle housings movably mounted therein, a plurality of sleeves carried by said housings for journalling wheel axles of said truck, and means for uniformly distributing the load of the truck body on said axles.

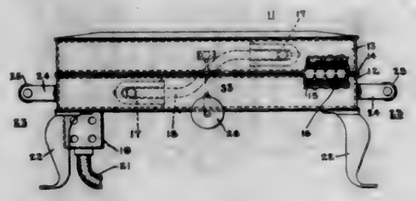
---

1,557,009. ELECTRIC WAFFLE IRON. HERMAN M. BIEBEL, Oakmont, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 20, 1922. Serial No. 576,195. 4 Claims. (Cl. 219—19.)



1. In an electric-cooking device, in combination, an electrically-heated lower casing, an electrically-heated superposed casing hinged on said lower casing, and having a closed and an open position relatively thereto, and a combined carrying and upper-casing-raising means pivotally mounted on the lower casing in such position as to cause said upper casing to remain in its closed position while the device is being carried by said combined means.

1,557,010. ELECTRIC WAFFLE IRON. HERMAN M. BIEBEL, Oakmont, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 27, 1922. Serial No. 577,838. 6 Claims. (Cl. 219—19.)



1. In a waffle iron, in combination, an upper and a lower casing hinged togeher, a heating element located in each of said casings, a shaft extending laterally of said device and secured thereto at the bottom of the lower casing, a hand wheel secured to said shaft at the front of the casing, and a link motion operatively connecting the rear end of said shaft with the upper casing and operative by a turning movement of said shaft, to raise said upper casing.

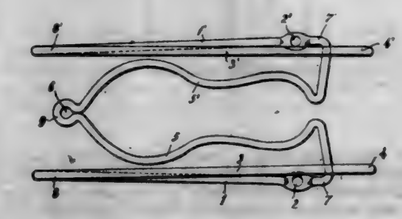
---

1,557,011. PROCESS OF TANNING HIDES OR SKINS. JOHN REGINALD BLOCKEY, Bolton, England, assignor to William Walker and Sons Limited, Bolton, England. Filed Dec. 16, 1924. Serial No. 756,855. 3 Claims. (Cl. 149—3.)

1. A process of tanning hides and skins comprising preliminarily subjecting the pelts to the action of a solution, the acid strength of which is maintained substantially the same as that of the tanning liquor by addition of a properly proportioned amount of neutral salt, whereby the extent or degree of swelling of the pelts may be regulated as desired.

---

1,557,012. SHOE-POLISHING DEVICE. CHARLES BLUMEL, New York, N. Y. Filed June 14, 1924. Serial No. 720,041. 1 Claim. (Cl. 15—266.)



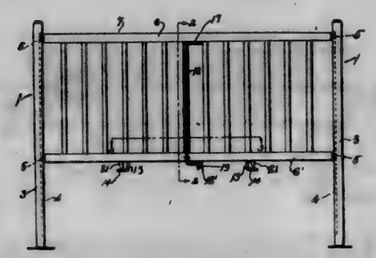
A shoe polishing device comprising a foot rest made of a single piece of wire provided at its front and rear ends with integral supports, said rear supports having extensions inclined forwardly and upwardly in the direction of the front support, said extensions being folded back upon themselves past said rear supports, terminating in extensions provided with hooks, thereby providing side and rear guides for a polishing cloth.

---

1,557,013. CRIB. CHARLES H. BOARDMAN, Columbus, Ohio. Filed Oct. 18, 1924. Serial No. 744,406. 2 Claims. (Cl. 5—100.)

1. A crib comprising end frames, a spring frame supported thereby, a shaft pivotally supported upon the spring frame and having extensions upon its ends, a side frame slidably connected with the end frames and

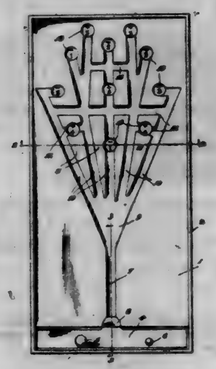
having flanges carried thereby, seats formed in the flanges for engaging the extensions to hold the side frame in its elevated position, a rod pivotally supported



by the side frame, and means carried by the rod for rocking the shaft to disengage the extensions from the seats.

---

1,557,014. GAME. CHARLES H. BÖHN, Saginaw, Mich. Filed May 6, 1925. Serial No. 28,463. 5 Claims. (Cl. 273—118.)

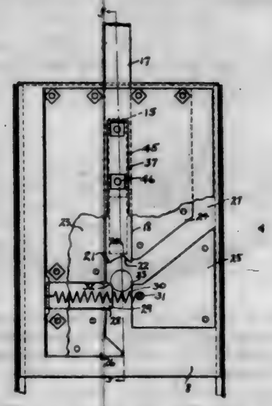


3. A game comprising a tiltable playing board having a compartment adjacent one end and a main pathway leading therefrom longitudinally of the board and provided with branches constituting auxiliary pathways, supplemental pathways being provided transversely of the board and connecting certain of said auxiliary pathways, said auxiliary pathways and certain of said supplemental pathways communicating with scoring pockets, and relatively large and small counting balls adapted to be placed in said compartment and, by tilting of the board, caused to roll along said pathways and into said pockets.

---

1,557,015. VENDING MACHINE. CHARLES W. BONER and SAMUEL S. OSBORNE, Raymondville, Tex. Filed July 23, 1923. Serial No. 653,270. 4 Claims. (Cl. 194—69.)

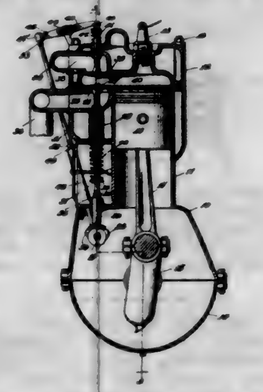
1. In a vending machine, a housing, a plurality of flat adjacent plates having therein a longitudinal plunger slot, a plunger therein, an inclined coin slot, and a laterally extending latch slot, a latch in said latch slot projecting into said plunger slot below said coin slot, said latch being adapted to stop said plunger, but being forced laterally out of said plunger slot by said plunger when a coin is inserted between the said plunger and



latch, and a plate on said plunger having an object-receiving recess therein, said plate movable into delivering position when said plunger is depressed past said latch.

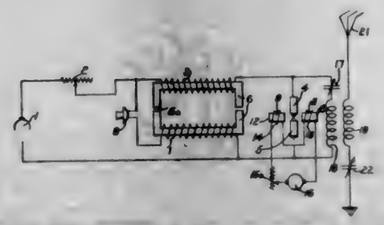
---

1,557,016. INTERNAL-COMBUSTION ENGINE. BYRON G. BOSWELL, Arlington, Ky. Filed May 21, 1924. Serial No. 714,975. 2 Claims. (Cl. 123—75.)



1. In an internal combustion engine, a block incorporating a plurality of cylinders and provided with an intake passage for said cylinders and with a separate intake port for each cylinder at the inner end of said passage, a head closing the cylinders and provided with an exhaust passage for said cylinders and with a separate exhaust port for each cylinder at the inner end of the exhaust passage as well as with a combined induction and eduction passage for each cylinder connecting one of said intake ports and one of said exhaust ports with each cylinder respectively, intake valves on the block controlling the intake ports, exhaust valves on the head controlling the exhaust ports, a cam shaft, tappets coacting between said shaft and the intake valves, a pair of rockers mounted on the head and provided at their inner ends with lugs extending toward each other to coact with the exhaust valves and at their outer ends with lugs extending away from each other, push rods coacting with the latter lugs, and tappets coacting between the cam shaft and said push rods.

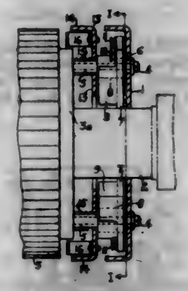
1,557,017. SIGNALING SYSTEM. QUINCY A. BRACKETT, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 2, 1921. Serial No. 497,950. 20 Claims. (Cl. 179—171.)



1. A method of controlling the high-frequency output of an oscillating arc which consists in changing the permeability of an iron core associated with an inductor in the supply circuit.

---

1,557,018. SHORT-CIRCUITING DEVICE. JOHN LYALL BROWN, Verona, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1923. Serial No. 668,467. 8 Claims. (Cl. 172—279.)

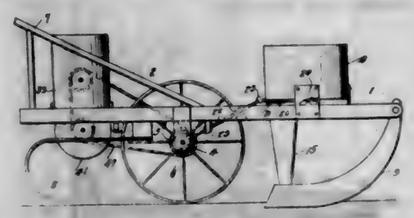


1. The combination with the commutator cylinder of a dynamo-electric machine, of a member spaced from and secured to the end thereof by a plurality of spaced threaded pivot members, a centrifugally actuated member pivotally and threadedly mounted on each of the threaded pivot members, and a short-circuiting member loosely disposed between said spaced member and said commutator cylinder, said centrifugally-actuated members adapted to pivot outwardly and simultaneously therewith to adjust themselves axially on their pivot members and force the short-circuiting member into engagement with the end of the commutator cylinder.

---

1,557,019. COMBINATION SEED DISPENSER. JOHN A. BURCHAM, Bath Springs, Tenn. Filed Nov. 3, 1923. Serial No. 672,550. 3 Claims. (Cl. 221—122.)

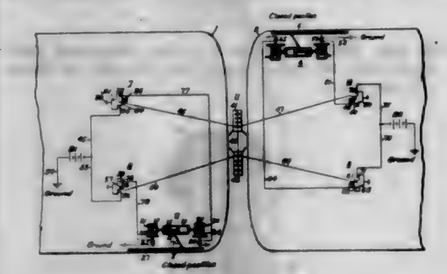
1. In a planter, concentric hoppers, the outer hopper being stationary, a bottom plate common to both hoppers and closing the lower ends thereof and having a discharge opening for each hopper, and rotatable dispensing



plates for the respective hoppers mounted upon said bottom plate, said dispensing plates and inner hopper being rigidly connected together.

---

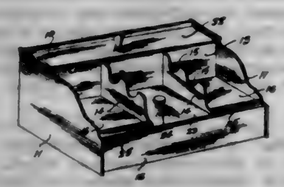
1,557,020. DOOR-CONTROLLING CIRCUITS. ANDREW H. CANDEE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1919. Serial No. 295,328. 15 Claims. (Cl. 105—341.)



1. The combination with a plurality of door-operating mechnaisms, of a plurality of similar two-position switching devices respectively located near and remote from one of said mechanisms, and means including said devices for effecting the operation of that mechanism.

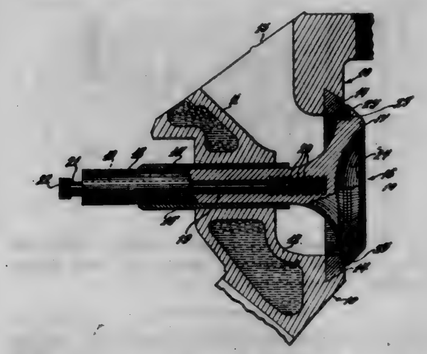
---

1,557,021. INKSTAND. HARRY CHILINGIRIAN, Bridgeport, Conn. Filed June 23, 1925. Serial No. 39,012. 5 Claims. (Cl. 120—5.)



1. In a device of the character described, walls forming a cabinet having a compartment, a retractable cover for the compartment, means for supporting an ink bottle in the compartment, and means on the cover for closing the bottle.

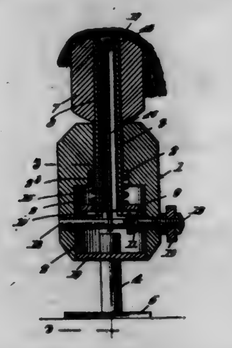
1,557,022. VALVE AND METHOD OF MAKING SAME. ROLAND CHILTON, Keyport, N. J., assignor to Aeromarine Plane & Motor Company, a Corporation of New York. Filed Nov. 3, 1922. Serial No. 598,872. 6 Claims. (Cl. 128—188.)



1. In a valve, the combination of an inner core of high tensile material having serration thereon, and outer body portion of highly thermally conductive material secured to the inner core by said serrations, and a peripheral portion of high tensile material on said body portion.

---

1,557,023. DOLL. HOWARD T. CHINN, Atascadero, Calif. Filed June 10, 1924. Serial No. 719,163. 8 Claims. (Cl. 46—40.)



6. A toy of the class described comprising a body having a bore extending therethrough, a tube mounted to rotate and reciprocate in said bore and having a head fixed to its outer end, a spring mounted to normally retract said tube, and means mounted in said body to engage said tube to project the tube against the tension of the spring, and means on the tube to be engaged by said projecting means to simultaneously turn the tube whereby said head is caused to be raised and lowered and turned.

---

1,557,024. DISCONNECTING SWITCH LATCH. LEONARD B. CHUBBUCK, Hamilton, Ontario, Canada, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 15, 1920. Serial No. 396,576. 1 Claim. (Cl. 200—169.)

A switch comprising a pair of blades, a latch stop connecting the blades at one end and disposed between the blades so as to hold them in spaced relation, contact jaws comprising spaced contact members for receiving the blades, the said blades being provided with a recess adjacent the end of the blade into which an operating tool may be inserted for withdrawing the blade from the jaws, a latch pivoted to the jaws and extending between the blades and provided with a tooth for engaging the said latch stop when the blade is moved into operative engagement with the jaws, a spring

mounted between the contact members and projecting between said blades and engaging the latch for normally holding the latch in operative engagement with the latch stop, the said latch extending across the recess in the blades and adapted to be engaged by the operating tool and withdrawn from engagement with the latch stop when the rod is moved in a direction tending to withdraw the blade from the jaws.

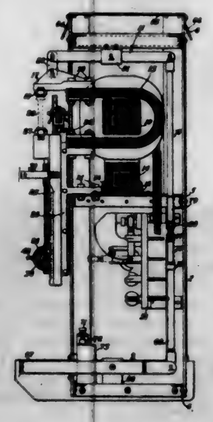
---

1,557,025. NICKEL-CHROMIUM ALLOY AND ARTICLES MADE THEREFROM. WILLIAM F. COCHRANE, Baltimore, Md., assignor, by mesne assignments, to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed July 17, 1924. Serial No. 726,462. 13 Claims. (Cl. 75—1.)

1. An alloy which comprises chromium 1% to 5%, nickel, 20% to 40%, and the balance largely copper.

---

1,557,026. ELECTRIC RIVET HEATER. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 17, 1920. Serial No. 410,863. 8 Claims. (Cl. 219—18.)



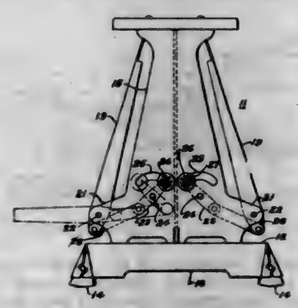
1. In a rivet heating machine, the combination comprising means for completing an electric circuit through the rivet to be heated, and means for automatically opening the circuit upon heating of the rivet to a predetermined temperature.

1,557,027. TOASTER-TRAY BUTTON. ORA A. COLBY, Irwin, and CHRISTIAN AALBORG, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 9, 1923. Serial No. 637,751. 6 Claims. (Cl. 53—5.)

1. In a vertical toaster, in combination, a frame comprising stationary side members having relatively narrow, integral, projecting portions, a material-supporting member supported by said projecting portions and having a turning movement relatively thereto, and a member of substantially U-shape secured to said material-supporting member for turning the same.

---

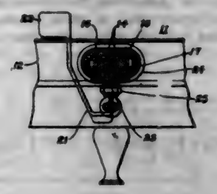
1,557,028. TOASTER HANDLE. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 9, 1923. Serial No. 637,756. 5 Claims. (Cl. 53—5.)



3. In a toaster, the combination with a frame, and a tray pivotally mounted thereon, of an actuating lever for said tray having a floating pivotal mounting on said frame.

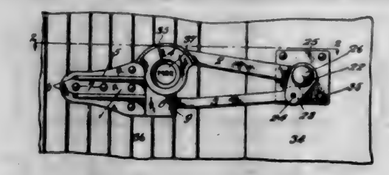
---

1,557,029. PLUG-TRIPPING DEVICE. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1923. Serial No. 680,401. 3 Claims. (Cl. 219—19.)



1. The combination with an electrically heated device comprising a plurality of contact pins and a contact plug operatively engaging said contact pins, of a manually actuable balanced-pressure plug-removing means pivotally mounted on said device below said contact pins.

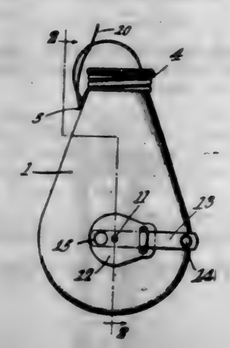
1,557,030. SEAL LOCK. ERNEST A. CONAWAY, Little Rock, Ark. Filed Feb. 10, 1925. Serial No. 8,206. 12 Claims. (Cl. 70—28.)



1. A device of the character described comprising a keeper provided with a plurality of bolt receiving apertures, bolts adapted to engage said apertures in superposed relation, and latch mechanism carried by one of said bolts and adapted to lockingly engage the keeper whereby to lock both bolts within the keeper.

---

1,557,031. CHALK LINE. ELISHA ASBURY CONWAY, Williamsport, Pa. Filed Oct. 25, 1923. Serial No. 670,738. 1 Claim. (Cl. 33—87.)



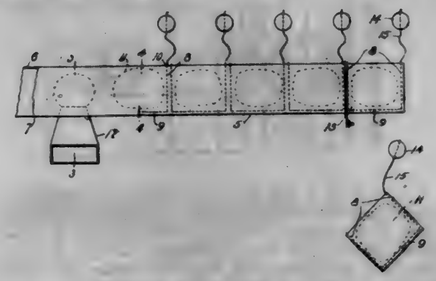
A self chalking chalk line means comprising a flat pear-shaped casing having an apertured boss in one face below its transverse median line, the opposed face having a comparatively large opening therein, a cylindrical line carrying reel removably inserted through said opening and mounted in said casing with its outer end provided with a plate projecting radially over the side walls of the reel and closing said casing opening, a removable headed rod extending through said casing and reel, said rod passing through said apertured boss with its head abutting the outer face of the boss and the other end thereof having threaded engagement with said plate so that the reel may be removed for removing said rod, the smaller end of said casing having a threaded neck with a screw threaded cap mounted thereon and provided with an aperture for the passage of a line therethrough, said cap having a line holding clip extending from its edge and contacting with said casing.

---

1,557,032. METHOD OF PACKETING TEA OR THE LIKE. SIMON COOPER, Brooklyn, N. Y., assignor to Cooper Tea Packet Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 1, 1921. Serial No. 512,161. 4 Claims. (Cl. 226—53.)

1. That method of making tagged completely closed packets of tea or like material, which consists in folding longitudinally an elongated blank, depositing charges of the material in spaced apart relation between the plies of the blank, running a line of stitching through both plies from the folded edge of the blank at one side

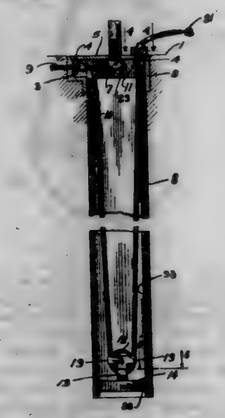
of the charge, around the charge, and back to the fold, extending the stitching thread at one side of the charge beyond the folded edge and free of the blank, and attaching to the extended thread a tag.



3. That method of producing a filled packet which consists in preparing a folded blank of textile material with a charge of filling material contained between the plies of the fold, and running a line of stitching from the folded edge of the blank around the charge of material and back to the folded edge.

---

1,557,033. AIR-HOSE PROTECTOR. HAROLD G. DAVIS, Denver, Colo. Filed Feb. 11, 1924. Serial No. 692,060. 1 Claim. (Cl. 299—77.)

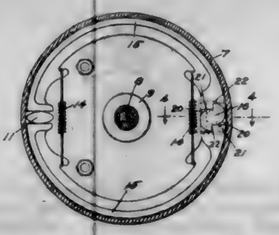


An air hose protector comprising a ringlike member of metal having an outwardly projecting pocket in one side thereof, a rabbet along the upper inner edge of said ring and pocket, the wall portion of said pocket having an opening adapted to receive an air pipe, a cover adapted to fit said member and to rest in said rabbeted portion, a casing secured at its upper end to said ringlike member, diametrically opposed guides secured to the inside of said casing, a weight operatively related to said guides, said weight having a diameter substantially like member and a pulley secured to the upper surface linke member and a pulley secured to the upper surface of said weight.

---

1,557,034. BRAKE. VICTOR DELBOARD, St. Paul, Minn. Filed Apr. 21, 1924. Serial No. 708,093. 2 Claims. (Cl. 188—78.)

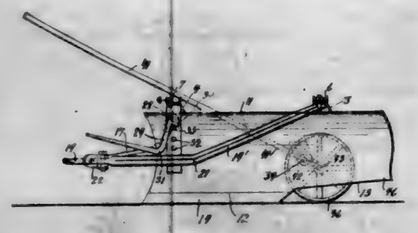
1. The combination with a rotatable brake drum and a stationary plate closing the end of the drum, of a pair of oppositely disposed semi-circular brake shoes adapted to frictionally brake against said drum, means at one end of the pair of shoes for spreading the same to effectuate said braking, an adjustable cam member, between the opposite ends of said shoes, having diametrically opposed semi-parabolic cams adapted to respectively engage the adjacent shoe ends, said last mentioned shoe



ends being offset to permit them to be snapped into their original contracted position upon the completion of one semi-circular movement of the cam member from its initial position.

---

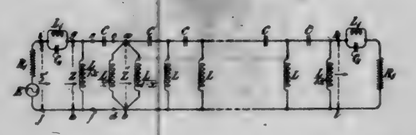
1,557,035. CHECKING IMPLEMENT. WALTER DOST, Yuba City, Calif. Filed May 21, 1923. Serial No. 640,586. 3 Claims. (Cl. 37—56.)



1. A checking implement of the character described, comprising two cooperating elements arranged to force dirt inwardly when dragged forward, a front and a rear bar bridging the same and holding them in spaced relation, and means for attaching the same to a pulling agent comprising a member engaging the pulling agent, two rods loosely connecting the same with the front ends of the two elements, a third rod connecting the same to the rear bar and adjustable means associated with the front bar bearing on the third rod for controlling the height of its front end.

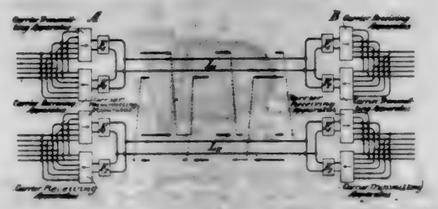
---

1,557,036. TERMINAL NETWORK FOR HIGH-PASS WAVE FILTERS. HENRY W. ELSASSER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 24, 1921. Serial No. 455,360. 8 Claims. (Cl. 178—44.)



1. A high-pass wave-filter of the type having recurrent sections in combination with a terminal network comprising inductance and capacity in parallel and simulating the impedance if the corresponding infinite filter.

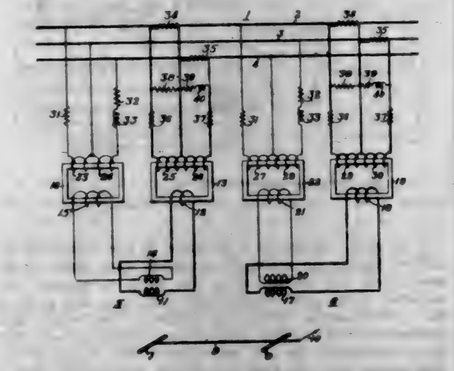
1,557,037. REDUCTION OF CROSS TALK. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 11, 1922. Serial No. 606,281. 18 Claims. (Cl. 179—15.)



1. In a transmission system in which a plurality of channels transmit in each direction over each of a plurality of lines paralleling each other, the method which consists in filtering out of any channel transmitting in a given direction over any line near end cross-talk induced from all channels transmitting in the opposite direction over an adjacent line.

---

1,557,038. POWER-FACTOR METER. ROBERT D. EVANS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1920. Serial No. 387,607. 16 Claims. (Cl. 172—245.)



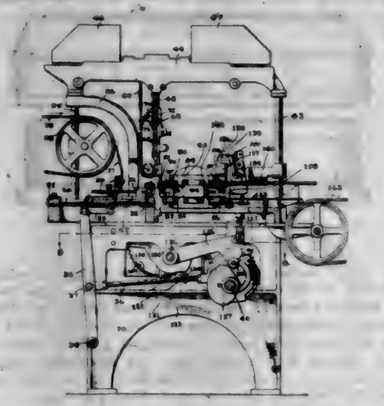
1. A measuring instrument comprising two single-phase power-factor meters operatively connected together, means for actuating one of the meters in accordance with the phase-angular relation between the positive sequence current and voltage and the other meter in accordance with the phase-angular relation between the negative sequence current and voltage.

12. The method of determining the power factor of an unbalanced polyphase circuit which consists in segregating the several sequence systems present in the circuit, measuring the power factors of the several systems and combining the several measurements.

---

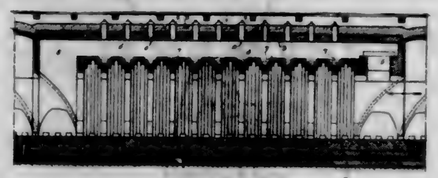
1,557,039. WRAPPING MACHINE. MILFORD B. FERGUSON, Brooklyn, N. Y., assignor of one-half to Edward Haas, Brooklyn, N. Y. Filed Sept. 15, 1921. Serial No. 500,744. 23 Claims. (Cl. 93—2.)

1. In apparatus of the class described, in combination, an intermittently movable work carrier having a plurality of article-receiving means, each comprising a pair of jaws for receiving therebetween an article, driving means for moving said work carrier, means for adjusting the jaws of each article-receiving means on said carrier relatively to one another to accommodate articles of various thicknesses, means for moving an article and a wrapper along a predetermined fixed path into one of said receiving means and between the jaws thereof, and means for adjusting said work carrier with respect to said predetermined path to align the jaws of said receiving means with said path upon a pause in the movement of said carrier, said adjusting means being operable without disturbing the driving means for said work carrier.



---

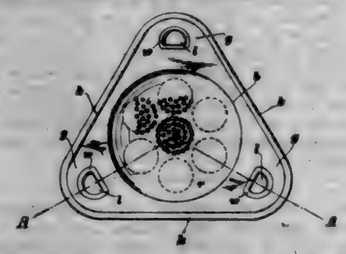
1,557,040. TUNNEL, FURNACE, KILN, OVEN, AND THE LIKE. HENRI FRANCART, Tongres, Belgium. Filed June 24, 1920. Serial No. 391,513. 1 Claim. (Cl. 25—142.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



In a tunnel oven, a jacket oven, a drying oven within the jacket oven and forming therewith a free space for passage of air, said jacket oven having openings therein through which heat insulating material may be applied to the surface of the drying oven.

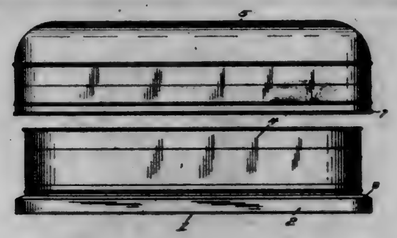
---

1,557,041. TEA STRAINER. MARTIN FRANK, Gruhnhain, Germany. Filed Mar. 13, 1924. Serial No. 698,971. 1 Claim. (Cl. 210—162.)



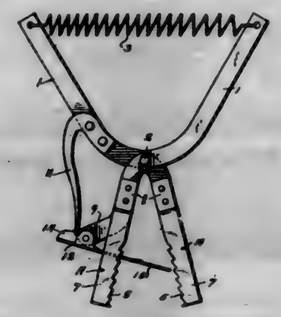
A tea strainer stamped from a blank of sheet metal which has the shape of an equilateral triangle the three corners of which form each a flap which are all situated on one horizontal plane and have each an aperture the edges of which are beaded.

1,557,042. BURIAL CASKET. ROBERT L. FRASER, McCrory, Ark. Filed Dec. 18, 1924. Serial No. 756,687. 1 Claim. (Cl. 27—35.)



A burial casket comprising a base formed of vitreous material, an upstanding wall around the edges thereof and having a beveled top edge, a cover formed of vitreous material conforming in contour to the shape of said base for seating thereon, the bottom edge of said cover being beveled for registry with the upstanding wall of said base, and an integral depending rib on said cover, offset to cover the joint of said cover and base.

1,557,043. TRAP. FREEMONT S. GRAHAM, Orting, Wash. Filed July 12, 1924. Serial No. 725,725. 2 Claims. (Cl. 43—8.8.)

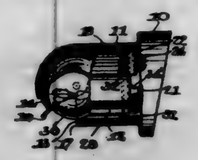


1. A trap of the class described comprising a pair of cross members pivotally connected one to the other, jaws carried by similar ends of the members, the opposite end portions of the members being in divergence, a retractile member interposed between and secured to said opposite end portions of the members, one of said members extending outwardly beyond the adjacent portion of the jaw secured thereto and directed outwardly with respect thereto to provide a relatively short inclined arm, a trigger pivotally engaged with the outer end portion of said arm and provided with a tailpiece having a notch, and an arm carried by the second member at the opposite side of its pivotal connection to engage within the notch of the tail-piece when the jaws are separated to hold said jaws in such separated relation, said trigger substantially bridging the space between the jaws when separated.

1,557,044. NICKEL-COPPER ALLOY. WALTER F. GRAHAM, Baltimore, Md., assignor, by mesne assignments, to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Aug. 28, 1923. Serial No. 659,837. 4 Claims. (Cl. 75—1.)

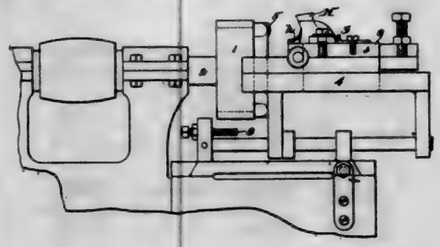
1. An alloy consisting of nickel 30 to 35%, iron 3 to 7%, and the remainder copper, and containing no lead or zinc.

1,557,045. INSTRUMENT LIGHT. RAYMOND W. GRIFFITH and SAMUEL N. HOPE, Milwaukee, Wis., assignors to Griffith-Hope Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 6, 1922. Serial No. 592,891. 4 Claims. (Cl. 240—8.16.)



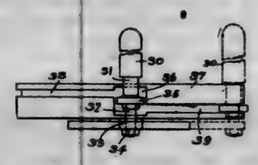
1. An instrument light comprising a horizontally elongated oval-shaped base, a lamp mounted thereon, a correspondingly shaped rounded front hood mounted on the base and enclosing the lamp and provided with a sector-shaped opening in its lower front portion, and a convex shutter pivotally mounted at its ends within the hood and in one position adapted to completely close the opening of the hood and to supplement the rounded front end of the hood.

1,557,046. ART OF WOOD-HEEL MAKING. NICHOLAS L. GULLIFORD, Peabody, Mass., assignor to Gregory & Read Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1923. Serial No. 658,647. 7 Claims. (Cl. 12—47.)



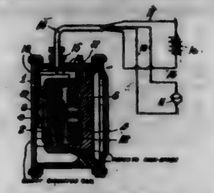
1. A work holder for a machine of the character described having an abutment engaging that side of the heel where the cutter leaves the work to support the material of the same immediately adjoining thee path of the cutter against the lateral thrust of the latter, said abutment being molded with a heel engaging face that is a counterpart of and conforms to the shape of the side of the heel and having a corner adjacent the breast of the heel coinciding with the corner at the side of the breast of a heel as finished by the cutter.

1,557,047. MOTOR REVERSE CONTROL. EMMER F. GWYNN and HARRY H. JAMES, Pittsburgh, Pa. Filed Dec. 24, 1923. Serial No. 682,485. 5 Claims. (Cl. 74—88.)



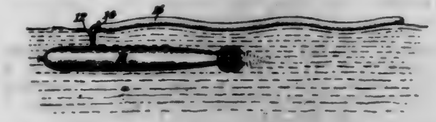
1. A motor reverse control device comprising a member shaped for attachment to a motor control box for electric elevators, the said member having offset grooves formed therein and having recesses at the end of said grooves, said member also having an opening providing communication between said grooves.

1,557,048. VIBRATION APPARATUS, PARTICULARLY FOR RECEIVING AND PRODUCING SOUND WAVES. WALTER HAHNEMANN, Kitzeberg, near Kiel, Germany, assignor to the Firm Signal Gesellschaft m. b. H., Kiel, Germany. Filed Feb. 4, 1921. Serial No. 442,578. 2 Claims. (Cl. 177—386.)



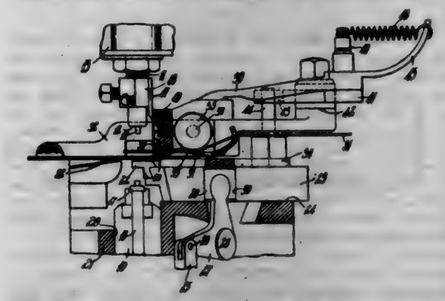
1. A vibration apparatus comprising a magnetic field, an electrical coil adapted to vibrate in the magnetic field and two coupled vibratory structures of substantially the same natural frequency and means for coupling said structures with each other, one of the vibratory structures being adapted to act as a sound radiating member, the electrical coil representing a part of the vibratory structure which is coupled to the sound radiating member, the degree of coupling between the structures being suitably chosen so that the desired vibration frequency of the combined system is located within the range of the coupling frequencies of the system.

1,557,049. ELECTRICAL ANTENNA. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed May 10, 1918. Serial No. 233,763. Renewed Nov. 10, 1922. Serial No. 600,185. 10 Claims. (Cl. 250—33.)



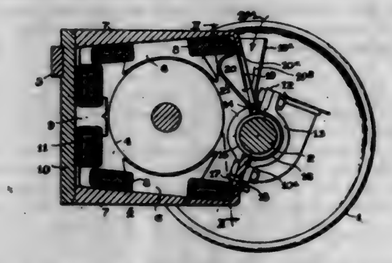
5. The combination of an antenna and yielding buoyant means including a single, continuous flexible casing to support said antenna in close proximity to and substantially parallel with the surface of a body of water whereby said antenna flexes and conforms to the contour of the surface of the water under all conditions.

1,557,050. LACING-STUD-SETTING MACHINE. ARTHUR R. HAVENNER, Wayland, Mass., assignor to Judson L. Thomson Manufacturing Co., Waltham, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1924. Serial No. 745,788. 6 Claims. (Cl. 218—17.11.)



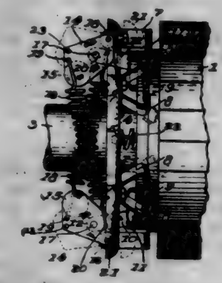
1. A machine for setting a lacing stud in the upper of a boot or shoe and in a reinforcing strip therefor having, in combination, a punch and anvil, a die adapted to cooperate with said punch, mechanism adapted to move said punch and anvil longitudinally thereof toward said die, mechanism adapted to subsequently move said die out of alignment with said punch while said punch is inserted in said upper and reinforcing strip, means adapted to sever said strip from the portion which has been punched, mechanism adapted to move said punch laterally thereof to feed said upper and said severed portion of said strip, and means mounted on said presser foot and operated by said die adapted to impart a step by step feeding movement to said reinforcing strip.

1,557,051. RAILWAY MOTOR. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 24, 1923. Serial No. 670,454. 11 Claims. (Cl. 105—49.)



1. A bipolar railway motor comprising an armature and a field frame, the latter having two main pole members respectively located above and below the armature, means for supporting a railway axle at one side of the frame, means for suspending the frame at the opposite side thereof, and a single commutating pole member located on the suspension side thereof.

1,557,052. SHORT-CIRCUITING DEVICE. WALTER H. HIMES, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1921. Serial No. 468,703. 12 Claims. (Cl. 172—279.)



4. The combination with a rotor member, of a switch comprising contact elements carried by said rotor member, an axially movable ring-member, adapted to make contact with said contact elements, axially disposed yielding means for forcing said ring-member away from said contact elements, a pair of oppositely disposed, substantially longitudinally extending lever members engaging said ring-member at their inner ends and carrying weights at their outer ends, means carried by said rotor member for pivotally supporting said lever members, and a link member connecting a point on the inner end of one lever member to a point on the outer end of the other lever member.

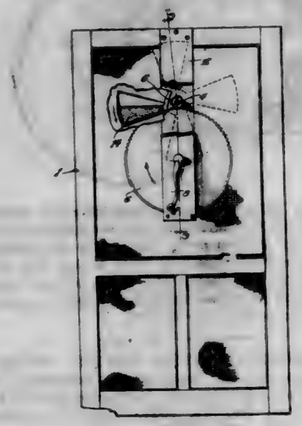
1,557,053. FOOD PRODUCT. CHARLES W. HOOPER, Jamaica, N. Y. Filed Dec. 10, 1923. Serial No. 679,779. 7 Claims. (Cl. 99—11.)

6. The new food product comprising a dry mixture of food ingredients, one ingredient being finely divided desiccated animal liver, another being desiccated fruit

juice, another being a finely divided infant food carbohydrate and another being dry powdered milk, the mixture having the following characteristics and properties; the mixture is stable and the ingredients do not materially react on one another to change their food value while being kept sealed under ordinary conditions, the mixture is readily miscible with water leaving the ingredients thoroughly distributed there-throughout, the ingredients do not curd or coagulate the milk when so mixed with water and all the ingredients are capable of being assimilated by infants generally without material trouble.

---

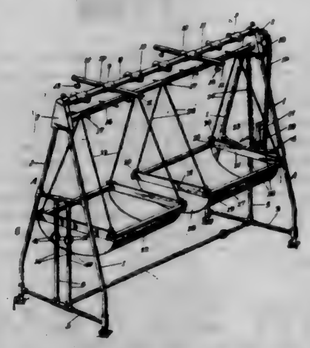
1,557,054. FLYCATCHER. ANNA M. HORNING, Burlington Junction, Mo. Filed May 13, 1925. Serial No. 30,020. 3 Claims. (Cl. 43—110.)



3. A device for the purpose set forth comprising a hub, a plurality of radial arms extending from the hub and having their inner faces provided with marginal reentrant flanges, sheets of insect-holding material covering the inner faces of the several arms and engaged at their edges under said flanges, and means engaged with the said hub for rotatably mounting the same upon a screen door.

---

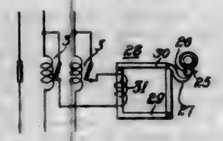
1,557,055. INVALID'S AND CRIPPLE'S BED APPLIANCE. GEORGE W. HOYLE, Santa Rosa, Calif. Filed Mar. 25, 1924. Serial No. 701,707. 7 Claims. (Cl. 5—86.)



1. A bed appliance including a vertical and rigid frame, adapted to straddle a bed lengthwise thereof, a plurality of body supporting elements arranged between the end members of the frame, means supporting one of said elements in a manner to enable the same to be raised and lowered at will, and means supporting the other element from the frame in a manner to enable the transverse position of the same relative to the other element to be altered at will while enabling both elements to be raised and lowered in common.

---

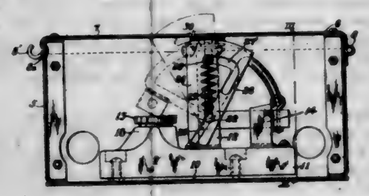
1,557,056. STARTING SAFETY SWITCH. OLIVER S. JENNINGS, Brooklyn, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 7, 1920. Serial No. 371,926. 6 Claims. (Cl. 175—294.)



1. The combination with a casing having a door therefor, of a snap switch, latching means for maintaining the switch in the desired position, means operable from without the casing and responsive to low voltage and to overload for actuating the latching means, and interlocking means for precluding any operation of the switch when the door is open and for precluding the opening of the door when the switch is closed.

---

1,557,057. SAFETY SWITCH. OLIVER S. JENNINGS, Brooklyn, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1920. Serial No. 408,879. 8 Claims. (Cl. 200—50.)

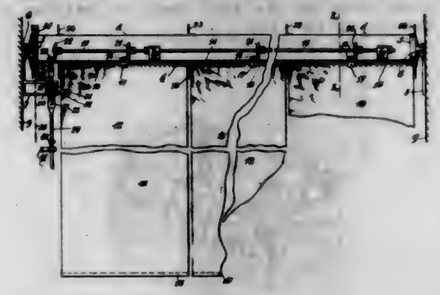


1. A switch mechanism comprising a housing having an opening therein, a movable cover for closing the opening, a movable switch within the housing, a rotatable operating lever for moving the switch to open and to closed positions, and a latching member for the cover mounted for rotation about the axis of rotation of the operating lever and rotatable with the operating lever for preventing movement of the operating lever to closed position so long as the cover is in open position, and movable by the cover into a position permitting closing movement of the operating lever when the cover is in closed position.

---

1,557,058. SHADE ROLLER. VALDEMAR JOHANSEN, Brooklyn, N. Y., assignor to Knud Murck and Thomas J. Gilmour, both of New York, N. Y., and himself. Filed Nov. 13, 1924. Serial No. 749,611. 8 Claims. (Cl. 156—44.)

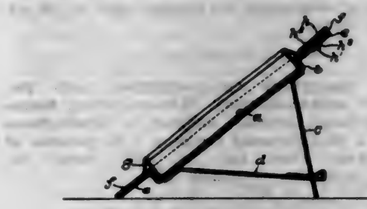
1. The combination of supporting brackets, a hollow roller mounted therein a plurality of shades pivoted to said roller, means within the roller for adjusting said shades in angular relation to the roller, operating means for said adjusting means, mechanism for clutching and



unclutching the operating means from said adjusting means and mechanism for operating the said roller to raise and lower the said shades.

---

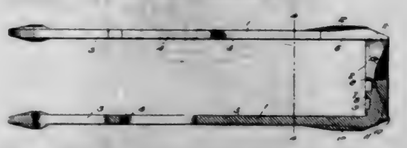
1,557,059. COMMODITY-DISPLAY DEVICE. CLARENCE P. JOHNSON, Lexington, Mass. Filed Jan. 20, 1921. Serial No. 438,654. 2 Claims. (Cl. 211—28.)



1. In a commodity display device, a commodity carrier having an open end through which commodities or a commodity tray may be inserted edgewise therein, said commodity carrier having side and end bounding walls, and one or more of said walls being cut away to form an opening at one or more corners thereof to facilitate access to the contents.

---

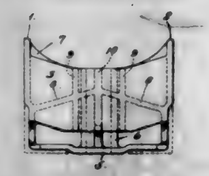
1,557,060. DRAFT YOKE. BYRNE W. KADEL, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Aug. 2, 1922. Serial No. 579,266. 9 Claims. (Cl. 213—67.)



1. A draft yoke adapted at its forward end to be connected to a car coupler and having a rear end adapted to engage a draft rigging back-stop, said yoke involving a U-shaped portion providing spaced parallel arms connected at their rear ends and adapted to receive a cushioning unit between them, and a plurality of flanges integrally united to said U-shaped portion and projecting forwardly from the rear end thereof between said arms, the forward ends of said flanges terminating in a common plane and forming forwardly opening recesses and being adapted to engage said cushioning unit.

---

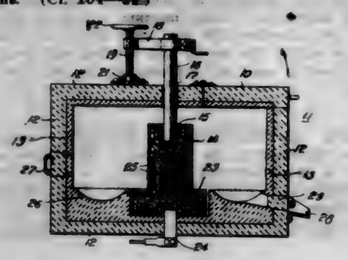
1,557,061. BACKSTOP. BYRNE W. KADEL, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Nov. 30, 1923. Serial No. 677,731. 6 Claims. (Cl. 213—57.)



1. A backstop casting for railway draft rigging involving spaced side walls having a plurality of openings therein, said walls being united at their front ends by a transverse wall forming a buffing web, a floor portion uniting the said walls, the front edge of said floor portion being spaced rearwardly from the buffing web and disposed below the lower edge thereof to proportion uniting the said walls, the front edge of said openings in the forward lower portion of the side walls, and a plurality of longitudinally disposed substantially parallel reinforcing flanges for said buffing web, said flanges being spaced from the side walls and floor portion.

---

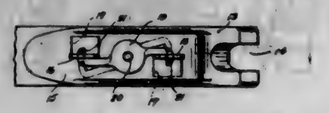
1,557,062. ELECTRIC FURNACE. ALVIN D. KEENE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 18, 1923. Serial No. 658,031. 3 Claims. (Cl. 204—64.)



2. In an electrically heated device, in combination, a heating element comprising a formed block of carbonaceous material having an opening therein, an electrode co-operating with said block to produce an arc located in the opening in said block and a resistor member comprising a plurality of refractory electric-conducting members operatively engaging said block and connected in series circuit relation to said arc.

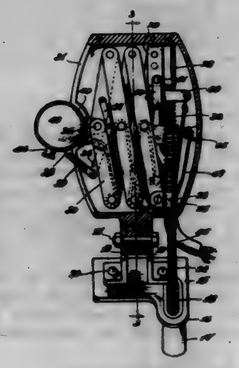
---

1,557,063. DETACHABLE EAR FOR TRANSMISSION BANDS. EDWARD F. KELLEY, Bridgeport, Conn., assignor to The Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 28, 1924. Serial No. 734,657. 7 Claims. (Cl. 188—249.)



5. A transmission or brake band comprising a curved strip of metal having a pair of spaced outwardly extending lugs having transverse openings, an ear having openings to receive said lugs, and a catch pivoted to the ear between said openings and provided with lateral extensions at the opposite ends thereof to extend into the openings in the lugs.

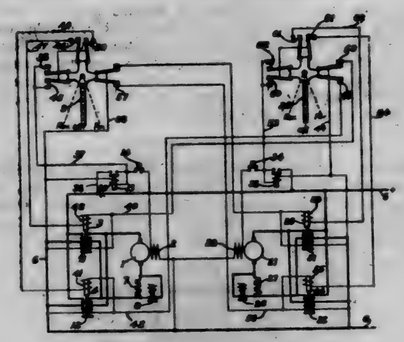
1,557,064. COMBINED PARKING LIGHT AND TRAFFIC SIGNAL. ALEXANDER KERR, La Crosse, Wis., assignor of one-half to A. Rim, jr., La Crosse, Wis. Filed Oct. 3, 1923. Serial No. 666,327. 9 Claims. (Cl. 116—40.)



1. A traffic signal including a casing having a seat, a signal arm mounted in the casing and extensible to project therefrom, a lamp housing carried by said arm, means for extending the arm, and means for collapsing the arm within the casing and shifting said lamp housing to rest in said seat exposed at the exterior of the casing.

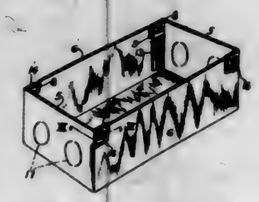
---

1,557,065. MOTOR-CONTROL SYSTEM. GEORGE E. KING, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 8, 1923. Serial No. 617,735. 5 Claims. (Cl. 172—179.)



1. The combination with a plurality of motors and controlling means therefor, of means for effecting the simultaneous operation of the motors, each in a given direction, and means for preventing reversal of one motor prior to reversal of another.

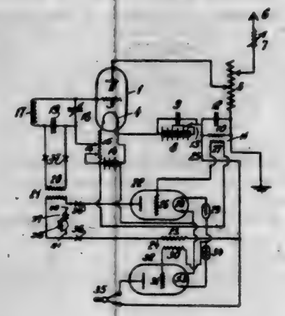
1,557,066. BOX STRUCTURE. HUBERT K. KRAUTZ, Brooklyn, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 14, 1921. Serial No. 444,779. 5 Claims. (Cl. 220—76.)



1. A box-corner interlock for two angularly disposed wall members, one of which is provided with a counter-sunk portion, comprising a divided flange on the other wall member disposed at an angle thereto, said flange having a division thereof overlapping the counter-sunk portion of the adjacent wall member and another division thereof overlapping the opposite side of the adjacent wall member.

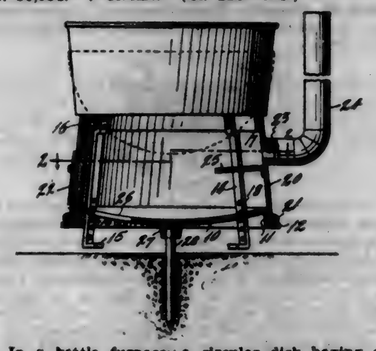
---

1,557,067. COMBINED TRANSMITTING AND RECEIVING ARRANGEMENT. LUDWIG KÜHN, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 26, 1921. Serial No. 495,739. 4 Claims. (Cl. 250—13.)



1. In a radio communication system, an antenna, a vacuum tube, circuits associated with said tube to cause it to function as both an oscillator and a detector, said associated circuits including a coupling to the antenna, a grid circuit and a circuit coupled to the antenna and to the grid circuit, an amplifier in said coupled circuit, an indicating device associated with said coupled circuit, and switching means for opening said coupled circuit, whereby when said coupled circuit is closed, signals may be received by heterodyne reception and when said switching means are open, said vacuum tube may function as a transmitter of continuous waves.

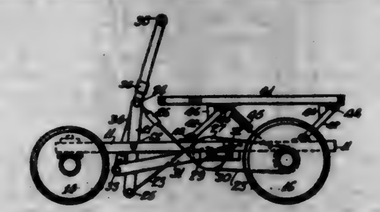
1,557,068. KETTLE FURNACE. WILLIAM A. LEE, Ector, Tex., assignor of one-half to William L. Mangrum, Whitewright, Tex. Filed May 18, 1925. Serial No. 30,994. 7 Claims. (Cl. 126—345.)



6. In a kettle furnace, a circular disk having a depending apron provided with an outwardly directed flange, frame bars extending through the disk, bolts securing the bars to the apron, a band fastened to the upper ends of the bars, and a jacket surrounding the bars and apron and resting on the flange.

---

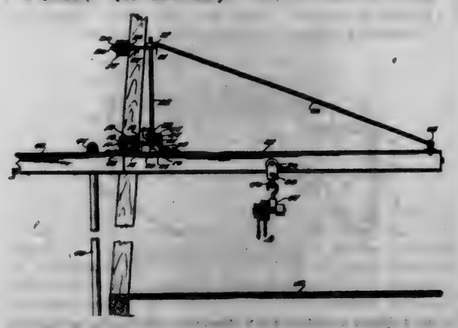
1,557,069. MECHANICAL MOTION. MATTHEW H. LOUGHRIDGE, Bogota, N. J., assignor of one-half to Harry W. Dyer, New York, N. Y. Filed May 14, 1923. Serial No. 638,771. 29 Claims. (Cl. 74—53.)



6. In a system for converting reciprocating motion into rotary motion, the combination of a rocker, a driven pulley, an idler pulley, a belt operatively connecting said pulleys with both ends of said rocker and means independent of said belt for changing the position of said idler pulley as said rocker changes its direction of movement.

---

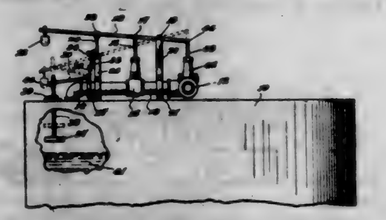
1,557,070. TRAVELING HOIST. ALVIN R. LOGUE, Tulsa, Okla. Filed May 5, 1924. Serial No. 711,174. 2 Claims. (Cl. 104—92.)



1. In a traveling hoist, spaced brackets, a bearing carried by one of said brackets, a rotatable shaft carried by the brackets and provided with a bearing to confront said first mentioned bearing, anti-friction devices interposed between said bearings sustaining the shaft for free rotation, and a boom swingingly supported by said shaft.

---

1,557,071. AUTOMATIC REGULATING DEVICE FOR TANKS. ROBERT W. MCMULLEN, Bristow, Okla. Filed Feb. 12, 1925. Serial No. 8,748. 4 Claims. (Cl. 137—68.)



1. In a construction of the character described, a main pipe, a branch pipe leading from said main pipe, a valve in said main pipe having an operating stem extending transversely out of the pipe, a valve in said branch pipe having an operating stem extending transversely out of the pipe, a fulcrum carried by said branch pipe between its valve and said main pipe, a lever pivoted to said fulcrum and extending longitudinally of the branch pipe and pivotally connected with the stems of said valves, float controlled means for releasably securing said lever in a set position with one valve closed and the other open, and means for imparting movement to said lever to reverse the positions of the valves when the lever is released.

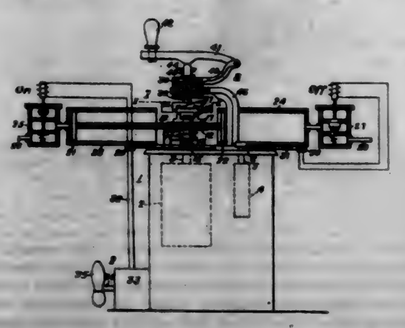
---

1,557,072. MOLDING FLASK. JAMES R. MCWANE, Birmingham, Ala. Original application filed May 12, 1923, Serial No. 638,639. Divided and this application filed Aug. 25, 1924. Serial No. 734,002. 4 Claims. (Cl. 22—96.)

1. A flask section having two pairs of alined trunnions, one pair being longer than the other.

---

1,557,073. CONTROL APPARATUS. JOHN S. MCWHIRTER, New York, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1919. Serial No. 302,665. 22 Claims. (Cl. 200—17.)

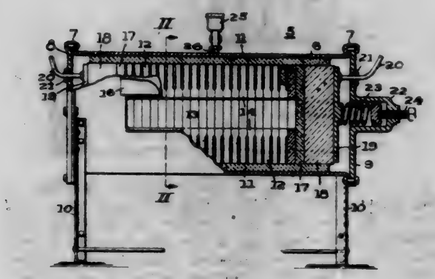


8. The combination with a movable control member, of means operable to effect manual actuation of the control member, means adapted to effect power actuation

of the control member and means cooperative to maintain continuously connection between either of said actuating means and the control member.

---

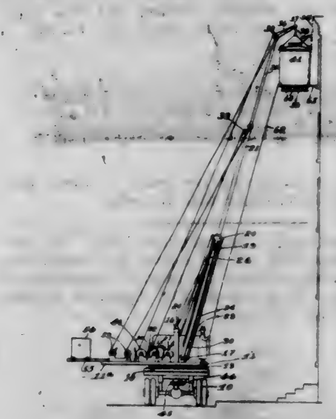
1,557,074. ELECTRIC RIVET FURNACE. ALLIS M. MACFARLAND, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 3, 1921. Serial No. 489,428. 6 Claims. (Cl. 204—64.)



1. An electric furnace comprising a plurality of relatively thin refractory resistor members having substantially radial slots therein to form a furnace chamber.

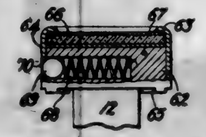
---

1,557,075. FIRE APPARATUS. JOHN W. MACLEOD, Brooklyn, N. Y. Filed Jan. 17, 1925. Serial No. 2,972. 12 Claims. (Cl. 227—20.)



1. An apparatus of the class described comprising a motor vehicle, a platform revolubly mounted thereon, a beam mounted in connection with said platform and movable therewith, said beam being composed of extensible parts, a lift member adapted to be normally supported on said vehicle and to be raised and lowered with reference to a predetermined structure and capable of movement toward and from said structure, the elevation of said lift member being governed by said beam, means for actuating said member, means for actuating said beam and the parts thereof both of said actuating means being in operative connection with the motor of the vehicle.

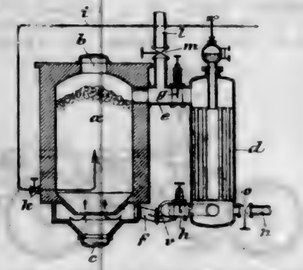
1,557,076. TYPEWRITING MACHINE. CHARLES T. MILLER, Jr., Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed Jan. 31, 1920, Serial No. 355,449. Divided and this application filed Nov. 9, 1922. Serial No. 599,751. 3 Claims. (Cl. 197—104.)



1. In combination, a typewriter-key having a fixed head bearing a plurality of different characters, a transparent disk, a shutter having an aperture to disclose one character and obscure the others, a flanged shutter-rotating key-cap rotatable about the head and formed of a single piece and having ears to retain the cap on the head without interfering with the rotation thereof, and detent means for the cap including perforations through the side wall of the cap and co-operative with a spring-pressed detent carried by the head and timed to the separate disclosure of each character, and too large to protrude through the perforations.

---

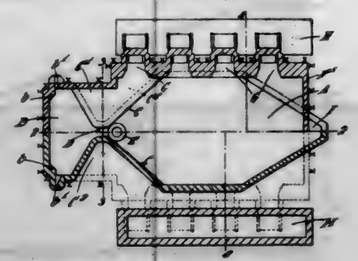
1,557,077. COKE-COOLING APPARATUS. ARNOLD MORTELI, Oberwinterthur, Switzerland. Filed Dec. 28, 1921. Serial No. 525,518. 1 Claim. (Cl. 202—11.)



A plant for dry cooling coke comprising in combination a cooling chamber, a steam boiler connected therewith, a valved means for introducing steam from the boiler into the chamber, a valved means for drawing off water-gas and valved means for circulating a cooling gas through the chamber and then through the boiler.

---

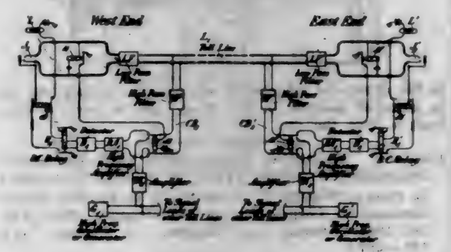
1,557,078. GLASS-MELTING FURNACE. THOMAS COURTNEY MOORSHEAD, Strand, London, England, assignor of one-half to the United Glass Bottle Manufacturers Limited, Strand, London, England, a British Company. Filed Oct. 15, 1924. Serial No. 743,684. 4 Claims. (Cl. 49—56.)



1. A glass melting tank furnace comprising a melting compartment, a working compartment, a bridge wall separating said melting compartment from said working compartment, the sides of said bridge wall being so disposed relatively to both the working and melting compartments as to avoid right angled corners in which dormant glass can collect, and the other boundary walls of said melting compartments being also so formed as to avoid right angled corners.

---

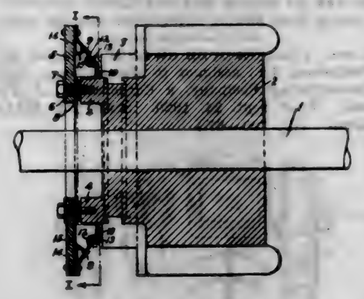
1,557,079. TELEPHONE SIGNALING EQUIPMENT. LYMAN F. MOREHOUSE, Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 16, 1919. Serial No. 324,140. 6 Claims. (Cl. 179—15.)



1. In a signaling system, a low frequency telephone transmission line, a plurality of carrier channels associated therewith for the transmission of frequencies without the voice range, and means whereby, when the operator initiates a supervisory signal of one character alternating carrier currents will be transmitted over said line through one of said channels and when the operator initiates a supervisory signal of another character, carrier currents will be transmitted over said line through another channel.

---

1,557,080. SHORT-CIRCUITING DEVICE. HENRY D. MURDOCK, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 19, 1922. Serial No. 562,077. 10 Claims. (Cl. 172—270.)



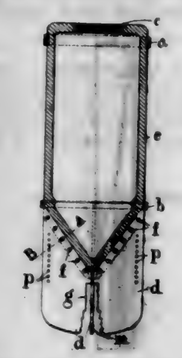
1. A short-circuiting device comprising a short-circuited member adapted to be fixedly secured to the rotor member of a dynamo-electric machine, and a plurality of resilient contact members carried by said short-circuited member and having a free end projecting obliquely, inwardly toward the axis of the rotor member, said contact members being arranged to swing outwardly under centrifugal action for engagement with the commutator segments of said machine.

1,557,081. HAND AND RIFLE GRENADE AND FUSE THEREFOR. HENRY NEWTON, Derby, England. Filed Nov. 17, 1917. Serial No. 202,474. 4 Claims. (Cl. 102—29.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. In a projectile, grenade, fuse or the like, an unmachined hollow body of cast metal, a sheet metal cap having apertures therein, lugs upon said body upon which the apertures of the cap are adapted to fit to secure the cap removably upon said body, a striker pin carried by said cap and firing means comprising a standard blank rifle cartridge adapted to co-operate with said striker pin.

---

1,557,082. SHELL AND BOMB. HENRY NEWTON, Darley, near Derby, England. Filed Sept. 1, 1921. Serial No. 497,511. 16 Claims. (Cl. 102—29.)



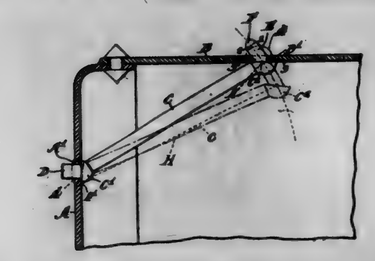
14. A projectile comprising a body, tail fins attached to said body at an angle to each other and having a cut-away and recessed portion at the end of their line of intersection, and a striker adapted to spring into said recessed portion.

---

1,557,083. ARTIFICIAL BAIT. ERNEST HILARY PECKINPAUGH, Chattanooga, Tenn. Filed Feb. 6, 1923. Serial No. 617,319. 7 Claims. (Cl. 43—42.)

1. An artificial bait comprising, in combination, a hook, a body united to the shank of the hook, feathers tied to the hook shank adjacent one end of the body, a flexible fibrous element wound closely about the body and extended beyond the body and also about the feather tie, and waterproof enamel applied to said wrapping whereby the feather tie is protected from the water.

1,557,084. DIAGONAL STAY. JOHN PETTY, Lebanon, Pa. Filed Nov. 21, 1923. Serial No. 676,199. 5 Claims. (Cl. 85—1.5.)



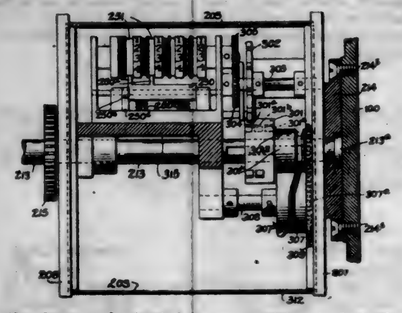
1. A diagonal stay having at one end a head adapted to lie against one of the plates to be connected and a rivet extension projecting from said head and adapted to extend into a rivet hole in the plate, said stay having at its other end means for securing it to the other plate to be connected.

1,557,085. DAYLIGHT PLATE CHANGER. FRANZ FILLER, Munich, Germany. Filed Oct. 10, 1923. Serial No. 667,624. 3 Claims. (Cl. 95—30.)

1. A daylight changer for plates or films comprising in combination a cardboard case for the plate pack having double guide folds, a protecting case guided in said double folds, a plate holder of angular cross section adjustably mounted in the upper end of the protecting case and designed to engage with the front plate in the pack when said protecting case is in the lowered position, curved blade springs on the side walls of the cardboard case for pushing the front plate of the pack backward when the same has been lifted by the holder, and rearwardly projecting bars pivotally mounted on the side walls of the cardboard case and designed to guide the plate lifted by the holder to the rear part of the case when the protecting case is being pushed down over the cardboard case.

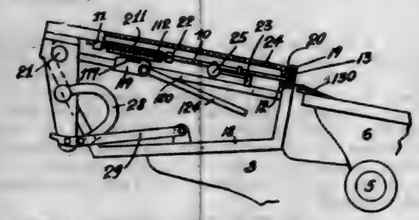
1,557,086. MULTIPLE DIE FOR POSTAGE METERS, ETC. ARTHUR H. PITNEY, Stamford, Conn., assignor, by mesne assignments, to Pitney-Bowes Postage Meter Company, Stamford, Conn., a Corporation of Delaware. Original application filed June 19, 1923, Serial No. 646,443. Divided and this application filed Aug. 24, 1923. Serial No. 659,237. 17 Claims. (Cl. 101—91.)

1. In a machine of the character specified, a rotatable drum, a multiple faced die mounted on said drum adapted to have any of its faces brought to printing position on the drum, a slidable plate and a slidable bolt mounted



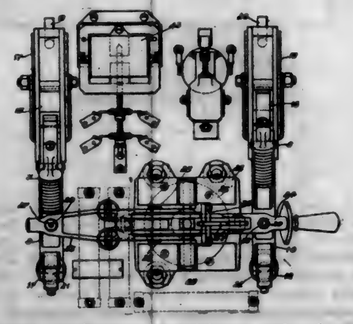
in the drum and adapted in one position to lock the die in adjusted position in the drum, and in another position to free the die.

1,557,087. GRIPPING MECHANISM FOR PRINTING PRESSES. S HAINES PLUM, 2d, Madison, and PERCY L. SIBOLE, Newark, N. J., assignors to Keymax Feeder Company, a Corporation of New Jersey. Filed Aug. 30, 1924. Serial No. 735,059. 3 Claims. (Cl. 101—287.)



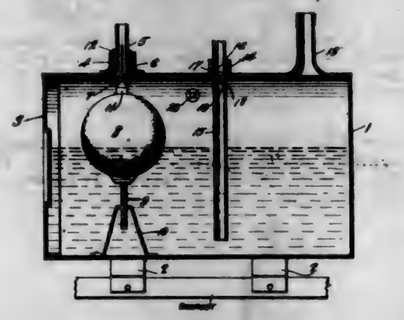
3. The combination with a press, of a gripping mechanism of the character described comprising supporting means, means for operating the gripping mechanism thereon, a spring actuated bolt for automatically locking the said supporting means and gripping mechanism to the press while said mechanism is being operated and a device for moving the gripping mechanism into a predetermined inoperative position on the said supporting means and for moving said bolt against the force of its said spring from locking engagement with the said press.

1,557,088. CHANGE-OVER SWITCH. ERNEST K. READ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 24, 1920. Serial No. 412,543. 6 Claims. (Cl. 200—87.)



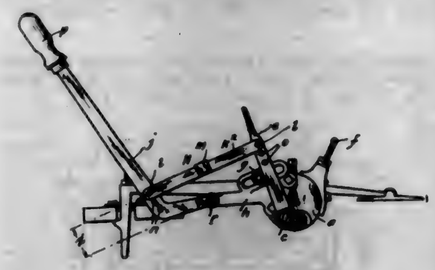
1. Switch mechanism comprising a pair of separate switch members, means normally tending to move the switch members to closed position, latch means for holding one of the switch members in open position and means for tripping the latch to release the said switch member after the other switch member has been moved to open position.

1,557,089. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. JAMES A. REASONER, Athens, Ohio. Filed July 19, 1921. Serial No. 485,998. 1 Claim. (Cl. 137—104.)



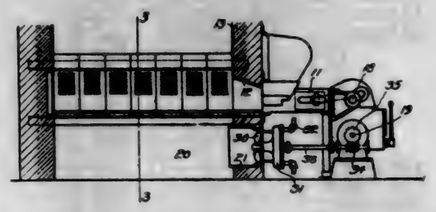
In an attachment for internal combustion engines, a liquid container having an upstanding internally threaded flange at the top thereof, a nipple having threaded engagement with said flange intermediate its ends and provided with a tapered valve seat at its lower end within the container, a float in said container, a tapered valve head rigid with the top of the float and adapted to close upon the seat of the nipple when the liquid in the container reaches a predetermined level, a stem rigid with and extending upwardly from said valve head and protruding into the nipple to guide the valve head into its seat, a bracket rigidly mounted below the float and having an opening, said float having a second stem rigid therewith and depending therefrom and slidably extending through the opening of said bracket to guide said float.

1,557,090. SAW SWAGE. JERRY RICKER, Enterprise, Oreg. Filed Sept. 7, 1922. Serial No. 586,635. 6 Claims. (Cl. 76—54.)



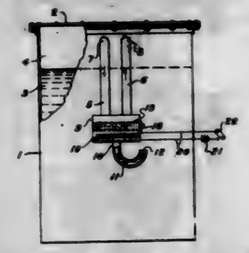
1. In a saw swage of the character described, a head carrying a fixed anvil and a rotatable die co-acting therewith, an arm carried by the die, a bracket provided on the head, an L-shaped lever provided with a long arm and a short arm, the extremity of the latter pivoted to said bracket, a link connecting the long arm of said L-shaped lever adjacent the juncture of the short arm of the latter, with the arm of said die, said link being adjustable so as to vary the force transmitted by said L-shaped lever to said die arm, the devices being adapted to form a compound lever.

1,557,091. STOKER-DRIVING MECHANISM. ROBERT SANFORD RILEY, Worcester, Mass., assignor to Sanford Riley Stoker Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 22, 1922. Serial No. 556,013. 1 Claim. (Cl. 110—44.)



An underfeed stoker having, in combination, a front wall with air and fuel openings therein, a retort extending rearward from the front wall of said stoker, a ram to feed coal through the fuel opening in said wall to said retort, a crank shaft, connections between said crank shaft and said ram for driving the ram, a motor mounted forward of the air opening in the wall, a shaft for said motor, the rear end of said shaft extending into said air opening, a fan driven by said motor, mounted on said end of the shaft, in said opening, the motor shaft also extending forwardly of the motor, a speed reducing connection between said forwardly extending motor shaft and said crank shaft, said connections including a worm and worm wheel and providing a slow powerful feeding movement of the crank shaft and ram.

1,557,092. DEOXYGENATION OF INCLOSED ATMOSPHERE. CLARENCE J. RODMAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 23, 1922. Serial No. 608,798. 10 Claims. (Cl. 252—1.)

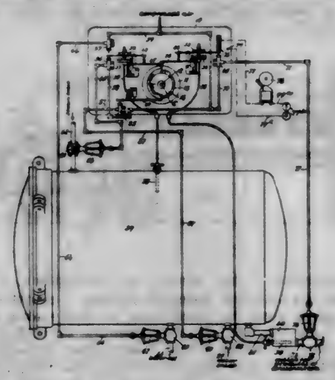


1. Means for removing reactive gases and vapors from an atmosphere containing the same, which comprises a mixture of a metal capable of reacting with oxygen and an inert material, a protective coating over said mixture and means for holding said mixture and inert material in proper relation.

1,557,093. CONTROLLING DEVICE. ALFRED ROESCH, Brooklyn, N. Y., assignor to Charles J. Tagliabue Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 21, 1920. Serial No. 360,470. 15 Claims. (Cl. 236—46.)

1. The combination of an element in which the internal conditions are to be controlled, means for regulating the flow to said element, of a fluid whereby changes in said internal conditions are effected, actuating means for actuating said regulating means in a predetermined manner to produce corresponding changes of internal conditions in said element, means for regulating the discharge from said element of a medium resultant from physical changes in said fluid, actuating means controlled

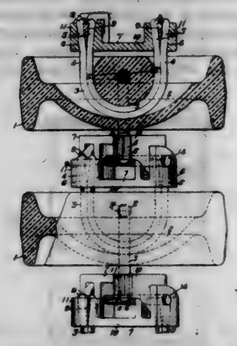
by the medium to be discharged for actuating said discharge regulating means in a predetermined manner bearing a fixed relation to the operative actuation of said



first named regulating means and time controlled mechanism common to both of said actuating means whereby the latter are operated to perform their predetermined functions in a given period of time.

---

1,557,094. INSULATOR CONNECTER. EDWARD E. ROSE, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 13, 1919. Serial No. 323,607. 8 Claims. (Cl. 173—366.)



1. An insulator connecter comprising a member extending transversely of the longitudinal axis of the insulator and having an eye portion at one end and a clevis portion at the other end for co-operation, respectively, with the clevis and eye portions of a similar member, said members also having tapered longitudinal openings therein laterally offset from said eye-and-clevis portions, a pin disposed between said tapered openings for co-operation with the eye-and-clevis portions, a U-shaped longitudinally halved member of rounded cross-sectional area having its ends in said tapered openings and wedges spreading the halves of each of said ends in said openings, the extreme ends of said halves being bent inwardly over the larger ends of the wedges.

---

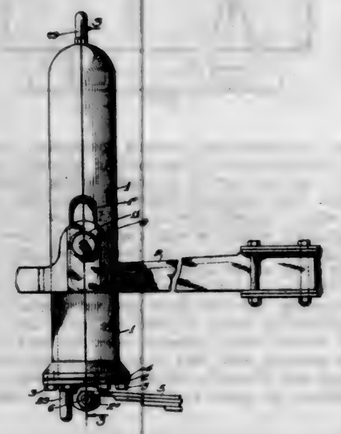
1,557,095. RAIL BRACE. EDWARD B. RUTLEDGE, Smithfield, Nebr. Filed May 12, 1924. Serial No. 712,674. 1 Claim. (Cl. 238—51.)

A rail brace of the character described comprising a pair of tie rods, a turn buckle connecting the said tie rods, angular rail embracing jaws formed upon the outer extremities of the said tie rods, U-shaped straps formed on the intermediate portions of the tie rods, extension lugs formed on the said tie rods, a pair of removable clamps adapted to be inserted beneath the U-shaped

straps to engage the inner side of the rails, means for securing the removable clamps upon the tie rods, and a pair of U-shaped retaining clamps adapted to embrace the outer retaining jaws.

---

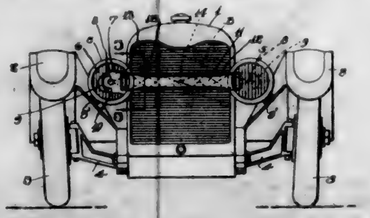
1,557,096. SHOCK ABSORBER FOR VEHICLE SPRINGS. FRANK W. RYAN, San Diego, Calif. Filed June 11, 1923. Serial No. 644,668. 14 Claims. (Cl. 267—65.)



13. A shock absorber, including a casing with opposed air chambers therein, a bucket type piston with a passage from end to end reciprocally mounted therein intermediate said chambers, means for supporting said casing, and means on which said piston is supported.

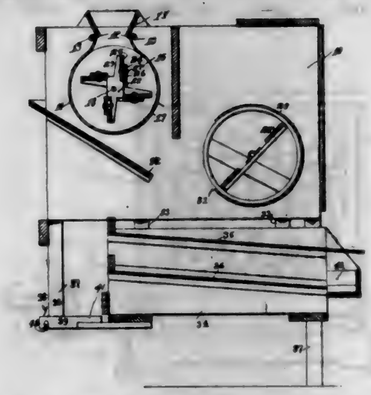
---

1,557,097. DUPLEX HEADLIGHT. EDWARD RAYMOND SAGER, Seattle, Wash. Filed May 10, 1924. Serial No. 712,349. 2 Claims. (Cl. 240—41.)



1. In a lighting system for vehicles, headlights, reflectors therefor, sources of illumination within the headlights, and a tubular member arranged between the headlights, said tubular member being closed throughout its length and the head lights and reflectors therein being formed with openings through which the source of illumination in said head lights may reach the interior of the tubular member.

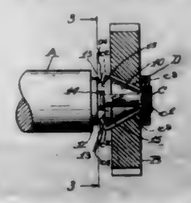
1,557,098. PEANUT SHELLER. SAMUEL N. SCARBOROUGH, Henderson, Tex. Filed Apr. 24, 1924. Serial No. 708,761. 2 Claims. (Cl. 130—30.)



1. In a peanut sheller, the combination with a housing, of disks mounted on the housing, a drum comprising a metal sheet having openings therein and engaged with its marginal edge portions around said disks and having its ends in closedly spaced parallel relation, and means removably engaged through the housing and removably engaged through said sheet ends whereby said drum is removable and reversible.

---

1,557,099. SHAFT AND DETACHABLE GEAR. WILLIAM H. SCHULZE, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Nov. 21, 1924. Serial No. 751,300. 2 Claims. (Cl. 287—53.)

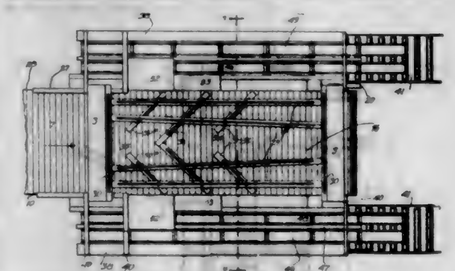


1. In combination, a shaft, a detachable gear and an attaching device, the shaft having a tapered gear centering terminal seat for the gear and having back of said terminal a rearwardly facing shoulder, the gear having a conical central aperture whose taper corresponds to the tapered centering terminal of the shaft, the securing device comprising a plural pronged spring clip being adapted to be snapped over the tapered terminal of the shaft and engaged by the hooked ends of its prongs behind said rearwardly facing shoulder, said clip having a threaded hub and a nut adapted to engage the threaded hub and seat against the outer face of the gear for crowding the gear onto the tapered seat and clamping the prongs between said seat and the gear.

---

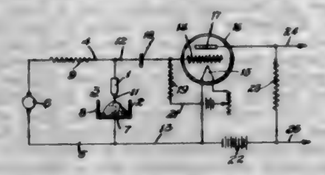
1,557,100. PRODUCE CLEANING, DISTRIBUTING, SORTING, AND PACKING MACHINE. FRANK W. SHIELDS, Walla Walla, Wash., assignor to Valley Fruit Company Incorporated, Walla Walla, Wash., a Corporation of Washington. Filed Dec. 6, 1923. Serial No. 678,893. 2 Claims. (Cl. 130—32.)

1. In a produce cleaning, distributing, sorting and packing machine, the combination with a frame, a cleaning and distributing table operably mounted in said frame, and means to operate said table, of slotted adjusting bars adjustably attached to said frame, and distributing and sorting gates adjustably attached to said bars, through said slots, and in operable contiguity with said table.



---

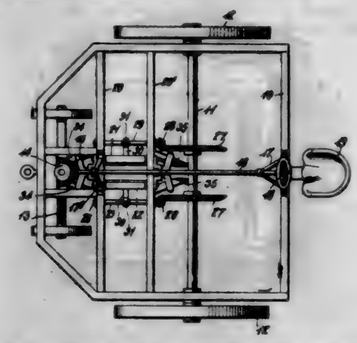
1,557,101. SOUND-WAVE TRANSLATING DEVICE. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 28, 1922. Serial No. 597,568. 13 Claims. (Cl. 179—121.)



11. In a sound-translating device, a chain of conductive particles exposed intermediate its ends to sound waves and means responsive to the changes of an electrical characteristic of said chain for delivering energy corresponding to the sound.

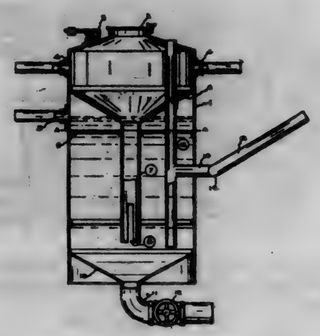
---

1,557,102. COTTON CHOPPER. CHARLIE J. SMITH, McKinney, Tex. Filed Oct. 26, 1923. Serial No. 670,948. 2 Claims. (Cl. 97—13.)



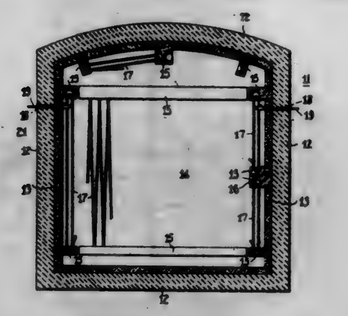
1. In a cotton chopper, a wheel frame, a drive shaft therein, a pair of spaced apart, short crank shafts journaled in said frame and geared to the said drive shaft, a pair of cutters pivoted to the frame and depending downwardly therefrom, said cutters being arranged in the space between the said crank shafts, and an operating connection between the said crank shafts and the said pivoted cutters for causing the latter to be alternately brought together and separated.

1,557,103. OIL SEPARATOR. WILLIS B. SMITH, Burkburnett, Tex. Filed June 6, 1923. Serial No. 643,680. 1 Claim. (Cl. 210—50.)



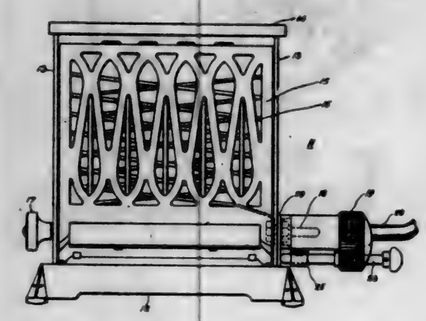
A separator of the character described comprising a cylindrical tank having an opening arranged in the top thereof, a closure therefore, a funnel positioned within the upper end of said tank for dividing the latter into an upper oil receiving chamber and a lower storage chamber, a plurality of inlets leading to said oil receiving chamber, a pipe extension formed with said funnel and projecting downwardly within the oil storage chamber, a funnel arranged within the lower portion of said tank and forming a bottom for said oil storage chamber, a valve controlled outlet leading from said last mentioned funnel, an oil outlet leading from the upper end of said storage chamber, and a water outlet leading from the lower portion thereof, and a screen extending horizontally across said storage chamber immediately below said oil outlet.

1,557,104. RESISTOR MOUNTING FOR ELECTRIC FURNACES. FRANK THORNTON, Jr., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 18, 1923. Serial No. 658,094. 11 Claims. (Cl. 204—64.)



7. In an electric furnace, in combination, a helically wound coil of resistor wire having flat, substantially parallel sides and rounded edge portions, and a pair of relatively narrow, elongated, refractory, supporting members located in parallel-spaced relation relatively to each other operatively engaging the outer surface of the rounded edge portions only of said coil to support the same and embodying means for positively locating the adjacent turns of said coil in spaced relation to each other.

1,557,105. CONNECTING-PLUG REMOVER. FRANK THORNTON, Jr., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 12, 1923. Serial No. 674,162. 4 Claims. (Cl. 219—19.)

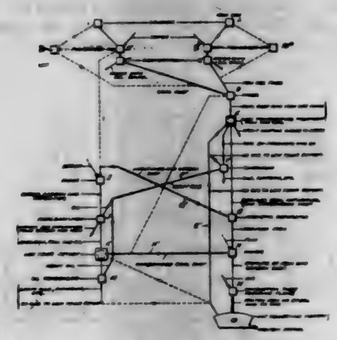


1. A removable connecting plug for an electrically heated device, comprising a casing, and a manually-operable rod on said casing for effecting disengagement of said plug from said device.

1,557,106. PLANT DUSTER. JOHN Z. TOW and SAM OLWOVITCH, Springfield, Tenn. Filed Mar. 15, 1924. Serial No. 699,443. 2 Claims. (Cl. 43—148.)

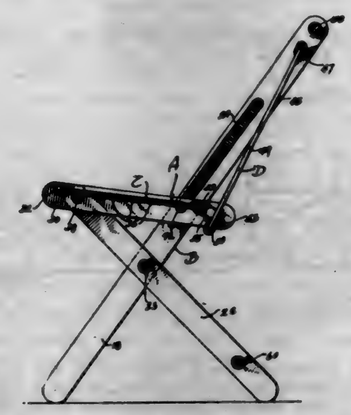
1. A plant duster comprising a casing having an internal dividing wall defining an air chamber and a powder chamber above and in advance of the air chamber, a spout leading from the air chamber at the bottom of the powder chamber and in communication with the powder chamber, the side walls of the casing being provided with alined openings near the bottom of the powder chamber and one side wall having a larger opening above the alined openings, a cover removably fitted in said larger opening, a shaft having a trunnion at one end and a spindle at its opposite end extending through the alined openings, said shaft being removable endwise through one of the alined openings, bearings for the spindle and the trunnion of said shaft removably secured on the outer sides of the casing, an agitator fitted on said shaft to rotate therewith and removable therefrom when the shaft is moved endwise from the casing, the agitator being removable from the casing through said larger opening, means for rotating said shaft, a fan in the air chamber, and operative connections between the fan and said shaft.

1,557,107. PROCESS OF REDUCING ORES. WALTER EDWIN TRENT, Washington, D. C., assignor to Trent Process Corporation, Washington, D. C., a Corporation of Delaware. Filed Oct. 4, 1920. Serial No. 414,526. 18 Claims. (Cl. 75—17.)



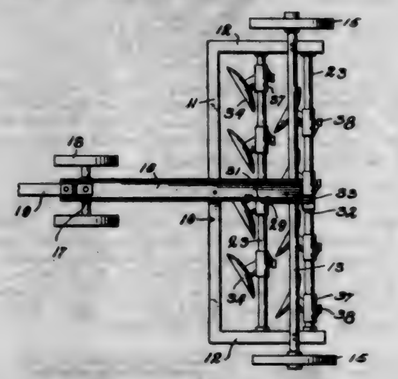
1. The process of treating ores, which comprises mixing finely comminuted ore particles with finely divided carbonaceous fuel particles substantially freed of hydrocarbon, and in then burning the fuel particles mixed with the ore in a reducing atmosphere to reduce the ore.

1,557,108. FOLDING CHAIR. HENRY TEMPLE TUCKER, Fort Smith, Ark. Filed Oct. 21, 1924. Serial No. 744,059. 5 Claims. (Cl. 155—144.)



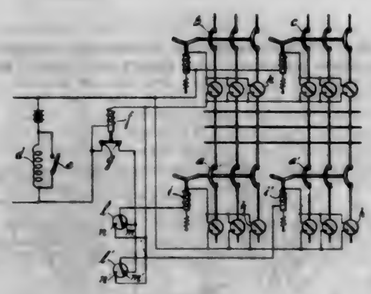
1. As an article of manufacture a folding chair comprising a pair of main bars each including at its lower portion a front supporting leg and each including at its upper portion a back rail rigid with its respective leg, a pair of rear legs pivotally connected intermediate their ends between the ends of said front legs inwardly of said front legs, a seat pivotally connected at its forward end to the upper ends of said rear legs, means pivotally and slidably connecting the rear portion of said seat to said back rails whereby the rear portion of said seat extends rearwardly of said back rails when the seat is positioned for seating purposes, means providing a transverse opening in said seat at its rear end, and a back pivotally connected at its upper end to the upper ends of said back rails and having its lowest free swinging end slidably disposed through the opening provided at the rear of said seat.

1,557,109. DISK HARROW. TEDDIE C. VANDEBERG, Epping, N. Dak. Filed Oct. 18, 1924. Serial No. 744,349. 2 Claims. (Cl. 55—78.)



1. In a harrow, a frame, spaced supporting members mounted in and forming part of the frame, slidable sleeve members mounted on said supporting members and including bearings, and disks having stub shafts engaged through said bearings, the bearings on the sleeves carried by one supporting member being inclined forwardly and laterally in one direction and the bearings on the sleeves carried by the other member being inclined forwardly and laterally in the other direction, the sleeves being adjustable longitudinally along their supporting members.

1,557,110. ARRANGEMENT FOR THE PROTECTION OF SUBSTATIONS. PETRUS KLAAS VAN DEN STERR, Frankfort-on-the-Main, Germany, assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 29, 1921. Serial No. 496,672. 4 Claims. (Cl. 175—294.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



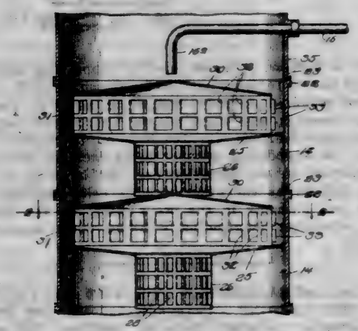
3. An electrical system comprising a plurality of circuit-interrupters, means including a common voltage-drop relay for controlling the same in case of a fault, and means depending upon the location of the fault for rendering said relay ineffective to control certain of said circuit-interrupters.

1,557,111. HOSE CLAMP. WILLIAM T. RUTLEDGE, Santa Ana, Calif. Filed Dec. 10, 1923. Serial No. 679,621. 3 Claims. (Cl. 24—19.)

1. A hose clamp comprising a single length of wire bent to form at least one ring and at least one hump and having at least one hooked tongue formed by an end portion of said wire, said tongue being engaged by the inner curve of said hump.

---

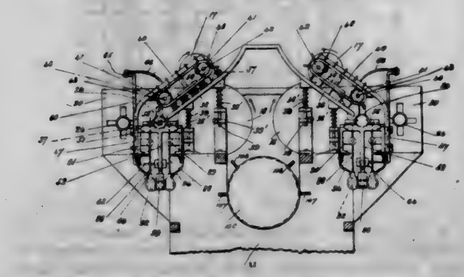
1,557,112. DISTILLATION APPARATUS. JOSEPH SCHNEIBLE, Chicago, Ill.; Beatrice Schneible Ingram, administratrix of said Joseph Schneible, deceased, assignor to Claude D. Schneible, K. F. Schreiber, and Benjamin B. Schneider, as trustees under the name of The Schneible Trust. Filed Nov. 12, 1923. Serial No. 674,286. 5 Claims. (Cl. 195—13.)



1. In a column still construction, a unit having a baffle ring extending from its wall inwardly to an open central space, a cylindrical skirt depending from the inner rim of said ring, peripheral openings in said skirt and vanes at each of said openings for imparting rotary movement to vapors passing therethrough.

---

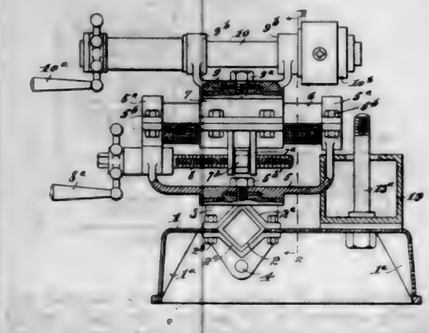
1,557,113. CANE-STRIPPING MACHINE. HENRY O. SCRANTON, Jeanerette, La. Filed Dec. 1, 1925. Serial No. 758,188. 28 Claims. (Cl. 130—31.)



2. In a stripping machine, a housing provided with guides arranged radially in vertical and horizontal planes, spring-pressed blocks slidable in the guides, stripping blades pivoted to the blocks and arranged in tubular form, and means which normally hold the blades of each pair of blocks tilted at an angle to each other to present a converging entrance for the canes.

---

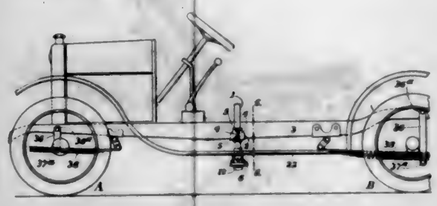
1,557,114. PORTABLE GRINDING MACHINE. LOUIS E. SMITH, Cleveland, Ohio. Filed Sept. 19, 1923. Serial No. 663,587. 2 Claims. (Cl. 51—241.)



1. In a grinding machine, a guide shaft provided with an eccentrically arranged pilot element, a tool carrying spindle carrying a tool in proximity to said pilot, a gear casing, means for connecting said casing to said guide shaft in various positions relative to said pilot element, gearing in said casing operatively connected to said tool carrying spindle, and power driven connections leading from said gearing.

---

1,557,115. JACKING UP OF MOTOR VEHICLES. JOHN FERGUSON STEVENSON, Belfast, Ireland. Filed Sept. 26, 1923. Serial No. 664,830. 7 Claims. (Cl. 254—86.)

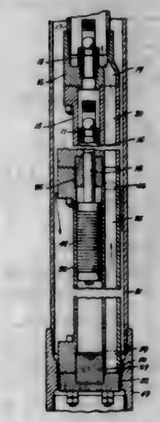


1. A four-wheeled motor vehicle having two jacks attached to the frame thereof and disposed one at each side of the vehicle, each jack being adapted to act on one side only of the vehicle and to lift it bodily at that side so that the vehicle when lifted will rest on the two wheels on the opposite side, the two wheels at the same side as the operative jack being raised off the ground.

---

1,557,116. HYDRAULICALLY-OPERATED DEEP-WELL PUMP. JOHN H. SUTER, Los Angeles, Calif. Filed Feb. 11, 1925. Serial No. 8,422. 9 Claims. (Cl. 103—4.)

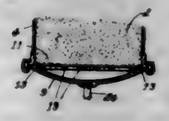
1. In a deep well, an insertable pumping unit disposed therein comprising a fluid motor and a pump direct connected thereto, a passage for the motive fluid extending down the well hole to said motor, valve mechanism at said motor for controlling the supply of motive fluid thereto and the discharge of motive fluid therefrom, a passage for the liquid being pumped, the discharge of said motor being connected to the passage for liquid be-



ing pumped whereby the liquid being pumped and the fluid being discharged from said motor mingle and are raised together.

---

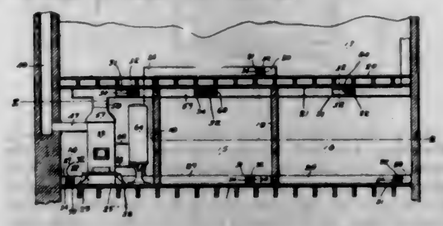
1,557,117. BASE-EXCHANGE WATER SOFTENER. ORLAND RUSSELL SWEENEY, Ames, Iowa, assignor to Ward-Love Pump Corporation, Rockford, Ill., a Corporation of Illinois. Filed Feb. 9, 1925. Serial No. 7,790. 23 Claims. (Cl. 210—24.)



1. In a water softener having a bed of base-exchange material, means for flowing water or brine solution through said material, and a diaphragm having extremely fine interstices, closely and uniformly spaced and permanently fixed for uniformly distributing the flow of said liquid through said material, said interstices being of such size as to prevent channeling under normal operating pressures, to secure more complete chemical exchange.

---

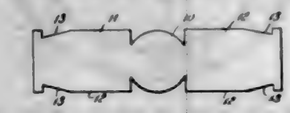
1,557,118. HOT-AIR HEATER. JOHN W. TOLLAND, St. Louis, Mo., assignor of forty-five one-hundredths to John A. Talty, St. Louis, Mo., and one-fourth to Fred Powers, Norman, Okla. Filed May 1, 1922. Serial No. 557,699. 1 Claim. (Cl. 126—99.)



A heater comprising a base provided on its lower surface with a flange, an air chamber secured to said flange beneath the base, an ash-pit integral with said base and located on the upper face thereof, a flange integral with said base surrounding and spaced apart from said ash-pit, a flange integral with the top of said ash-pit and surrounding the opening formed through said top, a fire pot supported on said ash-pit and within said flange, a hollow cylindrical casing mounted on said fire box, a cylindrical casing closed on its upper end formed on said first mentioned casing, a casing surrounding said ash-pit, fire box and first mentioned casings and spaced apart therefrom, said last mentioned casings being held in position on the base by the flange surrounding the ash-pit, a bell shaped top located on said last mentioned casing, a pipe secured to said top, a second pipe connected to said first mentioned pipe, said second mentioned pipe extending into various rooms and being provided with a plurality of valve controlled openings, and a plurality of valve controlled pipes connected to said air chamber for drawing air to certain rooms, whereby a constant circulation of air is permitted.

---

1,557,119. EXPANSION SHIELD. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to J. Edward Ogden, Mountainville, N. Y. Filed Oct. 1, 1921. Serial No. 504,629. 7 Claims. (Cl. 85—2.4.)



1. A method of forming an expansion shield from a single piece elongated sheet metal blank which consists of forming a blank with notches in its side edges adjacent the ends, bending the blank upon itself on an axis transverse to the length thereof and folding the lateral edges around a nut having projections extending into the notches and inwardly toward each other until they meet, to form a tubular shield.

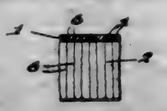
---

1,557,120. SPECTACLE TEMPLE. GEORGE L. TULLY, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 10, 1922. Serial No. 551,125. 1 Claim. (Cl. 88—52.)

A one-piece terminal fitting for the end of a non-metallic temple, consisting of a cap plate provided on one side with a central prong embedded in the temple, said prong having an indented portion to prevent rotation thereof and longitudinal removal and to retain the cap plate against the end of the temple, the other side of the cap plate having a hinge ear for connection with an end piece of an eyeglass frame, said cap plate having a marginal collar fitting the exterior of the end of the temple.

---

1,557,121. STAPLE PACKAGE. MAX VOGEL, Frankfort-on-the-Main, Germany. Filed Nov. 28, 1923. Serial No. 677,478. 1 Claim. (Cl. 1—56.)

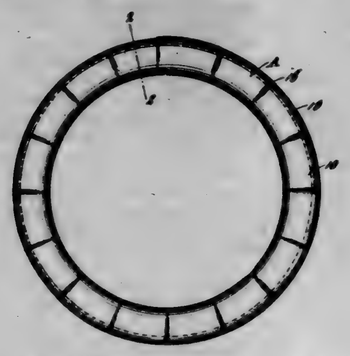


A staple package for use in stapling machines comprising a unit consisting of staples detachably connected together formed by pressing together a plurality of indi-

vidual staples arranged side by side and provided on their side faces with small irregularities which cause the individual staples to adhere to each other.

---

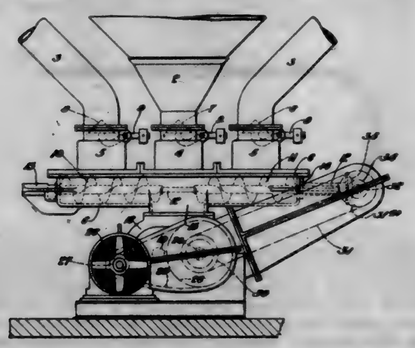
1,557,122. INNER TUBE. ANTHONY VOLENCE, Browerville, Minn. Filed Nov. 7, 1924. Serial No. 748,450. 3 Claims. (Cl. 152—8.)



3. As a new article of manufacture, an inner tube constructed from spring material comprising a body substantially circular shaped in cross section, the body being adapted to be flexed into an annular configuration including a plurality of resilient leaves having their free edges disposed outermost for engaging the tread portion of a tire casing, and means detachably connecting the terminals of the body together.

---

1,557,123. METHOD OF HANDLING FLUE DUST. GEORGE W. VREELAND, Steubenville, Ohio. Filed Oct. 13, 1921. Serial No. 507,410. 4 Claims. (Cl. 183—38.)

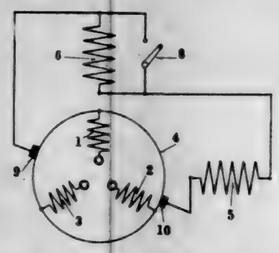


1. The method of handling hot blast furnace flue dust, which consists in separating the flue dust from the hot blast furnace gases in a suitable dry gas cleaner, then passing the separated flue dust through a closed receptacle, adding water to said flue dust in the receptacle, and agitating the flue dust within the receptacle to intimately mix the water with the flue dust.

---

1,557,124. ALTERNATING-CURRENT MOTOR. HANS WEICHSEL, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Oct. 20, 1924. Serial No. 744,552. 2 Claims. (Cl. 172—280.)

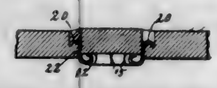
1. In a synchronous induction motor, the combination of an inducing member provided with a commutator and brushes thereon, an induced member having an exciting winding and a starting winding displaced therefrom, said windings of the induced member being connected



to the brushes in series, and means for short-circuiting the second winding when suitable speed has been attained.

---

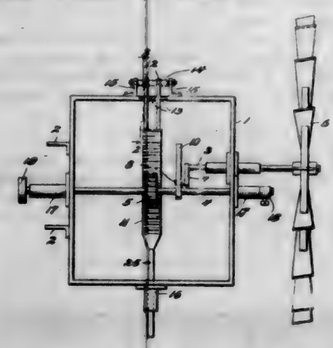
1,557,125. SNAP FASTENER. JACOB WISHN, Dorchester, Mass., assignor to United States Fastener Company, a Corporation of Maine. Filed Mar. 3, 1925. Serial No. 12,918. 2 Claims. (Cl. 24—216.)



1. A socket member for a snap fastener composed of a short tube having one end curved inward to form a transversely convex internal lip, said lip having radial slits forming separate spring wings, the other end of the said tube being provided with a number of attaching prongs parallel to the axis of the tube and having substantial spaces between them at their junction with the unpronged portion of the tube, the radial slits of the internal lip being in line with the attaching prongs.

---

1,557,126. GEARING FOR WINDMILLS. CARBIE WILCOX, Mart, Tex. Filed Jan. 28, 1924. Serial No. 689,009. 1 Claim. (Cl. 74—14.)

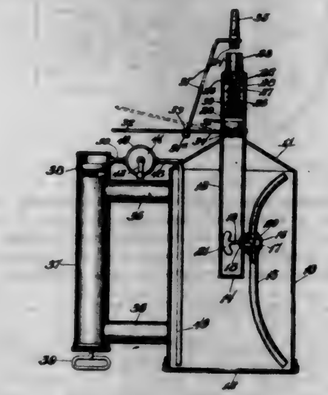


In a transmission for a windwheel, a frame having horizontal top and bottom members and vertical side members, a vertically reciprocating rack provided with guide rods at its upper and lower ends and engaging respectively the said top and bottom members, a horizontal rotary shaft mounted at its ends in the side members and carrying a gear intermediate its ends for engaging the said rack, another rotary shaft parallel with the first named shank and mounted intermediate its ends in one of the side members and provided with a crank and pin at its inner end and means for rotating it at

its outer end and a lever secured to the first named shaft having a slot for engagement with the said pin, the said lever being located intermediate the said gear and the end of the first named shaft.

---

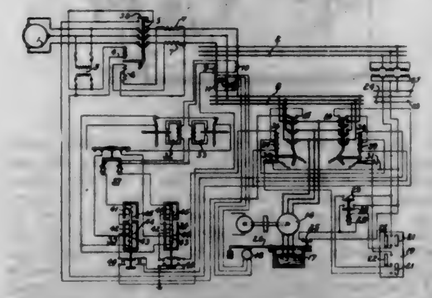
1,557,127. OIL CAN. GEORGE W. WILKIN, Grangeville, Idaho. Filed Aug. 5, 1924. Serial No. 730,292. 3 Claims. (Cl. 221—52.)



3. In a pressure oiler, a lubricant container, a sleeve communicating with the interior of the lubricant container at opposite ends of the container, means automatically cutting off communication of the sleeve with that end of the container which is arranged uppermost, an extension sleeve engaged with the outer end of the first named sleeve, a nozzle tube interiorly fitting the extension sleeve, having its outer end projecting beyond the outer end of the extension sleeve and its inner end closed, said nozzle tube adjacent such inner end having a valve, the inner end of the extension sleeve being formed to provide a seat for said valve, the tube being perforated outwardly of said valve, a support extending transversely of the sleeve, and a spring extending between said support and tube and normally maintaining the valve in engagement with the valve seat.

---

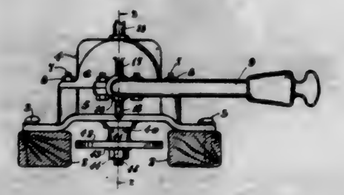
1,557,128. CIRCUIT-INTERRUPTING SYSTEM. GOLDER P. WILSON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 31, 1921. Serial No. 441,174. 14 Claims. (Cl. 172—179.)



1. In a rolling-mill-motor-control system, the combination with a motor a main or group interrupter having a large rupturing capacity and a plurality of feeder interrupters having a small rupturing capacity for controlling the energy supply to the motor, of means for preventing the actuation of the feeder interrupters upon the occurrence of a short circuit or sudden overload exceeding a predetermined value, means for actuating the main interrupter under such conditions, means controlled upon the actuation of the main interrupter for tripping the feeder interrupters, and means dependent upon a predetermined condition of the motor for controlling the operation of the interrupters.

---

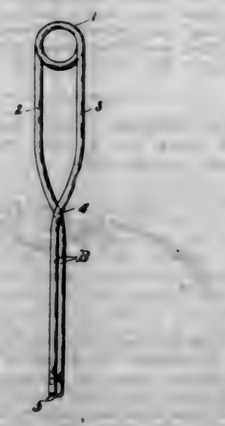
1,557,129. SWITCH STAND. OLIVER WILSON, Covington, Ky. Filed Feb. 9, 1925. Serial No. 7,839. 4 Claims. (Cl. 246—411.)



1. In switch operating means, a housing, a vertical shaft journaled therein, a connecting rod arm fixed to said shaft, a switch point connecting rod pivotally attached to said arm and adapted to be operatively connected to the switch points, a yoke fixed to said shaft, a swivel block having an elongated slot or opening therein and pivotally mounted in said yoke, a pivotally mounted crank shaft having one end engaging the walls of said opening, and a switch throwing arm mounted on the other end of said crank shaft.

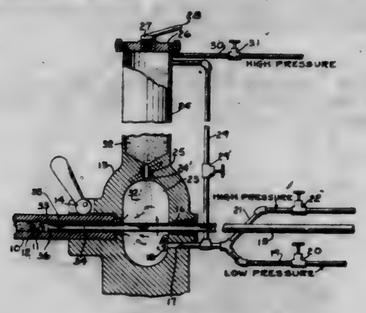
---

1,557,130. DISHCLOTH HOLDER. MARY CHASE WITHERBEE, Boston, Mass. Filed June 15, 1923. Serial No. 645,546. 6 Claims. (Cl. 15—147.)



1. A device of the character described comprising a resilient handle portion, and similar opposed jaw members carried by the handle portion, said jaw members comprising open loops each having a laterally deflected terminal portion projecting within the loop of the opposite jaw and substantially filling one dimension thereof.

**1,557,131. APPARATUS FOR REMOVING SAND CORES FROM HOLLOW DRILL ROD BY SAND BLAST.** PERCY A. E. ARMSTRONG, Loudonville, N. Y., assignor to Ludlum Steel Company, Watervliet, N. Y., a Corporation of New Jersey. Original application filed Dec. 13, 1919, Serial No. 344,738. Divided and this application filed Oct. 28, 1920. Serial No. 420,186. 2 Claims. (Cl. 51—8.)



1. Apparatus for removing a sand core from the bore of a tubular body, comprising a member containing a mixing chamber, means for supplying sand to said chamber, means for supplying gaseous fluid to said chamber under pressure, an outlet passage from said chamber being provided in a wall thereof, means for holding the cored tubular body with the cored part in register with said passage, and an outlet pipe for core material discharged from the said tubular body, said pipe extending through said chamber and passage and adapted to project into the bore of the tubular body.

---

**1,557,132. PROCESS AND PRODUCT OF MAKING LOW-CARBON CHROMIUM-IRON ALLOYS.** PERCY A. E. ARMSTRONG, Loudonville, N. Y., assignor to Ludlum Steel Company, Watervliet, N. Y., a Corporation of New Jersey. Filed Nov. 17, 1923. Serial No. 675,306. 12 Claims. (Cl. 75—27.)

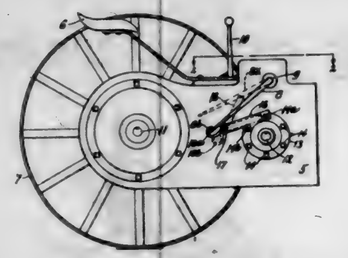
1. In the process of making low carbon or substantially carbon free alloys of iron and chromium, the step of melting iron, preheating chromium to a temperature approaching toward but below its melting point, and introducing it into the molten iron.

---

**1,557,133. JEWELRY CLASP.** HENRY BACKERT, Hilton, N. J. Filed Apr. 4, 1923. Serial No. 629,777. 2 Claims. (Cl. 24—230.)

1. A jewelry clasp comprising a box-like body portion having an entrance end flanked by stud-like members; a snap member having an elongated V-shaped resilient body provided with nicks formed thereon for interlocking with said stud-like members; and a laterally off-set hook formed at the smaller end of said snap-member, the base of said hook approximating in width the space between said stud-like members and progressively diminishing to the end of said hook with the inner curvature of the latter tangent to the adjacent outer side of said V-shaped body so that the hook may be disengaged from the stud-like member by rocking the snap-member about the engaged stud-like member.

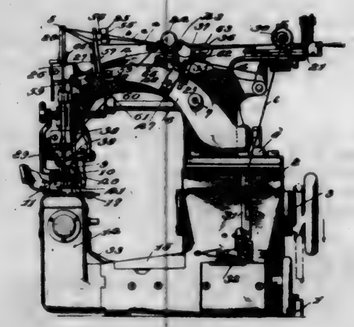
**1,557,134. CLUTCH-LEVER HOLDER.** GREGOR J. BARTHEL, Albertville, Minn. Filed Apr. 18, 1925. Serial No. 24,117. 2 Claims. (Cl. 74—81.)



1. In a tractor having a vertically oscillatable clutch lever with a horizontal foot engaging part, a clutch lever holder comprising an elongated body member fixed in a plane parallel to the movement of said clutch lever, a rock lever pivotally secured in said elongated member, one part of said rock lever adapted to normally rest in said body member and a hook member in the other end of said lever adapted to engage and hold the clutch lever in a predetermined position, said hook portion of the rock lever comprising an upwardly opening hook arranged in the path of the horizontal foot engaging part of the tractor clutch lever to be tilted by the downwardly directed engagement of the latter until the said hook engages the said part of the clutch lever.

---

**1,557,135. THREAD-CONTROLLING MECHANISM FOR SEWING MACHINES.** JOSEPH BERGER, Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1921. Serial No. 473,564. 14 Claims. (Cl. 112—242.)



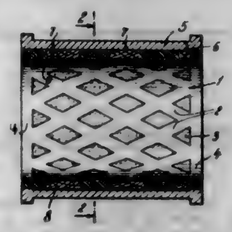
1. The combination with a covering stitching mechanism including a plurality of needles having the eyes thereof set at different heights, and a threaded looper cooperating with said needles at one face of the fabric being stitched, of a thread controlling mechanism including means for pulling different amounts of the respective needle threads from the supply proportionate to the distance between the eyes of the respective needles and the fabric, and means operating upon the thread of the needle having the lowest set eye for taking up thread on the first part of the upward movement of the needle to reduce the size of the needle thread loop thrown out for the looper to enter.

**1,557,136. SIDE-WALL CONSTRUCTION FOR CARS.** MINOT C. BLAKE, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 14, 1924. Serial No. 699,225. 10 Claims. (Cl. 105—406.)

1. In a car, a side having a vertically disposed upper portion, an angular member having a portion of one of its flanges disposed vertically and secured to the upper portion of said side, the remaining portion of said flange being disposed at an angle to said wall and sloping inwardly therefrom, and a flange extending outwardly at an angle to said remaining portion.

---

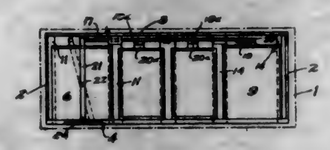
**1,557,137. SELF-LUBRICATING BEARING AND METHOD OF MAKING IT.** JOSEPH BRINCIL, Plainfield, N. J., assignor of one-half to Ralph Curcio, Lincoln, N. J. Filed Jan. 25, 1924. Serial No. 688,495. 11 Claims. (Cl. 308—239.)



1. A self-lubricating bearing comprising a lining of soft bearing metal and wood impregnated with a lubricant, and an outer shell of a harder metal in direct contact with the soft bearing metal and soldered thereto.

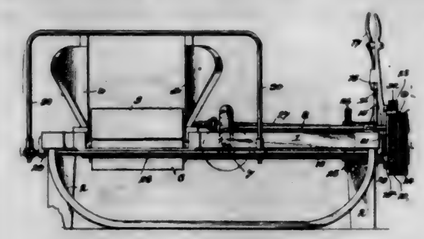
---

**1,557,138. CABINET LOCK.** OSCAR BRUNNER, St. Louis, Mo. Filed May 9, 1924. Serial No. 711,991. 5 Claims. (Cl. 45—94.)



1. In a cabinet, a sliding drawer, a tilting bin, a member at the rear of said cabinet movable in a straight line transversely of said drawer and bin and having a vertical surface adapted to engage said drawer to prevent its withdrawal and having a horizontal surface adapted to engage said bin to prevent its tilting, and locking means at the front of said cabinet for preventing movement of said member.

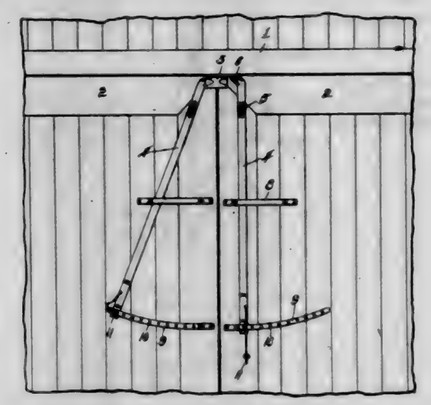
**1,557,139. SAFETY MECHANISM FOR GEARING.** FRED J. BULLOCK, Shortsville, N. Y. Filed May 18, 1922. Serial No. 561,899. 4 Claims. (Cl. 192—133.)



1. In combination with a driving gear, a driven gear cooperative therewith; a member standing adjacent said driving and driven gears; and means for throwing said member between the gears to cause the separation thereof and to thereby effect a stoppage of movement of said driven gear.

---

**1,557,140. DOORLOCK.** CHARLES S. CLARKSON, Toledo, Ohio. Filed Aug. 13, 1923. Serial No. 657,006. 8 Claims. (Cl. 292—202.)



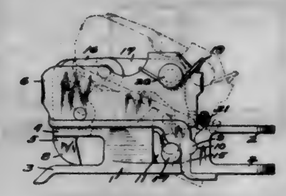
1. The combination with a door casing and a door swingingly mounted therein, of a socket member fixed to the upper portion of the casing adjacent to the free edge of the door with its socket opening at a side thereof, and a lever pivoted intermediate its ends to the door and having its upper arm provided with a laterally projecting tapered nose portion which is adapted to be moved into the socket of the member and to coact with the socket walls to lock the door in closed position and to prevent sagging and warping of the free edge portion of the door, and means for securing the lever in locking position.

---

**1,557,141. OVERLOAD RELEASE COUPLING.** LAWRENCE E. CONNER, Jackson, Mich. Filed Aug. 18, 1922. Serial No. 582,580. 9 Claims. (Cl. 280—33.16.)

1. In a vehicle coupling, a supporting member, a frame longitudinally slidably supported on the supporting member, a draft engaging member pivotally supported in the frame and for engaging the draft member of a trailing device, a toggle supported on the frame for controlling the draft engaging member, a spring lo-

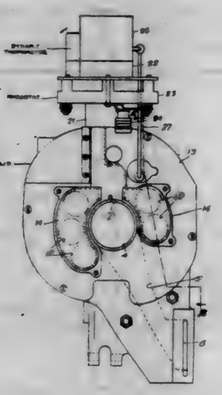
cated intermediate the frame and the supporting member and compressed by the draft of the trailing device, a trip for breaking the toggle to disengage the draft en-



gaging member from the draft member of the trailing device when the frame moves beyond a certain point with reference to the supporting member.

---

1,557,142. ELECTRICALLY-HEATED MELTING POT. GEORGE O. CROMWELL, Chicago, Ill., assignor to The Ludlow Typograph Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 24, 1920. Serial No. 376,206. 4 Claims. (Cl. 219—44.)

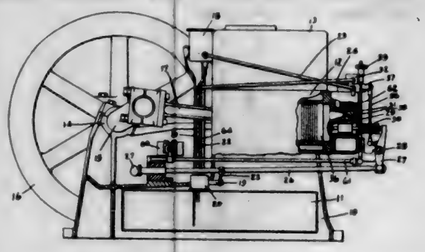


1. The combination with a melting pot for typograph machines and the like, said pot having a main chamber, a sub-chamber, and a spout leading from such sub-chamber; of a cover for said pot having internally threaded openings; cylindrical tubes, closed at their lower ends, and each having a flange and an externally threaded section adjacent its upper end, whereby such tubes are secured in the openings in said cover so as to depend in the space between said sub-chamber and the outer wall of said main chamber; and corresponding electrical heating units removably held in said tubes.

---

1,557,143. CIRCULATING-FUEL SYSTEM FOR OIL ENGINES. CLESSIE L. CUMMINS, Columbus, Ind. Filed Sept. 27, 1921. Serial No. 508,679. 2 Claims. (Cl. 123—33.)

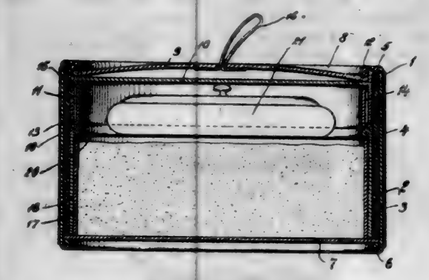
1. In an engine, the combination of a combustion space, a vaporizing chamber, a valve for admitting liquid fuel to said chamber and having a recess in its upper end, a spring coiled about a reduced portion of said valve, a passage in which valve is mounted, a control device for the valve, an enclosure for the control device, a source of fuel, and circulating means forcing fuel to said valve and including an inlet communicating with



said passage and an outlet from the enclosure to said fuel source to permit the excess fuel to return to said source.

---

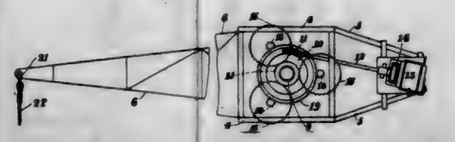
1,557,144. BOX. FRANK J. DOLAN, Brooklyn, N. Y., assignor to Joseph M. Price, New York, N. Y. Filed Nov. 18, 1922. Serial No. 601,890. 16 Claims. (Cl. 229—6.)



2. A box of the class described, comprising in combination a body formed of an outer ring, an inner ring, and a head, the head resting on the end of the inner ring and the head and inner ring being held in place by inturned portions of the outer ring, a cover having a maximum diameter substantially equal to the interior diameter of the said body and adapted to be received therein, this cover being formed of a ring and a head closing the ring, and a separable tubular member disposed within the body and forming an abutment on which the cover rests.

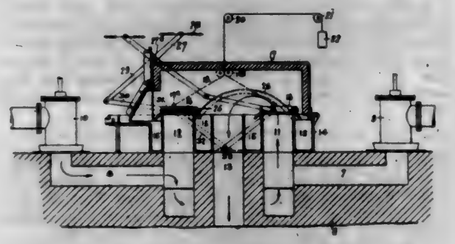
---

1,557,145. PILE-DRIVING MACHINE. MICHAEL CARMICHAEL DUNSMORE, Stirling, and DAVID CHERRY PATERSON, Glasgow, Scotland. Filed Dec. 11, 1922. Serial No. 606,203. 4 Claims. (Cl. 61—73.)



1. In a self contained screw pile driving machine the combination of a frame, a single anchorage arm forming a long extension of said frame, means rotatably carried by said frame for attachment to the pile to be driven, and a prime mover for rotating said means.

1,557,146. REVERSING VALVE FOR FURNACES. NICHOLAS F. EGLER, Chicago, Ill., assignor to Duff Patents Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 20, 1925. Serial No. 16,995. 4 Claims. (Cl. 137—151.)



1. Furnace valve structure comprising a valve chamber, a pair of furnace flues communicating therewith, a stack flue communicating therewith, and a valve movable to close either of the furnace flues, the stack flue being located between the furnace flues.

4. Furnace valve structure comprising a valve chamber, a hood member therefor forming the upper portion thereof, a pair of furnace flues communicating with said chamber, a stack flue communicating with said chamber at a point below said hood, a valve for closing either of said furnace flues, a gas inlet communicating with one of the furnace flues, and a gas inlet communicating with the other furnace flue.

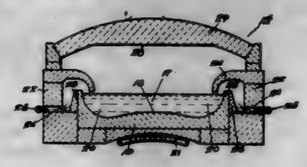
---

1,557,147. PROCESS OF TREATING CELLULOSE ACETATE. EDWARD S. FARROW, Jr., Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 20, 1925. Serial No. 3,681. 10 Claims. (Cl. 260—102.)

1. The process which comprises dissolving chloroform-soluble cellulose acetate in a solution of phosphoric acid of a type which is liquid above its melting point and partially hydrolyzing it while so dissolved.

---

1,557,148. SHEET-GLASS APPARATUS. ENOCH T. FERNGREN, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 26, 1924. Serial No. 758,133. 14 Claims. (Cl. 49—17.)

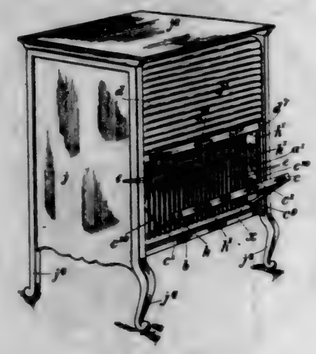


1. In sheet glass apparatus, including a draw-pot containing a source of molten glass, of means for directing heat along the border portions of the molten glass within said pot.

---

1,557,149. DISK-RECORD CABINET. HUGH D. FITZPATRICK, Glasgow, Scotland, assignor to Ernest Hayward Fairbanks, Philadelphia, Pa. Filed May 28, 1921. Serial No. 478,255. 1 Claim. (Cl. 211—16.)

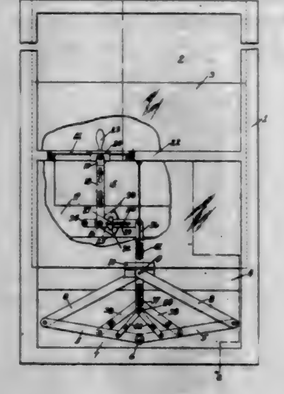
A filing cabinet having a compartment sub-divided into a plurality of sections open and unobstructed at their ends, the sections being designed to contain disk records, a forwardly and downwardly inclined bottom for said compartment upon which the records normally rest, arms pivoted at their lower ends upon each side of the cabinet, which arms are adapted to move outwardly, a rail carried by the free ends of said arms and normally extending transversely of and in abutting relation to said sections to retain the records therein, and



means connecting said arms with said cabinet to limit the forward movement thereof, whereby on moving said rail downwardly all of the records in each of the said sections will roll down said bottom in abutting relation to said rail until the latter reaches its lowermost position.

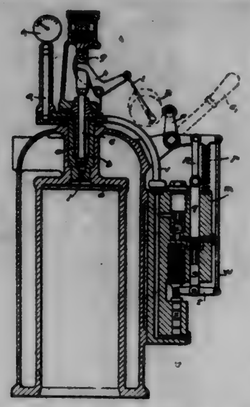
---

1,557,150. WINDOW-CONTROL MECHANISM. CHARLES FORGERSON, Toledo, Ohio, assignor of one-half to E. D. Moon, Toledo, Ohio. Filed July 9, 1923. Serial No. 650,217. 4 Claims. (Cl. 268—4.)



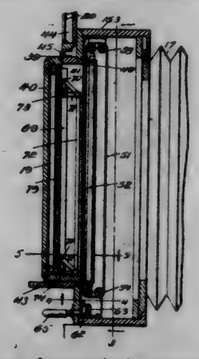
1. In a mechanism of the class described, a frame, a member slidably movable therein, a lazy-tongs means operable to move said member and having a pivotal connection at one end to the frame and connection at its other end to the member, a set of toggle links connected to a set of oppositely projecting links of the lazy-tongs means at opposite sides of the pivotally connected ends of such lazy-tongs links, and a counter-balancing spring anchored at one end to the frame and connected at its other end to the set of toggle links to exert a pull on the lazy-tongs means through the set of toggle links.

1,557,151. METHOD FOR REGULATING THE FUEL SUPPLY WITH COMPRESSORLESS HIGH-PRESSURE CRUDE-OIL ENGINES. ERNST FREY, Troisdorf, near Cologne, Germany, assignor, by direct and mesne assignments, of one-fourth to Johan Nicolaysen, one-fourth to Thomas B. Danckwortt, and one-half to Frank H. Osgood, all of Seattle, Wash. Filed Jan. 4, 1923. Serial No. 610,656. 6 Claims. (Cl. 123—140.)



1. In combination with a fuel pump for engines of the class described including a suction valve and a pump plunger, and having a pressure passage leading from said pump, means operatively connecting said plunger and suction valve to positively control closure of the latter in accordance with the piston stroke, and a spring-controlled piston in communication with said pressure passage operable to positively adjust the time of closing said suction valve in accordance with the pressure in said pressure passage, thereby to vary the delivery of the pump.

1,557,152. MULTIPLE-EXPOSURE CAMERA. WENZEL FRITSCHE, New York, N. Y. Filed Mar. 31, 1920. Serial No. 370,117. 6 Claims. (Cl. 95—36.)



1. A camera as characterized, comprising a frame for holding a sensitized plate; a plurality of co-operating independent, laterally and vertically movable light obscurating members, movable in a plane juxtaposed to said plate for varying the location and size of areas of said plate to be exposed; and means operable at the outer side of said camera for adjusting said obscurating members, said means embodying rollers disposed in perpendicular relation within the camera, and indices on he frame of the camera for showing the location of said members.

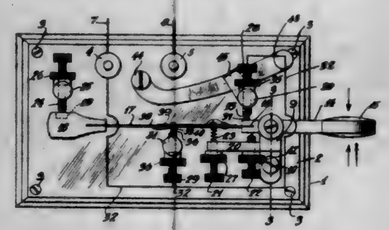
1,557,153. MANUFACTURE OF BENZOIC ACID FROM BENZOTRICHLORIDE. ANTHONY GEORGE, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed July 22, 1924. Serial No. 727,412. 12 Claims. (Cl. 260—108.)

1. The method of producing bensoic acid from benzotrichloride which comprises hydrolyzing the benzotrichloride directly with water in the presence of an anhydrous metal compound at a temperature of about 100 to 120° C., the reaction mixture being agitated, and the water being added at substantially the rate at which it reacts.

1,557,154. MANUFACTURE OF BENZOYL CHLORIDE. ANTHONY GEORGE, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed July 22, 1924. Serial No. 727,413. 5 Claims. (Cl. 260—123.)

1. The method of producing bensoyl chloride, which comprises adding water gradually to an agitated mixture of benzotrichloride containing a catalyst in suspension and maintained at a temperature at which active hydrolysis of the benzotrichloride takes place, the amount of water added not substantially exceeding about 110% of that theoretically required to form benzoyl chloride, the catalyst containing as an active agent only an anhydrous zinc salt.

1,557,155. TELEGRAPH INSTRUMENT. JOHN J. GHEGAN, East Orange, N. J. Filed Feb. 11, 1924. Serial No. 691,901. 7 Claims. (Cl. 178—82.)



1. A telegraphic instrument embodying a long leaf spring constituting a vibrator, a cushioning member mounted on and carried by said spring, and an electrical contact mounted on and carried by the cushioning member and positioned approximately midway of the length of the long leaf spring which constitutes the vibrator.

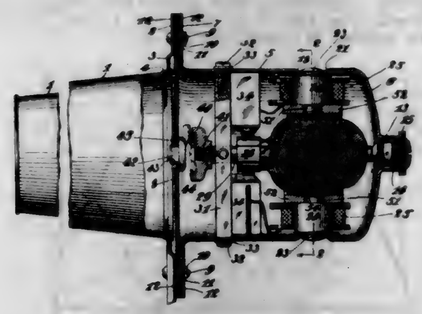
1,557,156. EXTENSION HANDLE FOR GOLF STICKS. CONSTANT S. GLESS, Los Angeles, Calif. Filed May 28, 1923. Serial No. 641,833. 8 Claims. (Cl. 273—81.)

6. A golf stick having a stem thereon, a stationary metallic tube held on said stem, a metallic tube telescoping said stationary tube and closed at the outer end, the inner end of said outer tube being provided with a plurality of longitudinal kerfs and externally threaded, and the sleeve telescoping said outer tube and said inner tube and provided with internal threads for engagement with the threads on the outer tube for locking the outer tube in adjusted position.

1,557,157. ATHLETIC SHOE. DANIEL J. GOLDEN, Brockton, Mass. Filed July 14, 1924. Serial No. 725,755. 1 Claim. (Cl. 36—59.)

An atuletic shoe comprising a sole and an upper connected thereto, the outer surface of the sole being entirely outside the upper, a flexible reinforcing plate secured to the outer sole and seated on the outer surface thereof, an apertured tread member secured to the sole and having orifices extending from its outer to its inner surface, flat anchoring plates seated on the inner surface of the tread member and riveted to the latter, said plates bearing on the reinforcing plate and being provided with tapped orifices coinciding with the orifices in the tread member, and cleats having threaded shanks inserted in the orifices of the tread member and engaged with the tapped orifices of the anchoring plates, said cleats having clamping bases bearing on the outer surface of the tread member around the orifices in the latter and compressing the portions of the tread member in which said orifices are formed, so that the walls of the orifices are pressed against the threaded shanks and prevent accidental unscrewing rotation of the latter, the reinforcing plate preventing tipping movements of the anchoring plates seated thereon, while the reinforcing plate, the anchoring plates, and the cleat bases prevent tipping movements of the cleats on the tread member.

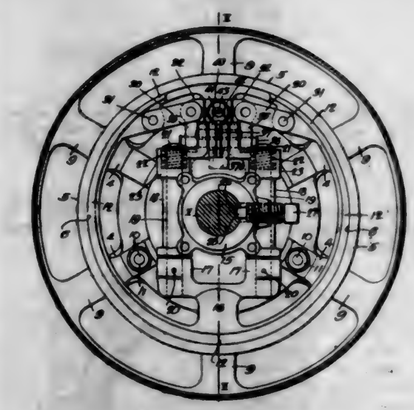
1,557,158. ELECTRIC MOTOR. HARRY C. GRANT, Bayonne, N. J., assignor to Klaxon Company, a Corporation of Delaware. Filed May 3, 1922. Serial No. 558,164. 11 Claims. (Cl. 172—36.)



7. A shoe for the field of a dynamo electric machine, consisting of heavy rolled sheet metal formed to the curvature of the armature and having a perforation through which a core piece may be riveted and partially extruded around said perforation to form a washer-like projection affording approximately parallel flat outer and inner surfaces for the riveting.

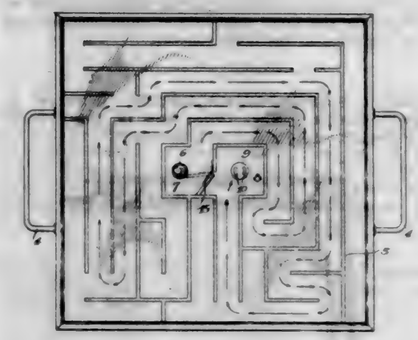
1,557,159. CLUTCH. HOWARD T. HALLOWELL, Philadelphia, Pa. Filed Oct. 20, 1919. Serial No. 331,892. 5 Claims. (Cl. 192—77.)

1. The combination in a clutch of a split ring; links attached to the ends of the same; lugs carried by the ends of said links; wedging means for spreading said lugs to take up wear of the split ring; a pin loosely



connecting said lugs; and means engaging said pin for moving the lugs radially of the ring to spread the links and expand the ring.

1,557,160. GAME OF SKILL. JOHN R. HAUPENTHAL, Rochester, N. Y., assignor of one-half to Bertram E. Wilson, Rochester, N. Y. Filed Nov. 20, 1922. Serial No. 602,049. 9 Claims. (Cl. 213—86.)

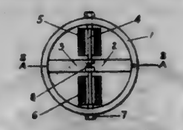


3. The combination with a plurality of game boards, each adapted to be manipulated by a player and including a movable circuit closing member which the player works into winning position by manipulating the board of electrical indicating means connected with the game boards and acting automatically to show which one of said circuit closing members first reaches winning position.

1,557,161. SOUND PRODUCER. HARVEY C. HAYES, Washington, D. C. Filed Mar. 2, 1925. Serial No. 12,602. 2 Claims. (Cl. 179—114.)

1. An electromagnetic sound reproducing device comprising an electromagnetic operating mechanism including a pair of solenoids, an armature in the form of a

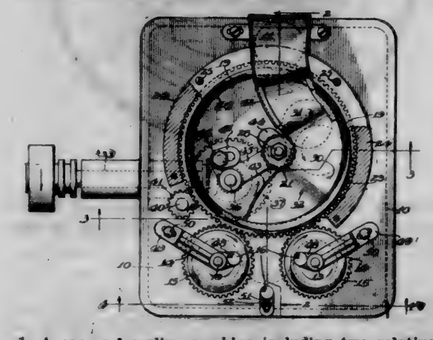
magnetic rod passing through said solenoids, means for varying the tension in said rod, a sound reproducing dia-



phragm and a connection between a point in said armature and said sound reproducing diaphragm for reproducing the sound vibrations existent in said armature.

---

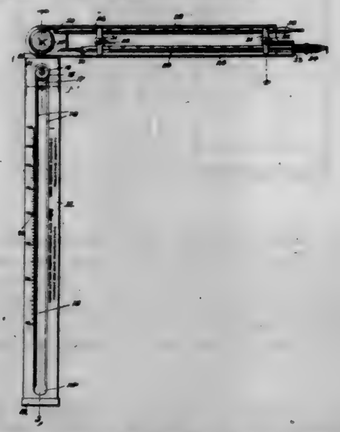
1,557,162. CAN-END-CURLING MACHINE. GUSTAV W. HEDSTROM, Chicago, Ill. Filed Dec. 19, 1924. Serial No. 756,871. 24 Claims. (Cl. 153—59.)



1. A can end curling machine including two relatively rotating curling elements, one enclosed by and eccentric to the other the shortest distance between said elements being approximately equal to the diameter of a can end to be curled, and there being curling grooves located respectively on the inner side of the outer element and on the periphery of the inner element.

---

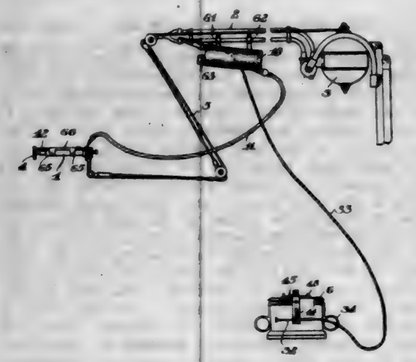
1,557,163. SLING PSYCHROMETER. WILLIAM B. HODGE, Charlotte, N. C. Filed May 19, 1923. Serial No. 640,282. 10 Claims. (Cl. 73—24.)



1. In a psychrometer or the like, the combination of a thermometer element including a wet bulb thermometer, a dry bulb thermometer and a support therefor; and a casing element for said thermometer element capable of entering into slidable relation therewith, said two elements being provided with coacting series of slide rule graduations arranged for computing a function of atmospheric humidity from the readings of the wet bulb and dry bulb thermometers.

---

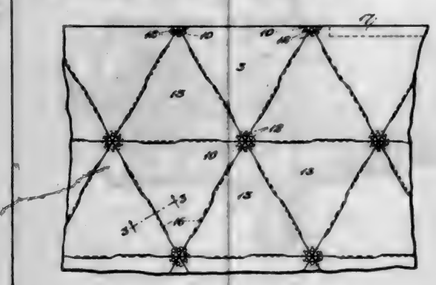
1,557,164. LIQUID-CONTROLLING MEANS FOR DENTAL ENGINES. FREDERIC J. HOFSCHNEIDER, Rochester, N. Y. Filed Dec. 9, 1924. Serial No. 754,751. 7 Claims. (Cl. 32—10.)



1. The combination with a dental engine including a hand piece, an electric motor, a switch for the motor, of gravity controlled liquid supply means for the hand piece, and devices governing the liquid supply including a valve, and valve operating means located in the path of said switch and movable when the switch is actuated, the valve operating means being connected to the valve and acting to open the valve when the switch is moved.

---

1,557,165. PAVEMENT FOR HIGHWAYS. ELMER G. HOOPER, New York, N. Y. Filed Nov. 1, 1922. Serial No. 598,344. 9 Claims. (Cl. 94—13.)



1. In a pavement of the class described, a series of supporting posts arranged at the apices of triangles, and supporting slabs of triangular form having their apices resting on said supporting posts.

---

1,557,166. METAL BRUSH. HAROLD J. HORN, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a Corporation of New Jersey. Filed Apr. 7, 1923. Serial No. 630,445. 9 Claims. (Cl. 15—198.)

4. The combination with a brush body, or wire bristles having their base portions mounted thereon, each of said bristles having a straight portion between the free end of the bristle and said base portion of less thickness in the direction of movement of the brush than the

rest of the bristle and arranged to bend in the movement of the brush, whereby localized bending of the bristles at their base is avoided.

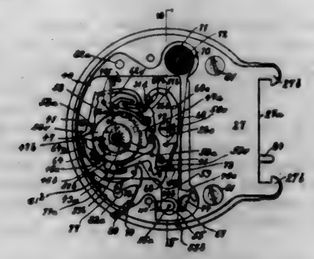
---

1,557,167. THEFT-INDICATING WINDSHIELD FOR VEHICLES. EDWIN HERBERT IVES, San Francisco, Calif. Filed Nov. 16, 1922. Serial No. 601,432. 7 Claims. (Cl. 296—84.)

1. The combination in a shield for motor vehicles, of a frame mounted on said vehicle, a pair of transparent panels secured in said frame, said panels being spaced apart, a flexible curtain disposed at one end of said panels and adapted to have its free end moved between the panels toward the other end thereof, a lock on said frame and a coating member on said curtain.

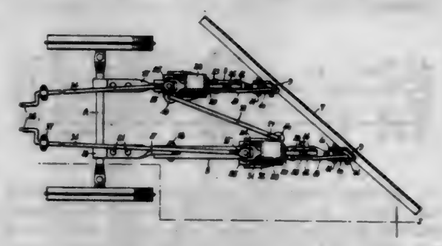
---

1,557,168. COMBINATION LOCK. ANTONI KADLUBOWSKI, Jersey City, N. J.; Josefa Kadlubowski, administratrix of said Antoni Kadlubowski, deceased. Filed Jan. 8, 1923. Serial No. 611,412. 28 Claims. (Cl. 70—18.)



1. A keyless lock, comprising a latch mechanism, a rotatable door knob, restrictedly movable in an axial direction, and means to open the lock operative by a predetermined series of reciprocations followed by a rotary movement of the door knob for each digit of a combination of numerals, said means including devices to restore the means to initial position when said predetermined series of reciprocations are interrupted by a wrong motion.

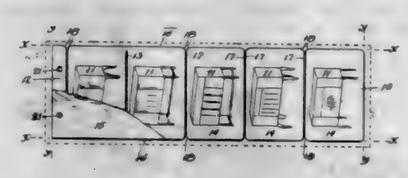
1,557,169. ROAD SCRAPER AND SNOWPLOW. CHARLES A. KALINA, Exeter, Nebr. Filed July 17, 1925. Serial No. 44,318. 7 Claims. (Cl. 37—155.)



1. A device of the character described comprising a scraper blade, means for connecting said blade with a vehicle for the up and down movement of said blade, members having vertical sliding connection with said means and having portions to bear on the road, and adjusting means connecting said members and firstnamed means for raising and lowering the firstnamed means on said members.

---

1,557,170. PROCESS OF PRODUCING FOLDERS. CHARLES D. KAUFMANN, Chicago, Ill., assignor to Kaufmann & Fabry Co., Chicago, Ill., a Corporation of Illinois. Filed July 16, 1924. Serial No. 726,374. 3 Claims. (Cl. 11—1.)



1. The herein described process of producing folders, which consists in transversely slotting a strip, having spaced individual photographs printed thereon, mounting the slotted strip on a backing, and trimming off the edge portions of the strip and backing back to the slots, thereby leaving separated individual photographic prints mounted on a backing which is foldable between the prints.

---

1,557,171. TIRE-CHAIN LOCK. HENRY J. KELLEN, Woodstock, Minn. Filed July 26, 1923. Serial No. 653,936. 6 Claims. (Cl. 24—241.)

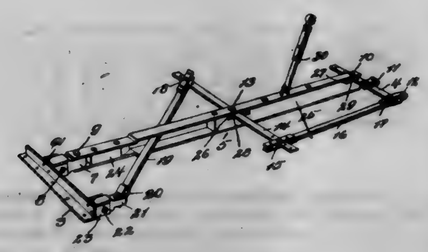
1. A lock for tire chains comprising a channel frame having a tongue on one side and open on the opposite side, the sides of the frame being formed with registering notches, a rivet for connecting a chain link to one end of said frame, and a lever fulcrumed at one end in the opposite end of said frame and formed with a notch adapted to register with the notches of said frame, the notch of said lever being adapted to receive another chain link and carry it into the registering notches of said frame and prevent its removal therefrom, said lever being formed with a tooth adapted to engage said tongue.

1,557,172. CHAIN. NICHOLAS J. KLEIN and JAMES C. LAW, Scranton, Pa., assignors to Wilmot Engineering Company, Hazleton, Pa., a Corporation of Pennsylvania. Filed July 19, 1923. Serial No. 652,567. 6 Claims. (Cl. 74—32.)

1. A chain comprising alternate single and double links having slots extending horizontally therethrough adjacent their opposite ends, each of the said bars of each double link being provided with outwardly extending projections, one projection being situated near one end adjacent one edge thereof and the other projection being situated near the opposite end adjacent the opposite edge thereof, and pintles extending through said slots and pivotally connecting the links together, said pintles each having heads upon their opposite ends for retaining said pintles in engagement with said links, each head having a notch in one of its edges at one end thereof.

---

1,557,173. TRAILER HITCHING DEVICE. ARTHUR KREPPEL, Belleville, Ill., assignor of one-half to Marcell A. Miller, Belleville, Ill. Filed June 14, 1923. Serial No. 645,292. 1 Claim. (Cl. 280—33.44.)



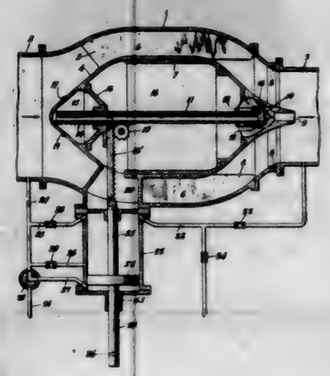
A trailer hitching device comprising a draft bar composed of vertically spaced metallic straps, longitudinally spaced reinforcing elements between said straps, a tractor bar, a universal joint connecting the draft bar and tractor bar, a binder bar, means for pivotally connecting the draft bar and binder bar, a translating bar, means for pivotally connecting the translating bar and draft bar, a grain bar, means for pivotally connecting one end of the grain bar with the translating bar and its other end with the binder bar, a cross bar, means for pivotally connecting one end of the cross bar with the translating bar and a universal joint for connecting the other end of the cross bar to the tractor bar, said cross bar being extended between the vertically spaced metallic straps of the draft bar and between the longitudinally spaced reinforcing elements of the draft bar.

---

1,557,174. LEATHER-TANNING COMPOUND. GEORGE W. LANGLEY and ARGUS A. HOWELL, Greenbrier, Ark.; said Howell assignor of his entire right to Dan N. Ward, Greenbrier, Ark. Filed Aug. 28, 1922. Serial No. 583,920. 2 Claims. (Cl. 149—4.)

1. A tanning composition comprising extract of sumach, extract of wild cherry bark, gum gambier, and water.

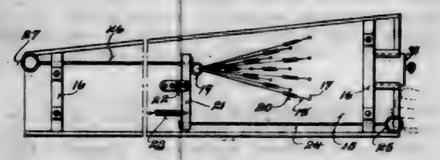
1,557,175. VALVE. CHESTER W. LARNER, Philadelphia, Pa., assignor to William Cramp & Sons Ship and Engine Building Company, a Corporation of Pennsylvania. Filed July 14, 1922. Serial No. 574,887. 17 Claims. (Cl. 137—139.)



13. In a conduit valve the combination with a valve plunger adapted to be moved by fluid pressure, of means for controlling said fluid pressure comprising a pilot valve within the conduit, and fluid pressure operated means controlling said pilot valve and located outside of said conduit.

---

1,557,176. BOWLING ALLEY. HUGO LOEWENBACH, Milwaukee, Wis. Filed Oct. 26, 1923. Serial No. 670,872. 3 Claims. (Cl. 273—39.)

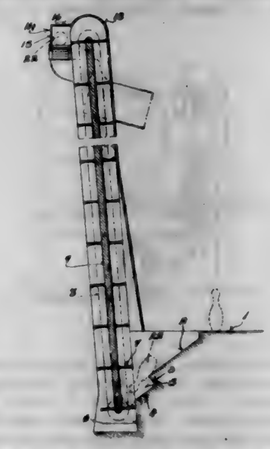


1. A game comprising an alleyway having a forward and rear end, a plurality of pins located adjacent said rear end and adapted to be knocked into a prone position, a flexible member attached to each pin and adapted to set such pin in upright position when tensioned, a movable member carried by said alleyway and adapted to simultaneously tension all of said flexible members when moved, and manually operable means connected to a portion of said member and extending to one end of said alley, and a second manually operable member connected to another portion of said member and extending to the other end of said alley.

---

1,557,177. AUTOMATIC PIN SETTER. CHARLES LORENZ and EMIL KUNISH, Manitowoc, Wis. Filed Mar. 18, 1925. Serial No. 16,519. 4 Claims. (Cl. 213—43.)

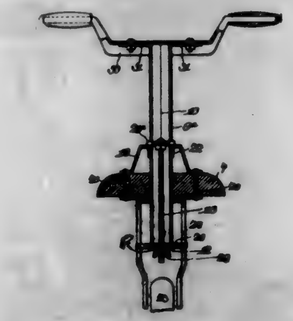
1. In an automatic pin setting machine for bowling alleys, the combination of a bowling alley having a downwardly slanting rear surface down which the dislodged pins are adapted to travel, said alley having a depressed step provided with an abrupt edge adjacent its lower portion, and a conveyor provided with elevating flaps adapted to receive the pins, said conveyor being located rearwardly of and adjacent said step, said conveyor



being spaced from the abrupt edge of said step less than the length of a pin, whereby a pin resting upon such abrupt edge will be dislodged by said conveyor and will roll on to said conveyor.

---

1,557,178. STEERING MECHANISM FOR CHILDREN'S VEHICLES. WILLIAM E. MCLAREN, Los Angeles, Calif. Filed Dec. 26, 1924. Serial No. 757,978. 3 Claims. (Cl. 208—114.)

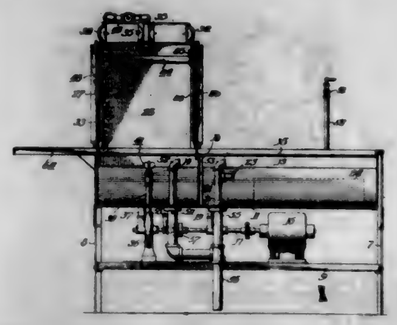


1. In a mechanism of the class described, the combination with a seat board of a vehicle having a vertical opening near one of its ends, of a collar surrounding said opening, and secured to the upper surface of said board, a steering post rotatably journaled in said collar and board opening, a hanger mounted on the lower portion of said post to turn therewith and having a transverse portion at its upper end located adjacent the lower surface of said board, and a steering wheel journaled on the lower portion of said hanger.

---

1,557,179. DISHWASHING MACHINE. JOSEPH A. MASONICK, Lake Bluff, Ill., assignor to J. A. Masonick Company, Lake Bluff, Ill., a Corporation of Illinois. Filed May 6, 1921. Serial No. 467,299. 7 Claims. (Cl. 141—9.)

1. In a dish washing machine, the combination of a receptacle provided near the top with longitudinally extended supporting ledges, a dish tray adapted when disposed longitudinally of the receptacle to be submerged in the water therein and when disposed transversely to be slidably supported on said ledges, means for circulating the washing water in said receptacle around the submerged dishes in said tray, a rinsing chamber at one end of said receptacle into which a tray of dishes may



be slid along said ledges, a rinsing receptacle beneath said chamber, means for delivering the rinsing water from said receptacle upwardly and downwardly against the dishes in said chamber, doors for closing the sides of said chamber, and a drain board at the opposite side of said chamber from said receptacle onto which the dishes may be slid from said chamber.

---

1,557,180. RECEPTACLE CHARGER. WILEY O. MELTON, Rocky Mount, N. C. Filed July 21, 1924. Serial No. 727,257. 3 Claims. (Cl. 214—17.)

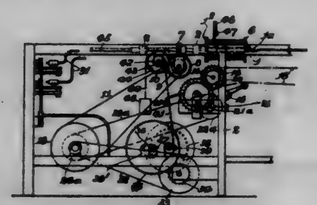
1. A receptacle charger comprising a portable platform provided with supporting means, and means for attachment within the opening of the receptacle, comprising sill-engaging keepers and apron-engaging tongues.

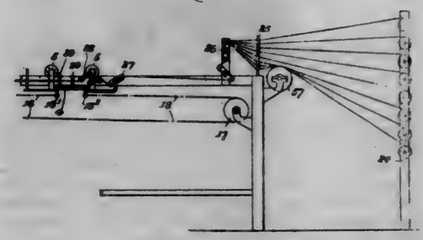
---

1,557,181. PROCESS OF MAKING CASEIN. ADOLPH MESSMER, San Francisco, Calif. Filed May 26, 1923. Serial No. 641,749. 7 Claims. (Cl. 99—11.)

1. The method of making casein which comprises precipitating the curd, separating the whey from the curd, discharging the curd from its container in a stream and directing a stream of cold water under pressure into the discharging curd stream, draining the water from the curd and subjecting the curd to centrifugal force and simultaneously applying wash water thereto.

1,557,182. MACHINE FOR CURLING AND/OR DECURLING YARNS. BENJAMIN DISRAELI MICKLETHWAITE, Huddersfield, England. Filed June 27, 1923. Serial No. 648,005. 5 Claims. (Cl. 118—21.)

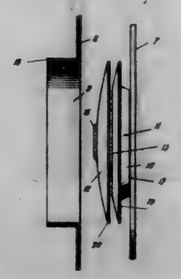




1. In a machine of the class described, a revoluble curling spindle for engaging with the two parts of the yarn, a carriage slidable longitudinally of the spindle, separating devices mounted on the carriage and operating to divide a series of previously spun yarns into two parts, and driving devices operating to revolve the curling spindle and to slide the carriage back and forth at a predetermined speed proportioned to the speed of the spindle.

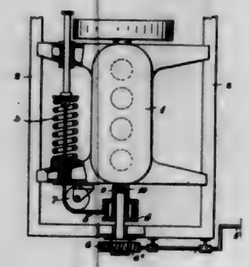
---

1,557,183. ATTACHING MEANS. DE WITT TALMADGE MOATS, Indianapolis, Ind. Filed Dec. 26, 1924. Serial No. 758,224. 7 Claims. (Cl. 292—307.)



1. The combination with an object to bear against another object beyond the edge of an opening in the secondnamed object, of two resilient members carried by the firstnamed object and arranged to move in succession into said opening and to frictionally engage the wall of the opening, each of said members being adapted to be sprung when entering the opening to grip the wall of the opening with a binding action, the member which enters the opening first being rotatable with reference to the firstnamed object and the other member being non-rotatable with reference to said object.

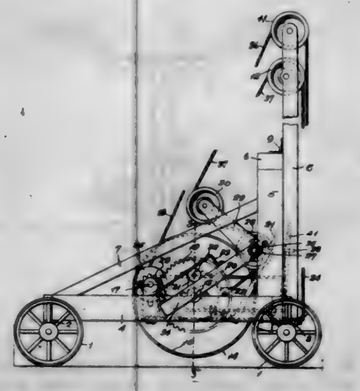
1,557,184. STARTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. FRIEDRICH MÜLLER, Vienna, Austria. Filed Aug. 9, 1921. Serial No. 491,005. 9 Claims. (Cl. 185—41.)



1. The combination with an internal-combustion engine, of a starting device therefor, comprising resilient means operable, when stressed, to rotate the engine-shaft, a self-locking worm-gearing comprising a worm and a worm-wheel adapted to be engaged with and disengaged from each other, means for disengaging said gearing from the resilient means and operative connections, between said worm-gearing and said resilient means.

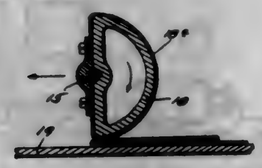
---

1,557,185. WELL-DRILLING MACHINE. JOHN M. MYERS, Scottsville, Ky. Filed Aug. 19, 1924. Serial No. 732,950. 1 Claim. (Cl. 255—11.)



In a well drilling machine, a power shaft having a belt wheel provided with an inner circumferential track, an auxiliary shaft provided with a friction wheel bearing against said track, a drill rope drum loose upon said power shaft and carrying a spur gear wheel, a casing rope drum loose upon said auxiliary shaft, a pinion fast upon said auxiliary shaft and having a clutch connection with said casing rope drum and being slidable to release said clutch and mesh with said spur gear wheel, said auxiliary shaft being pivoted at one end and movable to disengage said friction wheel from said track, and a rock shaft carrying a drill rope guide pulley and fast upwardly and forwardly projecting arms provided at their free ends with a drill rope guide pulley overlying said drill rope drum and a fast downwardly and forwardly projecting rocker arm, said power shaft having a crank engaging said rocker arm.

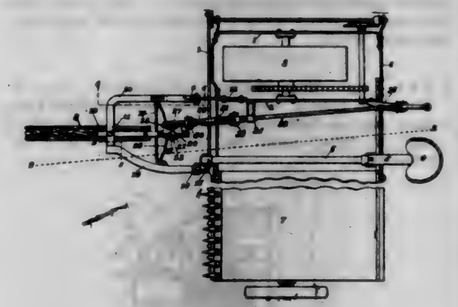
1,557,186. LEATHER-GRAINING MACHINE. GEORGE S. NEELEY, Wood River, Ill., assignor of one-half to Griffin Watkins, Alton, Ill. Filed Jan. 7, 1925. Serial No. 1,061. 6 Claims. (Cl. 149—23.)



1. A leather graining machine comprising in combination a revoluble presser roller, means for moving said roller in a horizontal plane, and braking means movable with said roller and exerting braking action on said roller for preventing free rotary movement thereof.

---

1,557,187. DRAFT DEVICE. NICHOLAS R. NELSON, East Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 8, 1920. Serial No. 363,934. 2 Claims. (Cl. 280—33.6.)



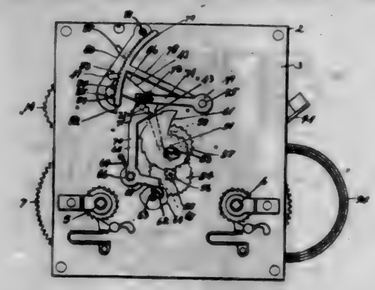
1. A draft device for agricultural machines, having in combination a draft frame pivotally connected to the machine, a draft tongue pivotally supported intermediate its ends on said frame and extending rearwardly therein from its pivot, an arcuate member rigidly supported on both sides of said frame and concentric with the pivot of the tongue, a series of notches in said member, gearing mounted on the rear end of the tongue engaging with said notches, and means supported on the machine frame flexibly connected with said gearing and operable to actuate said gearing whereby the tongue is swung to either side of the normal line of draft.

---

1,557,188. PROCESS OF PURIFYING WASTE WATERS. JAMES A. NEWLANDS, Hartford, Conn. Filed Jan. 19, 1921. Serial No. 438,515. 6 Claims. (Cl. 210—23.)

1. The process of purifying waste waters containing sulphuric acid, to prevent the contamination of streams, which consists in removing such impurities as tend to impair the quality of the resulting product, adding zinc to the liquor to produce sulphate of zinc, adding barium sulphides, and separating the resulting sulphide of zinc and sulphate of barium from the liquor.

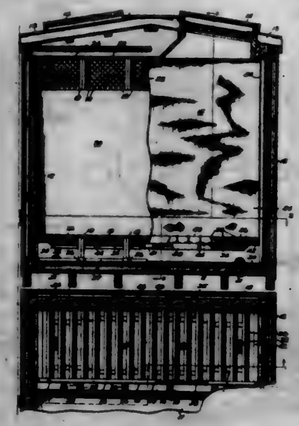
1,557,189. CLOCK MECHANISM. STEPHEN A. PAVEY, Philadelphia, Pa. Filed Aug. 1, 1924. Serial No. 729,474. 14 Claims. (Cl. 58—13.)



1. In a device of the character stated, the combination of chime hammers, a music roll for actuating said chime hammers, a striker hammer, means for placing said striker hammer in and out of operative position, a notched disc revolving with the music roll for controlling said means, a segmental gear revolving in unison with the notched disc and music roll, means for transmitting motion to said segmental gear, a time mechanism and a mechanism controlled by the time mechanism for starting the segmental gear at predetermined intervals for synchronizing the different hammers with the time mechanism.

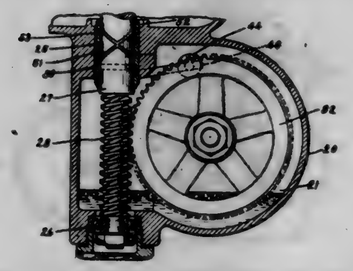
---

1,557,190. REFRIGERATOR CAR. DAMIAN L. REYNOLDS, San Francisco, Calif., assignor of one-half to Luther L. Yates, San Francisco, Calif. Filed Jan. 8, 1923. Serial No. 611,481. 18 Claims. (Cl. 62—19.)



15. In a refrigerator car having an ice compartment and a cargo compartment, a bulkhead between said compartments comprising a plurality of vertically extending sections placed with their vertical lateral edges substantially abutting, each of said sections comprising a sheet metal wall having flanged lateral edges for reinforcing said wall, means for connecting the lateral flanges of adjoining sections, a horizontally extending flange at the upper end of each section, means for securing said horizontally extending flange at the upper part of the car, a sill member secured to the floor of the car, and means for fastening the lower ends of said lateral flanges to said sill members.

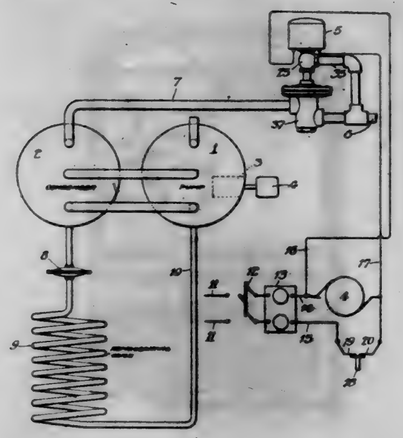
1,557,191. SPINDLE LUBRICATOR. ROSS BIDDLE, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 26, 1923. Serial No. 677,167. 2 Claims. (Cl. 308—168.)



1. A lubricating apparatus for bearings comprising, in combination with a bearing, a lubricant reservoir, a disc rotatable through said lubricant and having its rim located adjacent a wall of said reservoir, and a movable wiper supported by said wall and resiliently engaging a relatively small portion of the end face of the disc, and a duct provided by said wall for conducting to the bearing lubricant removed by the wiper.

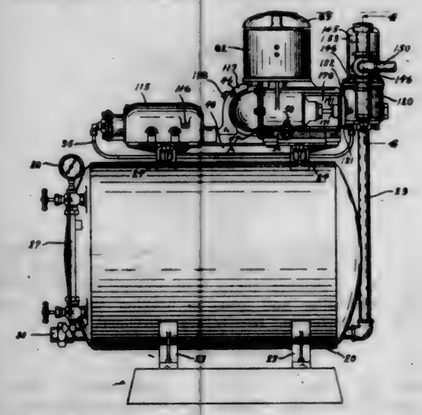
---

1,557,192. REFRIGERATING APPARATUS. ERNEST J. BRUNNING, Chicago, Ill., assignor, by mesne assignments, to Delco-Light Company, Dayon, Ohio, a Corporation of Delaware. Filed Apr. 26, 1920. Serial No. 376,540. 6 Claims. (Cl. 62—4.)



1. In a refrigerating system, the combination with a condenser; of a pump for causing a refrigerant to flow to the condenser; a motor for operating the pump; a conduit for supplying cooling water to the condenser; a main valve controlling the conduit; and means for opening and closing the main valve, said meanscomprising a fluid pressure device including a branch conduit connected with said cooling water conduit, a second valve for controlling said device, a single electromagnet for operating the second valve, and means rendered operative immediately upon the closing of the second valve for permitting the closing of the main valve.

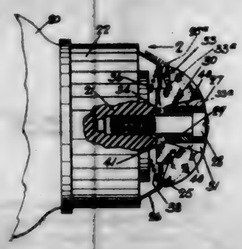
1,557,193. PUMPING APPARATUS. GEORGE A. BUVINGER and CLARENCE WARNER, Dayton, Ohio, assignors to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 19, 1923. Serial No. 626,174. 8 Claims. (Cl. 103—57.)



1. Pumping apparatus comprising, in combination, a transmission housing including a frame having vertically aligned bearings in its upper and lower walls; a motor mounted on said frame and including a shaft journalled in said bearings; a pump mounted on said frame; and mechanism in said housing for connecting the pump with the motor shaft.

---

1,557,194. ELECTRICAL APPARATUS. JOHN G. CAMPBELL, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 27, 1924. Serial No. 702,457. 2 Claims. (Cl. 177—279.)

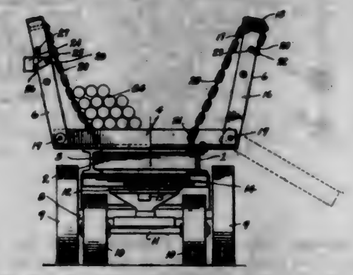


1. An electric motor comprising, in combination, a shaft; a commutator mounted on the shaft; and a short circuiting device for the commutator including: an axially movable short circuiting contact for engaging the commutator segments, a spring for urging said contact out of short circuiting position, a plurality of centrifugal arms for urging said contact into short circuiting position at a predetermined speed of rotation, a retaining member for said arms mounted upon said shaft, said arms each having a lug loosely set in a socket in said retaining member forming a pivot for said centrifugal arms, said arms being held against radial displacement from said sockets by said short circuiting contact.

---

1,557,195. TRUCK. ROWLAND C. CLAPP, Portland, Oreg. Filed Oct. 25, 1924. Serial No. 745,773. 3 Claims. (Cl. 280—145.)

2. In a trucking vehicle of the class described, a frame, bolsters extending transversely of the frame, standards pivotally fixed at their lower ends to the ends of the bolsters to swing in vertical planes between upwardly inclined load supporting positions and downwardly inclined positions, shafts extended rotatably through the upper ends of said standards, hooks on said shafts, releasable means for normally preventing rotation of the



shafts and anchor chains, or the like, attached to the bolsters within the pivot points of the standards and adapted for releasable connection at their upper ends with the hooks of said shafts to sustain the standards in load supporting position.

---

1,557,196. DECORATIVE ARTICLE OF MANUFACTURE. HENRY M. CONGER, Seattle, Wash. Filed May 21, 1923. Serial No. 640,414. 2 Claims. (Cl. 41—16.)

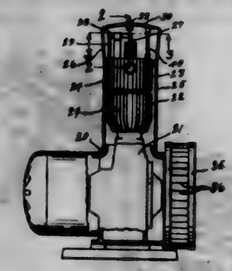
1. A new decorative article of manufacture, comprising a plurality of tinsel streams cut from a film of glutinous substance; said streamers being in various colors, transparent and iridescent, whereby prismatic effects similar to those of ice crystals are produced by light rays.

---

1,557,197. ENGINE. ERNEST DICKEY, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 24, 1924. Serial No. 688,306. 3 Claims. (Cl. 123—171.)

1. In an internal combustion engine in combination with a cylinder having heat dissipating fins, means for cooling the cylinder including a draft tube surrounding

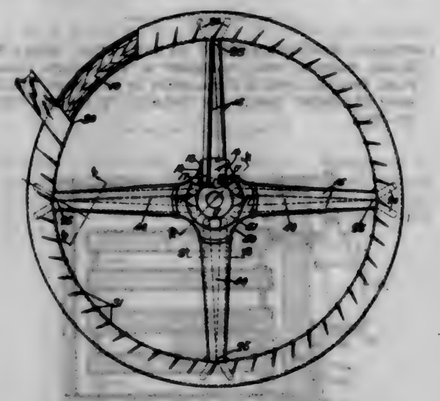
the cylinder, overhead valve mechanism, a removable tube cap supported by the draft tube and enclosing said valve mechanism, said cap being provided with ports



in the top wall thereof, a valve carried by said top wall of the cap for closing or opening said ports, and temperature responsive means located above the cylinder and within the draft-tube cap for adjusting said valve.

---

1,557,198. STEERING WHEEL. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 23, 1924. Serial No. 687,942. 13 Claims. (Cl. 74—33.)



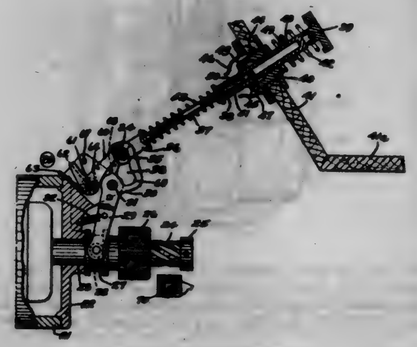
1. A handwheel having a rim and a spider, said spider including a metal hub and a plurality of separate metal spokes rigidly secured thereto, said spokes having their outer ends bent at an angle and inserted in corresponding recesses in the rim whereby said spokes are locked against radial withdrawal, alternate spokes having their outer ends bent in different directions.

---

1,557,199. ENGINE-STARTING APPARATUS. FREDERICK J. HARDMAN, Dayton, Ohio, assignor to General Motors Corporation, a Corporation of Delaware. Filed Apr. 28, 1924. Serial No. 709,353. 9 Claims. (Cl. 74—7.)

1. Engine starting apparatus comprising, in combination, an engine having a gear; a motor and shaft driven thereby; a motor operated gear movable into mesh with the engine gear; manual means for entering the motor gear into mesh with the engine gear and for capsing the motor to operate the shaft; means connecting the

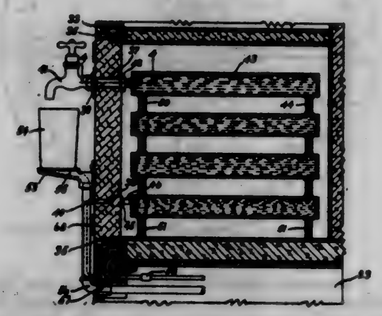
shaft and motor gear and adapted to cause the motor gear to be operated by the motor into engagement with the engine gear independently of operation by the manual means, said means tending to cause demeshment of the motor gear from the engine gear when the engine be-



comes self-operative; and means for weakening the effect upon the motor gear of the moving forces exerted by the manual means after the motor starts, whereby automatic demeshment of the motor gear may take place regardless of manipulation of the manual means.

---

1,557,200. REFRIGERATING APPARATUS. HARRY B. HULL, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 29, 1924. Serial No. 702,972. 3 Claims. (Cl. 62—38.)

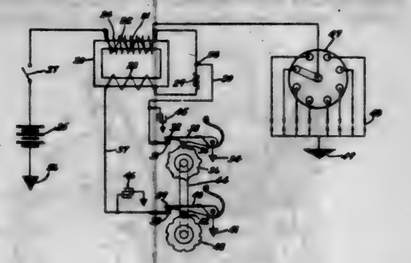


3. An attachment for refrigerator cabinets having a door opening and door therefor, said attachment including a door, a panel pivotally carrying said door, said panel and door being insertable with the door opening for completely covering the opening, and a water cooler unit carried by the panel and insertable through said opening.

---

1,557,201. IGNITION APPARATUS. JOHN H. HUNT, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 21, 1925. Serial No. 17,363. 5 Claims. (Cl. 123—148.)

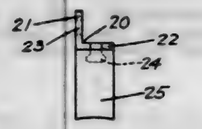
1. An ignition system comprising, in combination, a current source, an ignition coil having primaries of different inductances, and a secondary inductively related to both primaries, and timing mechanism for causing



one primary only to be connected with the current source, then both primaries in series with the source, and then for interrupting the current to the primaries.

---

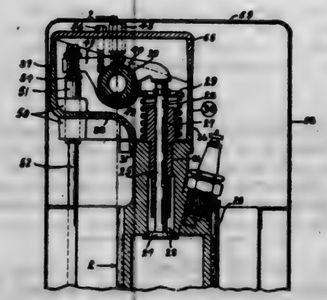
1,557,202. GENERATOR BRUSH. JOHN H. HUNT, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 3, 1923. Serial No. 666,261. 3 Claims. (Cl. 171—325.)



1. The method of making a composition brush which comprises forming a bracket having two sides angularly arranged; forming tongues projecting from one of the sides and a plurality of holes in the other side; and pressing a mass of conducting material onto the side of the bracket including the tongues whereby said mass will have the tongues embedded in its body portion forming an integral whole.

---

1,557,203. ENGINE. LESTER S. KEILHOLTZ and ERNEST DICKEY, Dayton, Ohio, assignors to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 3, 1923. Serial No. 655,503. 5 Claims. (Cl. 123—90.)

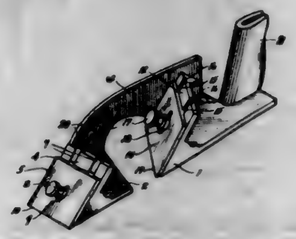


1. In a device of the kind described, and in combination with an internal combustion engine cylinder, a housing supported by said cylinder above the upper

end thereof; a hollow pin the ends of which are supported in bearings carried by said housing; a rocker arm located within said housing, and one end of which is adapted to engage and operate a valve of the engine; a push rod for operating said rocker arm; a removable cover for said housing, and which cover has a hole in its upper surface; and a hollow conduit the lower end of which engages said pin to thereby hold it in place within its bearings, and the upper end of which conduit extends through the hole aforesaid in the cover of said housing.

---

1,557,204. CARPENTER'S PLANE. MYRON E. KENNEY, Everett, Wash. Filed Oct. 15, 1923. Serial No. 668,563. 1 Claim. (Cl. 145—5.)



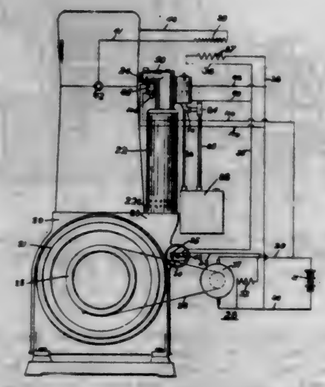
A plane of the class described, formed from a single metal piece, comprising a floor base and a longitudinally extended side flange at right angles thereto, an inclined flange at the forward end thereof at right angles to the direction of movement of the plane and comprising means for adjustably sustaining a cutter blade in functional position, an inclined flange rearwardly of the forward flange disposed at an angle with respect to the movement of the plane and having means for adjustably sustaining a cutter blade in functional position and a rearward flange to form a handle for the plane.

---

1,557,205. AUTOMATIC SWITCH. CHARLES F. KETTERING, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 21, 1919. Serial No. 332,287. 14 Claims. (Cl. 200—56.)

1. A device of the kind described comprising the combination of an automatic switch, having cooperating contacts; of a meter; of a mechanism operated by the meter, said mechanism including a movable resilient member; and means provided in the path of movement of said resilient member for causing energy to be stored therein as the member is moving, and for permitting said resilient member to be released and to suddenly strike against one of said contacts thereby obtaining a quick actuation of said contacts.

1,557,206. FUEL-SUPPLY DEVICE. CHARLES F. KETTERING, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Original application filed Sept. 23, 1918, Serial No. 255,294. Divided and this application filed Mar. 18, 1922. Serial No. 543,200. 9 Claims. (Cl. 123—139.)



1. In a device of the character described, the combination with an engine; of electro-magnetic pump means for lifting liquid to a higher level comprising a plurality of electromagnet circuits; and means actuated by the engine for successively energising said circuits.

---

1,557,207. IGNITION APPARATUS. FREDERICK C. KROMER, Anderson, Ind., assignor to General Motors Corporation, a Corporation of Delaware. Filed Nov. 20, 1923. Serial No. 675,945. 3 Claims. (Cl. 74—1.)

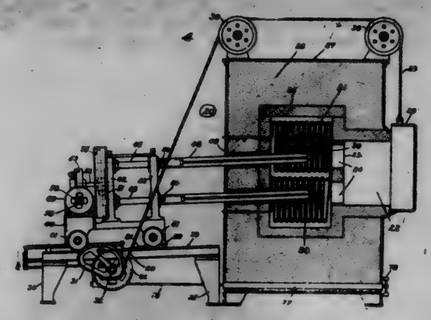
1. A cam rubbing block having angularly disposed legs and including a plurality of layers of cloth which extend into both legs, the warp threads of the cloth extending substantially parallel to the side faces of the legs.

---

1,557,208. FURNACE. CHARLES L. LEE and THOMAS C. VAN DERGIFT, Dayton, Ohio, assignors to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 11, 1924. Serial No. 691,928. 8 Claims. (Cl. 263—6.)

3. Heat treating apparatus comprising in combination, a furnace including a heating chamber; a vestibule separated from the heating chamber by an apertured partition; a carriage having two positions; work-piece-supporting spindles rotatably carried by the carriage, and extending through one wall of the heating chamber so that their free ends are in the heating chamber when the carriage is in its retracted position; means on the carriage for rotating the spindles; and means for mov-

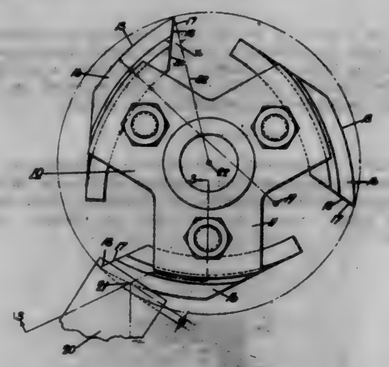
ing the carriage into its forward position whereby the spindle ends will be moved from the heating chamber



through the apertured partition into the vestibule, the main body of the spindles extending through the heating chamber while in this position.

---

1,557,209. ROTARY CUTTER. JOHN W. LEE, Dayton, Ohio, assignor to Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 25, 1924. Serial No. 694,815. 3 Claims. (Cl. 144—231.)

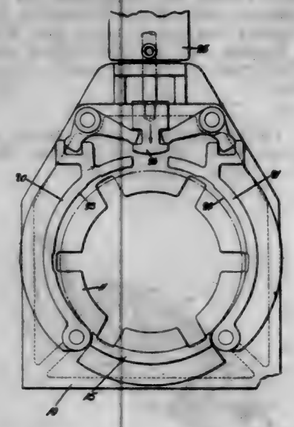


1. In a machine for cutting scarf joints, a rotary cutter comprising: a cutter head, a plurality of cutter blades fixed upon said head, said blades having a plurality of radial cutting edges making radial cuts in the work and a plurality of angular cutting edges making cuts at a substantial angle to the radial cuts, the faces in which both radial and angular cutting edges lie being backed off from the work cut thereby in both radial and axial directions, and means permitting said blades to be set forward upon said head whereby said blades may be ground back for resharpening purposes and again set so that their cutting edges are in their original position.

---

1,557,210. METHOD OF CONSTRUCTING WHEEL RIMS. JOHN W. LEE, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 5, 1924. Serial No. 697,161. 2 Claims. (Cl. 144—309.)

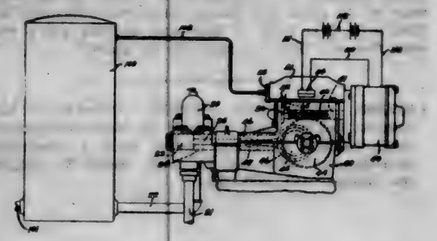
1. The method of joining together separate wood segments to form an annulus, comprising: cutting mutually intermeshing teeth in the ends of said segments, applying glue to said ends to fully cover all contacting surfaces thereof, arranging said segments together in the form of an annulus and then applying a high radial pressure upon the outer periphery of the annulus for a short interval of time, said pressure being sufficiently high to press the intermeshing teeth of said segments



so tightly together that they hold together with considerable tenacity after said pressure is removed and before the glue has had time to begin drying, and then permitting the glued joints to dry with no radial pressure upon said annulus.

---

1,557,211. PUMPING APPARATUS. RALPH L. LEE, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 26, 1923. Serial No. 677,171. 5 Claims. (Cl. 103—25.)

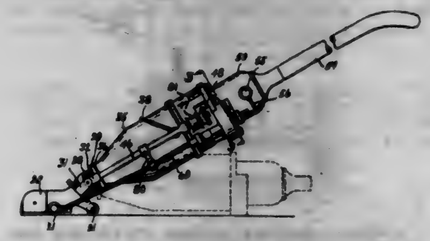


1. A pumping system comprising, in combination, a storage tank, pressure means connected with said tank, a prime mover for said pressure means, driving mechanism between said prime mover and pressure means, a normally closed switch for controlling said prime mover, switch operating means actuated by the driving mechanism for operating said switch, but which means is normally disengaged from said switch so as not to operate the same, and means responsive to a rise in pressure in the system for conditioning said switch operating means so that the switch will be operated by the driving mechanism.

---

1,557,212. DOMESTIC APPLIANCE. RALPH L. LEE, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 14, 1924. Serial No. 686,124. 1 Claim. (Cl. 15—8.)

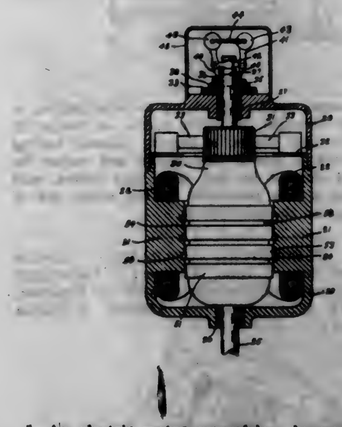
In a vacuum cleaner, a suction nozzle having a mechanical cleaner therein, a handle hinged to said nozzle for manipulating the same, said handle including a tubular portion enclosing a suction pump, and motor for driving the pump, and means for driving the mechanical cleaner by the motor, said means including a flexible shaft extending along the tubular portion but removed from the under side and upper side thereof, whereby the



tubular portion may rest directly upon the floor when cleaning under low articles of furniture, and movement of the cleaner under said furniture will not be hindered by said flexible shaft.

---

1,557,213. ELECTRICAL APPARATUS. RALPH L. LEE, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 25, 1924. Serial No. 694,835. 2 Claims. (Cl. 171—227.)

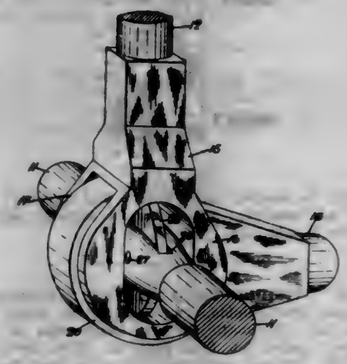


1. An electric motor comprising, in combination, field poles provided with grooved faces, an armature provided with an annularly grooved core and adapted to be shifted endwise between said pole pieces, and speed responsive means for shifting the armature endwise thereby varying the relative position of said grooves to vary the motor field strength and maintain the speed of the motor substantially uniform.

---

1,557,214. AIRPLANE-CONTROL MECHANISM. JOSEPH L. MCCLANE, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 14, 1922. Serial No. 536,589. 6 Claims. (Cl. 244—29.)

1. In airplane control mechanism, a torque shaft, a second torque shaft intersecting said first torque shaft, an actuating handle for said torque shafts, and means for pivoting the handle to the torque shafts in such a way that either shaft may be actuated independently of the other, said pivoting means comprising a fork on the



handle pivoted to the first torque shaft, and a cross member in said fork for pivoting to the second torque shaft.

---

1,557,215. SWITCH. HARRY E. NORVIEL, Anderson, Ind., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 28, 1921. Serial No. 481,138. 7 Claims. (Cl. 200—168.)

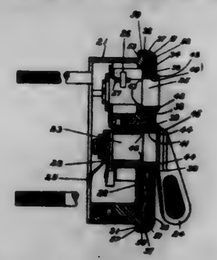
7. In a switch, the combination with a switch handle having a rotatable hub; of a switch contact blade and means for locating and fastening said contact blade to said hub in insulated relation therewith, said means comprising an insulating locating washer drivingly positioned upon the end face of said hub, means for both locating and driving said contact blade through said washer and a screw extending through said contact blade but insulated therefrom for securing said insulating washer and contact blade to said hub.

---

1,557,216. SWITCH. HARRY E. NORVIEL, Anderson, Ind., assignor to General Motors Corporation, a Corporation of Delaware. Filed Feb. 11, 1922. Serial No. 535,920. 7 Claims. (Cl. 200—168.)

1. In a switch, the combination with a switch case, a dial and a transparent dial cover spaced apart and

having aligned openings, and switch controlling members extending through said openings and into said case;



of means for sealing together said dial and dial cover around said openings; and means for securing said dial and cover to said case.

---

1,557,217. VISIBLE-CARD SYSTEM. WILLIAM A. RINGLER, Philadelphia, Pa., assignor to Globe Wernicke Co., Cincinnati, Ohio, a Corporation of Ohio. Original application filed Sept. 25, 1920, Serial No. 412,855. Divided and this application filed Nov. 29, 1922. Serial No. 603,913. 2 Claims. (Cl. 40—63.)

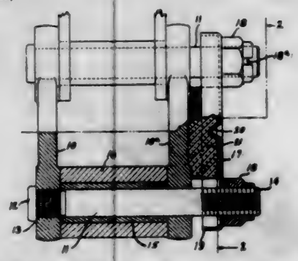
1. The herein described filing card having a double fold forming an upper and a lower terminal tab of substantially equal dimensions and extending in opposite directions, said upper terminal tab having a portion of its outer face forming a recording portion designed to receive the filing indicia and the width of said lower tab when two cards are assembled defining the visibility of such indicia.

---

1,557,218. PROCESS OF MAKING HOLLOW ARTICLES. JOSEPH N. ROYAL, Buffalo, N. Y., assignor to F. N. Burt Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario, Canada. Filed Nov. 3, 1924. Serial No. 747,457. 6 Claims. (Cl. 92—54.)

1. The process of forming a hollow article composed of two telescoping parts, which comprises forming a single integral article having portions corresponding to the said parts, the inner diameter of the one corresponding to the outer diameter of the other, said portions being spaced from each other and united by a wall extending from the one to the other and thereafter removing said uniting wall.

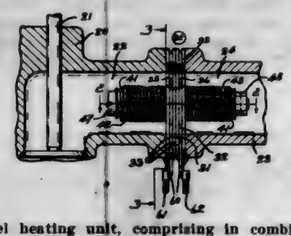
1,557,219. SPRING SHACKLE. FABIO SEGGARDI, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 14, 1924. Serial No. 699,187. 8 Claims. (Cl. 267—54.)



1. A shackle comprising relatively movable side links, cross connections, and an elastic body of rubber disposed intermediate the cross connections in such manner as to force said side links yieldingly toward each other.

---

1,557,220. MIXTURE-HEATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. FRANK F. STARR, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 26, 1923. Serial No. 677,136. 7 Claims. (Cl. 219—38.)



1. A fuel heating unit, comprising in combination, a pair of parallel electrical conductor plates, an insulating member between said plates, a heating element having one end connected to one of said plates, and means for supporting said element by and from said plates, said means including a bolt connected to the other end of said element and to the other plate.

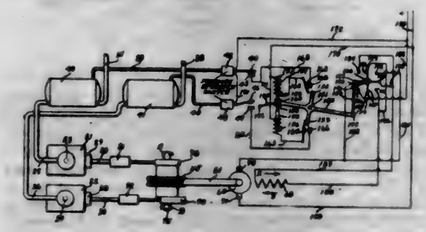
---

1,557,221. ELECTRICAL APPARATUS. CORNELIS VAN RENNES, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 24, 1923. Serial No. 676,826. 6 Claims. (Cl. 172—240.)

1. Reversing mechanism comprising, in combination, an electric motor having a commutator and a rotatable brush holder carrying commutator brushes and means for maintaining the brushes in frictional engagement with the commutator, a device which in one position prevents rotation of the brush holder in the direction of rotation of the commutator, but is movable to another position for releasing the brush holder to permit the brushes to rotate with the commutator into position for reversing the motor, and then to engage the brush holder to prevent rotation of the same upon reversal of the motor, and vice versa, and means for controlling said device.

---

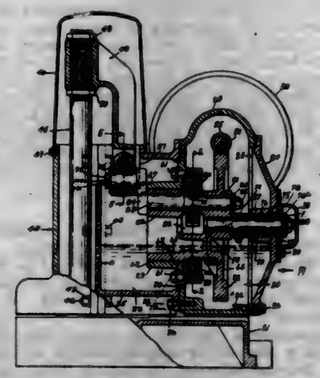
1,557,222. PUMPING APPARATUS. CLARENCE WARNER, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed July 2, 1923. Serial No. 649,094. 15 Claims. (Cl. 103—6.)



1. Water supply apparatus comprising, in combination, a plurality of water systems; power operated means including two separate and independent pumps for causing water to be supplied to either of said systems; and devices responsive to a demand in either of said systems for causing the power operated means to supply water to that system.

---

1,557,223. PUMPING APPARATUS. CLARENCE WARNER, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 3, 1923. Serial No. 666,282. 4 Claims. (Cl. 24—14.)



1. A pump operating device comprising a hollow frame enclosing various of the parts thereof and having a vertically extending pump rod passage open at its upper end, a lubricant containing chamber provided with an opening in its top located adjacent the open upper end of said passage, a vertically arranged wall separating said chamber and passage from one another, and an internal annular bearing flange; a reciprocating pump rod extending along said passage; a reciprocating member the upper end of which is operatively connected with said pump rod, and the lower end of which is arranged to move through the opening aforesaid in the top wall of said lubricant containing chamber; a rotatable operating member housed within said hollow frame and supported in said annular bearing flange; mechanism carried by said rotatable operating member and operatively connected with said reciprocating member to thereby impart reciprocatory movement to said pump rod; and a motor operatively connected with said rotatable operating member to drive the same.

---

1,557,224. PUMPING APPARATUS. CLARENCE WARNER, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 23, 1923. Serial No. 670,355. 8 Claims. (Cl. 103—179.)

1. In combination, a discharge head located within a well below the surface of the ground, a suction lift pump including a piston and a cylinder, a hanger attached to one end of the cylinder, said hanger adapted to be seated within the discharge head and provided with an outlet port in communication with an outlet port in the discharge head, and means for maintaining the hanger in seated position.

---

1,557,225. STEERING WHEEL. WALLACE S. WHITTAKER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 24, 1923. Serial No. 682,366. 6 Claims. (Cl. 74—93.)

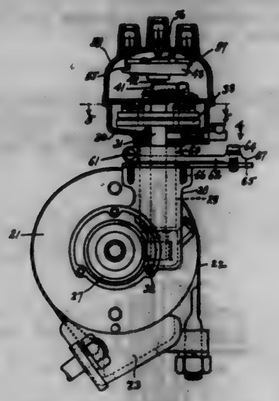
1. A steering wheel having a rim and a plurality of wooden spokes, and a metal spider hub having sockets therein for receiving the inner ends of said spokes, said hub having projections extending outwardly along the under side of said spokes beyond the periphery of the upper portion of said hub, and rigidly secured to said wooden spokes.

---

1,557,226. IGNITION-TIMER ADJUSTMENT. CHARLES E. WILSON, Anderson, Ind., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 9, 1921. Serial No. 521,234. 4 Claims. (Cl. 200—19.)

4. In an ignition timer, the combination with a frame member; and an indexing member extending therefrom; of a timer housing having a tubular shank journalled in said frame member; a lever including a split collar

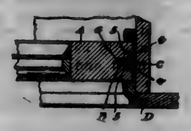
portion surrounding said shank and an arm portion extending therefrom; a screw for tightening said collar portion about said shank in various positions of adjustment; and a screw threaded into said indexing mem-



ber and passing through an arcuate hole in said lever arm for attaching the lever to the indexing member in various positions of adjustment, said lever arm having a pointer cooperating with indicia on the indexing member.

---

1,557,227. WEATHER-STRIP DEVICE. WILLIAM R. WOOD, Crafton, Pa. Filed Aug. 19, 1921. Serial No. 493,505. 7 Claims. (Cl. 20—69.)



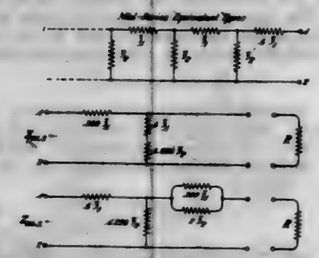
1. A groove liner for sashes comprising a metal strip having a channel formed therein which is adapted to be received in a groove, and turned over edges at the side of the channel having integral means thereon adapted to be driven into wood to hold the liner in position, said edges being turned back in the same direction as the channel and overlying the channel.

---

1,557,228. PAPER AND PLASTER-FOUNDATION SUPPORTING DEVICE. GUY L. WOODYARD, San Diego, Calif. Filed Aug. 24, 1922. Serial No. 584,148. 3 Claims. (Cl. 72—118.)

1. A device of the class described, including a yieldable plaster foundation supporting member formed with consecutive alternately disposed loop portions and a pointed securing member positioned at a substantial right angle to one side of said supporting member and extending therethrough adapted to secure said supporting member to a wall structure.

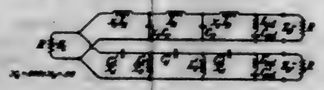
1,557,229. TERMINATING NETWORK FOR FILTERS. OTTO J. ZOBEL, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 30, 1920. Serial No. 377,964. 20 Claims. (Cl. 178—44.)



1. In a transmission circuit a wave filter comprising a plurality of like sections, each section comprising series and shunt impedance elements, at least one of said elements including both inductance and capacity, and a terminating network unlike said sections associated with said filter, said network being so proportioned as to neutralize the reactance component of the impedance of the filter over practically the entire range of free transmission and to equalize the corresponding resistance component to a constant value.

---

1,557,230. COMPLEMENTARY FILTER. OTTO J. ZOBEL, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 30, 1920. Serial No. 377,965. 10 Claims. (Cl. 178—44.)



1. A selective circuit comprising a plurality of filters, each consisting of a plurality of like sections, and each section including shunt and series impedance elements, the filters being joined at one end of each so that certain frequencies may be diverted into one filter, and other frequencies into another filter, the filters at the junction point being terminated respectively in fractional sections so proportioned that for the free transmitting range of each filter the remaining filter or filters operate to reduce impedance irregularities of said each filter.

---

1,557,231. SEALING COMPOSITION COMPRISING SULPHUR-BONDED FIBROUS MATERIAL. FRANK ALOIS ADAMSKI, Fremont, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Feb. 24, 1923. Serial No. 621,091. 6 Claims. (Cl. 106—8.)

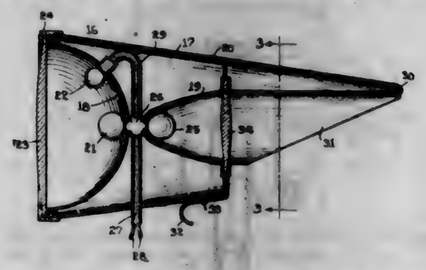
4. A composition for use in sealing and the like, comprising a mixture of sulphur, fibrous material and an inert granular material, the sulphur being the major constituent and the proportion of fibrous material being not less than about 10% of that of the sulphur.

---

1,557,232. AUTOMOBILE HEADLIGHT. WILLIAM SAYRE ALLEN, Birmingham, Ala., assignor of nine-tenths to A. T. Newell, Jefferson County, Ala. Filed June 21, 1924. Serial No. 721,547. 4 Claims. (Cl. 240—7.1.)

1. In an automobile headlight a conical casing a forwardly directed reflector within the larger end of said casing for directing the light along the path of travel,

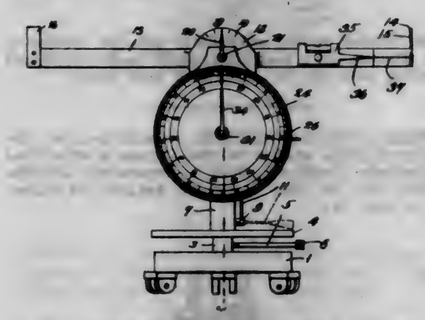
a rearwardly directed reflector within the smaller end of said casing for directing the light rearwardly and against the vehicle body, the smaller end of said casing being cut away to provide a rearwardly extending tapered



overhanging portion, said rearwardly directed reflector comprising a plurality of sections, the section at the inner end being parabolical in form and the section forming the outer end being pivoted at its outer end to said overhanging portion, substantially as set forth.

---

1,557,233. TRANSIT. PIERCE BUTLER ANDERSON, Brownsville, Tenn. Filed July 7, 1923. Serial No. 650,078. 4 Claims. (Cl. 33—60.)



1. In a transit, the combination with a standard, of a sight arm adjustable to different angles relative to the standard, a graduated dial fixed relative to the standard, a segmental plate adjustable angularly with the sight arm, a wheel, yielding means for holding the wheel in operative engagement with the segmental plate, and a pointer rotatable with the wheel upon one face of the dial.

---

1,557,234. FILTER. HEINRICH BECHHOLD, Frankfort-on-the-Main, Germany. Continuation of application Serial No. 585,087, filed Aug. 29, 1922. This application filed Sept. 14, 1923. Serial No. 662,755. 3 Claims. (Cl. 210—208.)

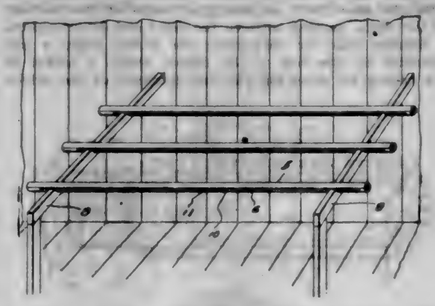
1. A filter impregnated with an insoluble or difficultly soluble compound of a metal of lower solution tension than hydrogen and of a higher solution tension than copper.

---

1,557,235. FILTER. HEINRICH BECHHOLD, Frankfort-on-the-Main, Germany. Filed July 1, 1924. Serial No. 723,592. 10 Claims. (Cl. 210—208.)

1. A filter impregnated with a plurality of insoluble or not easily soluble inorganic substances, one of the said substances being a metal of lower solution tension than hydrogen and of higher solution tension than platinum, the other one being a compound of a metal of lower solution tension than hydrogen.

1,557,236. POULTRY ROOST. GEORGE H. BLINN, Topsfield, Me. Filed Nov. 13, 1923. Serial No. 674,533. 1 Claim. (Cl. 119—25.)



A poultry perch comprising a hollow cylindrical open ended body composed of upper and lower semi-cylindrical parts, said parts being substantially channel-shaped in cross section and being hingedly connected together, the upper part of said body being imperforate and the lower part being provided with a multiplicity of longitudinally spaced openings communicating with the interior of said body, said openings being disposed in longitudinal rows extending from end to end of the lower part and being arranged in divergent relation on opposite sides of the longitudinal center of the latter to form two rows, there being a pair of longitudinal grooves formed in the outer surface of said lower part, and said grooves intersecting said openings, whereby to interconnect the same to guide and facilitate entrance of the insects.

---

1,557,237. SPRING DEVICE. RUBEN BODO, Moline, Ill., assignor to Hawkeye Invention Co., Davenport, Iowa. Filed Oct. 21, 1922. Serial No. 596,032. 2 Claims. (Cl. 267—45.)

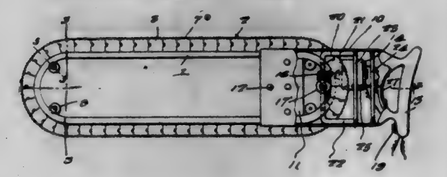
1. The combination with a vehicle chassis including a frame, an axle, and a cushioning spring between the frame and axle resisting movement of the frame and axle toward one another, of tensioning means connecting the frame and axle tending to force the frame and axle toward one another in opposition to the movement of the spring, including a second spring pivoted upon the opposite side of the axle from and extending in the same direction as the spring of the vehicle chassis, connections between one end of the second spring and the vehicle spring and a second connection between the opposite end of the second spring and the chassis, the first named connections being at opposite sides of the axle with respect to one another and rigidifying the spring butt to the axle in adjusted positions with relation thereto.

---

1,557,238. MOTOR-DRIVEN CHAIN SAW. RICHARD F. BOMMER, Tuolumne, Calif. Filed Nov. 22, 1924. Serial No. 751,633. 1 Claim. (Cl. 143—32.)

A device of the class described comprising a channel-shaped frame, a chain saw adapted to travel therein, said chain saw including a plurality of inter-connected sections, saw teeth on the outer edge of the sections, gear teeth on the inner edges of the sections, a casing

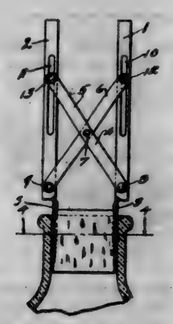
supported on one end of the frame, a drive shaft supported in the casing, a driven shaft supported in the casing a cog wheel on said shaft adapted for engagement with the gear teeth on the inner edges of the sections of the chain, gearing between the drive and driven shafts, a slidable yoke for supporting the driven shaft, a ball terminal on one end of the driven shaft, a socket in the casing for receiving the ball terminal of the driven



shaft, a stationary cross member mounted in the casing rearwardly of said yoke, a bar secured to the rear free edges of the yoke member, an adjusting bolt carried by the bar and having the threaded end thereof extended through the stationary cross member and a thumb nut on the threaded end of the bolt whereby the bar may be drawn toward the cross member for tensioning the chain saw.

---

1,557,239. CORK PULLER. AUGUST V. BOHNER, Big Sandy, Mont. Filed June 9, 1923. Serial No. 644,408. 1 Claim. (Cl. 65—47.)

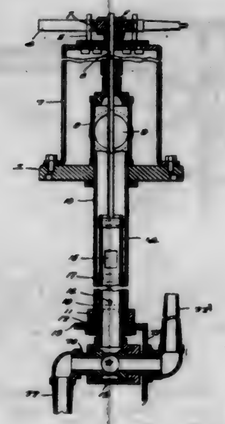


A cork puller comprising a pair of parallel handle bars, each handle bar having a thin blade at one end thereof for engaging a cork, each handle bar being equipped with a longitudinal slot, toggle levers comprising cross bars pivotally connected together intermediate their ends, the lower ends of the bars being pivotally connected to the lower ends of the said handle bars and pins upon, the opposite ends of the cross bars slidably mounted in said slots in the handle bars.

---

1,557,240. TANK CLEANER AND FLUID CIRCULATOR. ARTHUR B. BUTTERWORTH, Port Arthur, Tex. Filed June 16, 1924. Serial No. 720,469. 1 Claim. (Cl. 299—62.)

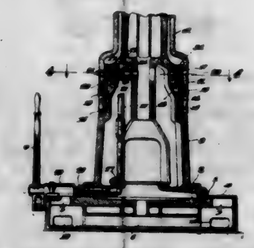
In a tank cleaner, a base, a tube extending through the base and supported thereby, means for introducing a column of liquid into the tube on one side of the base, a tubular cylinder journaled for rotation in the tube on the other side of the base and provided at points between its ends with openings, means for rotating the cylinder, a gear wheel fixed to the tube, a nipple journaled for rotation transversely across the lower end of the cylinder and provided at a point between its ends



with openings which communicate with the interior of the cylinder, and a gear wheel carried by the nipple and meshing with the first mentioned gear wheel.

---

1,557,241. FRICTION CLUTCH. JACK C. CARLTON, Cincinnati, Ohio, assignor to The Carlton Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 23, 1922. Serial No. 546,136. 17 Claims. (Cl. 188—78.)



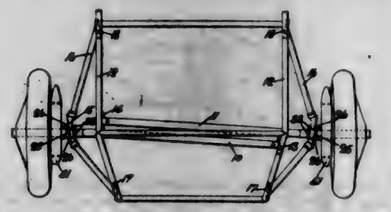
1. In a device of the class described for clamping together two members having concentric circumferential surfaces, a pair of crescent shaped members adapted to be interposed between concentric circumferential surfaces of two members to be clamped, with the ends of said wedge members arranged to relatively overlap one another, and means for moving one of said members toward a second.

---

1,557,242. LANDING CHASSIS FOR AIRPLANES. VIRGINIUS E. CLARK, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 27, 1921. Serial No. 524,929. 5 Claims. (Cl. 244—2.)

1. In a landing gear for airplanes, in combination, right and left V-struts pivoted to the right and left

sides respectively of the fuselage, right and left wheel axles each having a slidable connection to the lower



part of its respective V-strut and pivoted at its other end to the opposite side of the fuselage.

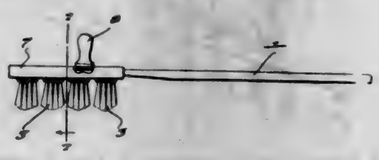
---

1,557,243. DEVICE FOR FORMING ROUND BELTING. ALBERT H. DE VOE, Westfield, N. J., assignor, by mesne assignments, to The Cleveland Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 30, 1919. Serial No. 327,585. 30 Claims. (Cl. 211—14.)

1. In a sewing machine, stitch-forming mechanism, means for rolling a strip of flexible material into a substantially convolute form, and means for feeding it to the stitch-forming mechanism.

---

1,557,244. ROTARY TOOTHBRUSH. NAZAIRE T. DOMINGUE, Waterbury, Conn. Filed July 3, 1924. Serial No. 724,044. 1 Claim. (Cl. 15—28.)

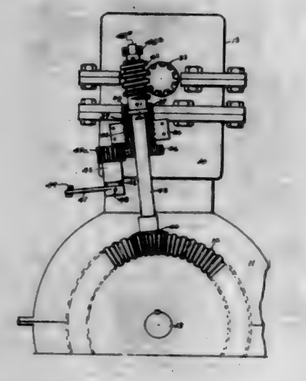


In a rotary tooth brush structure, a handle in the form of a flat bar, said bar being provided in its under side and at its outer end with a channel, the inner surface of one wall of which is serrated to provide a toothed rack, rotary cleaning elements embodying head including toothed pinions located within said channel, the teeth of the pinions meshing with the teeth of said rack, and a metal casing partially surrounding the channeled portion of the handle and pinion, and provided with longitudinally spaced openings through which said cleaning elements extend.

---

1,557,245. ROTARY VALVE STRUCTURE FOR ENGINES. PEARL G. FRAZIER, Ankeny, Iowa. Filed Nov. 16, 1921. Serial No. 515,548. 1 Claim. (Cl. 123—190.)

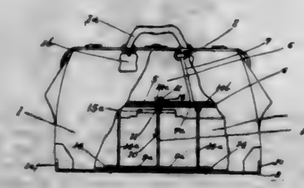
The combination with an engine having an operative mechanism including cylinders and pistons and crank shaft with a rotary valve structure, comprising a rotary valve having an inclined passage for each cylinder, a worm wheel on the end of the valve, a worm in mesh therewith, a shaft on which said worm wheel is mounted, an exterior threaded sleeve nonslidably and rotatably mounted on the shaft,



an interiorly threaded bearing receiving the sleeve, controlling means for rotating the sleeve for moving the shaft longitudinally and thus varying the register of the worm with the worm wheel, the shaft being operatively connected with the crankshaft.

---

1,557,246. COMPARTMENT BAG. JESSE G. GALLOWAY, Falmouth, Ky. Filed Nov. 22, 1924. Serial No. 751,450. 6 Claims. (Cl. 190—52.)



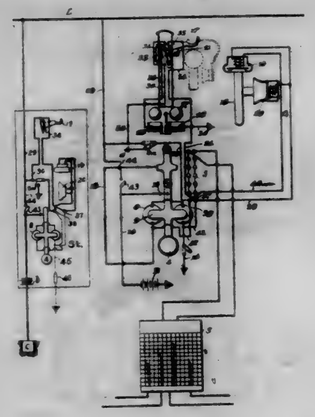
1. A portable hand bag having an open bottom, a separate base adapted to close said bottom, a false bottom within the bag located above the open bottom thereof, sufficiently to leave a space for insertion of desired articles, and means for removably securing said base in the bottom of the bag, said means being positioned so as to be operable from within the bag above the false bottom thereof.

---

1,557,247. COMBINED TELEGRAPH RELAY AND TELEPHONE. WILLIAM R. GARNER, Erie, Pa., assignor of one-fourth to Charles Jacobsen and one-fourth to A. F. Joras, both of Washington, D. C. Filed Jan. 20, 1920. Serial No. 352,770. 8 Claims. (Cl. 179—2.)

6. The combination of a single metallic line, a substation telephone set, a connection by which said set is joined to the line, and a hook switch provided with contacts for keeping a grounded ringing mechanism normally in readiness for a ringing impulse from the line; a telegraph instrument including an electro-magnetically actuated key-armature normally unaffected by a ringing

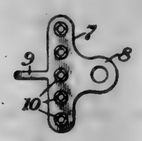
impulses, but provided with switch means for joining said connection to said instrument for receiving telegraphic impulses, means embodied in the telephone set prevent-



ing energization of the ringing mechanism by said impulses, and a sound-proof compartment housing the telegraph instrument to prevent the escape of telegraphic sounds.

---

1,557,248. CORD TERMINAL. HUGO GRENSBACK, New York, N. Y. Filed Dec. 28, 1923. Serial No. 683,128. 5 Claims. (Cl. 173—334.)



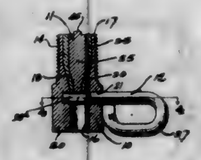
3. A cord tip terminal comprising a metallic base plate having an eyelet lug projecting from one edge for engagement about a binding screw and a bar lug projecting from the opposite edge for engagement in the socket of a binding post and a plurality of spring cord tip sockets on said base plate.

---

1,557,249. GAS-SAVING DEVICE. ELIAS GOOSSENS, Long Island City, N. Y. Filed Aug. 28, 1923. Serial No. 659,713. 1 Claim. (Cl. 67—120.)

As a new article of manufacture, a gas saving device adapted to be inserted into a gas supply hose of elastic formation, a hollow bullet-shaped shell embodying a cylindrical portion closed at one end and open at its opposite end, and a complemental portion detachably connected to the open end and provided with a reduced pointed nose to facilitate insertion of the device into said hose, the closed end of said first named portion being provided with restricted intake openings, and said nose being slit to provide a restricted discharge.

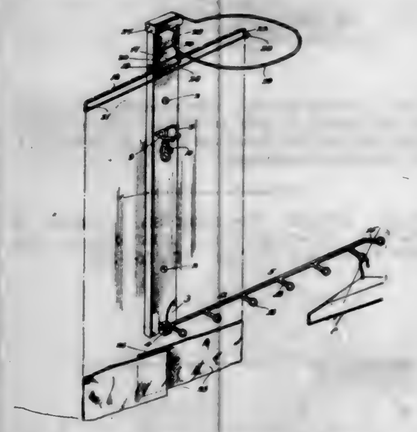
1,557,250. SAFETY PLUG. EARL M. GRANDFIELD, Boynton, Okla. Filed Mar. 30, 1922. Serial No. 548,140. 8 Claims. (Cl. 122—504.)



1. As an article of manufacture, a safety plug comprising a tubular body having an internal valve seat, a valve member slidable in the tubular passage in said body and comprising a core of non-fusible material having spaced laterally disposed extensions normally sealing said passage projecting from its sides for engaging the walls of the passage and retaining the core centered in the passage, said core having a valve head forming portion for seating upon the valve seat, fusible material upon said core about the valve head and intermediate said lateral extensions, and removable means for retaining the core in a raised position out of engagement with the valve seat when the fusible material is melted.

---

1,557,251. WALL CLOSET. CHARLES R. HAMLIN, Chicago, Ill. Filed Apr. 20, 1923. Serial No. 633,490. 2 Claims. (Cl. 45—37.)



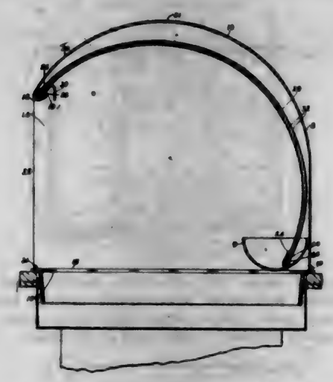
1. A portable closet comprising a base, a bracket thereon, a garment-carrying element consisting of parallel side by side strands of stout wire forming a shank, eyes at the ends of the shank integrally uniting said strands, one of said eyes being pivotally engaged in said bracket and the opposite end of the shank being diverged slightly away from the base to form a handle, a series of arms integral with one strand of the shank and inclined toward the same, each consisting of parallel branches of the strand integrally united by a terminal eye, and a retainer on the base having resilient fingers to engage the shank of the garment-carrying element and hold the same in upright position close to the base.

---

1,557,252. HEAT DEFLECTOR. JOHN D. IMBAUGH, Cincinnati, Ohio, assignor of one-half to Frances C. Zimmerman, Cincinnati, Ohio. Filed Apr. 14, 1925. Serial No. 23,082. 6 Claims. (Cl. 261—104.)

1. In a device of the class described the combination with a curved hood having an open bottom and front,

of a trough disposed interiorly of the hood and positioned opposite the open front, a curved frame interiorly of the hood and having its one edge disposed within the



trough and its opposite edge removably retained adjacent the front edge of the hood, and a porous member carried by the frame.

---

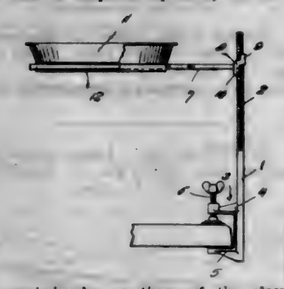
1,557,253. OUTBOARD MOTOR FOR SMALL CRAFT. LOUIS J. JOHNSON, Mishawaka, Ind., assignor to Johnson Bros. Engineering Corporation, South Bend, Ind. Filed Jan. 5, 1924. Serial No. 684,563. 5 Claims. (Cl. 115—18.)

1. The combination with an outboard motor having a tubular drive shaft casing, a locking sleeve carried by the outer side of said drive shaft casing, said sleeve being rotatably mounted in a segmentally shaped plate, a water jacket carried by the motor, a pump rotatable with the shaft casing and disposed beneath the sleeve, of a pipe connection between the water jacket and the pump, said pipe connection extending through the sleeve between the inner and outer peripheries thereof.

---

1,557,254. SUPPORTING DEVICE. HARRY P. KING, Marshall, Mo. Filed Mar. 17, 1925. Serial No. 16,156. 1 Claim. (Cl. 248—20.)

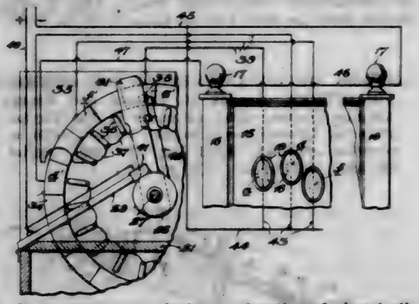
A supporting device of the class described comprising an upright, the upper portion thereof being threaded, a bracket associated with the lower end of the upright, means for securing the bracket to a suitable support, a laterally extending article supporting arm, a sleeve carried by the inner end of said arm and disposed transversely of the arm, said sleeve being cut away at its respective ends to provide a pair of opposed semi-circular portions whereby the inner end of the arm may be readily adjusted in any vertical position on the upright, when the arm is disposed upwardly at an incline so



that the semi-circular portions of the sleeve are out of engagement with the uprights, the semi-circular portions of the sleeve being internally threaded for cooperation with the threaded upright to permit the swinging movement of the laterally extending arm with respect to the upright.

---

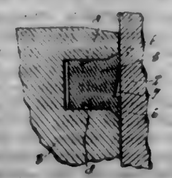
1,557,255. AMUSEMENT DEVICE. SAMUEL B. KISER, Altoona, Pa. Filed July 18, 1924. Serial No. 726,704. 9 Claims. (Cl. 273—86.)



1. In an amusement device, a plurality of electrically operated main indicating elements, a plurality of electrically operated auxiliary indicating elements, means to intermittently operate the auxiliary indicating elements, means to intermittently operate the main indicating elements, the interval of time between the operation of said main indicating elements being different from the interval of time between the operation of the auxiliary indicating elements and manually operated means for interrupting the operation of said elements.

---

1,557,256. PISTON RING. SAM LA BONSKY, Vancouver, British Columbia, Canada. Filed June 16, 1925. Serial No. 37,498. 2 Claims. (Cl. 74—109.)



1. A piston ring, the sides of which are parallel throughout the greater part of its thickness and are therefrom angularly enlarged to the outer circle so as to

offer acute cutting edges where the ring bears on the cylinder wall, and grooves for retaining a lubricant in the surfaces which contact with the groove of the piston and the wall of the cylinder.

---

1,557,257. MOTOR FUEL. JEAN LA RIBOISIERE, Washington, D. C. Filed Aug. 26, 1925. Serial No. 52,688. 5 Claims. (Cl. 44—9.)

1. A motor fuel comprising a hydrocarbon, aniline and an ether.

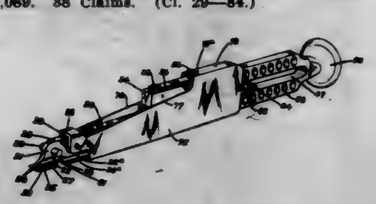
---

1,557,258. SICKLE GUARD. LOUIS A. LARSEN, Hubbard Precinct, Nebr. Filed Feb. 27, 1924. Serial No. 695,435. 1 Claim. (Cl. 56—310.)

A sickle guard embodying a supporting plate, a sickle tooth projecting forwardly therefrom and having a pointed end and a thin vertical fin formed integrally with the forward portion of the tooth, and projecting upwardly and downwardly from the pointed end of the tooth, the lower edge of the fin being substantially flush and aligned with the lower edge of the body of the tooth, and the forward edge of the fin being curved to substantially semi-circular shape, with a diameter greater than the mean vertical diameter of the tooth.

---

1,557,259. DEVICE AND METHOD FOR ASSEMBLING ARMATURES. GEORGE H. LELAND and ROBERT H. AHLERS, Dayton, Ohio, assignors to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed May 17, 1920. Serial No. 382,089. 38 Claims. (Cl. 29—84.)

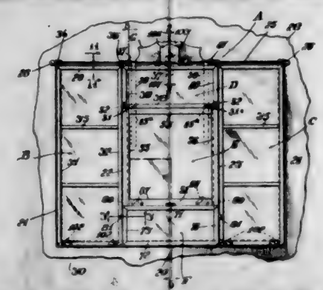


1. The method of inserting a retaining strip in each of a series of longitudinal slots in an armature core, which includes rotating the core to bring a slot to a predetermined position; moving a wire compacting tool longitudinally through a slot in said position to compress wires in the slot, removing the tool from the opposite end of the slot; and placing a retaining strip in each of the slots while the wires are in compact relation.

---

1,557,260. DISPLAY DEVICE. WILLIAM A. LEU and EDWARD E. LEU, Chicago, Ill. Filed Feb. 18, 1924. Serial No. 693,447. 7 Claims. (Cl. 40—64.)

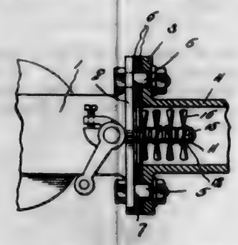
1. A display device comprising a main frame, two outer panel frames pivoted at their tops to said main frame, a series of central pivoted panel frames, the uppermost central panel frame being pivoted at its upper edge to said main frame, means for locking the lower portion of said uppermost central panel frame to said main frame, a mounting for the second central panel frame upon said main frame underlying said uppermost central panel frame whereby the locking of the latter to the main frame holds the former against movement outward from said main frame, a mounting for the third central panel frame upon said main frame whereby said third frame is locked by said second frame,



and locking means on said third central panel frame for holding said outer panel frame against movement from said main frame when said third panel frame is in locked position against said main frame.

---

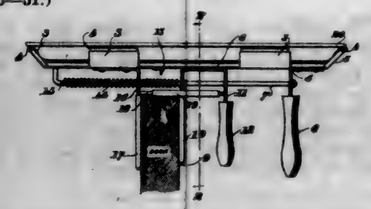
1,557,261. MIXING DEVICE. GILBERT J. MCCARTHY, Washington, D. C. Filed Dec. 1, 1924. Serial No. 753,233. 3 Claims. (Cl. 48—180.)



1. A mixer comprising a plate member having a central opening, and a plurality of segmental openings arranged concentrically to the central opening, a plurality of bearing members, and an impeller for each bearing member rotatably mounted thereon, and assembling means for securing said bearing members in rigid aligned relation to each other and to the plate member in alignment with the central opening thereof.

---

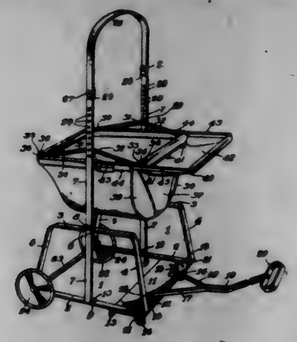
1,557,262. SERVING-TRAY SUPPORT FOR AUTOMOBILES. JESSE E. MCGEE, Guntown, Miss. Filed Jan. 17, 1924. Serial No. 686,851. 5 Claims. (Cl. 45—51.)



1. A serving tray support for automobiles comprising a body portion provided with outwardly and upwardly extending tray supporting arms, a handle fixed to the under surface of said body portion, a bearing rod secured to said handle at one end and at its opposite end to the body portion, and in spaced relation thereto, fixed clamping arms carried by said body portion, a slidable clamping arm mounted on said bearing rod, a second handle connected with said slidable clamping arm adapted to draw the same away from said fixed arms, and resilient means normally tending to draw said slidable clamping arm toward said fixed clamping arms.

---

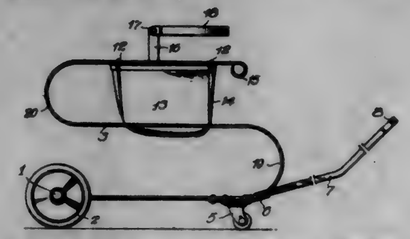
1,557,263. CHILD'S CART. JAMES R. MILLER, Flint, Mich. Filed Mar. 10, 1924. Serial No. 698,316. 5 Claims. (Cl. 280—47.)



4. In a child's cart, a resiliently-supported seat frame and seat, a toy tray frame having a sliding connection with said seat frame, and a toy tray engaged over portions of the said frames with its end portions detachably connected together.

---

1,557,264. CHILD'S CART. JAMES R. MILLER, Flint, Mich. Filed Apr. 28, 1924. Serial No. 709,489. 7 Claims. (Cl. 280—48.)

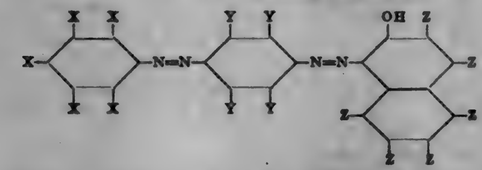


5. In a child's cart, side members, each composed of a single spring S-shaped in form and disposed with the long members thereof disposed substantially horizontally and extended substantially the entire length of the cart.

---

1,557,265. DISAZO DYE. RICHARD C. MILLER, Winfield, Long Island, N. Y., assignor of one-half to Toch Brothers, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 29, 1924. Serial No. 752,934. 2 Claims. (Cl. 260—84.)

1. As new products, compounds formed by the combination of the diazo compounds of para-aminoazoxylenes with betahydroxynaphthoic acids, said products being insoluble in water, fast to light, and soluble in non-aqueous materials and having in the free state most probably the formula:



in which two of the X's stand for methyl groups, two of the Y's stand for methyl groups, and one of the Z's stands for a carboxyl group.

---

1,557,266. COMPOSITION ADAPTED TO GENERATE FREE IODINE. WILLIAM C. MOORE, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Dec. 27, 1922. Serial No. 609,341. 29 Claims. (Cl. 167—9.)

2. A dry composition comprising an iodide of an alkali metal, a salt of an alkali metal containing iodine and oxygen and a substance that hydrolyses to form an acidic agent capable of acting upon the same to liberate iodine.

10. A dry composition comprising an iodide of an alkali metal, a salt of an alkali metal containing iodine and oxygen and a dehydrated crystalline aluminum sulfate.

29. A dry composition in the form of a tablet comprising an iodide of an alkali metal, a salt of an alkali metal containing iodine and oxygen, a substance that hydrolyses to form an acidic agent capable of acting upon the other constituents to liberate iodine, a soluble filling material and talc.

---

1,557,267. SAFETY CLIP FOR PENS, PENCILS, AND THE LIKE. MORRIS MOSTKOFF, Brooklyn, N. Y. Filed Feb. 11, 1925. Serial No. 8,844. 3 Claims. (Cl. 24—11.)

1. In combination with a pen or pencil, a safety clip adapted to lock said pen or pencil in the pocket comprising a band rigid with said pen or pencil, a plate depending therefrom, the lower end of said plate being bifurcated by a slot, said plate having legs at its lower end, a locking lever pivoted on said legs, said lever having parallel longitudinal channels at its sides, the legs cooperating with the channels to lock said lever in

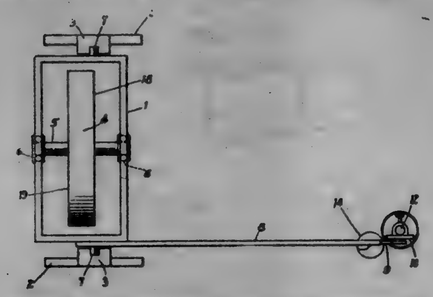
a position aligned with the plate, and a tooth on said lever adapted to project toward the pen or pencil and pierce the pocket material to lock said pen or pencil in place in the pocket.

---

1,557,268. PROCESS OF AND APPARATUS FOR BALANCING ROTATIVE BODIES. BURT L. NEWKIRK, Minneapolis, Minn., assignor, by mesne assignments, to Precision Balancing Machine Company, Eau Claire, Wis., a Corporation of Wisconsin. Filed July 23, 1920. Serial No. 396,564. 30 Claims. (Cl. 73—51.)

1. In the process of balancing a rotative body, the step which consists in rotating the body upon a resilient

support at a varying speed that is uniformly repeatable and that passes the critical speed and determining and



measuring the maximum amplitude of oscillation of said support.

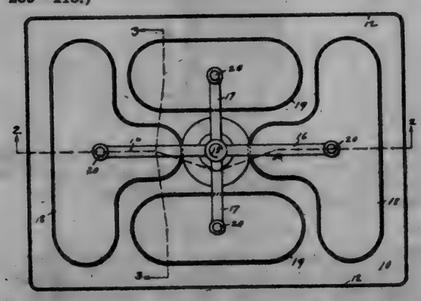
---

1,557,269. DOMESTIC FIRE GRATE. REGINALD JOHN PAGE, Auckland, New Zealand, assignor of one-half to Joanna Dickson and one-fourth to Harry Clinton McElwain, both of Auckland, New Zealand. Filed June 3, 1925. Serial No. 34,705. 6 Claims. (Cl. 126—125.)

1. A fire grate of the kind described revolvable about a vertical axis in a cross passage in chimneys so as to be capable of being made to face into either of two rooms; shutters and frames operable vertically in guides at each end of said passage to completely close one end of said passage and partly close the other end thereof, or to completely close both ends of said passage, substantially as described and illustrated.

---

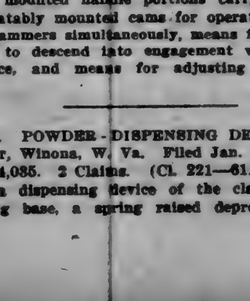
1,557,270. VACUUM CUP FOR WASHING MACHINES. WILLIAM E. PINCKNEY, Portland, Oreg. Filed Nov. 10, 1924. Serial No. 748,920. 1 Claim. (Cl. 259—113.)



The combination of a rectangular water container having a vertical plunger mounted near the middle of its bottom; a pair of crossed arms attached to the upper end of said plunger; a pair of T-shaped cups at the opposite ends of one pair of arms; and a pair of longitudinal cups on the opposite ends of the remaining pair of arms, said longitudinal cups occupying space between said T-shaped cups, all of said cups occupying the major portion of the area of said water container.

---

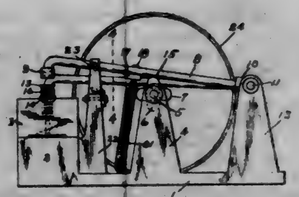
1,557,271. CARRIER DEVICE FOR SUITCASES, VALISES, AND THE LIKE. CHARLES RITTENHOUSE, Jr., Cincinnati, Ohio. Filed Aug. 4, 1923. Serial No. 659,128. 2 Claims. (Cl. 224—28.)



1. An auxiliary or adjunct carrier-element for a suitcase, valise, or like pack or burden, adapted to be used or rested on the forearm of the person and comprising an arched fore-arm member, a prop-member and an intermediate attaching jaw-member, the latter adapted to be engaged with the grip-handle of the said burden and the said prop-member to rest or fulcrum upon and engage the upper face or the side of the said burden.

---

1,557,272. VALVE-SEATING MACHINE. ALBERT H. SCHAEFER, Columbus, Ind. Filed July 10, 1922. Serial No. 574,110. 4 Claims. (Cl. 78—24.)



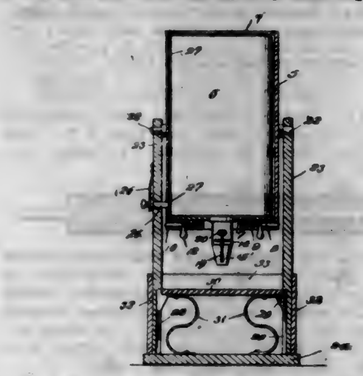
1. A valve seating machine adapted for delivering blows to the valves of a motor for driving said valves against their seats, comprising a plurality of hammers, pivotally mounted handle portions carrying said hammers, rotatably mounted cams for operating a plurality of said hammers simultaneously, means for causing said hammers to descend into engagement with the valves with force, and means for adjusting said hammers laterally.

---

1,557,273. POWDER-DISPENSING DEVICE. JOSEPH SECRIST, Winona, W. Va. Filed Jan. 2, 1924. Serial No. 684,035. 2 Claims. (Cl. 221—61.)

1. In a dispensing device of the class described, a supporting base, a spring raised depressible platform

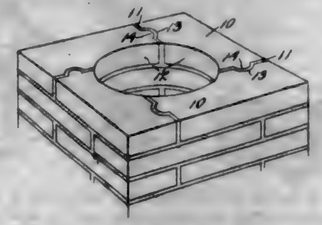
mounted above said base, for movement toward and from the latter, and a pivotally mounted container above said platform for containing a powder keg having a



valved discharge nozzle for disposition above said platform, said platform being adapted to hold a receptacle, placed thereon, against the nozzle.

---

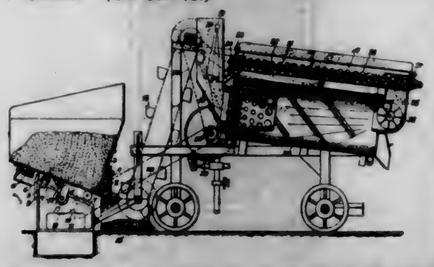
1,557,274. BRICK. CLARENCE E. SMITH and NOAH M. BUCKINGHAM, Wabash, Ind., assignors of one-third to A. H. Landwehr, Holland, Mich. Filed Dec. 27, 1924. Serial No. 758,440. 4 Claims. (Cl. 72—91.)



1. A chimney brick in the form of a rectangular parallelopiped having the faces adjacent to one vertical edge cut away to form a uniformly curved surface which is adapted to define a closed cylindrical opening when laid with other blocks of corresponding shape, substantially as set forth.

---

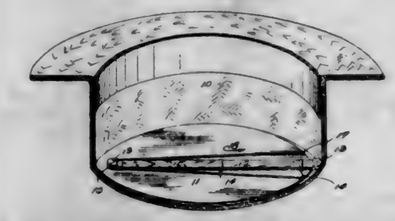
1,557,275. METHOD AND APPARATUS FOR MIXING AND WORKING UP GRANULAR AND PULVERULENT MATERIAL. EMILE SPRENGER, Goldach, Switzerland. Filed July 13, 1922. Serial No. 574,756. 7 Claims. (Cl. 83—73.)



1. The process of working up and mixing a plurality of granular materials, consisting in subjecting the several materials to agitation whereby the surfaces of the granules are abraded, with retention in the mass of the particles detached by abrasion, and concurrently commingling streams of the agitated materials under pressure in a confined space, agitating the mixture in the said space, and withdrawing a constricted stream of the mixture from the said space.

---

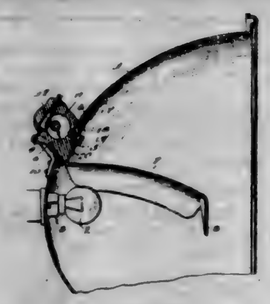
1,557,276. HAT FAN. EUGENE STEBBINGS, Des Moines, Iowa. Filed Apr. 23, 1924. Serial No. 708,434. 1 Claim. (Cl. 230—33.)



1. In a fan structure of the class described adapted to be received and retained in a hat or the like, a fan element, a handle member slidably mounted on the fan for movement in a plane parallel with the plane of the fan, the fan and handle having cooperating members for slidably mounting the handle on the fan, a yielding device interposed between the fan and the handle for yieldingly tending to move the handle to extended position, said handle and fan having coacting means for limiting the extending movement of the handle, whereby when the handle is moved to one position against the tension of the yielding device, it lies substantially parallel with the fan, whereas when the handle is permitted to move toward extended position when the device is placed in a hat, the fan will engage one side of the hat and the handle the other side for yieldingly holding the fan in the hat by frictional engagement therewith.

---

1,557,277. REFLECTOR. JOHN ROBERT STONEY, Ouachita, La. Filed Jan. 9, 1925. Serial No. 1,460. 5 Claims. (Cl. 240—45.)



1. A headlight comprising a casing, provided with a slot, a shield provided with an arm projecting through the slot pivotally mounted on the back of the casing, a block secured to the arm movable through the slot and provided with a central passage, a pair of spaced solenoids, and a single armature movable in the solenoid, a cone-shaped member on the armature and adapted to be moved into the passage in the block and located eccentrically of the passage in the block, said cone-shaped member when moved into the passage in the block engaging the walls of said passage and causing the block to be elevated and likewise the shield.

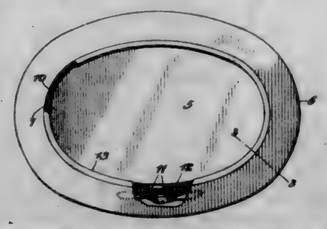
1,557,278. LADDER JACK. SAMUEL C. TUSSING, Findlay, Ohio. Filed Dec. 26, 1924. Serial No. 758,204. 2 Claims. (Cl. 304—34.)

1. In a device of the character described, a pair of bars having hooks formed at one of their respective ends, a pair of spaced arms having pivotal connection with each of the bars, bars formed with notches and having pivotal connection with the first mentioned bars, and extending between the arms of each pair, a pressure block slidably mounted between each pair of arms, a pin extending through the pair of arms and adapted to fit in the notches to hold the notched bar against movement, and resilient means carried by the pressure block for holding the pin in engagement with the notched bar.

1,557,279. LOOSE-LEAF BINDER. RICHARD M. VAN VALKENBURGH, Kansas City, Mo., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Aug. 15, 1924. Serial No. 732,315. 9 Claims. (Cl. 129—12.)

5. In a loose-leaf binder, the combination with a pair of leaf-holding posts and a hollow clamping member provided with apertures for receiving said posts, of a post-gripping means, an actuator therefor and means for supporting said gripping and actuating means in their related position before inserting the same into said hollow clamping member.

1,557,280. HAT CONFORMATOR. CHARLES H. WATSON, New York, N. Y. Filed Dec. 24, 1920. Serial No. 432,912. 2 Claims. (Cl. 2—185.)

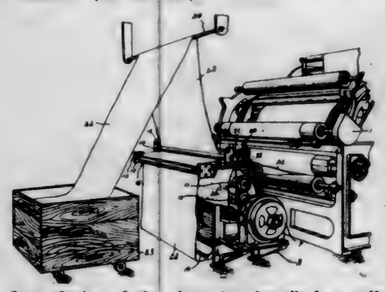


1. The combination with a hat having a crown and a brim and a sweat band attached at one of the edges at the junction of the hat crown and brim, a fabric sheath having its inner edge secured to the wall of the hat crown, a considerable distance above the point of attachment of the sweat band and the outer end of the sheath having a flattened tubular portion and an adjustable flat elastic tape enclosed within said tubular portion having the direction of its width in parallel relation to the wall of the hat crown.

1,557,281. INKING ROLLER FOR PRINTING PRESSES. WILLIAM C. HART, New York, N. Y. Filed Dec. 4, 1922. Serial No. 604,861. 11 Claims. (Cl. 91—67.8.)

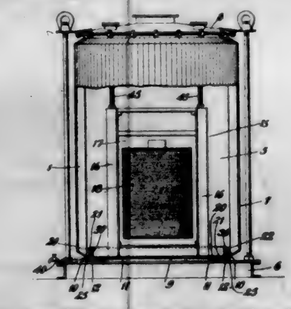
1. An inking roller comprising an inner portion formed of suitable plastic glue and glycerine composition, an outer portion of glue and glycerine composition formed on said inner portion, and means interposed between said portions for preventing adhesion of the outer portion to the inner portion when the outer portion is to be removed.

1,557,282. CLOTH MAKING. ALPHONSE J. HENRICHON, Palmer, Mass. Filed June 1, 1923. Serial No. 642,809 17 Claims. (Cl. 26—28.)



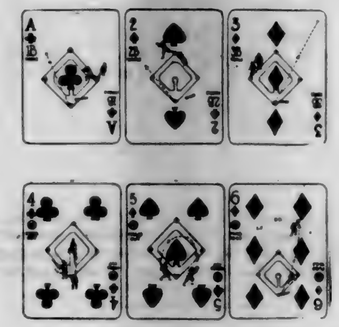
1. In a device of the character described, a roller, a sheet metal cover on the roller having short, sharp, non-yielding, pointed teeth struck up therefrom, means to rotate the roller, and means to draw the cloth over the roller whereby the fibers of the cloth are raised and broken off close to the surface of the cloth.

1,557,283. TRANSFORMER STRUCTURE. SAMUEL HORELICK, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed May 4, 1923. Serial No. 636,524. 7 Claims. (Cl. 175—361.)



1. In a transformer structure a sheet metal tank having a sheet metal bottom, a transformer in said tank supported by said bottom, a retainer ring fastened to said bottom and spaced from the side walls of said tank, and means carried by said transformer and engaging said ring to hold said transformer in position on the bottom of said tank and out of engagement with the sides thereof.

1,557,284. PLAYING CARDS. JOSHUA HOROWITZ, Brooklyn, N. Y. Filed Sept. 18, 1924. Serial No. 737,559. 3 Claims. (Cl. 273—152.)

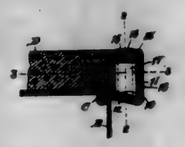


1. The winner must have the greater number of runs, or of runners most nearly advanced towards home plate. The five cards are calculated to determine the number of runs scored, or the position of the men on the bases. The cards need not be figured in the rotation in which they were dealt. If the player were first given a diamond 10 (home run) and then an ace (single) he has the privilege of counting it as though they were dealt in the opposite order. In other words the player may advance his men as far as possible to advance them with the 5 cards, just as if they had been dealt him in the rotation most advantageous to the player.

1,557,285. SAFETY-TREAD-STEP CONSTRUCTION. ARTHUR SHERIDAN HUGHES, Mansfield, Ohio. Filed Apr. 21, 1922. Serial No. 555,907. 12 Claims. (Cl. 72—96.)

1. In a stair construction, a step including a riser and a tread member interlocked at their front edges forming the nose of the step, and a separate nose piece applied over the nose at the top and provided with pockets filled with non-slipping material.

1,557,286. INTERLOCKED-STEP CONSTRUCTION. ARTHUR SHERIDAN HUGHES, Mansfield, Ohio. Filed Apr. 21, 1922. Serial No. 555,908. 21 Claims. (Cl. 72—96.)

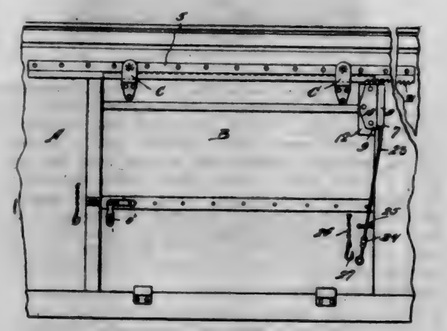


20. In a stair construction, a tread member formed with a plastic tread face, a nose piece having a depending channel embedded in said face, and a filling of non-slipping material in said channel.

1,557,287. STAIR CONSTRUCTION. ARTHUR SHERIDAN HUGHES, Mansfield, Ohio. Filed Apr. 21, 1922. Serial No. 555,909. 11 Claims. (Cl. 72—96.)

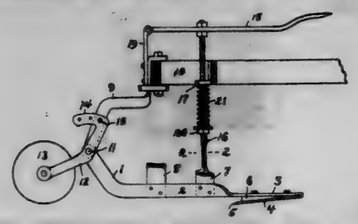
1. In a stair construction, a step including a riser and a tread, each formed of one piece in separate sections overlapped and interlocked at their front edges so as to form a nose for the step having a double thickness, the riser being provided with a rearward continuation constituting a nose piece, said nose piece being formed with a channel, and a strip of non-slipping material within the channel and projecting above the surface of the nose piece.

1,557,288. AUTOMATIC FREIGHT-CAR-DOOR-LOCKING MECHANISM. JAMES E. HUNTER and CHRISTIAN H. LINDSAY, Monaca, Pa. Filed Mar. 7, 1925. Serial No. 13,771. 5 Claims. (Cl. 292—164.)



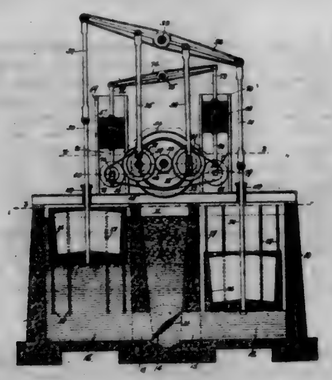
1. In combination, a freight car door, a track, said door being slidably mounted on said track, said track provided with a series of ratchet teeth, and a spring pressed latch device engageable with said teeth for allowing the door to be freely closed and preventing it from being normally opened.

1,557,289. BEET TOPPER. OLIVER E. HUICK, Wauseon, Ohio. Filed Sept. 2, 1924. Serial No. 735,244. 5 Claims. (Cl. 55—107.)



5. In apparatus of the class described, a sled having a pair of parallel runners; a cutting means at the front end of the sled including a pair of discs alined respectively with the runners; a topping blade transversely disposed respecting the sled and fixed thereto at the rear end thereof; an arch fixed on the sled at the rear end thereof in advance of said blade, its top extending in a plane above the blade; automatic means applying downward pressure to the sled at the rear part thereof; and manually operated means for augmenting the downward pressure.

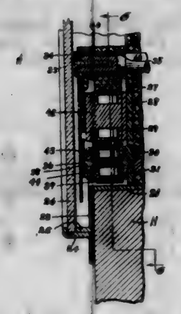
1,557,290. WATER ENGINE. STANISLAO IPPOLITO, New York, N. Y. Filed Aug. 15, 1923. Serial No. 657,539. 7 Claims. (Cl. 253—18.)



1. A water engine comprising a structure presenting a pair of wells each formed with an inlet opening and an outlet opening, a valve controlling each opening, a float arranged in each well, a walking beam, a connecting rod interposed between said walking beam and each float, a power shaft, a crank shaft, gears mounted on the power shaft and on the crank shaft intermeshing with each other, a pitman interposed between said crank shaft and said walking beam so as to rotate said crank shaft and said power shaft, and a mechanism extended between said power shaft and said valves for alternately opening and closing said valves.

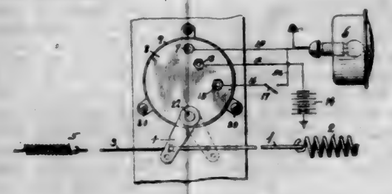
1,557,291. SIGNAL. GEORGE JACOBS, Detroit, Mich. Filed Mar. 29, 1921. Serial No. 456,718. 12 Claims. (Cl. 175—355.)

1. A signaling device for vehicles comprising a plurality of electric lamps, a pointer and means actuated by the vehicle to position the pointer according to the speed of the vehicle, a rotatable member adapted to be moved by said pointer in either direction, contact blades mounted in the rotatable member and insulated from each other, fixed contacts adapted to be engaged by said blades, and circuits between the fixed contacts and



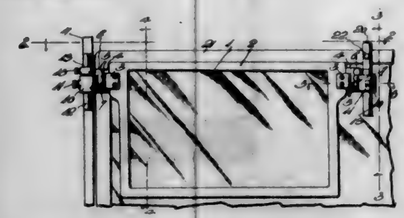
a current source and said lamps said pointer being adapted to engage and electrically connect predetermined blades when moving in one direction and to engage and connect other blades when moving in the opposite direction.

1,557,292. SIGNAL. GEORGE JACOBS, Detroit, Mich. Filed Aug. 26, 1922. Serial No. 584,400. 10 Claims. (Cl. 177—337.)



7. In combination with a vehicle, an electric warning signal therefor, a movable element for controlling the progress of the vehicle, a circuit including the signal and a suitable source of electric energy, means actuated by movement of the control element for intermittently opening and closing the circuit to energize and deenergize the signal, and means for controlling said first named means to govern the frequency with which the circuit is opened and closed.

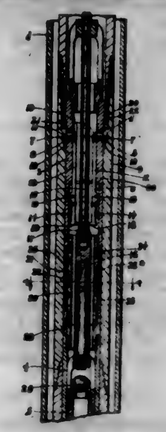
1,557,293. EYE-SHADING ATTACHMENT FOR WINDSHIELDS. CALLE P. JACOBSEN, Oakland, Calif. Filed Apr. 17, 1924. Serial No. 707,201. 2 Claims. (Cl. 296—97.)



2. A device of the class described comprising a clamp composed of a U-shaped body member and a clamping screw threaded through one side of said body member and having its inner end in opposing relation to the other side of the latter, the outer end of said screw

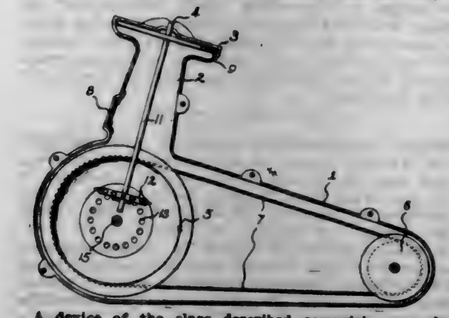
being bent at right angles to provide a post, a bracket mounted upon said post for adjustment to different longitudinal positions along the same, and an anti-glare shield pivoted to said bracket.

1,557,294. DEEP-WELL PUMP. DONALD FRANK JOHNS, Maricopa, Calif. Filed Oct. 17, 1924. Serial No. 744,151. 6 Claims. (Cl. 103—181.)



1. In a pump for deep wells, the combination of a liner, a flow-pipe having a bore receiving the liner, a latch-device including a dog mounted on the liner to anchor it in the flow-pipe, said flow-pipe having socket means to cooperate with the latch-device in anchoring the liner, actuating means for the latch-device with means for moving the latch device into its engaging position, a pump-rod having a mandrel cooperating with the actuating means to hold the latch-device in its retracted position in lowering the liner within the flow-pipe, said liner and said flow-pipe having cooperating engaging means located above the said socket means, for stopping the downward movement of the liner when the latch device is opposite to the said socket-means of the flow pipe, said actuating means for the latch-device operating upon a further downward movement of the pump-rod to permit the latch-device to engage the socket-means and thereby anchor the liner in the flow-pipe, said dog having an inclined outer face enabling the same to pass the engaging means on the flow pipe.

1,557,295. PICTURE-PROJECTING MACHINE. WALTER E. JOHNSTON, Youngstown, Ohio. Filed Apr. 21, 1923. Serial No. 633,705. 1 Claim. (Cl. 88—17.)

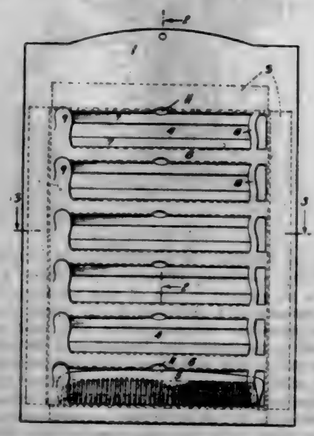


A device of the class described comprising an elongated casing having an upwardly extending part at one end thereof which is provided with a sight opening in its top, drums in the end portions of the casing, an endless strip passing over the drum and having pictures thereon, a rotary shutter in the top of the extension for controlling the sight opening, a shaft to which the shutter is connected, gears connecting the shaft with one of the drums, a handle connected with this drum for rotating the same and a window in the extension for permitting illumination of the pictures on the strip as they pass under the sight opening.

1,557,296. ABRASIVE POT-CLOTH FABRIC. RUSSELL B. KINGMAN, West Orange, N. J., assignor to Metal Textile Corporation, West Orange, N. J., a Corporation of Rhode Island. Filed Apr. 25, 1925. Serial No. 25,826. 5 Claims. (Cl. 66—4.)

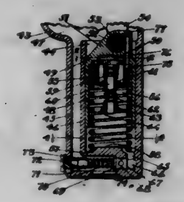
1. An abrasive pot-cloth fabric comprising interknit vegetable yarn and metallic threads so combined that the former provide a fabric body adapted to readily absorb and retain cleansing fluids while the latter are disposed to provide rib-like abrasive elements exposed on and projecting from the working face of said fabric body.

1,557,297. DISPLAY DEVICE. JOHN L. LITTLE, Brooklyn, N. Y., assignor to The Vulcanized Rubber Company, Inc., a Corporation of Maine. Filed Nov. 3, 1923. Serial No. 672,513. 1 Claim. (Cl. 211—14.)



A display device comprising a frame having front and rear portions, the said front portion being formed of a flat sheet of material in which a series of vertically aligned loops have been struck therefrom adjacent one edge thereof and a series of vertically aligned fingers struck therefrom adjacent the other edge and paired with the said loops, the material between each pair of loops and fingers being rearwardly bent and joined to the front portion of said back to form a plurality of receptacles, and a support hinged to the said back.

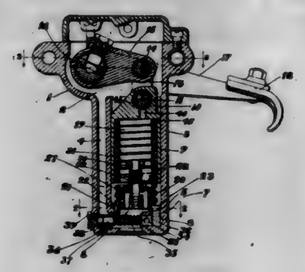
1,557,298. SHOCK ABSORBER. RALPH M. LOVEJOY, Meredith, N. H. Filed Nov. 10, 1921. Serial No. 514,378. 14 Claims. (Cl. 267—8.)



1. A shock absorber for cushioning the movement of two relatively movable members comprising a casing adapted to be secured to one of said members and having a tubular liquid-containing cylinder, a piston reciprocable in said cylinder, means connecting said piston to the other relatively movable member, a port in said piston, a valve cage seated upon said piston head communicating with said port and presenting a valve seat, a valve co-operating with said valve seat operable to establish a substantially free flow of the liquid through said port when the piston is raised, a spring engaging said valve cage acting to hold said valve cage in seated position during the movement of the piston and also tending to raise the piston and means for restricting the flow of liquid through said port during the downward movement of the piston.

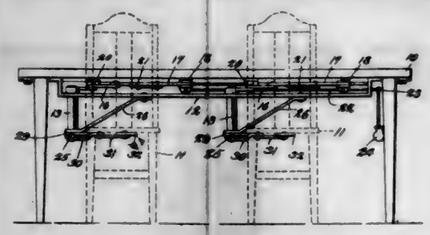
---

1,557,299. SHOCK ABSORBER. RALPH M. LOVEJOY, Meredith, N. H. Filed Nov. 28, 1921. Serial No. 518,120. 15 Claims. (Cl. 267—8.)



1. A shock absorber for cushioning the movement of two relatively movable members comprising a casing adapted to be secured to one of said relatively movable members presenting a reservoir for a liquid, a cylinder having an open end communicating with said reservoir and a head at the lower end located at a distance from the lower end of the casing and provided with an inlet port and with an outlet port, a conduit of relatively small diameter in the wall of said cylinder extending in parallelism with the axis thereof, communicating at its upper end with said reservoir and at its lower end extending below said cylinder head and communicating with said inlet and outlet ports, a piston reciprocable in said cylinder, means connecting said piston to the other relatively movable member, a valve in said inlet port operable when the piston is raised to permit liquid to flow freely from said conduit into said cylinder and a spring actuated valve for said outlet port, located below said cylinder head in said conduit, operable to restrict the flow of liquid from said cylinder into said conduit when the piston is moved downwardly.

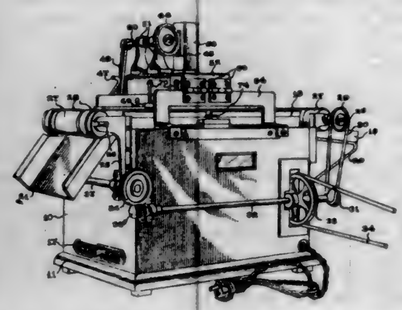
1,557,300. CHAIR-MOVING APPARATUS. CHARLES H. LUCUS, West Frankfort, Ill. Filed July 23, 1924. Serial No. 727,759. 4 Claims. (Cl. 155—81.)



1. A chair controlling apparatus comprising in combination with a table, spaced rotatable standards, means secured to the table to provide bearings for the upper ends of the standards, a bearing frame connecting the lower ends of the standards, a lower horizontally movable frame including a chair attaching arm secured to each of the standards and movable therewith, a crank arm secured to each of the standards, slides mounted beneath the table, means for guiding the slides, means operatively connecting the slides and crank arms, whereby the latter may be moved to rotate the standards and means connected to the standards whereby the latter may be operated.

---

1,557,301. PHOTOGRAPHIC-PRINTING MACHINE. FRED J. LYONS, Madison, Wis. Filed May 22, 1924. Serial No. 715,202. 7 Claims. (Cl. 95—78.)



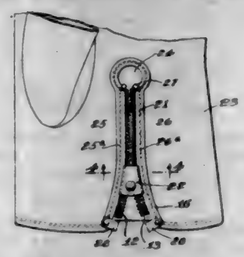
1. In a photograph printing machine, the combination of a cabinet, a source of illumination in the cabinet, a negative holder in the cabinet, a feeding device adapted to bring sensitized articles into registry with the negative holder, a reciprocating platen mounted over the feeding device and adapted to engage the feeding device for arresting the motion thereof when the article registers with said negative holder, and light controlling means mounted on said platen for controlling the illumination within the cabinet.

---

1,557,302. MECHANICAL ELEMENT AND METHOD OF MAKING SAME. JAMES MCINTOSH, Norristown, and JOHN M. TAYLOR, Bridgeport, Pa., assignors to Diamond State Fibre Company, Bridgeport, Pa., a Corporation of Delaware. Filed Jan. 15, 1924. Serial No. 686,331. 3 Claims. (Cl. 18—55.)

3. The method which consists in mounting between two bodies of sheet fabric a mass of irregularly placed pieces of fabric impregnated with a phenolic condensation product in its intermediate form; and thereafter subjecting said mass to heat and pressure to form a mechanical element in which the condensation product is in its final form.

1,557,303. SEMIDETACHED FASTENING DEVICE. DAVIS MARINSKY, Bronx, N. Y. Filed Jan. 21, 1925. Serial No. 3,738. 12 Claims. (Cl. 24—205.)



8. A fastening device of the class described comprising two coupling bodies secured to a binder composed of a flexible strand and a flexible attaching strip folded around and enclosing said strand and said bodies being coupled together by said binder.

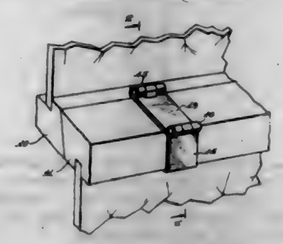
---

1,557,304. FASTENING DEVICE. DAVIS MARINSKY, Bronx, N. Y. Filed Jan. 21, 1925. Serial No. 3,739. 20 Claims. (Cl. 24—205.)

1. A device of the class described comprising two coupling bodies, each of said bodies comprising a plurality of independently formed link members, means for mounting said link members one upon the other and in common alinement and for coupling said link members together with that portion of said members on said means in juxtaposition and abutting, said mounting means being flexible, and means movably disposed on said bodies for coupling and uncoupling the same.

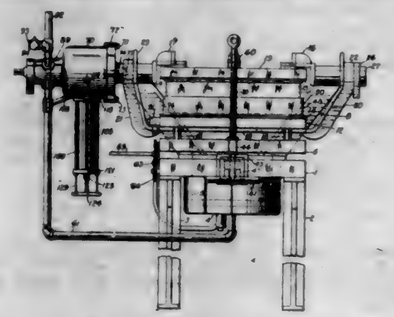
---

1,557,305. WINDOW-SASH LOCK. JOSEPH O. MEERBOTT, Jersey City, N. J. Filed Feb. 24, 1925. Serial No. 11,187. 6 Claims. (Cl. 292—288.)



1. In a device for locking two window sashes together, a plate, means for securing said plate to the inner face of a frame member of one of said sashes, a flange at the lower end of said plate adapted to bear against the bottom of said member, and an articulated hook hinged to the upper end of said plate, said hook being adapted to overlap the top of a frame member of the other of said sashes and hook under the edge of said last named member.

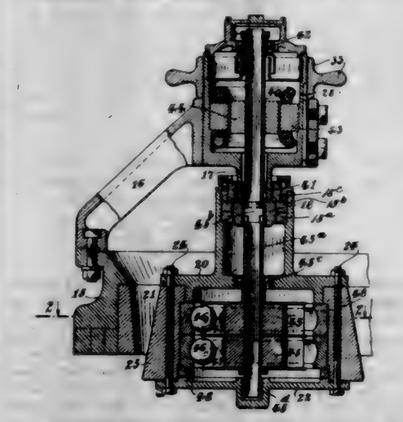
1,557,306. MOLDING MACHINE. PAUL S. MENOUGH, Bridgeport, Conn. Filed May 18, 1921. Serial No. 470,535. 51 Claims. (Cl. 22—27.)



1. In a molding machine, the combination with two pattern plates, a two-part flask, means for mounting one part of said flask containing sand on each of said plates, and means for moving one plate and one part of the flask into position above the other part of the flask and the other plate, of means for simultaneously squeezing an impression in the sand at the top and the bottom of said flask while maintaining the plane of the perimeter of each impression coincident with the plane of the edge of the flask and varying the thickness of the sand in the flask.

---

1,557,307. CRUSHER. BENJAMIN A. MITCHELL, New York, N. Y. Filed May 24, 1923. Serial No. 641,040. 21 Claims. (Cl. 83—10.)



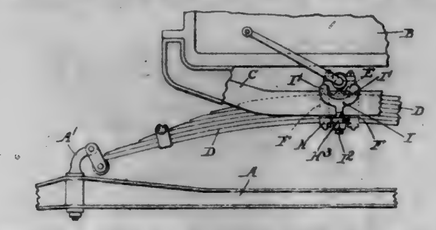
1. In a crusher, the combination of a relatively fixed crusher member, a relatively movable crusher member, a balanced impeller, a freely movable intermediate body interposed between the impeller and the relatively movable crusher member and subject to the action of centrifugal force, and means to maintain the radial distance of such intermediate body from the axis of the impeller constant throughout the revolution of the intermediate body.

---

1,557,308. SPRING. HAROLD TUTHILL MOORE, Hinsdale, Ill., assignor to Tuthill Spring Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 14, 1924. Serial No. 749,820. 13 Claims. (Cl. 267—52.)

1. In combination in a spring a plurality of imperforate leaves, placed together and provided on their engaging surfaces with mating irregularities, and means

for holding the leaves together when the spring is not in operative position, said means constituting a member surrounding the spring being of such size that it may



remain in place on the spring when the latter is put in position in the fitting normally adapted to receive the spring alone, said member adapted to lie within such fitting.

---

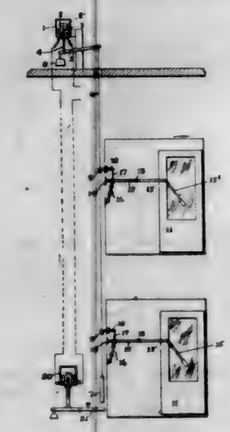
**1,557,309. ELECTROMECHANICAL INTERLOCK.** CLIFFORD NORTON, New York, N. Y., assignor to Graham & Norton Company, New York, N. Y., a Corporation of Delaware. Original application filed Aug. 2, 1923, Serial No. 655,175. Divided and this application filed Jan. 10, 1925. Serial No. 1,569. 1 Claim. (Cl. 187—31.)

The combination with door opening and closing mechanism adapted to be controlled from an elevator car, of a latch engaging and holding a member thereof in door-closing position, operating means for operating said latch to free said mechanism, said means including a cam slidably supported for right line movement transverse to the path of movement of said car, spring means for moving said cam into position to free said latch, a rotary electric motor, a connecting member for operatively joining said cam and motor whereby said motor may draw said cam directly away from said latch.

---

**1,557,310. ELECTROMECHANICAL MASTER INTERLOCK FOR ELEVATORS.** CLIFFORD NORTON, New York, N. Y., assignor to Graham & Norton Company, New York, N. Y., a Corporation of Delaware. Filed July 7, 1923. Serial No. 650,043. 8 Claims. (Cl. 187—31.)

5. The combination with a series of elevator well doors, of a toggle joint one arm of which is mounted on a fixed support while the other is pivotally connected to the door, a door closing spring and connected dash-pot operating on the toggle to close the door, a master switch common to the doors, a line connected with said switch at the upper end of the line by a positive unyielding connection, means for giving to the switch a constant bias superior to the weight of the line to restore the same to and hold it in normal position, means at each landing adapted to engage and exert a direct and positive downward pull on the line and



a link connected directly at one end with the fixedly pivoted toggle member and connected directly at its opposite end with said means to cause a direct, positive pull on the line superior to the bias of the switch to throw said switch positively.

---

**1,557,311. METAL AIR PROPELLER AND THE LIKE.** HENRY LEITNER, London, England. Original application filed Jan. 21, 1922, Serial No. 530,845. Divided and this application filed May 8, 1924. Serial No. 710,839. 3 Claims. (Cl. 170—159.)

1. A screw-propeller blade of the kind described, formed from sheet metal folded to form the edges of the blade and joined at the meeting edges by a longitudinal mechanical seam extending along one side of the blade intermediate of the two folded edges.

---

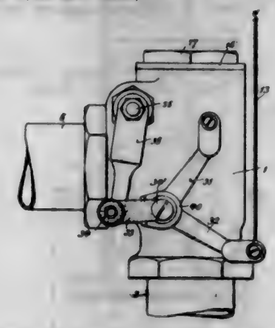
**1,557,312. ARCH SUPPORTER.** JOSEPH LELYVELD, Rockland, Mass. Filed Sept. 16, 1924. Serial No. 737,962. 4 Claims. (Cl. 36—76.)

1. A one-piece arch-supporting plate of resilient sheet material, adapted to be interposed as a unit between an outer and an inner sole, and including an inner longitudinal curved edge portion formed to extend from the oscalcis to the base of the first metatarsal, an outer longitudinal curved edge portion formed to extend from the oscalcis to the base of the fifth metatarsal, and an-

terior and posterior end portions integral with and connecting said edge portions, the plate being cut away between the edge portions and between the end portions to permit independent flexure of the edge portions.

---

**1,557,313. GAS VALVE.** JOHN H. LINDSAY, Brooklyn, N. Y. Filed Apr. 16, 1925. Serial No. 23,623. 4 Claims. (Cl. 137—102.)



4. A valve of the character described, comprising a casing, a spring-pressed valve in the casing, a shaft projecting through the casing, means on the shaft operatively engaging the valve, an arm on the shaft outside of the casing and adapted to be moved to a position to open the valve against action of the spring, a hub mounted on the casing, a crank arm fixed to the hub and adapted to be manually moved, a pair of fusible links also fixed to the hub, and a roller carried by the fusible links and adapted to be engaged by the free end of the arm outside of the casing whereby the valve is held in open position and released so as to automatically close when the hub is turned manually or when the fusible links are destroyed.

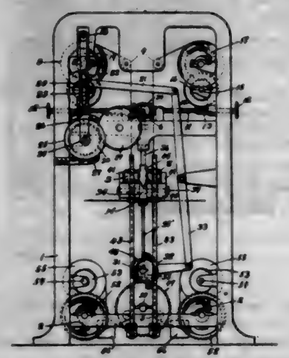
---

**1,557,314. DUST GUARD FOR SHOCK ABSORBERS.** HENRY HAVELOCK LOGAN, Chicago, Ill. Filed Jan. 11, 1924. Serial No. 685,623. 2 Claims. (Cl. 267—10.)

1. The combination with a shock absorber having a casing and a flexible strap extending exteriorly thereof and arranged for longitudinal movement toward or away from said casing when said shock absorber is in operation, of an extendible tubular flexible casing disposed concentric with said flexible strap and secured to said casing at one end, means for securing the opposite end of said tubular casing to said strap at a point adjacent to its lowermost end, and means within said tubular casing for maintaining the inner walls of said casing out of engagement with said strap.

---

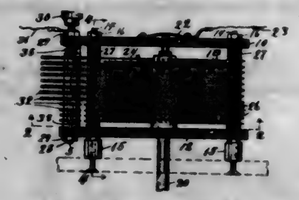
**1,557,315. LOOM.** CHARLES J. NAUEN, West Somerville, Mass. Filed Sept. 17, 1923. Serial No. 663,041. 5 Claims. (Cl. 139—310.)



1. In a loom, a crank shaft having an eccentric thereon, a pair of cloth beams, a pawl carrying lever operated from said eccentric and having a pawl, a ratchet driven by said pawl, a common drive shaft for the cloth beams and operatively connected to said ratchet, and a regulating device in contact with the fabric being wound upon one of said cloth beams and operatively connected with the connections between said eccentric and said pawl carrying lever, whereby to change the effective leverage of said lever as the diameter of said cloth beam increases.

---

**1,557,316. VARIABLE CONDENSER.** GEORGE H. NOBBS, Watertown, Mass. Filed Dec. 16, 1924. Serial No. 756,222. 5 Claims. (Cl. 250—41.)



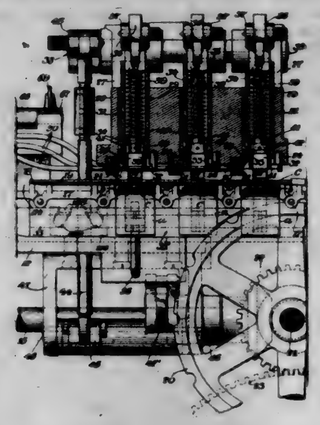
1. An electrical condenser comprising a group of stator plates and a group of rotor plates arranged to be moved between said stator plates to vary the capacity, a terminal for each group of plates, the terminal for the rotor plates being electrically connected thereto, means for supporting said stator plates out of electrical contact with each other and the terminal thereof and a series of switches corresponding in number to the stator plates and movable independently of each other to establish electrical connection between the respective stator plates and their terminal.

---

**1,557,317. STAPLING MACHINE.** JOHN R. NOLAN, New York, N. Y., assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 20, 1922. Serial No. 555,006. 11 Claims. (Cl. 1—2.)

5. In a stapling machine, the combination with a reciprocative plunger having a staple-forming portion, a

reciprocative staple-driving plunger in the first-named plunger, and means for actuating said plungers, of a rock-shaft, an anvil thereon movable into and from the path of the said staple-forming portion, means for oscil-



lating said shaft, oppositely-acting clinching members positioned to receive the protruding legs of a staple when they are driven, and cam connections between the rock-shaft and the clinching members.

---

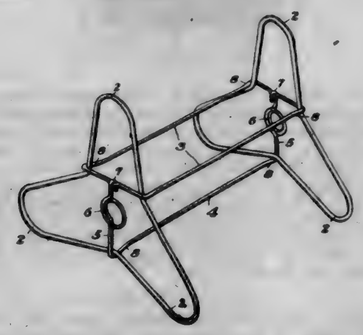
1,557,318. COMPOSITE BODY. EMIL E. NOVOTNY, Logan, and CHARLES J. ROMIEUX, Philadelphia, Pa., assignors to John Stogdell Stokes, Huntingdon Valley Post Office, Pa. Filed Oct. 1, 1923. Serial No. 666,030. 3 Claims. (Cl. 91—70.)

1. A moldable composite body comprising a fibrous filler containing lanolin and a synthetic resinous binder therefor substantially as described.

3. The herein described method of making a molded composition composed of a fibrous filler containing a free lubricant and a synthetic resinous binder comprising impregnating or coating a fibrous filler with a lubricant and a synthetic resin and subsequently pressing, forming and heating to set the resinous body to an infusible form.

---

1,557,319. REEL. FRANK H. NULLMEYER, Struthers, Ohio. Filed Aug. 9, 1923. Serial No. 656,574. 3 Claims. (Cl. 242—115.)



1. A reel having two head members, each head member having three radial arms, and two separable body members formed of wire, one of said body members being endless and of rectangular form and straddling one arm of each head, and the other of said members being U-form and engaging each head between the other two arms thereof, said U-member having hooks at its ends engaging the endless body member and one of said body members having looped portions forming spindle bearings for the reel adjacent the ends of the latter, substantially as described.

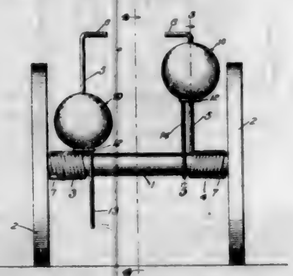
---

1,557,320. FUEL BRIQUETTE AND PROCESS OF MAKING THE SAME. JOHN F. O'DONNELL, Morris Run, Pa. Filed Apr. 12, 1924. Serial No. 706,172. 2 Claims. (Cl. 44—23.)

1. The process of producing a high-grade coal briquette, which comprises mixing fine anthracite and semibituminous dust coal in approximately fifty per cent proportions, placing the mixture in a mold under pressure, and subjecting the material to temperatures in the neighborhood of 1000° F. for from three to six minutes.

---

1,557,321. TOY. EDWARD H. PARKE, Findlay, Ohio. Filed June 13, 1925. Serial No. 37,002. 2 Claims. (Cl. 46—48.)



1. A toy of the class described comprising a wheel supported structure including an axle having wheels fixed thereto, springs coiled loosely around said axle with arms projecting therefrom and having stops thereon, elements mounted to reciprocate on said arms, annular members secured to said axle and extending in diametrically opposite directions, said members being located below the reciprocatory members whereby the turning of the axle will operate to alternately reciprocate said members.

---

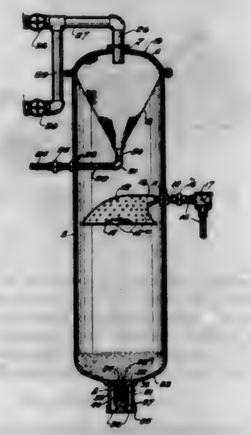
1,557,322. SPECTACLE FRONT FRAME. PETER PECK, Nicolet, Quebec, Canada. Filed Dec. 22, 1922. Serial No. 608,492. 2 Claims. (Cl. 88—41.)

1. In a spectacle frame, a rim attaching clip having a stud projecting therefrom, an arm pivoted to said clip by means of a rule joint, and a clip at the free end of the arm adapted to detachably engage the temple of a spectacle.

---

1,557,323. SAND AND GRAVEL SEPARATOR ATTACHMENT FOR PUMPS. CHARLES H. PERRY, Miami, Fla. Filed Aug. 19, 1924. Serial No. 733,010. 5 Claims. (Cl. 210—167.)

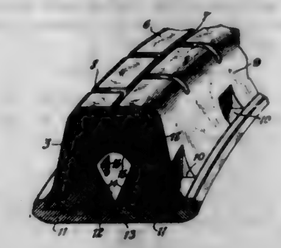
1. In a sand and gravel separator attachment for pumps, a cylindrical receptacle having an inlet connection at an intermediate point and an outlet connection above the said inlet connection, a spreader wholly disposed within the receptacle and connected to the inner end of the inlet, the spreader having a fully open bottom to direct the water downwardly towards the bottom of the receptacle and connected to the inner end of the inlet at one side of the top portion thereof, the body



of the spreader being perforated and permitting the unfiltered water to pass therethrough and the solids to be directed downwardly through the open bottom thereof in a tangential manner, water supply means connected to the inlet, and an inverted conical screen separator mounted in and filling the top portion of the receptacle above the spreader and having its lower reduced end secured to the outlet connection.

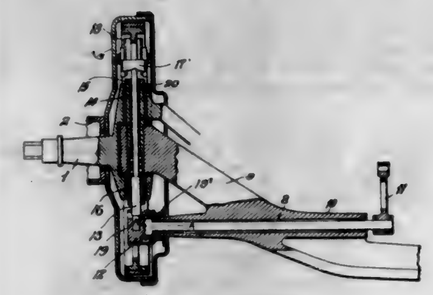
---

1,557,324. CUSHION TIRE. SAMUEL PESTUNOWITZ, Newark, N. J. Filed Oct. 1, 1924. Serial No. 741,017. 3 Claims. (Cl. 152—1.)



2. A resilient tire comprising a circular body of resilient material having an internal circumferentially extending chamber, the walls of which are in angularly disposed relation, a plurality of radially disposed lugs bridging certain of the angles of said angularly disposed walls, and transversely extending lugs bridging other angles of the walls, all of said lugs serving to restrict the compression of the tire beyond a predetermined point.

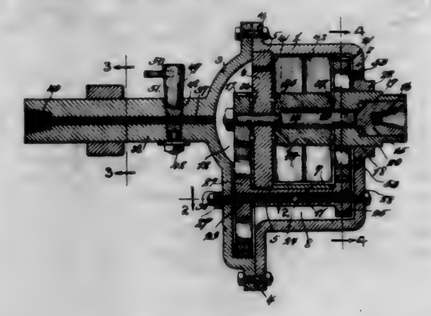
1,557,325. STEERING-WHEEL BRAKE MECHANISM FOR MOTOR VEHICLES. FERDINAND PORSCHE, Stuttgart-Unterturkheim, Germany, assignor to the Firm Daimler-Motoren-Gesellschaft, Stuttgart-Unterturkheim, Germany. Filed Mar. 14, 1925. Serial No. 15,691. 2 Claims. (Cl. 88—194.)



1. In combination with an axle of an automobile having a hollow portion and having a steering wheel turnably connected thereto by a journal member, a brake drum associated with said steering wheel, brake members pivotally connected to said steering wheel and located within said brake drum, a cam turnably connected to said steering wheel and adapted to force the brake members associated with said steering wheel outwardly against the cinner surface of the said brake drum, a rod slidably located within said journal member and connected to the said cam, a brake-actuating shaft located within the said hollow portion of said axle and having its ends projecting beyond the said hollow portion, an actuating member connected to that end of said shaft which is furthest from said steering wheel, the end of the said brake-actuating shaft which is adjacent said wheel having a cam adapted to co-operate with the said slidable rod to actuate the first mentioned cam, a spring associated with said slidable rod and adapted to force it into a position in which the associated brake mechanism is inoperative, the center of the said brake-actuating shaft and of the second mentioned cam mounted at the end thereof and the central axis of said slidable rod being located on the central axis of said journal member.

---

1,557,326. PNEUMATIC MOTOR. FRED J. POWELL, Jerome, Ariz. Filed Apr. 3, 1925. Serial No. 20,464. 6 Claims. (Cl. 253—3.)

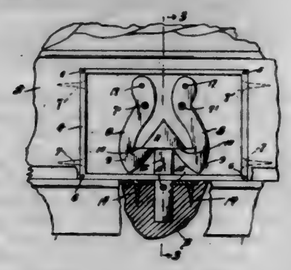


1. In a pneumatic motor, a casing provided with a rotor receiving chamber and a fluid storage chamber, a shaft coaxial with the center of the rotor receiving chamber and provided with a rotor having inclined blades,

a member rotatable on the shaft and provided at one end with means for supporting a device to be rotated, the end of the shaft adjacent the member having means for receiving and carrying an element to be rotated, a countershaft eccentrically mounted in the casing, a sleeve supported on the countershaft with its opposite ends geared to one end of the rotor shaft and said member for imparting movement to the member at a different rate of speed to that of the rotor shaft, said casing having means for conveying a fluid to the storage chamber, the casing having passages for conducting the fluid from the storage chamber to and toward the blades of the rotor, and exhaust ports for the utilized fluid.

---

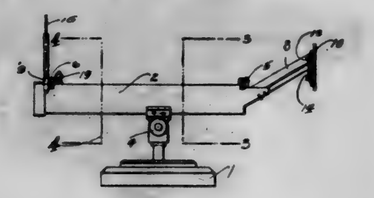
1,557,327. SPRINGLESS AUTOMATIC SASH LOCK. JAMES L. POWELL, Pictou Landing, Nova Scotia, Canada. Filed Nov. 17, 1921. Serial No. 515,832. 1 Claim. (Cl. 292—31.)



A lock of the class described having pivoted locking dogs, each dog having an offset portion functioning dually to provide a shoulder and a weight to cause the dog to seek the vertical, a locking stud intermediate and co-operating with said dog engageable with said shoulder, a casing for said dogs, a cover plate for said casing having arcuate slots therethrough, securing members passing through the cover plate to fasten the latter to the casing, each securing member being concentric with one of said slots and passing through one of said dogs near its upper end and constituting the pivot for the dog, operating members extending from the dogs and outwardly of said cover plate through said elongated slots, and said dogs being arranged relatively close together for joint manipulation.

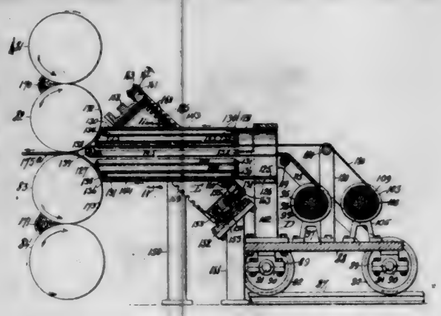
---

1,557,328. OPTICAL INSTRUMENT. HERBERT C. RESS, San Antonio, Tex. Filed Nov. 9, 1921. Serial No. 513,875. 17 Claims. (Cl. 88—20.)



1. In an optical instrument, a sighting device pivoted to swing transversely of its axis, a chart target rigidly associated therewith, and means for automatically leveling said device and target at right angles to the axis of the sighting device.

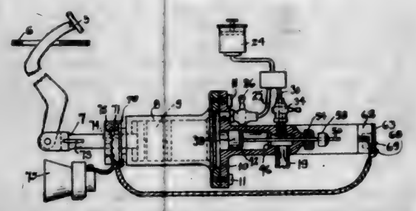
1,557,329. CORD TIRE FABRIC AND METHOD OF MAKING THE SAME. ROLAND B. REMPEL, New York, N. Y., assignor, by mesne assignments, to Respro Inc., Cranston, R. I., a Corporation of Rhode Island. Filed July 19, 1920. Serial No. 397,451. 14 Claims. (Cl. 154—2.)



1. That method of making unwoven tire fabric comprising winding strands to form a helix, bringing opposite portions of each spire of the helix into contact with a sheet of rubber, turning such opposite portions of each helix to lie in substantially parallel planes, and subjecting the two ply fabric thus formed to pressure.

---

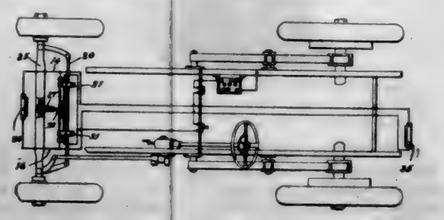
1,557,330. FLUID BRAKING APPARATUS. JOSEPH B. REYNOLDS, Croton Falls, N. Y. Filed Apr. 17, 1924. Serial No. 707,064. 8 Claims. (Cl. 188—152.)



2. In a fluid braking apparatus, a fluid pressure brake, a fluid compressor, a conduit between said compressor and said brake, an indicator mechanism, and means interposed in said conduit for closing same and actuating said indicator mechanism when the pressure in said brake is below a predetermined point.

---

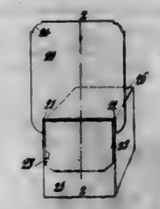
1,557,331. SWITCH. SVEN REYNOLDS, Providence, R. I. Filed Oct. 31, 1924. Serial No. 747,047. 3 Claims. (Cl. 200—59.)



1. In a direction indicator for motor vehicles, a tubular casing carried by the steering cross-rod of the vehicle to swing with it, said casing having a set of contact strips, and a circuit closing member supported on the vehicle axle and having a head portion in said tube to bridge said strips, and means whereby the operating length of said closing member may be elongated and contracted to accommodate the relative movement of said casing.

---

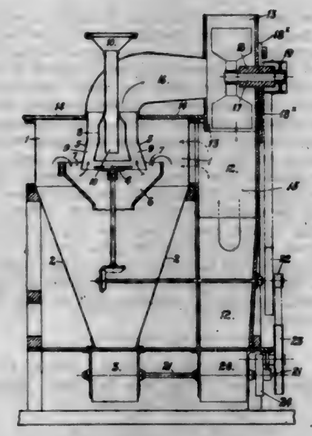
1,557,332. DISPLAY DEVICE. HAROLD V. ROBBINS, New York, N. Y., assignor to Harry B. Kruger, New York, N. Y. Filed May 18, 1922. Serial No. 561,815. 3 Claims. (Cl. 40—7.)



2. In a display device, the combination with a package having a slit in its upper portion and means therein forming a sheath to which the slit is the entrance, of a display blank having a projection forming a lip adapted to be inserted into said slit and said sheath, and means on the blank extending laterally of the lip for engaging the exterior of the package.

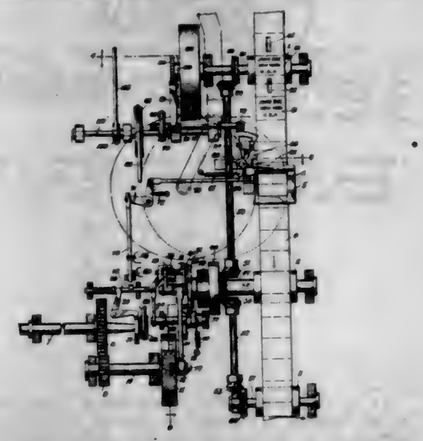
---

1,557,333. MACHINE FOR REMOVING DUST AND PARTICLES FROM GRAIN OR GRANULAR SUBSTANCES. CHARLES JOHN ROBINSON, Rochdale, England, assignor to Thomas Robinson & Son Limited, Rochdale, England, a Limited Liability Company of England. Filed May 5, 1923. Serial No. 636,996. 2 Claims. (Cl. 83—40.)



1. A centrifugal machine for separating dust and other particles from air used for the cleaning of grain and other granular substances, comprising an inverted L-shaped suction duct, a fan operating vertically and transversely of the horizontal portion of said duct, a dust separating chamber to receive the air directly from the fan, said dust receiving chamber comprising an upper compartment to directly receive the air, and a second compartment in communication with the first mentioned compartment and of greater area than the first mentioned compartment to cause a comparatively retarded movement of the air in said second compartment.

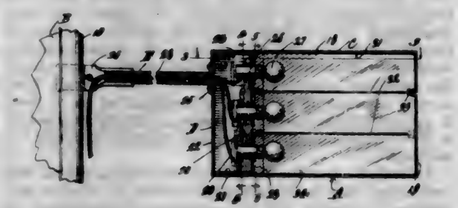
1,557,334. MOTION-PICTURE-PROJECTING MACHINE. PEDRO ROELS, New York, N. Y., assignor of twenty-five per cent to Joaquin Montoya, New York, N. Y. Filed Oct. 18, 1924. Serial No. 744,414. 11 Claims. (Cl. 88—17.)



1. A motion picture projecting machine, comprising film moving means, a film having slots therein, an air nozzle discharging against the film and through the slots, means back of the slots operated by the blast of air to stop the film moving means, and means for moving the nozzle throughout the length of the slots.

---

1,557,335. AUTOMOBILE SIGNAL. FREDERICK L. ROCK and ARTHUR J. ROCK, Burlington, Vt. Filed June 28, 1924. Serial No. 721,845. 2 Claims. (Cl. 177—329.)



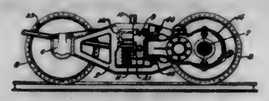
2. An automobile direction indicator comprising a casing having front and rear walls provided with direction indicia, top and bottom walls, and an outer end wall, a housing fitted within the inner end of the casing terminating flush with the inner end thereof, the housing having a removable inner wall, means detachably securing the housing and its removable inner wall in place, partitions fitted within the casing engaged by the housing dividing the casing into a plurality of signaling compartments, and lamps and sockets carried by the removable inner wall of the housing arranged to project into said compartments, the housing with its removable inner wall forming means for protecting the sockets from the elements and means for permitting the quick removal of the last mentioned sockets from the casing.

---

1,557,336. RAILWAY TRUCK. WILLARD F. ROCKWELL, Oshkosh, Wis. Filed Dec. 3, 1923. Serial No. 678,232. 5 Claims. (Cl. 105—109.)

1. In a car truck, a frame provided with a vertical pivot pin; an axle journalled in said frame; a gear

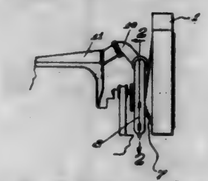
casing transversely journalled on said axle and longitudinally journalled in said frame; gearing including a clutch within said casing for driving said axle; and



an universal joint for transmitting power to said gearing, located below and substantially in alinement with said pivot pin.

---

1,557,337. AIR COOLER FOR MOTORS. ARTHUR ROMDER, Benton Harbor, Mich. Filed Apr. 5, 1924. Serial No. 704,547. 1 Claim. (Cl. 123—171.)



An air cooler for motors comprising a frame forming an air opening, a plurality of shutters controlling the passage of air through said opening, link mechanism for operating said shutters, a collector formed at the rear of said opening, said collector having an outlet, a fan casing in communication with the collector through the outlet, a fan within the casing driven from the motor and a conduit forming communication between the casing and the motor jacket.

---

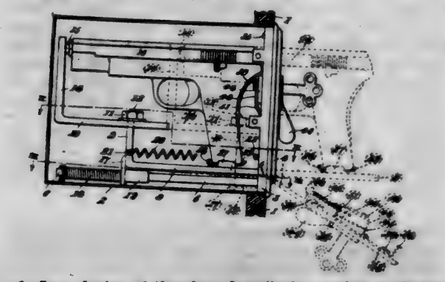
1,557,338. METHOD OF PRODUCING HALF STUFFS AND CELLULOSE. ROLAND RUNKEL, Rottenburg-on-the-Neckar, Germany. Filed Dec. 10, 1923. Serial No. 679,776. 4 Claims. (Cl. 92—9.)

1. A method of producing half stuffs and cellulose from vegetable fibres of any kind, including peat, for the manufacture of paper pulp and paper, the distinguishing feature being that the chemical action of chlorine and alkalies is carried out simultaneously, whereby with periodically repeated addition of alkali, the complete loosening of vegetable fibres of any kind as well as wood, in the form of chippings so as to form a pure white cellulose substance is rendered possible in a considerably shortened and simplified course of working.

2. Method according to claim 1, the distinguishing feature being that the simultaneous action of chlorine and alkalies is carried out by continuous introduction of chlorine into the alkaline solution.

---

1,557,339. PISTOL-HOLDING DEVICE. JOHN R. SANDEN, Harriman, Tenn. Filed Jan. 31, 1924. Serial No. 689,721. 7 Claims. (Cl. 296—37.)



1. In a device of the class described, a casing, a closure door for the casing, a tensioned article-support slidable in the casing and normally retained in the casing against spring tension by the closure door, key-operated lock mechanism for the door including a sliding latch plate and manually operable means for the latch plate, the pistol support including guide rods, a plate supporting the pistol slidable on the guide rods, springs surrounding the rods for normally forcing the plate outwardly of the casing, like springs extending between the plate and open end of the casing, an angle member carried by the plate, a plug carried by the angle member entering the barrel of the pistol for supporting the same and an adjustable support for the butt of the pistol.

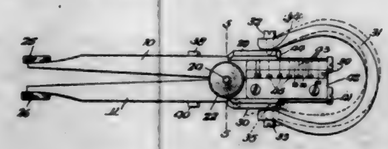
---

1,557,340. SETTLING AND SEPARATING APPARATUS. BENNO SANDMANN, New Orleans, La. Filed June 19, 1924. Serial No. 721,078. 9 Claims. (Cl. 210—61.)

1. Apparatus of the character described, comprising a casing formed of two frustums of cones connected together at their bases to form a tapered bottom chamber and overhanging upper chamber, a series of concentric short cylinders arranged one above the other and having both ends open, each cylinder forming with the casing an annular chamber having the cross-sectional form of an inverted V, means for supplying the liquid to be treated to the upper chamber and for drawing off the sediment from the bottom chamber, a scum pipe projecting down through the center of the system and having its upper end provided with a funnel, said funnel being spaced apart from the upper cylinder, a tank for clear liquid, a series of pipes opening into said annular chambers and connected to said clear liquid tank, and a pipe opening into said lower chamber for drawing off the liquid therefrom, substantially as and for the purposes described.

---

1,557,341. COMPRESSION GAUGE. OSCAR L. SCALBOM, Glenview, Ill. Filed May 31, 1923. Serial No. 642,440. 12 Claims. (Cl. 265—21.)

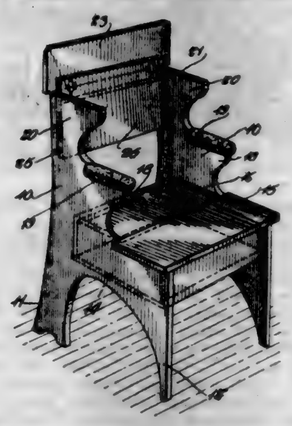


1. A compression gauge including two lever like members pivotally connected in proximity to one end, bearing members adjustably mounted upon said members, resilient means connecting the said bearing members, the points of connection of said resilient means

being movable with said members towards and away from the pivot of the first recited members, the opposite ends of the lever like members being movable towards each other against the stress of the said resilient means, and means for indicating the extent of pivotal movement of the last recited members against the force of said resilient means.

---

1,557,342. CONVERTIBLE FURNITURE. PHILIP M. SCHLAMP, Henderson, Ky. Filed Apr. 25, 1925. Serial No. 25,869. 2 Claims. (Cl. 155—42.)



1. A convertible article of the character described comprising side members formed to provide a series of stepped portions, a box extending from the front of the side portions to the back and constituting a seat, a lid to the box operatively hinged thereto and adapted to be normally disposed in a horizontal position and rest upon the lowest stepped portions of the sides to thereby constitute a lower step, a member disposed between the side portions and operatively pivoted thereto to be turned either into a vertical position approximately parallel with the back or into a horizontal position to form an intermediate step resting upon the intermediate stepped portions of the side members, and a top step hinged to the top of the back and shiftable into a vertical position to form a continuation of the back or into a horizontal position to form a top step resting upon the top stepped portions of the side members.

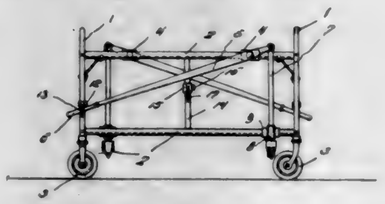
---

1,557,343. TRACTION WHEEL. KUNO ERNEST SCHUETZ, Geyserville, Calif. Filed Aug. 26, 1924. Serial No. 734,338. 3 Claims. (Cl. 301—41.)

2. A wheel of the class described comprising an annular shell having a margin V-shaped transversely and a plurality of V-shaped outstanding lugs extending from opposite sides of the margin and projecting at their points beyond the apex of same, the lugs at one side being disposed opposite the spaces between the lugs at the opposite side, said shell having an annular seat at one side and inwardly directed stop lugs at the other side, a filler member having an axle bearing and formed with an annular rib to engage the seat of the shell and a plurality of seats to engage the stop lugs of the shell, and means for coupling the filler member to the shell.

---

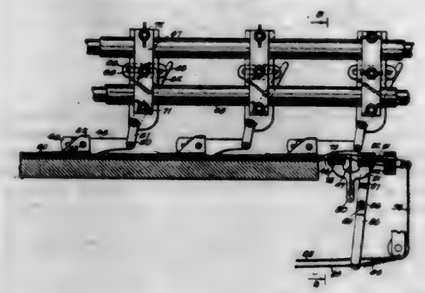
1,557,344. RADIATOR-TRANSPORTING TRUCK. OTTO H. SCHUH, Indianapolis, Ind. Filed Oct. 20, 1924. Serial No. 744,704. 3 Claims. (Cl. 214—65.4.)



1. In a radiator supporting truck of the class described, a wheel supported truck, a fulcrum block adjustably mounted thereon, a lever pivotally mounted between its ends on said block, a handle on one end of said lever, a keeper with which said handle is adapted to be engaged, a hoisting rod pivotally connected to the opposite end of the lever and depending therefrom, a second block adjustably mounted upon said truck, said second named block being equipped with a guide through which said rod is slidable, and a laterally directed radiator engaging arm swivelly mounted upon the lower end of said rod.

---

1,557,345. PILE CUTTER. JULIUS SCHUMACHER, West Hoboken, N. J. Filed Jan. 17, 1924. Serial No. 686,905. 13 Claims. (Cl. 26—8.)



1. In a pile cutting machine, means for guiding cloth through the machine from a supply roller to a receiving roller, a plurality of cutters adapted to move transversely of the cloth for cutting the pile as the cloth is passed through the machine, means for moving said cloth intermittently, means for reciprocating said cutters so as to cause them to perform a cutting operation while the cloth is stationary, and means for stretching the cloth adjacent the cutters at the time the cutters are functioning.

---

1,557,346. SENSITIZED ELEMENT AND MOUNTING THEREFOR. FREDERICK SCHWANHAUSSER, New York, N. Y., assignor to Rusling Wood, New York, N. Y. Filed May 6, 1921. Serial No. 467,230. 8 Claims. (Cl. 83—24.)

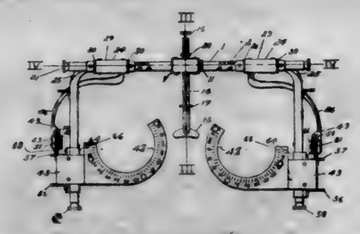
5. A mounting including a supporting column, a backing, means for detachably securing said backing to said column, a plurality of adjustable brackets secured to

the rear face of said backing and adjacent the opposite side edges thereof, a sensitized element disposed across the front face of the backing, and adjustable clamps

carried by said adjustable brackets adapted to clamp and tauten the sensitized element in a plurality of parallel and opposite directions through adjustment of the said brackets.

---

1,557,347. TRIAL FRAME. CHARLES SHEARD, Sturbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 3, 1922. Serial No. 572,632. 22 Claims. (Cl. 88—20.)



1. In a device of the character described, the combination with a central bar and a vertically and angularly adjustable nose rest support associated therewith comprising a block, a sleeve rotatably arranged around the block, means carried by the sleeve to prevent rotation thereof upon the block, and friction means for securing the bar in desired vertically adjusted position and a positive release for the friction lock to disengage the same when it is desired to raise the bar.

---

1,557,348. SOLDERING COMPOUND. JOHN C. SHOTTON, Lakewood, Ohio. Filed Dec. 8, 1922. Serial No. 605,704. 14 Claims. (Cl. 148—23.)

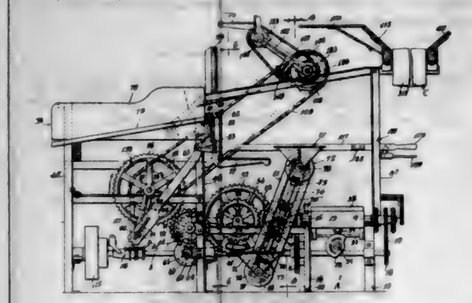
1. A soldering compound including a decomposable product of a metal, said product being adapted to be fused and dissociated by heat to leave the metal residues at a temperature below the melting point of the metal.

---

1,557,349. PROCESS AND MEANS FOR PREVENTING THE FORMATION OF HARD SCALES IN BOILERS AND FOR REMOVING SCALES ALREADY EXISTING. JOSEF SICHERT, Rogaska-Slatina, Yugoslavia. Filed Aug. 17, 1923. Serial No. 657,946. 6 Claims. (Cl. 87—27.)

3. The process for preventing the formation of hard scale in boilers and for removing scale already existing which process consists in emulsifying resins with the boiler water by means of organic protective colloids.

1,557,350. BOX-DUMPING MACHINE. FRED STEBLER, Riverside, Calif., assignor to Stebler-Parker Co., Riverside, Calif., a Corporation of California. Filed Mar. 28, 1922. Serial No. 547,449. 20 Claims. (Cl. 214—1.1.)



1. In combination, means for tilting a loaded box to discharge its contents, and means actuated in timed relation with the tilting means and cooperating with the open side of the box to regulate the rate of discharge.

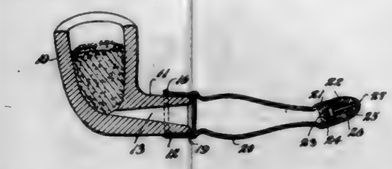
6. In combination, a frame, a table for receiving loaded boxes, means for tilting the boxes to discharge their contents, a rotary elevator horizontally journaled on the frame, box lifters journaled on the elevator and adapted during their travel to engage the bottom of the box on the table, lift it from the table and deposit it on the box tilting means, and means intermediate the frame and the box lifters maintaining them in a horizontal plane throughout the rotation of the elevator.

13. In combination, a receiving table, means for advancing a succession of loaded boxes towards the table with an accelerated rate of advance of the foremost box to separate it from the following boxes, and operating to deposit the boxes at timed intervals upon the table, and box manipulating mechanism functioning in timed relation to said feeding means for removing the boxes from the table.

17. In box-handling mechanism, the combination of feeding mechanism for feeding the boxes forward in succession to a loading point, box-dumping mechanism having a plurality of box-carriers to move past the loading point and receive the boxes, means including a clutch for driving the dumping mechanism, and a member projecting near the path of the boxes on the carrier and operating when struck by a misplaced box, to open the clutch and stop the dumping mechanism.

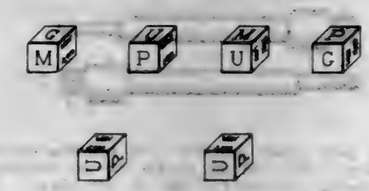
---

1,557,351. TOBACCO-PIPE STEM. CHARLES W. FISCHER, Sparks, Nebr. Filed Dec. 17, 1924. Serial No. 756,593. 3 Claims. (Cl. 131—12.)



2. A pipe stem comprising a screening cap threaded upon the neck of a pipe bowl, an elongated cooling chamber separately threaded upon the exterior of said cap, a mouthpiece carried by the free end of said cooling chamber and provided with a valve seat, a free ball valve cooperating with said seat, and means mounted in said valve casing and adjustable relative to the seat to limit the opening travel of said valve.

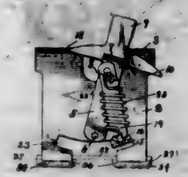
1,557,352. DICE GAME. GEORGE M. FOX, Springfield, Mass., assignor to Milton Bradley Company, a Corporation of Massachusetts. Filed July 24, 1924. Serial No. 728,025. 3 Claims. (Cl. 273—146.)



1. A device for playing a game comprising a die having separately exhibited on each of four sides thereof the different letters of a key word, and scoring indicia exhibited separately on each of the other two sides of said die indicating by numerical value either a win or a lose.

---

1,557,353. SWITCH. HARRISON J. L. FRANK, Detroit, Mich., assignor to Mutual Electric and Machine Company, Detroit, Mich., a Corporation of West Virginia. Filed May 5, 1922. Serial No. 558,791. 8 Claims. (Cl. 200—67.)



1. In a switch, the combination of a frame having spaced sides, a contact carrier pivoted on the frame and comprising sides outside the frame and a cross member connecting the sides, an actuator pivoted within the frame adjacent the path of said cross member, resilient and positive connectors between said contact carrier and the actuator, a pair of stationary contacts mounted on the frame, and a pair of contacts mounted on the contact carrier adapted to engage and disengage the stationary contacts as the contact carrier is moved by the actuator.

---

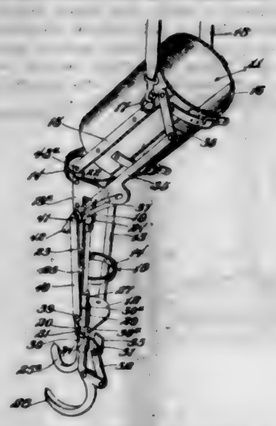
1,557,354. PROCESS FOR PRODUCING PHOTOMECHANICAL PRINTING PLATES. AMBROS GALEWSKA, Dresden, Germany, assignor of one-half to Sächsisches Serumwerk Aktiengesellschaft, Dresden, Germany. Filed June 26, 1925. Serial No. 39,813. 7 Claims. (Cl. 41—41.5.)

1. Process for producing printing plates consisting in placing an elastic, non-sensitive layer on a base, placing a sensitive layer on the non-sensitive layer, and transferring the object to be printed onto the sensitive layer by photographic means.

---

1,557,355. ARTIFICIAL HAND. HENRY F. GEISE, Whites, Wash. Filed June 9, 1925. Serial No. 36,024. 7 Claims. (Cl. 3—12.)

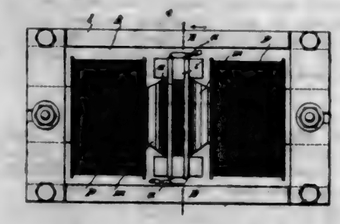
1. In a device of the character described, a socket adapted to receive a handless arm, a bearing carried by said socket, a pair of members rotatable within the bearing, one of said members being longitudinally shiftable upon the other thereof through the bearing, the other of said members being fixed against longitudinal movement, an upper arm socket, and connections between the upper arm socket and the first named member whereby the first named member can be shifted longitudinally of the second named member, said connections



being adjustable to determine the direction of motion of the first named member as the first named socket is moved into or out of alignment with the upper arm socket.

---

1,557,356. ELECTRODYNAMIC LOUD-SPEAKING APPARATUS. ERWIN GERLACH, Siemensstadt, near Berlin, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Jan. 12, 1924. Serial No. 685,812. 6 Claims. (Cl. 179—115.)



1. In an acoustic device for converting electrical energy into sound energy or sound energy into electrical energy, a light ribbon-shaped conductive diaphragm disposed between the poles of a constant field magnet and adapted to carry alternating speaking currents, said diaphragm having means for rendering it elastic to enable it to perform motions transversely to its plane of approximately equal amplitude over its entire length.

---

1,557,357. FOUNTAIN PEN. HERBERT GORNELL, Twickenham, England. Filed Sept. 14, 1923. Serial No. 662,689. 1 Claim. (Cl. 120—49.)

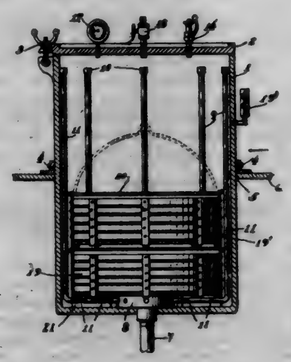
A fountain pen comprising, in combination, a pen nib, a hollow holder therefor having its end nearest the butt end of the pen open, a collar secured within said open end, an inner hollow cylindrical member rotatably bearing within said collar and extending into said holder, said cylindrical member having an annular shoulder engaging with said collar to prevent said cylindrical member moving longitudinally towards the butt end of the pen, a second collar secured on the outside of said hollow cylindrical member, at a part thereof which is outside said holder, said second collar forming manually oper-

ated means for rotating said cylindrical member, packing to prevent flow of fluid from the annular space between said cylindrical member and said holder past said collars to the atmosphere, a piston and piston rod for said hollow cylindrical member, said hollow cylindrical member having an opening between said annular space and the interior of said hollow cylindrical member adjacent the butt end of said annular space and hollow interior, so

that by moving said piston to the nib end of said cylindrical member ink may be sucked into said holder through the nib end thereof and an operative connection formed between said cylindrical member and said pen nib, such that rotation of said cylindrical member within said holder in reverse directions respectively effects movement of said nib to and from an operative position and a protected position within said holder.

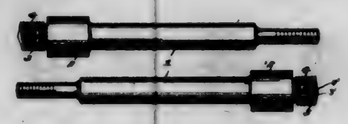
---

1,557,358. METHOD OF TREATING FRUIT FOR CANNING PURPOSES. EUGENE G. GRAB, Washington, D. C. Filed Aug. 20, 1923, Serial No. 658,369. Renewed June 16, 1925. 1 Claim. (Cl. 99—8.)



1. A method of treating fruit or the like in bulk consisting in extracting air and gases therefrom and instantly applying and equally distributing steam thereto.

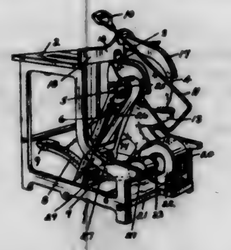
1,557,359. SPINDLE FOR BICYCLE PEDALS. JAMES H. GRAHAM, Torrington, Conn. Filed Sept. 22, 1924. Serial No. 739,121. 3 Claims. (Cl. 208—70.)



1. A pedal spindle provided at its attaching end with intersecting right and left threads, thereby adapting it for screwing into either a right or left crank.

---

1,557,360. CROSSCUT-SAW MECHANISM. FREDERICK J. GREENE, Racine, Wis. Filed Feb. 15, 1924. Serial No. 692,998. 3 Claims. (Cl. 143—46.)



1. A circular saw mechanism comprising the combination with a supporting frame, a bracket pivotally connected to the base portion of the frame, a circular saw having an arbor journalled in the upper portion of the bracket, pulleys carried by said arbor and bracket, a motor supported on the rear portion of the frame and provided with a pulley in belted connection with the bracket pulleys and arbor pulley, and means for manually adjusting the bracket to swing the saw into and out of operative position from the side of the frame opposite to that at which the motor is located, said swinging bracket being also provided with a dust collecting pan having a laterally extending spout supported from the bracket and adapted to swing therewith.

---

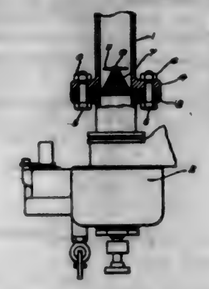
1,557,361. NUT LOCK. JESSE GRIMM, New Philadelphia, Ohio. Filed July 23, 1925. Serial No. 45,550. 3 Claims. (Cl. 151—17.)

1. In a nut and bolt lock the combination with a bolt having right and left hand threads, of a pair of superposed nuts one having right hand and the other left hand threaded bores, one of said nuts having a slot cut

transversely thereof through approximately two-thirds of its width to set up a spring tongue, the bore through said tongue portion being of increased diameter and unthreaded, and means formed upon the abutting surfaces of the lower nut and the tongue of said upper nut to set up a locking engagement therebetween.

---

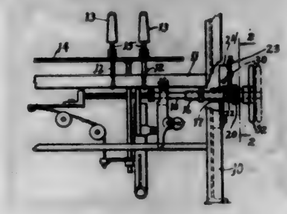
1,557,362. MIXING DEVICE. OSCAR HARRIS, Hackensack, N. J., assignor to The Perfect Gasoline Vaporizer Company, Paterson, N. J., a Firm. Filed June 3, 1924. Serial No. 717,623. 1 Claim. (Cl. 48—180.)



As a new article of manufacture, a mixing device adapted to be inserted in the intake manifold of an engine, and comprising a conical screen having its apex cut off whereby an opening is formed, a gasket constituting the support of the screen and adapted to be clamped between pipe sections, and a circular screened deflector having a central opening receiving the open smaller end of the conical screen and fixed thereto and of less diameter than the larger end of the screen.

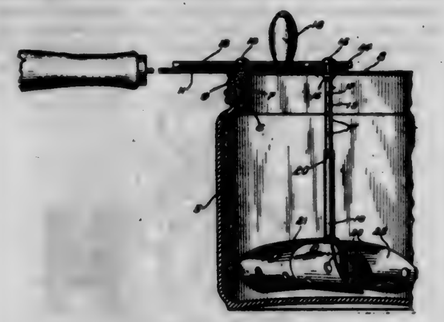
---

1,557,363. BUILDER MECHANISM FOR SPINNING AND LIKE MACHINES. ELLIS HARTLEY, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed May 16, 1925. Serial No. 30,692. 2 Claims. (Cl. 242—43.5.)



1. The combination with a cap spinning machine having a movable bobbin rail and mechanism for raising and lowering said rail including a revolvable shaft, of a sleeve revolvable with and slidably mounted on said shaft, a driving gear, a gear fixed to the sleeve in position to engage and disengage said driving gear as the sleeve is slid along the shaft, a transverse groove in the sleeve, a member slidably mounted in a bracket fixed to the framing of the machine and cooperating with said groove to lock the sleeve gear and driving gear in normally operative position, means to normally maintain said member in its locking position and manually operative means to release said member from its locking engagement with said sleeve.

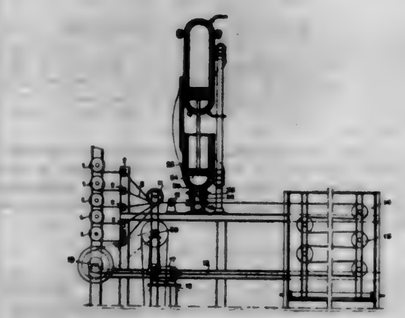
1,557,364. EGG BEATER. AFTON REES HEADLEY, Mulberry, Ohio. Filed Nov. 4, 1924. Serial No. 747,862. 3 Claims. (Cl. 259—122.)



1. In a beater, a cover for a receptacle, a handle secured to the cover, a plurality of meshing gears carried by the handle, the means for securing the handle to the cover also serving as a mounting for one of the gears, and a beater carrying shaft mounted in the cover and handle and upon which another of the said gears is mounted.

---

1,557,365. DEVICE FOR MAKING WIRE BANDS FROM WHICH WHALEBONES ARE MADE. ANDRÉ JONAS, Etampes, France. Filed Apr. 11, 1923. Serial No. 631,482. 8 Claims. (Cl. 18—13.)



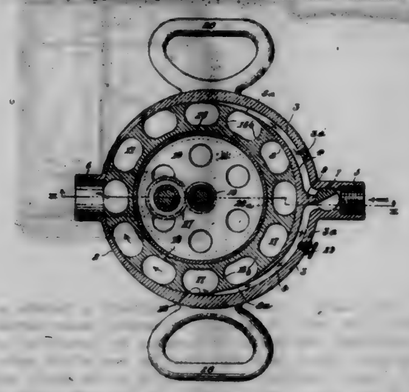
1. A device for making a wire band from which artificial whalebones are made, comprising means for laying a plurality of metallic wires side by side in spaced relation and all in the same horizontal plane, means for imparting a traveling movement to the said wires, and means for applying an adhesive substance to said wires to bind them together and form a coated flat band.

---

1,557,366. MOTOR-OPERATED DRILL. GEORGE JURESISIN, Wilkes-Barre, Pa. Filed June 18, 1923. Serial No. 646,280. 2 Claims. (Cl. 253—2.)

1. An air motor for drills comprising a truly cylindrical casing, a truly cylindrical rotor chamber eccentrically formed therein and permanently closed at one end, axially alined inlet and exhaust ports for said casing with the common axis of said ports intersecting the parallel axes

of the casing and rotor chamber at right angles thereto, said exhaust port communicating directly with the rotor chamber, the thickest side of the wall of the casing, formed by the eccentric location of the rotor chamber, having motive fluid feeding passages formed circumferentially therein communicating with and extending in opposite directions in respect to the inlet port, said feeding passages communicating with the rotor chamber at substantially diametrically opposite points, a rotor in said chamber having circumferentially elongated pockets formed in its periphery with the end walls of each pocket formed on an arc, means for closing the open end of said rotor chamber, a tool socket rotatably carried by said means, means for operatively connecting the rotor and tool socket, and means for selectively controlling the communication of the inlet port with the fluid feeding passages for causing rotation of the rotor in opposite directions.



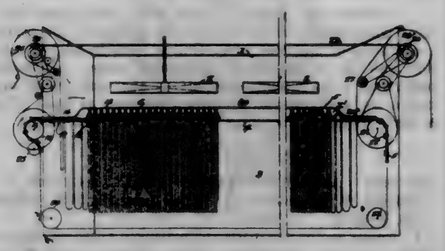
---

1,557,367. PROCESS FOR INCREASING THE STRENGTH OF METALLIC BODIES. HERMANN KÄNDLER, Berlin-Friedenau, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Dec. 20, 1923. Serial No. 681,849. 3 Claims. (Cl. 148—4.)

3. A process of increasing the strength of a metallic body, which consists in subjecting the surface of the body successively to the action of different corroding agents to remove discontinuities in the body surface beyond the reach of mechanical tools.

---

1,557,368. LOOP DRIER. FREDERICK KERSHAW and ALPHEUS O. HURXTHAL, Philadelphia, Pa., assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 17, 1924. Serial No. 738,167. 8 Claims. (Cl. 34—12.)



1. The combination in a loop drying machine, of two tracks spaced apart; an endless chain arranged to travel over each track; girts connecting the chains; a driven sprocket wheel arranged to push the chains over the tracks; means for holding the chains in an elongated position with the girts spaced a considerable distance apart; and means allowing the chains to be buckled so that the girts will be arranged close together.

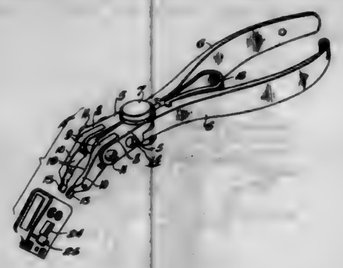
---

1,557,369. MEANS FOR SKIMMING OFF FROTH. JAN WILLEM KLEINENTINK, Hoensbroek, Limburg, Netherlands, assignor to Naamlooze Vennootschap Vereenigde Kolenmaatschappij en ter Voortzetting der Steenkolenzaken, Gedreven Door de N. V. Furness' Kolenmaatschappij en Hoven en Henny's Handelmaatschappij, Rotterdam, Netherlands, a Company organized under the laws of The Netherlands. Filed Nov. 6, 1923. Serial No. 673,208. 6 Claims. (Cl. 83—85.)

1. The combination with a vat adapted to contain a liquid with surface characteristics induced by froth flotation, of skimming means to remove the froth, including relatively movable skimming elements adapted for actual and displaceable contact during the skimming operation, one of said elements having a convex pressure face and the other of said elements being directly radial of the vat.

---

1,557,370. TOOL FOR APPLYING AND REMOVING LAUNDRY MARKERS. EDWIN LANE, New York, N. Y., assignor to Carolyn Laundry, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1923. Serial No. 681,641. 5 Claims. (Cl. 81—9.1.)



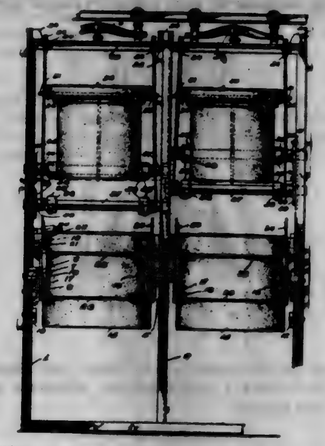
1. A tool of the class specified, comprising pivoted handles having jaws provided with adjustable arms terminating in spaced nibs with the outer sides thereof constructed as the engaging portions thereof, the arms being disposed at an angle to the jaws.

---

1,557,371. APPARATUS FOR CASTING POTTERY WARE. EDWARD S. LEA, Morrisville, Pa., assignor to Carrier Engineering Corporation, Newark, N. J., a Corporation of New York. Filed Nov. 12, 1924. Serial No. 749,491. 18 Claims. (Cl. 25—29.)

1. Apparatus for casting pottery ware from slip comprising a portable support, a mold pivoted thereon for

rotary movement from charging to dumping position, and a core suspended on said support above the mold



and adapted to be moved into and out of cooperative engagement with the latter.

---

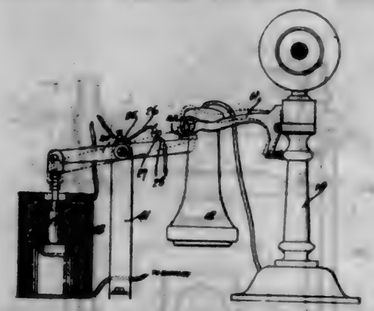
1,557,372. APPARATUS FOR CASTING POTTERY WARE. EDWARD S. LEA, Morrisville, Pa., assignor to Carrier Engineering Corporation, Newark, N. J., a Corporation of New York. Filed Nov. 12, 1924. Serial No. 749,492. 14 Claims. (Cl. 25—29.)

1. Apparatus for casting pottery ware from slip comprising a portable support, a mold section pivoted thereon for rotary movement from charging to dumping position, a frame pivoted to said support above the mold section, and a second mold section pivoted in said frame and adapted to be swung into and out of engagement with the first mold section by the movement of said frame.

---

1,557,373. BURGLAR ALARM. ANDREW D. SINDT, New York, N. Y. Filed Mar. 30, 1922. Serial No. 548,066. 4 Claims. (Cl. 179—5.)

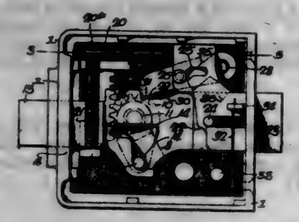
1. In combination with a telephone system including a telephone set and an annunciator, of an alarm comprising a switch in conjunction with the means for closing an entrance, an electric circuit including a battery controlled by said switch, a solenoid energized by the closing of the circuit, and a pivoted arm one end of which carries the armature of the solenoid, the other end



of the arm having a projection extending under the receiver hook of the telephone, said projection having insulating material thereon and normally just engaging said hook, whereby the arm will be operated by the solenoid to raise the receiver hook.

---

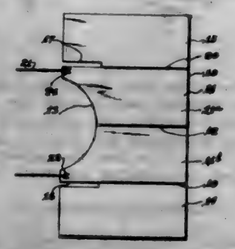
1,557,374. LATCH. FRANK SOLEY, Philadelphia, Pa., assignor to The Miller Lock Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 21, 1922. Serial No. 576,520. 10 Claims. (Cl. 20—29.)



1. The combination of a casing; a bolt mounted therein; an arm; a locking block geared thereto and arranged to be located back of the bolt when the bolt is in a fully projected position, said arm retracting the bolt and operating the locking block.

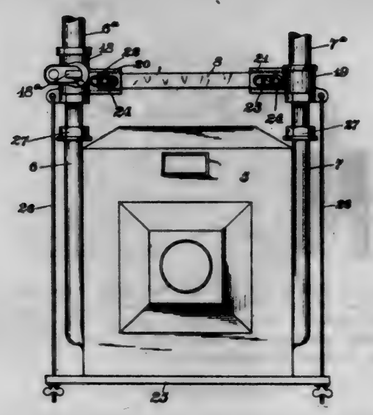
---

1,557,375. SUN SHIELD. PAUL STERN, Pawtucket, R. I. Filed Apr. 16, 1925. Serial No. 23,522. 3 Claims. (Cl. 2—12.)



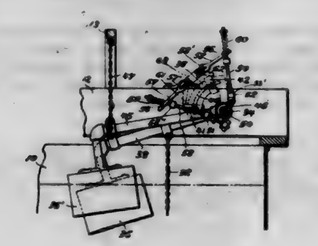
1. A device of the kind described comprising a central section having a cut-out portion, and two wing members, said central section and wing members having slots therebetween for attaching the shield to a head covering substantially as shown and described.

1,557,376. HANGER STRUCTURE FOR METERS. FRANK E. STEVENS, Columbus, Ohio, assignor to The Lattimer-Stevens Company, Columbus, Ohio, a Corporation of Ohio. Filed Feb. 3, 1923. Serial No. 616,774. 1 Claim. (Cl. 248—30.)



A hanger structure for a meter including meter-inlet and meter-outlet pipe-connecting sections, each provided with a seat, and a member connecting said sections consisting of a thin flat bar of resilient material tortionally deformable to fit flatwise at its ends on said seats, and means rigidly securing said bar at its ends to said seats.

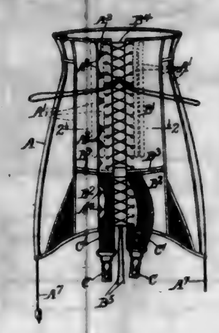
1,557,377. CONTROLLING DEVICE OF HYDRAULIC RAMS. FRANK STOFFER, Fenelton, Pa. Filed Apr. 23, 1924. Serial No. 708,582. 10 Claims. (Cl. 137—163.)



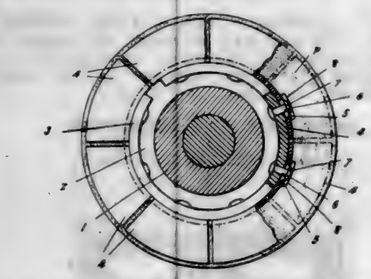
1. In a device of the class described, a pipe for connection with a hydraulic ram, a valve for closing the pipe, and means controlling the valve, said means including a float for opening the valve, a second float controlling the action of the float first named, concentric shafts, and means for mounting the floats, respectively, on said shafts.

1,557,378. CORSET. ETHEL M. STOWERS, Chicago, Ill. Filed Mar. 7, 1921. Serial No. 450,342. 5 Claims. (Cl. 2—29.)

1. A corset comprising an upper front panel extending upwardly from its lower edge which is arranged at approximately the groin or hip line, a lower panel extending downwardly from its upper edge which is arranged at approximately the groin or hip line in the same general location of the lower edge of the upper panel, the two panels designed to slide relative to each other longitudinally of the corset as the wearer sits down, and means for exerting a simultaneously downward pull on each of said panels.

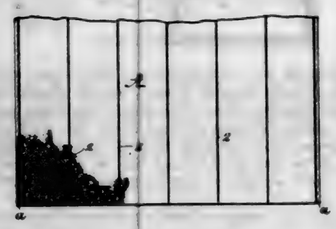


1,557,379. PISTON RING. WILLIAM SUDEKUM, Nashville, Tenn. Filed Jan. 27, 1925. Serial No. 5,095. 4 Claims. (Cl. 74—109.)



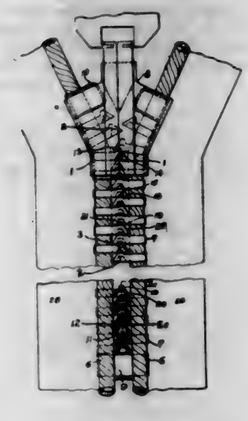
1. In a piston ring, the combination of an expansible collar; a plurality of packing carriers; sliding connections between the collar and the carriers; and a continuous ring of packing in the carriers.

1,557,380. SPRING-CUSHION CONSTRUCTION. SAMUEL SUKKOFF and WILLIAM W. GLEASON, Chicago, Ill.; said Gleason assignor, by mesne assignments, to A. F. McKeown, jr., Chicago, Ill. Filed Feb. 1, 1923. Serial No. 616,250. 5 Claims. (Cl. 5—353.)



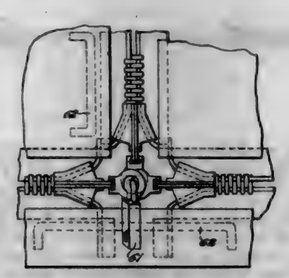
1. A method of manufacturing spring cushions consisting of sewing narrow fabric strips along their side edges to top and bottom fabric pieces, along parallel spaced lines to form a cover member containing a plurality of spring compartments extending the length or width of the cushion, cutting other similarly formed fabric members transversely of the narrow strips to form relatively narrow spring retaining members, inserting springs into said spring retaining members, and inserting the filled spring retaining members endwise into said compartments and closing the ends of said compartments.

1,557,381. FASTENER. GIDEON SUNDBACK, Meadville, Pa., assignor to Hookless Fastener Company, a Corporation of Pennsylvania. Filed Jan. 8, 1923. Serial No. 611,211. 13 Claims. (Cl. 24—205.)



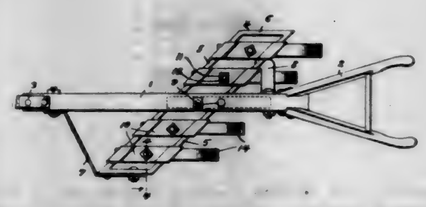
1. A plurality of interlocking members for an opening, which are adapted to be controlled by a slider, each of said members being provided with a projection on one side and a recess on the opposite side in axial alinement with said projection, the recess being enough larger than the projection to permit a lateral movement between the interlocked members.

1,557,382. MULTIPLE-SLIDE CLOSURE. GIDEON SUNDBACK, Meadville, Pa., assignor to Hookless Fastener Company, a Corporation of Pennsylvania. Filed Jan. 20, 1923. Serial No. 613,825. 26 Claims. (Cl. 24—205.)



1. A body provided with a plurality of openings, connecting means for the sides of said openings and a plurality of movable devices for closing said openings by moving said devices toward a common point.

1,557,383. HARROW. JESSE SUTTON, Silver Creek, Miss. Filed Oct. 13, 1924. Serial No. 743,358. 2 Claims. (Cl. 55—33.)

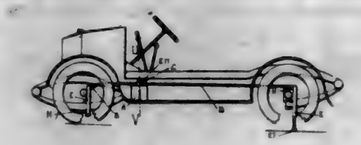


1. A device of the class described comprising a beam, a frame fastened to the lower edge thereof, said frame being composed of inclinedly arranged side bars and end bars connecting the side bars together, cross pieces on the frame arranged parallel to the beam, bolts carried by the cross pieces, a yoke carried by each bolt, teeth having their shanks passing through the yokes and resting against the lower edges of the side bars.

1,557,384. METHOD FOR THE MANUFACTURE OF DIPHENYLAMINE CHLORARSINE. WELLINGTON LEE TANNER, Cleveland, Ohio, assignor to The Graswell Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 17, 1922. Serial No. 582,531. 5 Claims. (Cl. 260—14.)

5. Process for the manufacture of diphenylamine chlorarsine which comprises heating a mixture of arsenic trioxide and diphenylamine hydrochloride.

1,557,385. VEHICLE JACK. WYNANT TASTENHOYE, Menin, Belgium. Filed Dec. 4, 1923. Serial No. 678,487. 4 Claims. (Cl. 138—9.)

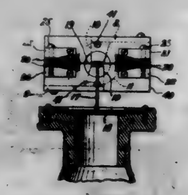


1. Lifting devices for a vehicle comprising a plurality of fluid pressure jacks applicable to the vehicle, a fluid pressure pump and a reservoir, connections between the jacks and the fluid pump, a distributing device between the pump and said connections for delivering fluid to the jacks alternately, and means in said distributing device for returning the fluid from the jacks to the reservoir.

1,557,386. ELECTROMAGNETIC DEVICE. ALBERT L. THURAS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 8, 1923. Serial No. 667,154. 16 Claims. (Cl. 179—114.)

5. A magnetic structure comprising a magnet producing a steady magnetic field, pole pieces attached to said magnet, an armature in operative relation to said pole

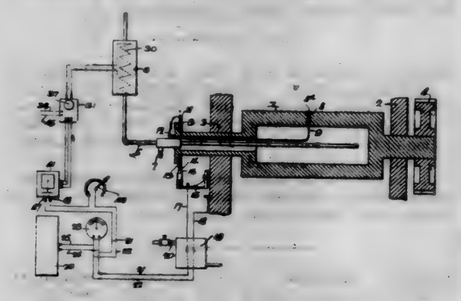
pieces, and means for compensating for the magnetic pull on said armature, said means comprising a plu-



rality of air cushions disposed on each side of said member whereby a constant resultant elasticity is provided for all displacements of the armature.

---

1,557,387. ELECTRIC TEMPERATURE CONTROL. CHARLES B. THWING, Philadelphia, Pa., assignor to Thwing Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1923. Serial No. 620,857. 6 Claims. (Cl. 136—4.)



1. The combination with a roll of an element mounted adjacent to the working surface thereof and forming with said roll a thermo electric couple, said element having different thermo-electric properties from the roll.

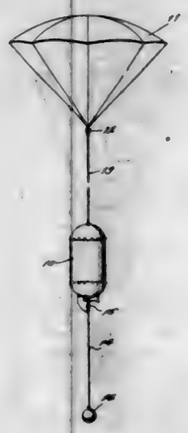
---

1,557,388. ANTIGLARE DEVICE. EDWARD B. TILDEN, New Orleans, La. Filed Aug. 1, 1923. Serial No. 655,123. 2 Claims. (Cl. 296—97.)

1. An anti-glare attachment for windshields comprising a frame adapted to be disposed in advance of a windshield and having means for attachment to the frame thereof, a plurality of shutters having trunnions journaled in the frame, a rod connecting all the shutters for simultaneous movement, a toothed disk on a trunnion of one shutter, bearings on the first named frame a control shaft journaled through said bearings and extending rearwardly beyond the side of the windshield with one end projecting into the vehicle and equipped with an operating head, and a worm on said shaft meshing with said toothed disk.

---

1,557,389. MEANS FOR ASCERTAINING ELEVATIONS OF AIRCRAFTS. ELBERT N. TODD, Crisfield, Md. Filed Mar. 16, 1925. Serial No. 16,072. 3 Claims. (Cl. 250—1.)



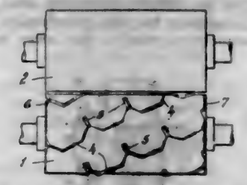
1. In an apparatus of the character described, the combination of a radio receiving apparatus, a portable radio transmitting apparatus adapted to be dropped, and impact operated means for controlling the energisation of the transmitting mechanism.

---

1,557,390. DRAIN VALVE FOR OIL RECEPTACLES. GEORGE TOLK and ALVIN H. ROSENBAUM, Brooklyn, N. Y.; said Rosenbaum assignor to said Tolk. Filed Jan. 19, 1924. Serial No. 687,204. 2 Claims. (Cl. 137—139.)

2. In an oil drain valve, the combination with a body and a valve plunger therein, of means for opening and closing said valve comprising a wire having one end secured to said valve, a head secured to the other end of the wire, a guide within which said head is movable for exerting a tension on said wire to open the valve, said head having a bore to receive an end of said wire and also having an axial socket remote from the wire, a clamping member for securing the wire in the head, said clamping member extending laterally from the head and wire and co-operating with said guide to prevent rotation of said head in the guide, and a member projectable endwise into said head socket for drawing the same and the wire longitudinally of the guide, substantially as set forth.

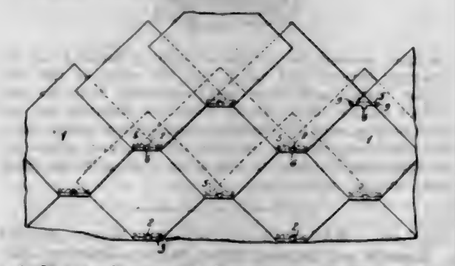
1,557,391. SHINGLE-STRIP CUTTER. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Company, a Corporation of New Jersey. Filed May 24, 1922. Serial No. 563,305. 2 Claims. (Cl. 164—28.)



1. In a shingle strip machine, a rotary cutter comprising a smooth faced cylinder, and a plurality of series of cutting dies projecting uniformly from the surface of the cylinder and arranged thereon in non-intersecting helically extending parallel lines.

---

1,557,392. ROOF. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Co., a Corporation of New Jersey. Filed June 16, 1924. Serial No. 720,390. 5 Claims. (Cl. 108—33.)



1. In a roof composed of overlapping flexible shingles each having a preformed opening through its lower end portion, a metallic fastener secured to two adjacent shingles of a course and having a tongue-like member that passes horizontally through the opening in an overlapping shingle of the next upper course and lies upon the lower end of said shingle, whereby to hold down the end but to permit of a sliding motion of this shingle on the tongue-like member.

---

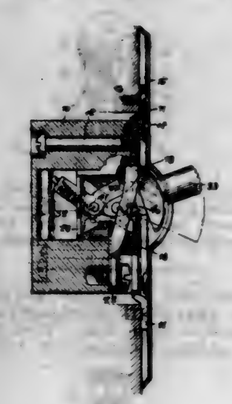
1,557,393. EMERGENCY SOLE. BARNET L. ABRAMS, New York, N. Y. Filed July 21, 1924. Serial No. 727,268. 5 Claims. (Cl. 36—15.)

1. An emergency-sole comprising an elastic pad, stiffening means secured thereto, and means on said stiffening means for permitting an attachment of said emergency-sole by bending said means around the outer edge of said sole to form a rim for the same outside of the edge portion of said sole.

---

1,557,394. ELECTRIC SWITCH. CARL ERIC ANDERSON, Stratford, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 11, 1921. Serial No. 451,462. 8 Claims. (Cl. 200—67.)

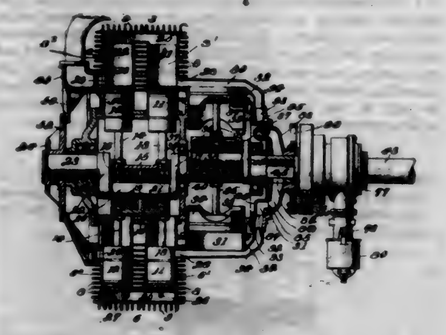
1. An electric switch comprising a freely oscillating switch bar, a switch spring, one end of which operatively engages the same, a rock lever operatively engaging the other end of said spring to shift said end across the axis of oscillation of the switch bar, and means moving with the rock lever but independently pivoted on the



axis thereof and having a lost motion engagement with said switch bar on the throw of the rocker in either direction, said means serving to positively initiate the oscillation of the switch bar.

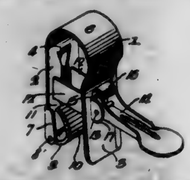
---

1,557,395. ROTARY GAS ENGINE. BENJAMIN FRANKLIN AUGUSTINE, Buffalo, N. Y. Filed Dec. 15, 1920. Serial No. 430,878. 10 Claims. (Cl. 123—44.)



7. A two cycle gas engine including in combination a plurality of cylinders having piston controlled intake ports, a reciprocating pump associated with each cylinder, ports connecting the pumps with a common supply, cut-off disk between the pumps and the supply timed so that each pump draws from the supply by suction an amount of fuel gas determined by the throttled condition of the supply and delivers said fuel gas directly to the cylinder with which it is associated, said pump being so proportioned and arranged as to deliver the gas continuously during the entire time that the intake ports are open to receive gas and at a pressure sufficiently low to prevent turbulence of the gases in the engine cylinders, and means for closing the exhaust ports in advance of the closing of the intake ports.

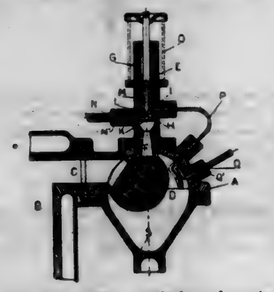
1,557,396. TOGGLE. ELWOOD B. AYRES, Melrose Park, and CHARLES S. MORRISON, Elkins Park, Pa., assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 27, 1924. Serial No. 716,134. 3 Claims. (Cl. 24—258.)



2. The combination in a toggle, of a body portion having a back plate and a clamp plate; an eccentric jaw pivotally mounted on the back plate; and means for forcing the clamp plate towards the jaw.

---

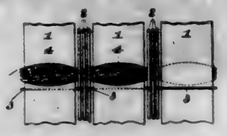
1,557,397. INJECTING AND CARBURETING APPARATUS FOR HEAVY-OIL HIGH-POWER ENGINES. ALBERTO BAGNULO, Turin, Italy. Filed May 22, 1922. Serial No. 562,702. 5 Claims. (Cl. 123—25.)



1. In combination with a cylinder of an internal combustion engine, a combustion chamber communicating with said cylinder, an injecting device communicating with the chamber, a catalyzing body disposed in the latter, means for separately supplying oil and steam to the injecting device and means to permit the oil and steam to mix in the injecting device and to be injected into said combustion chamber.

---

1,557,398. TEXTILE FABRIC AND METHOD OF MANUFACTURING THE SAME. CONSTANT BALAY, St. Etienne, France. Filed Oct. 31, 1922. Serial No. 598,192. 6 Claims. (Cl. 139—416.)

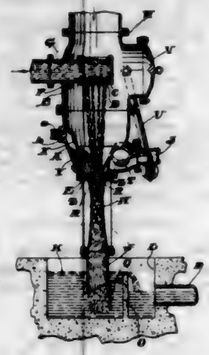


1. A decorative fabric, comprising, in combination, a fabric base formed of paper strips placed flat and forming warp members, decorative elements supported on the base, and tying threads fastening the decorative elements on the paper strips.

---

1,557,399. MULTIJET CONDENSER. PAUL A. BANCEL, Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 15, 1923. Serial No. 625,416. 1 Claim. (Cl. 261—116.)

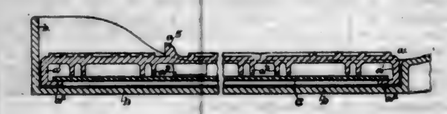
In a low level multi-jet condenser, the combination of a condenser casing, a nozzle plate having nozzles mounted thereon adapted to emit a plurality of unprotected convergent streams of water through the chamber formed by said casing, a discharge opening at the lower end of said casing, a diffuser having a contracted throat to which the streams of water are directed, a tank, and a tail piece on the diffuser extending into the tank, an inlet to said chamber for the introduction of steam, a perforated protective apron in the lower portion of the



chamber around the discharge opening forming an air chamber between the apron and the walls of the condenser casing, said apron being supported from the condenser casing independently from the mounting for the said nozzles, said air chamber being located wholly above the discharge opening into the diffuser, and means for withdrawing leakage air and gases from said air chamber beneath said apron.

---

1,557,400. MAT FOR VEHICLES. ALFRED GEORGE BARRETT and HUBERT HENRY BURTON, Leicester, England. Filed Nov. 28, 1924. Serial No. 752,789. 1 Claim. (Cl. 280—169.)



A foot rest for a motor vehicle comprising a recessed foot board, a mat mounted in the recess of said foot board, said mat having inturned flanges and depending projections, a stiffening plate in the recess of said foot board on the inturned flanges of said mat and supporting the depending projections of said mat so that said projections may yieldably support a foot on the mat, and side lugs carried by said mat and cooperating with a portion of said foot board in providing a heel socket.

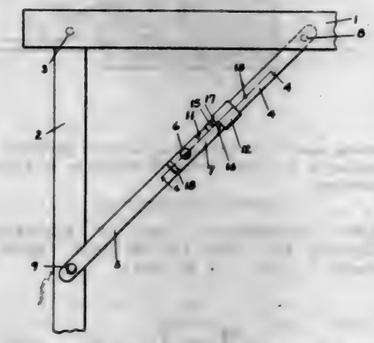
---

1,557,401. PRUNING SHEARS. LEON J. BARRETT, Worcester, Mass. Filed Feb. 27, 1925. Serial No. 12,169. 3 Claims. (Cl. 30—11.)

1. In a hand pruning shear, the combination with a pair of crossing handles, one of them having a slot arranged longitudinally with respect to the cutting edge and the other having a stud extending into the slot, of a link extending from a point near the stud on one handle to a point near the outer end of the other handle and pivotally connected with both for causing a sliding motion of one with respect to the other when they are opened or closed, said link being located entirely in the space between the two handles, whereby it does not form a projection from the surfaces of the shears.

---

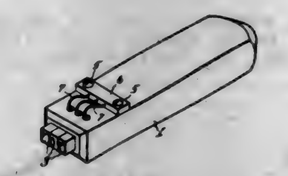
1,557,402. BRACE FOR FOLDING TABLES. JAMES BATTSON, Ludington, Mich., assignor to The Carrom Company, Ludington, Mich. Filed Aug. 30, 1922. Serial No. 585,153. 1 Claim. (Cl. 45—11.)



A brace of the class described comprising a pair of flat links pivotally connected in overlapping relation and adapted at their outer ends for pivotal connections for the parts to be braced, the upper link having a notch in its rear edge, the lower link having a coacting stop struck inwardly from its rear edge and adapted to swing into the notch when the brace is extended, the inner edge of the lower link being notched to form a keeper, a loop-like catch slidably embracing the upper link and having its lower edge notched providing a catch coacting with said keeper when the brace is extended, the end of the lower link and the end of said catch being oppositely curved so that the catch is automatically engaged when the brace is extended, and stops struck laterally from the upper link limiting the movement of said catch thereon, the lower link being offset adjacent its pivot permitting its being swung over said catch when the brace is collapsed.

---

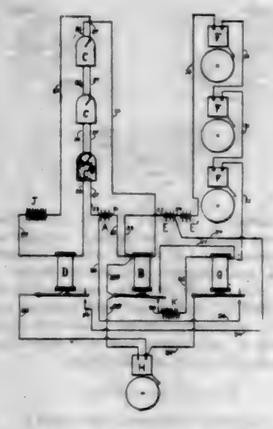
1,557,403. STEEL STAMP. ORLAND F. BAUGHMAN, Lakewood, Ohio, assignor to The Dickey-Grabler Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 2, 1925. Serial No. 20,160. 6 Claims. (Cl. 101—28.)



1. A device of the character set forth comprising a body portion having a type receiving socket, and a plurality of spring fingers severally secured to one side of said body portion, the adjacent side wall of the socket being cut away and the ends of said spring fingers being projected therethrough for holding engagement with type within the socket, each finger engaging an individual type and functioning independently of the other fingers, as and for the purpose specified.

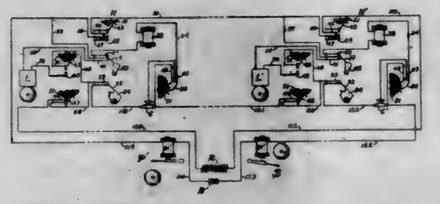
---

1,557,404. SIGNALING SYSTEM. CLARENCE E. BEACH, Binghamton, N. Y., assignor to The Gamewell Company, Newton, Mass., a Corporation of Massachusetts. Filed Jan. 7, 1920. Serial No. 349,948. 5 Claims. (Cl. 177—367.)



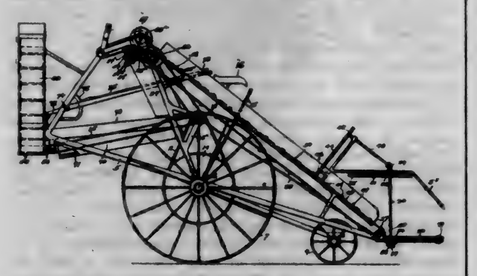
3. A signal system comprising repeating mechanism including circuit controlling means and electromagnetic mechanism unresponsive to current flow of less than a certain predetermined intensity and arranged to cause functional actuation of said controlling means in response to current flow of greater intensity; a transmitting circuit including said electromagnetic mechanism, a current source, a relay arranged for effective energization in response to current flow in said circuit of less than the aforesaid predetermined intensity, and transmitting stations arranged to formulate signaling impulses in said circuit by abnormal conditioning thereof to terminate effective energization of said relay, said circuit of such resistance so arranged that the current flow normally induced by said current source will be only sufficient to assure effective energization of said relay and so that the current flow during the aforesaid abnormal conditioning of said circuit will cause functional actuation of the controlling means of said repeating mechanism; a receiving circuit including a current source, receiving devices unresponsive to current flow of less than a certain predetermined intensity and arranged for functional actuation in response to current flow in said receiving circuit of greater intensity, a relay arranged for effective energization in response to current flow in said receiving circuit of less intensity than that required for the functional actuation of said receiving devices, said receiving circuit so connected to the circuit controlling means of said repeating mechanism and of such resistance and so arranged that, when said circuit controlling means is in functionally actuated condition, said second named relay will not be effectively energized and the intensity of the current flow through said receiving devices will be sufficient to cause response thereof, and, when said circuit controlling means is not in functionally actuated condition, the current flow induced by said second named current source will be only sufficient to assure effective energization of said second named relay; interconnections between the respective current sources and relays of said circuits whereby deenergization of said relays will effect parallel connection of said sources for the supply of said circuits; and a warning device so associated with said interconnections that the energy of one of said sources will be applied to said device whenever the relay associated with the other of said sources becomes deenergized.

1,557,405. SIGNALING SYSTEM. CLARENCE E. BEACH, Binghamton, N. Y., assignor to The Gamewell Company, Newton, Mass., a Corporation of Massachusetts. Filed Dec. 7, 1920. Serial No. 428,969. 77 Claims. (Cl. 177—369.)



17. In a signaling system: a primary responsive device; a current source; a secondary responsive device; signaling stations; and a signal circuit comprising two parallel loops, said primary responsive device connected between one end of one of said loops and the opposite end of the other of said loops, said current source and said secondary responsive device connected between the remaining ends of said loops, and said signaling stations serially connected in both of said loops.

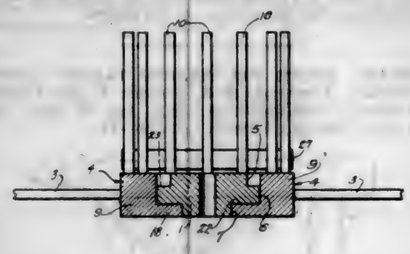
1,557,406. CORN-HARVESTING MACHINE. FRED W. BENNEFELD, Girard, Kans. Filed May 14, 1923. Serial No. 638,900. 2 Claims. (Cl. 56—66.)



1. In a machine of the character described, the combination with a wheeled supporting frame, of an inclined elevator, the lower end of which terminates at the forward end of the machine, gathering mechanism disposed at the opposite sides of the elevator and at the front end thereof, and comprising two groups of chains, one upon each side of said elevator, each group comprising three chains, two of the chains of a group being substantially horizontal and one being located materially above the other, the latter chain being stepped rearwardly with respect to the former and said horizontal chains at the opposite sides of the elevator being forwardly divergent to present a flaring mouth, the third chains of the groups extending and travelling substantially at right angles to the elevator, whereby the horizontal chains gather the stalks and deliver them to the elevator and the third chains carry the heads of the stalks downwardly upon the elevator to insure that the stalks will travel head first up the elevator.

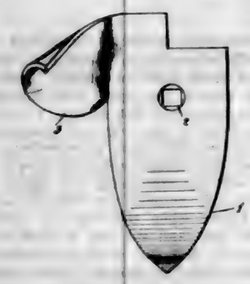
1,557,407. DEVICE FOR WINDING RADIOCOILS. FRANKLIN BITTNER, New York, N. Y. Filed Jan. 19, 1925. Serial No. 3,419. 13 Claims. (Cl. 242—1.)

1. A device of the character described having a plurality of pins, a centerpiece provided with a plurality of orifices for removably receiving said pins and to form a forming core for a coil having an inner periphery corresponding to the outer periphery of the centerpiece, and a plurality of anchoring members removably secured in position on said centerpiece by said pins to form



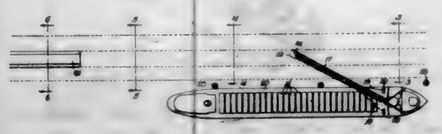
a forming core for a coil having an inner periphery corresponding to the outer periphery formed by said anchoring members.

1,557,408. PLOWPOINT. JEHU W. BLANKENSHIP, Lynchburg, Va. Filed Jan. 10, 1923. Serial No. 685,486. 1 Claim. (Cl. 97—204.)



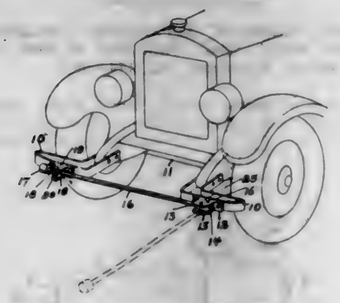
A plow point having a blade provided with a wing integral therewith and extending from an edge thereof, said wing being bent sharply rearwardly on a line forming a continuance of the line defining the corresponding edge of the blade and inclined laterally the upper edge of said wing having its outer portion curved forwardly, said wing forming a mold board that is adapted to direct the earth laterally of the furrow formed by the blade.

1,557,409. METHOD OF BUILDING BREAKWATERS. CARL D. BRADLEY, Rogers City, Mich. Filed Dec. 29, 1924. Serial No. 758,624. 6 Claims. (Cl. 61—4.)



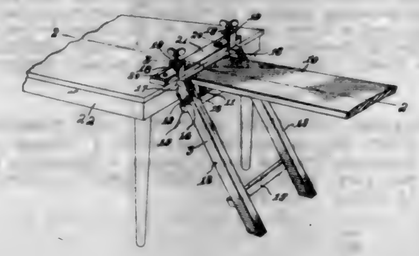
1. The method of constructing breakwaters or the like which comprises continuously depositing the breakwater forming material progressively along the longitudinal line of the breakwater, the point of deposit moving forward as the deposit reaches the desired height.

1,557,410. BUMPER. JACK BRESLAV, New Haven, Conn. Filed May 28, 1925. Serial No. 33,557. 6 Claims. (Cl. 293—55.)



1. In a bumper; companion base plates; and a rod movably connected with one of the plates, said rod functioning as a bumper in both its open and closed positions.

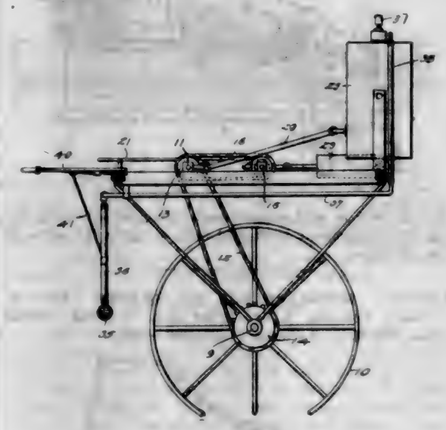
1,557,411. IRONING BOARD. JOSEPH W. BRINSON, Pocatello, Idaho. Filed Feb. 12, 1923. Serial No. 618,564. 1 Claim. (Cl. 68—10.)



In combination, an ironing board, a transverse strip secured to the underside of the board adjacent one end thereof, supporting legs pivoted on the opposite ends of said strip, the underside of each leg being bevelled at one end, inverted L-shaped brackets secured to said legs, the body portion of each bracket being secured to the bevelled portion of the adjacent leg, and having an offset extremity adapted to be secured to the straight portion of said leg, said brackets having their corresponding short branches adapted to be arranged horizontally, adjusting screws passed through said short branches, a transverse bar arranged beneath said branches and supported by said screws, and adapted to be moved toward and away from said branches by said screw, and a swivelled connection between each screw and said bar as described.

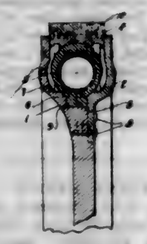
1,557,412. SPRAYING MACHINE. BENNIE B. BROADWAY, Summerton, S. C. Filed Mar. 13, 1924. Serial No. 699,025. 1 Claim. (Cl. 299—40.)

A spraying machine of the ground wheel type, comprising a wheel supported frame, a tank mounted thereon for swinging movement on a horisontal axis, a rotatable element geared to the wheels of said frame, a pitman connection between said element and said tank whereby the latter will be oscillated as the machine travels, an



air pump in communication with the tank, and a driving connection under clutch control between said element and said air pump.

1,557,413. YIELDABLE-TREAD WHEEL. DEWEY S. BRONSON, Sanford, Fla. Filed June 30, 1923. Serial No. 648,716. 2 Claims. (Cl. 152—34.)

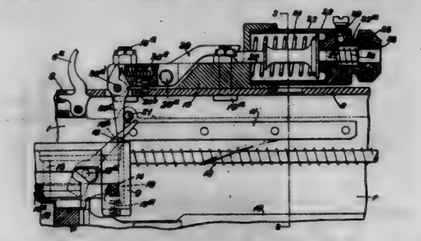


1. In a yieldable tread wheel, the rim of the wheel provided with an offset portion forming one wall of a recess, a ring removable and replaceable on said wheel and forming the other wall of the recess, said wheel being also formed with a channel interiorly of and communicating with said recess and having depressions in its bottom, an annular cushion inserted and removed laterally from said wheel when the ring aforesaid is removed and engaging said recess when in position, and a rib, and integral projections on said cushion to engage said channel and depressions respectively.

1,557,414. FIRING MECHANISM FOR GUNS. JOHN M. BROWNING, Ogden, Utah. Filed Mar. 3, 1924. Serial No. 696,528. 9 Claims. (Cl. 89—27.)

1. In an automatic machine gun, the combination of a breech casing, a barrel, a breech block mounted for longitudinal reciprocating movement in said casing to

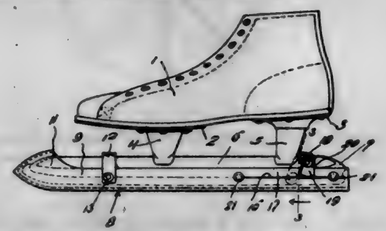
open and close the breech of the barrel, a transversely movable sear carried by said breech block, a support mounted on the outside of said casing, and a sear actu-



ator pivoted in said support and extending into said casing for engagement with said sear to move the same in one direction.

---

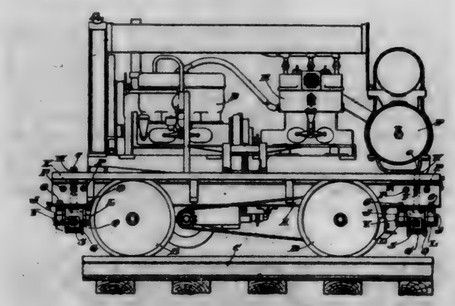
1,557,415. SCABBARD FOR ICE SKATES. JOHN B. CAREY, Concord, N. H. Filed Oct. 10, 1924. Serial No. 742,850. 3 Claims. (Cl. 208—183.)



1. A scabbard for ice skates including a pair of side members secured to a central wear resisting strip and formed with a pocket at the forward end for receiving the forward end of a skate blade, the rear end portion of one side member being slotted longitudinally to provide a strip portion along the upper edge of the member, and a securing means adjustably embracing the strip portion of the side member and adapted for removable fixed connection with the opposite side member at any one of a number of predetermined points, said securing means, being adapted for cooperation with one of the skate uprights, for preventing relative movement of the scabbard to the blade.

---

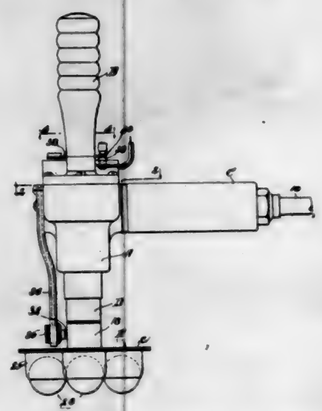
1,557,416. CAR-LIFTING DEVICE. ALLAN O. CARPENTER, Corning, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New York. Filed Apr. 23, 1925. Serial No. 25,201. 4 Claims. (Cl. 105—177.)



1. In a railway car, the combination with the car frame and track wheels, of transverse yoke brackets attached to the car frame, transverse wheel yokes pivoted to said yoke brackets, lifting wheels carried by said wheel yokes, means for rocking said transverse wheel yokes, and means for locking said wheel yokes either in raised or lowered position of the wheels.

---

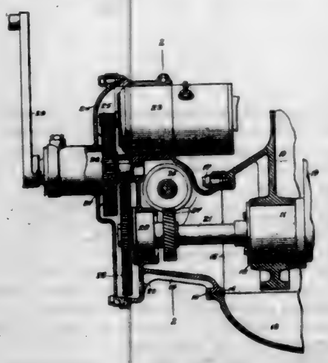
1,557,417. MASSAGE APPARATUS. CHARLES W. CHENEY, Boston, Mass. Filed June 15, 1923. Serial No. 645,564. 6 Claims. (Cl. 174—89.)



3. A massage appliance comprising a frame, a rotor in the frame, means for actuating the rotor, an insulated massage head carried by the rotor, said head having massaging members of electrically conductive material, and a brush arm carried by the frame having a brush in operative relation to the head for supplying an electric current to the conductive massage members.

---

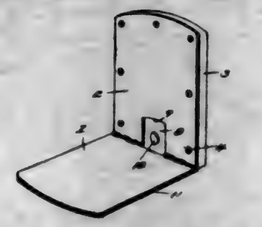
1,557,418. COMBINED MAGNETO AND STARTER UNIT. ROLAND CHILTON, Keyport, N. J., assignor to Aeromarine Plane & Motor Company, a Corporation of New York. Filed Sept. 15, 1921. Serial No. 500,807. 15 Claims. (Cl. 290—1.)



1. In a device of the class described, the combination with an internal combustion engine including a casing having an opening in one side thereof and a main drive shaft accessible from the outside of the casing through said opening, of a combined magneto and starter unit provided with means for mounting the same on the engine casing adjacent the accessible part of the main shaft and constituting a closure for said opening, said unit including a power transmitting shaft constituting an axial extension of the main drive shaft and provided with means at one end for coupling the same with said main drive shaft, a magneto operatively connected to the power transmitting shaft intermediate its ends to be driven thereby, a starter mechanism adapted to be operatively connected to the power transmitting shaft to start the main drive shaft adjacent its outer end.

---

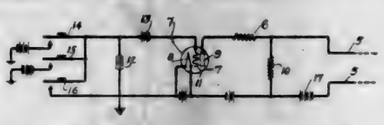
1,557,419. BOOK END. CHARLES F. CLARKE, Madison, Wis. Filed Aug. 1, 1924. Serial No. 729,570. 2 Claims. (Cl. 45—57.)



1. A book end comprising a base portion, an upstanding wall at one end thereof, a frame secured to the outer face of the wall, the bottom of said frame having a slot to permit the insertion of a sheet of material between the outer face of the wall and the rear face of the frame, and means for removably supporting the sheet of material in position in the frame.

---

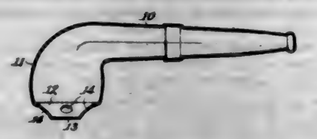
1,557,420. SIGNALING SYSTEM. ALLISON A. CLOKEY, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 18, 1920. Serial No. 389,842. 14 Claims. (Cl. 178—16.)



1. A holding relay comprising a space discharge device having a cathode, an anode, impedance control means, and an output circuit, a source of space current in said output circuit, circuit making and breaking means for intermittently impressing potential impulses on said cathode and impedance control means, and means including a condenser, associated with said cathode and impedance control means for prolonging in said output circuit the effect of each of said impressed potential impulses.

---

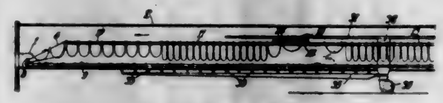
1,557,421. BUBBLE PIPE. IRWIN E. COHN, New York, N. Y., assignor to Tawka Toy Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 23, 1925. Serial No. 25,331. 2 Claims. (Cl. 46—31.)



1. A bubble pipe, which comprises a bowl portion having a cover plate with curved walls having a plurality of apertures therein, said curved plate having a reservoir therein between the bottom of the plate and said apertures, said reservoir adapted to hold a supply of soapy liquid.

---

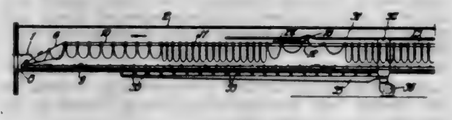
1,557,422. DRYING APPARATUS. CHARLES C. COLBERT and GEORGE E. PRESTON, Elkhart, Ind., assignors to American Coating Mills, Elkhart, Ind., a Corporation of Indiana. Filed Oct. 3, 1923. Serial No. 666,268. 8 Claims. (Cl. 34—20.)



1. A web drying apparatus comprising, in combination, a drying enclosure; successively arranged means including alternating means running at alternating speeds for continuously moving the web undergoing treatment through the drying enclosure while maintaining the web in undulating formation and providing alternating distended and contracted accumulations thereof.

---

1,557,423. DRYING METHOD. CHARLES C. COLBERT and GEORGE E. PRESTON, Elkhart, Ind., assignors to American Coating Mills, Elkhart, Ind., a Corporation of Indiana. Original application filed Oct. 3, 1923, Serial No. 666,268. Divided and this application filed Dec. 1, 1924. Serial No. 753,163. 15 Claims. (Cl. 34—24.)



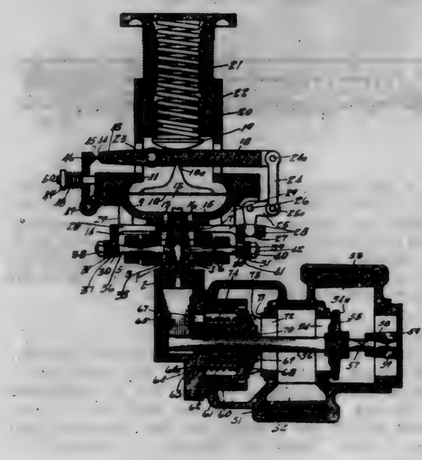
1. A drying method characterized by projecting currents of drying medium transversely of a drying enclosure; passing the web undergoing treatment through said currents; subjecting the web to a preliminary drying and seasoning action by said medium in a relatively quiescent state; and subsequently subjecting the web to the moving currents of drying medium under varying conditions providing drying treatments of different effects including recurrent treatments upon differently presented portions of the web.

---

1,557,424. SPOOL. WILLIAM H. CONANT, New York, N. Y., assignor to Charles U. Bay, New York, N. Y. Filed May 9, 1924. Serial No. 711,946. 1 Claim. (Cl. 242—70.)

A spool of the character described comprising a stem having a head at each end, and a partition member mounted upon and freely slidable lengthwise of the stem but with sufficient frictional engagement to hold the partition member in adjusted position against casual movement.

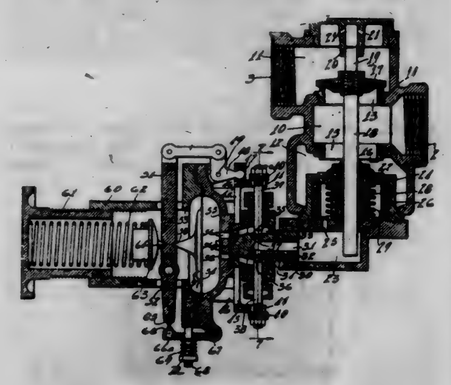
**1,557,425. PRESSURE-CONTROLLED VALVE MECHANISM.** RUDOLPH CONRADER, Erie, Pa. Filed Dec. 1, 1921. Serial No. 519,163. 24 Claims. (Cl. 137—153.)



22. In a pressure controlled valve mechanism, the combination of a motor having its movable element subjected to fluid pressure; a counter-pressure device acting on said element counter to the fluid pressure, said element being actuated by a variation of said fluid pressure; a valve mechanism controlled by and moving with said element; and means for retarding a reversal of said element and assisting its movement beyond an intermediate point in its travel.

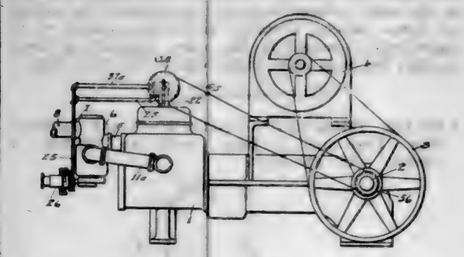
---

**1,557,426. UNLOADER MECHANISM.** RUDOLPH CONRADER, Erie, Pa. Filed Dec. 1, 1921. Serial No. 519,164. 10 Claims. (Cl. 230—24.)



1. In an unloader mechanism, the combination of a pump discharge passage; an unloader responsive to pump pressures acting on said passage; a valve preventing a return flow through said discharge passage when the unloader is in unloading position, said valve having a tendency to close; and means subjected to balancing fluid pressure neutralizing said tendency of the valve when the unloader is not unloading.

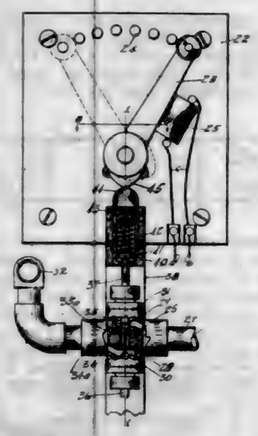
**1,557,427. MOTOR-LOAD-CONTROLLING DEVICE.** RUDOLPH CONRADER, Erie, Pa. Filed Dec. 1, 1921. Serial No. 519,165. 4 Claims. (Cl. 230—24.)



1. In a motor load controlling device, the combination of a motor-driven mechanism; an unloader for the mechanism; a speed sensitive controlling device controlling the unloader comprising a centrifugal element, a lever on which the centrifugal element acts a centripetal element acting on the lever; a V-shaped cam on the lever; a co-operating V-shaped cam opposing the V-shaped cam on the lever; and an adjustable spring actuating the co-operating V-shaped cam.

---

**1,557,428. ELECTRIC-MOTOR-LOAD-CONTROLLING DEVICE.** RUDOLPH CONRADER, Erie, Pa. Filed Dec. 1, 1921, Serial No. 519,166. Renewed May 6, 1925. 17 Claims. (Cl. 230—24.)

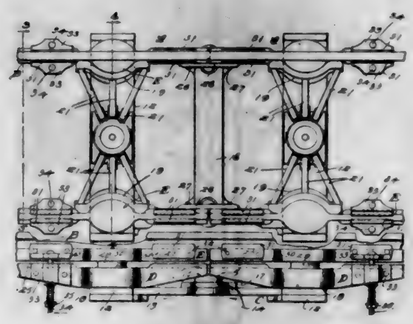


2. In an electric motor load controlling device, the combination of an electric motor; manually actuated variable resistance controlling switch; a pressure-actuated unloader; a valve controlling the unloader; and means actuated as the switch is actuated for controlling the valve.

7. In an electric motor load controlling device, the combination of an electric motor controlling rheostat comprising a series of contacts and an arm operating over the same; a pressure-actuated unloader; a valve controlling the unloader; and means comprising a cam carried by the arm for actuating the valve.

10. In an electric motor load controlling device, the combination of an electric motor controlling switch; an unloader; means actuated as the switch is actuated controlling the unloader; and a pressure actuated device controlling the unloader, said pressure actuated device operating independently of an action of the switch.

**1,557,429. RAILWAY-TRACK CONSTRUCTION.** GEORGE E. COPELAND, Springfield, Ohio. Filed Aug. 11, 1923. Serial No. 656,779. 4 Claims. (Cl. 238—48.)



1. A track construction consisting of a base, positioning members on said base, means to mount rails engageable with said positioning members, an anchor plate on said base, anchoring means for the base extending from said anchor plate, and bracing means connecting said supporting members and anchor plate.

---

**1,557,430. ELECTRICAL DISPLAY APPLIANCE.** LEONARD R. CROW, Vincennes, Ind. Filed Mar. 9, 1922. Serial No. 542,437. Renewed Apr. 9, 1925. 3 Claims. (Cl. 46—49.)

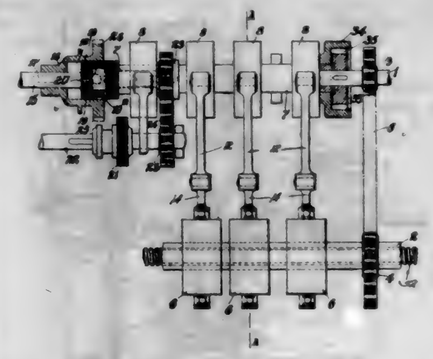
1. A tubular display apparatus which comprises a non-magnetic support, a magnetic movable element embracing the tubular support, magnetic means disposed within the support to repel the element, and means for making and breaking a circuit to said magnetic means.

---

**1,557,431. GOLD ALLOY AND METHOD OF MAKING THE SAME.** VICTOR D. DAVIGNON, Attleboro, Mass. Filed Sept. 4, 1925. Serial No. 54,490. 16 Claims. (Cl. 75—1.)

1. A substantially homogeneous malleable and ductile gold-copper alloy having not less than about 25% by weight of gold and a material proportion of copper and containing at least 1% by weight of aluminum.

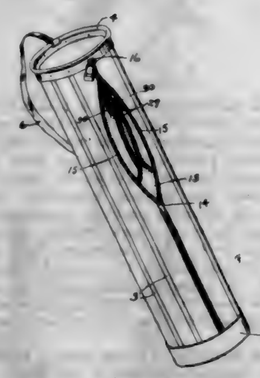
**1,557,432. VARIABLE-SPEED-TRANSMISSION MECHANISM.** JULES FREDERIC DEBONDT, Brussels, Belgium. Filed Mar. 21, 1921, Serial No. 454,189. Renewed July 13, 1925. 4 Claims. (Cl. 74—53.)



1. A variable speed gear comprising a shaft to be driven at constant speed, a secondary shaft, means constituting a direct driving connection between said constant speed shaft and said secondary shaft, variable stroke eccentrics mounted upon and driven by said secondary shaft, means for varying the eccentricity of said eccentrics from zero to a maximum, a hollow shaft mounted concentrically upon said constant speed shaft and revoluble independently thereof, free wheel clutches mounted upon and driving said hollow shaft, means constituting a driving connection between said variable stroke eccentrics and said free wheel clutches and adapted to increase the throw of said eccentrics, a driven shaft, means for connecting said driven shaft alternatively with said constant speed shaft and said hollow shaft, and means for reversing the direction of rotation of said driven shaft.

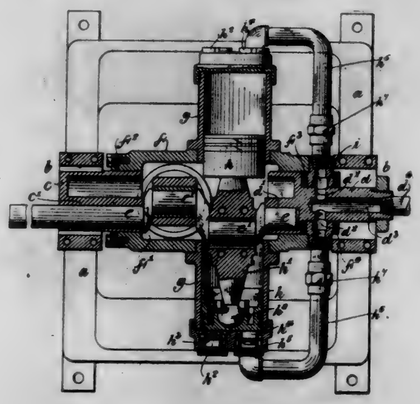
---

**1,557,433. GOLF BAG.** VICTOR M. DELAMATER, Bronxville, N. Y., and LEWIS WALKER, Jr., Meadville, Pa., assignors to Hookless Fastener Company, a Corporation of Pennsylvania. Filed Dec. 5, 1921. Serial No. 519,891. 14 Claims. (Cl. 150—1.5.)



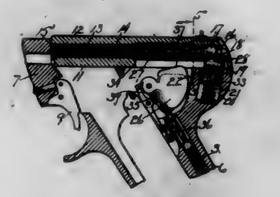
1. In a golf club receptacle fastener, a slit closure connected at each end, cooperating fastening members on the edges thereof, a slider and stringers, a lock, and means preventing manipulation of the stringers and slider when the lock is closed to open the slit.

1,557,434. COMPRESSOR. DANIEL DOUGLAS DEMAREST, Montclair, N. J. Filed Dec. 23, 1922. Serial No. 608,625. 6 Claims. (Cl. 230—31.)



1. In mechanism of the character described, the combination of a rotatable cylinder carrier, a cylinder carried thereby, a rotatable crank shaft eccentrically disposed with respect to the cylinder carrier, a piston, a piston rod engaging the crank of the crank shaft, and means to guide the piston rod, all being constructed and arranged to permit reciprocation of the piston and rotation of the cylinder carrier.

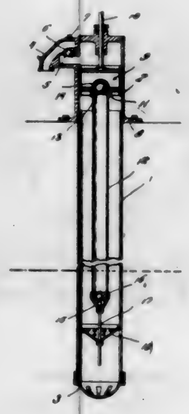
1,557,435. FIREARM. LUCIUS N. DIEHM, West Hartford, Conn. Filed Feb. 24, 1925. Serial No. 11,375. 6 Claims. (Cl. 42—3.)



1. A firearm including a frame, a breech-bolt slidably attached to the frame, a hammer pivotally mounted on the frame for engagement by the breech-bolt, a spring having a pivotal point of connection with said hammer for actuation thereof, said pivotal point being positioned to force the hammer backwardly when said hammer is in its rearmost position, means for positioning the hammer in such a sensitive but inoperative retracted position as to effect movement from such position by the jar incident to the manual closing of the breech-bolt to an operative firing position, means for holding the hammer in such firing position against the force of said spring, and means for releasing said holding means.

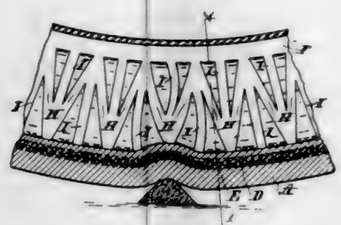
4. A firearm including a frame with a recess therein, a breech-bolt slidably attached to the frame overlying said recess and having a spring recess with a slot thereinto, a breech-bolt stop located in the first mentioned recess to limit backward movement of the breech-bolt, a breech-bolt retracting spring located in said spring recess, and means on said stop projecting through said slot to act as a seat for said spring.

1,557,436. PUMP. CECIL DIX, Cohasset, Calif. Filed Nov. 8, 1924. Serial No. 748,661. 3 Claims. (Cl. 103—178.)



1. A pump of the class described comprising a stand including a cylinder and a valved discharge spout, a hollow plunger head mounted for reciprocation in said cylinder, an operating rod passing through said stand and connected with said plunger head, a well casing attached to said stand, a fluid conducting tube attached to said plunger head and depending therefrom into said casing, and a check valve at the lower end of said tube.

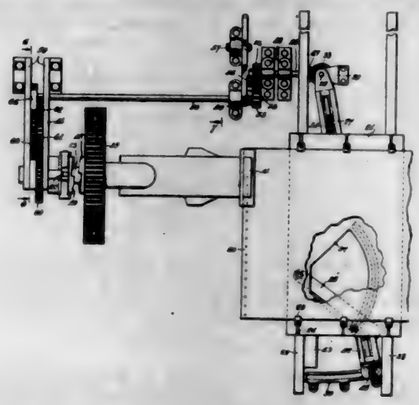
1,557,437. NONINFLATABLE TIRE. HOWARD M. DODGE, Akron, Ohio. Filed July 17, 1922. Serial No. 575,575. 2 Claims. (Cl. 152—1.)



2. In a non-inflatable tire, an annular, hollow, resilient body split centrally and longitudinally on its rim side, and having thickened edges, opposed transverse radial ribs extending into the opening in said body, and oppositely inclined transverse webs alternating with said radial ribs, and extending inwardly into said opening from the vertcal sides of said body, said ribs extending in opposite directions from the points of intersection of adjoining webs.

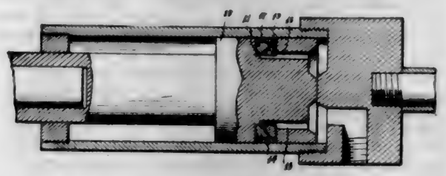
1,557,438. SPACING TABLE FOR METAL-SHEET-PUNCHING MACHINES. JOHN A. DOWD and JOHN A. DOWD, Jr., Fall River, Mass. Filed May 29, 1924. Serial No. 716,737. 10 Claims. (Cl. 164—116.)

1. In a sheet punching machine, the combination with a punching mechanism; of a sheet carrying table movable to feed a sheet to said punching mechanism, and mechanism for effecting the movement of said table and for



varying the distance of travel thereof, including swingingly mounted means, a traveler operated by said means, and an arm connected between the table and the traveler.

1,557,439. PACKING RING. THEODORE C. DU-SO, Tulsa, Okla. Original application filed Nov. 6, 1923, Serial No. 673,117. Divided and this application filed Feb. 5, 1925. Serial No. 7,140. 3 Claims. (Cl. 74—109.)

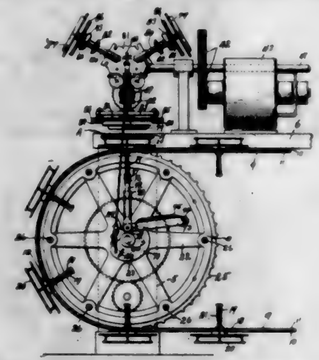


1. A piston having a packing groove and a composite packing in the groove comprising two rings, placed one against the other with their opposing faces inclined, and a third ring encircling the two rings and corresponding in width to the collective width of said two rings, the three rings fitting snugly between the walls of the groove.

1,557,440. COMB. JHUS RUSSELL EARP, Chattanooga, Tenn., assignor of one-half to Benjamin Silverman, Chattanooga, Tenn. Filed Nov. 7, 1923. Serial No. 673,254. 2 Claims. (Cl. 132—16.)

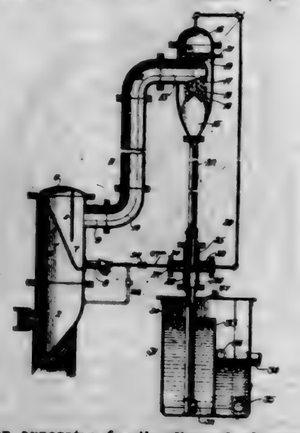
1. In a comb of the class described, a back member of substantially oval cross section said back member having an opening adjacent one edge portion and extending longitudinally therethrough, said back member being further provided with a similar opening adjacent its other edge portion and having slots in the last mentioned edge portion cutting through the last mentioned opening and into the first opening, teeth having back portions provided with openings adapted to register with the opening near the second edge portion and to be positioned in said slots, a pin passing through the last mentioned openings and having a head on one end bearing against the end of the back, a shank passing through the first mentioned opening in the back and having a head overlapping the head on the pin, said shank being flattened on one side to permit the base ends of said teeth to rest thereon, and a handle mounted on said shank.

1,557,441. PIE RIMMING AND PINCHING MACHINE. WILLIAM EHRLICH, Chicago, Ill., assignor to Case & Martin Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1922. Serial No. 526,621. 7 Claims. (Cl. 107—1.)



4. A pie crimping machine comprising a frame; a shaft journaled in said frame; a sprocket journaled on the frame around said shaft; an endless conveyer on said sprocket; a plurality of pie holders on said conveyer and adapted to be brought to a predetermined position adjacent said sprocket; a cam on said shaft; an arm fixed on the frame; a head slidably mounted in the frame; two links having their adjacent ends pivoted together and their remote ends pivoted to said head and arm; and a roller journaled at the pivotal points of said links and engaging said cam, the cam being formed so as to press said head against the pie holder to raise the latter for a predetermined time.

1,557,442. VAPOR-DISPOSAL APPARATUS. WILLIAM H. EICHELMAN, Downers Grove, Ill. Filed May 31, 1921. Serial No. 474,008. 7 Claims. (Cl. 183—28.)

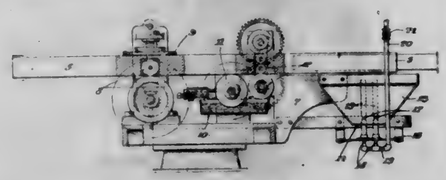


1. In an apparatus for the disposal of vapors or the like, in combination with a source of vapor, a separator at the discharge end of said source provided with

a baffle plate for the throwing down of solids carried out therefrom, a condenser located at a level above the separator, a conduit from the separator to the condenser, means within the condenser for providing a sheet of falling water therethrough, a water leg leading from the lower end of the condenser, a coupling at the lower end of the water leg, and adapted in conjunction therewith to maintain a vacuum, said coupling being provided with a discharge nozzle connected with the water leg, a water discharge pipe leading from the coupling, a well within which the water discharge pipe is sealed, means for educting water from the well, and a drain pipe connecting the separator with the coupling, substantially as described.

---

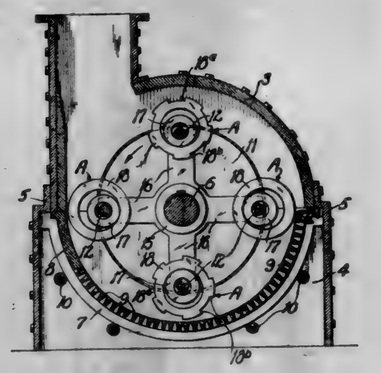
1,557,443. SANDING MECHANISM FOR MATCH BOXES. WILLIAM J. ELDER and CHARLES N. MORSHOUSE, Oswego, N. Y., assignors to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 16, 1923. Serial No. 662,916. 2 Claims. (Cl. 91—45.)



1. In a box-shuck sanding mechanism having a mandrel for box shucks, means for feeding shucks along the mandrel, and means for applying glue to the shucks, a receptacle for abrading material, and an air-blast device for forcibly driving the contents of the receptacle against the glue-coated surfaces of the shucks.

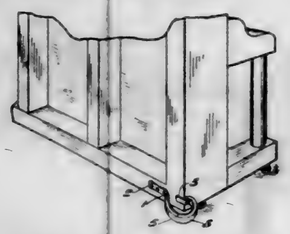
---

1,557,444. PULVERIZING MACHINE. ERNST H. ELZEMEYER, St. Louis, Mo., assignor to American Pulverizer Company, St. Louis, Mo., a Corporation of Missouri. Filed July 6, 1925. Serial No. 41,663. 2 Claims. (Cl. 83—11.)



1. A pulverizing machine comprising a casing having grinding surfaces, a carrier rotatably mounted therein, and sets of rings supported on said carrier to revolve therewith, each set of rings comprising an inner ring loosely mounted on said carrier and an outer ring loosely surrounding said inner ring and adapted to cooperate with said grinding surfaces.

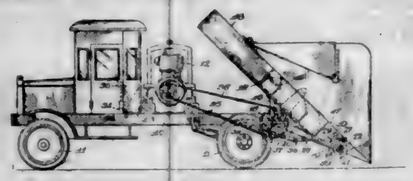
1,557,445. PIANO ATTACHMENT. MONTFORD R. EULER, Lima, Ohio. Filed Dec. 13, 1924. Serial No. 755,743. 5 Claims. (Cl. 45—137.)



1. An attachment for pianos comprising end lugs adapted to be secured to a side of the piano, and a resilient intermediate portion spaced from said piano and surrounding a corner thereof.

---

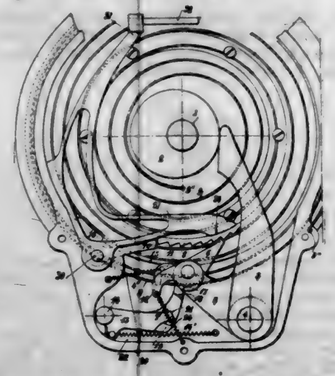
1,557,446. SNOWPLOW. EMERY H. FAHRNEY, Chicago, Ill. Filed Dec. 6, 1924. Serial No. 754,339. 9 Claims. (Cl. 37—43.)



1. In combination a supporting vehicle, a work handling structure carried by the vehicle for pivotal movement with respect thereto, and mechanism embodying interengaging elements for moving the work handling structure with respect to the said vehicle, the said elements being adapted to be automatically rendered inactive with respect to each other adapting the work handling structure to be freely moved independently of the said moving mechanism.

---

1,557,447. DEVICE FOR THE AUTOMATIC STOPPAGE OF SPIRAL SPRINGS. ERNEST FARAGGI, Paris, France. Filed Dec. 22, 1921. Serial No. 524,279. 5 Claims. (Cl. 185—41.)

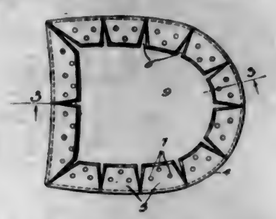


1. In a device for the automatic stoppage of the winding of a spring, the combination of a notched disc, a pawl releasing lever having a series of separate cam faces, one of which cams normally bears upon the outer

turn of the spring and the other being adapted to engage said notched disc, the arrangement of the cams being such that when the spring has been wound, the first cam permits the outer cam to engage the notched disc.

---

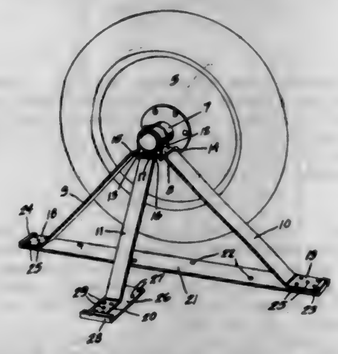
1,557,448. HEEL FOR BOOTS AND SHOES. WILLIAM FELSTEAD, Victoria, British Columbia, Canada. Filed Apr. 25, 1923. Serial No. 634,541. 2 Claims. (Cl. 36—59.)



1. A heel for boots and shoes, comprising a casing having its upper end extending inwardly at right-angles and forming means by which the casing can be secured to a boot or shoe, a lift in the casing, the top portion of the lift being of the same dimension as the interior of the casing and engaging the wall and the inwardly extending portion thereof and the remainder of the lift being smaller than the top portion and spaced from the wall of the casing and forming therewith a recess extending entirely around the said casing, a cushion fitting in the recess and extending below the lift and the lower end of the casing and entirely around the heel, and means for securing the cushion in said recess whereby an air space will be formed at the lower part of the heel.

---

1,557,449. SHIPPING DEVICE. CHARLES H. FENNELL, Detroit, Mich. Filed Apr. 2, 1925. Serial No. 20,271. 2 Claims. (Cl. 188—32.)

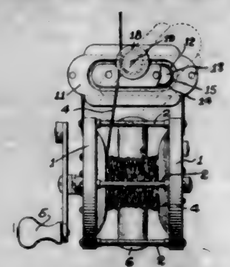


1. A device of the class described comprising a pair of supporting legs, horizontally bent portions on the bottoms of said legs forming feet, a strip extending between said legs and under said feet, the ends of the strip being bent over the ends of the feet, and means for securing said feet and strip to a floor.

---

1,557,450. REWINDING DEVICE. EDWARD FULDA, New York, N. Y. Filed Sept. 13, 1924. Serial No. 737,519. 6 Claims. (Cl. 242—84.4.)

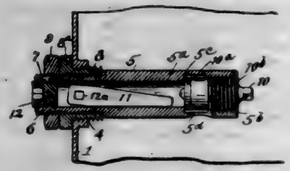
1. In combination with a reel provided with a rotatable hub adapted to have a flexible member wound thereon, means for guiding said flexible member when being wound upon said reel, said means comprising a support, a pulley projecting outwardly from said support and connected thereto by means extending from one face of



said pulley only, and means operated by rotation of said pulley for moving said flexible member transversely of said reel.

---

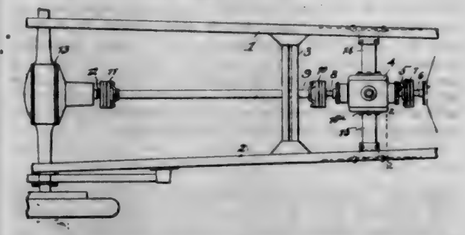
1,557,451. VALVE FOR USE WITH BARRELS. SAMUEL H. GIBSON, Cleveland, Ohio, assignor to The Fanner Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 11, 1921. Serial No. 460,263. 2 Claims. (Cl. 221—24.)



1. A barrel having an opening therein, a bushing removably mounted in said opening, said bushing being provided with internal screw threads, a hollow valve body, a valve cooperating with said hollow valve body, said valve body having a threaded end portion adapted to be screwed into the bushing, said threaded portion of the body being of a length to extend through the bushing and project beyond the end thereof when fully screwed therein and said valve body being insertible into the bushing from either end of the bushing, and a lock nut adapted to be screwed on the threaded end of the valve body which projects beyond the end of the bushing, said lock nut being engageable with the end of the bushing.

---

1,557,452. TRANSMISSION-HOUSING SUPPORT. GILBERT C. GOODE, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 10, 1922. Serial No. 551,037. 4 Claims. (Cl. 180—70.)

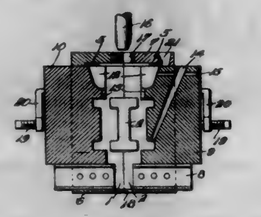


1. In a vehicle construction, the combination with opposite side frame members of the vehicle, of a transmission housing located between the same, the transmission having front and rear shafts connected by flexible

couplings to the motor and axle propelling shafts, oppositely extending arms rigidly secured to the transmission housing intermediate the ends thereof, brackets carried by the said frame members and cooperating with the outer ends of said arms, and supporting said arms in a manner to permit release of the arms to lower the transmission housing.

---

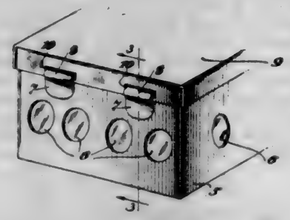
1,557,453. METHOD AND APPARATUS FOR MOLDING AND WELDING. WILHELM L. GROSS, Berlin, Germany, assignor to Hugh G. Spilsbury, Roselle Park, N. J. Filed Dec. 18, 1922. Serial No. 607,506. 18 Claims. (Cl. 22—204.)



3. The process of adding metal to a part, which consists in enclosing said part in a chamber an inner wall of which is movable and shaped to provide in conjunction with said part a mold for molten metal, preheating the part to be added to while said wall is spaced therefrom, moving said wall into engagement with said part to form therewith a mold and introducing molten metal into the mold so formed.

---

1,557,454. BOX HINGE. SAMUEL HAMMER, Brooklyn, N. Y., assignor to United Metal Box Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Feb. 27, 1924. Serial No. 695,455. 3 Claims. (Cl. 220—31.)

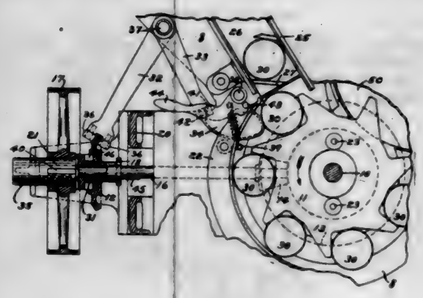


1. A box having a tongue integral at one of its ends with a body wall of the box and provided at said end with a bend therein forming a hinge sleeve or knuckle, the cover of said box having a flange provided with an opening therein through which said tongue is engaged and the other free end portion of said tongue extending towards the base of the box and within the plane of the box wall, said cover flange having a part at the outer side of said opening engaged in said hinge knuckle and said cover flange exerting an inward pressure against said tongue when the cover is in open position.

---

1,557,455. AUTOMATIC STOP MECHANISM. OSWALD H. HANSEN, Port Washington, Wis., assignor, by direct and mesne assignments, to Hansen Canning Machinery Corporation, a Corporation of Wisconsin. Filed Jan. 8, 1921. Serial No. 435,835. 7 Claims. (Cl. 192—125.)

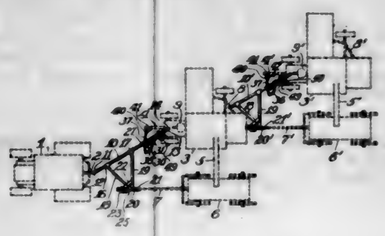
1. In combination, means for advancing receptacles in series about an axis, a source of power, mechanism including a clutch for connecting said source and said advancing means, a member movable toward said axis and engageable with successive advancing receptacles



of said series, and means operable by said member to disconnect said clutch when said series of receptacles is interrupted.

---

1,557,456. HITCH FOR MACHINES AND WAGONS. CLIFFORD L. HASELTINE, Carr Creek Township, Mitchell County, Kans. Filed Dec. 21, 1922. Serial No. 608,176. 11 Claims. (Cl. 280—33.44.)



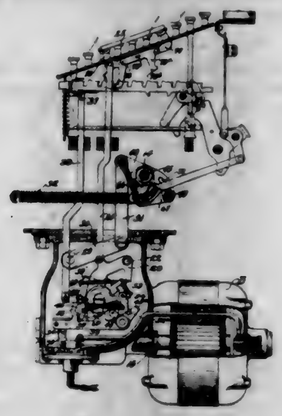
1. A unitary hitch apparatus including a straight draw-bar and a lateral draft arm rigidly secured to the draw-bar, the opposite ends of the draw-bar and the end of the arm having each a draft device, the end of the arm being provided with a device to support the end independently of the draw-bar.

---

1,557,457. ACCOUNTING MACHINE AND MOTOR-DRIVE MECHANISM. AMOS H. HAWLEY, Norwood, Ohio, assignor to Remington Arms Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 11, 1917, Serial No. 190,801. Renewed Mar. 25, 1925. 46 Claims. (Cl. 235—69.)

1. In combination, an accounting machine and its main actuator, a motor, a driving connection between the motor and actuator comprising a clutch, a starting key for the motor, a motor switch adapted to be closed by said key, a lever to connect the switch and key, a clutch controller normally locked against effective operation by said lever while the switch is in an open position, a switch opener operable by the motor, and automatic means to connect the opener with the switch.

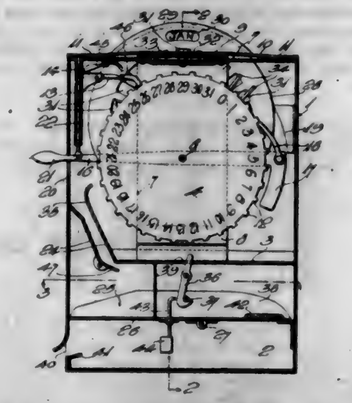
24. In combination, an accounting machine having a main actuator, a motor for driving said main actuator, a clutch connection intermediate the motor and actuator, a controller for said clutch, a switch controlling action and inaction of the motor, a starting key operable to close said switch, a lever operable by said key and normally holding the switch in open or motor inaction position, and operable to permit closing of the switch, an automatic device for opening the switch after a lapse of a predetermined period of operation of the motor,



a detent member for maintaining the switch in an open position when it has been opened by said automatic device, and means for actuating the said detent to restore the cooperation of said lever and switch.

---

1,557,458. COIN-OPERATED CALENDAR AND SAVINGS BANK. FRANK FRED KOLARIK, New York, N. Y., and JULIEN MARTIN, Guayaquil, Ecuador. Filed Sept. 27, 1923. Serial No. 665,165. 4 Claims. (Cl. 194—1.)



2. A coin-operated device comprising a casing containing coin-controlled mechanism, a coin receptacle in said casing for collectively holding the coins inserted, a latch under the control of said coin-controlled mechanism for normally holding said receptacle in coin-retaining position, and a guard for preventing release of said latch when the casing is tilted.

---

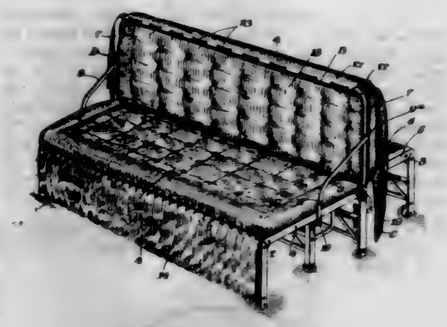
1,557,459. BRASSIÈRE. WALDEMAR KOPS, New York, N. Y., assignor to Nemo Circlet Company, Inc., a Corporation of New York. Filed Feb. 24, 1923. Serial No. 620,868. 5 Claims. (Cl. 2—42.)

1. In a brassière a body member having a front central section, side sections adjacent thereto, each side section having a strap continuation extending downwardly and forwardly, the said straps being connected at their extremities adjacent the lower edge of the brassière, and means connected to the extremities of the said straps to

depend therefrom for coacting with the front central section to exert a straight downward tension in the front central section and laterally inclined downward tensions in the side sections of the brassière.

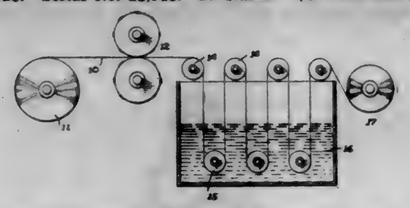
---

1,557,460. SLIDING COUCH. AUGUST J. KREUSKAMP, Chicago, Ill., assignor to Englander Spring Bed Company, Brooklyn, N. Y., a Corporation of New York. Filed June 28, 1922. Serial No. 571,422. 1 Claim. (Cl. 5—333.)



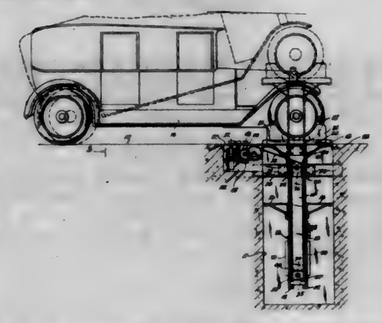
A folding book mattress consisting of two sections, comprising a normally stationary mattress section and a folding mattress section, a depending front curtain secured to the stationary mattress section, a pair of end curtains secured to the ends of the folding section, and a rear curtain secured to the book mattress adjacent to the connected edges of said mattress sections, said end curtains and said rear curtain being independently and freely movable to operative position and of sizes to serve with the said front curtain as a continuous valance when the mattress is folded, and said curtains and the top side of the book mattress when the latter is closed being constructed of decorative material, thereby to give the appearance of a mattress cover having valances thereon.

1,557,461. ART OF PRINTING SHEET MATERIAL. HENRY G. F. LAUTEN, Bay Shore, N. Y. Filed May 8, 1925. Serial No. 28,945. 10 Claims. (Cl. 101—211.)



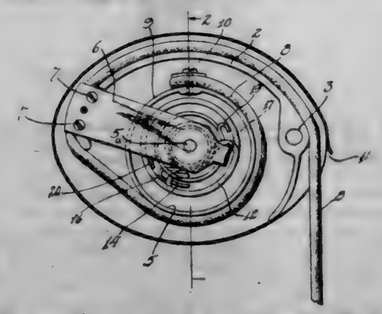
1. The improvement in the art of producing a design or pattern on sheet material, which comprises compressing parts of the material while the material is dry, and then applying color thereto whereby the compressed parts being less absorbent will have a lighter shade.

1,557,462. HOIST. ARTHUR G. LEAKE, Bridgeport, Conn. Filed Nov. 12, 1924. Serial No. 749,388. 6 Claims. (Cl. 187—9.5.)



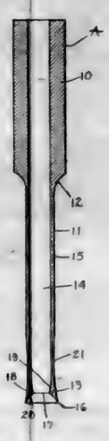
3. In an automobile service lift, upright stationary guides mounted in a pit below grade, a pair of spaced upright movable supports guided by said guides, a pair of wheel supports mounted at the upper ends of the upright supports, a cross beam connecting the upright supports adjacent their lower ends, a stationary cross beam mounted in the pit adjacent the upper end thereof, pulleys carried by said beams, a rotary drum, means for rotating the drum, and a flexible cable running over the drum and pulleys to raise and lower the upright supports.

1,557,463. SHOCK ABSORBER. NORRIS F. MCNAUGHT, Chicago, Ill. Filed Nov. 17, 1924. Serial No. 750,393. 6 Claims. (Cl. 267—10.)



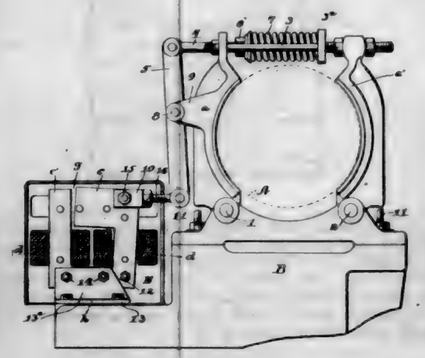
1. A shock absorber of the character described comprising a strap arranged to be fixed to the axle or the like of a motor vehicle, a rotatably mounted drum arranged for disposition upon the frame of a motor vehicle, a friction shoe adjacent to said drum, said strap being arranged to pass over said shoe, and means for gradually resisting the rotation of said drum when said strap is unwound therefrom.

1,557,464. CUTTER DRILL. WALTER K. MICK, St. Paul, Minn. Filed Mar. 20, 1924. Serial No. 700,547. 11 Claims. (Cl. 164—124.)



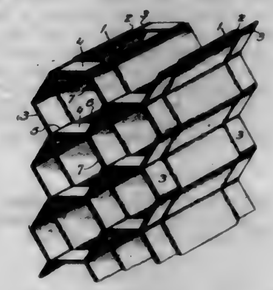
1. A cutter drill having a hollow stem, a cutting edge formed upon the extreme end of said stem and a constriction formed within the interior of said stem immediately above the cutting edge thereof and a curved surface formed in said stem, connecting the constriction with said cutting edge and the interior of the stem proper.

1,557,465. ELECTROMAGNETIC BRAKE. GUY K. MITCHELL, Baltimore, Md. Filed Apr. 9, 1920. Serial No. 372,481. 3 Claims. (Cl. 188—171.)



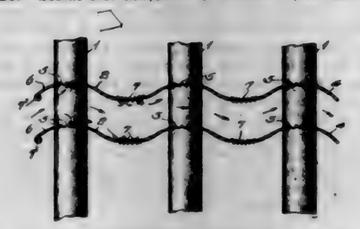
1. The combination with brake mechanism, including a spring for setting the brakes and a lever for releasing the same, of an equalising bar connected to said lever and a plurality of magnets having movable parts connected to said bar and adapted, collectively, to move the same.

1,557,466. TUBULAR RADIATOR CORE. ARTHUR B. MODINE, Racine, Wis. Filed Jan. 2, 1920. Serial No. 348,989. 1 Claim. (Cl. 257—130.)



A radiator core comprising a plurality of tubes each comprising a pair of alternately bent sigzag plates united in parallel to form sigzag tubes each tube provided with a sigzag projecting fin extending along each side centrally of the opposed walls of said tube, said tubes spaced apart so that the opposed surfaces of adjacent tubes are inclined relatively of one another throughout their height, in combination with a plurality of independent separately formed spacers each of a width equal to the width of said fins and positioned between the fins of adjacent tubes and bearing thereagainst from the apex of a fin to its base to space said tubes apart to form a continuous air space therebetween throughout their opposed areas, said air space varying in size throughout its vertical extent.

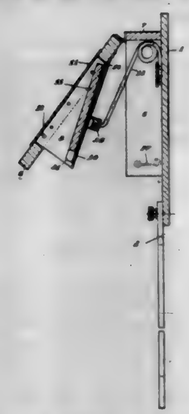
1,557,467. RADIATOR. ARTHUR B. MODINE, Racine, Wis. Original application filed May 10, 1920. Serial No. 380,215. Divided and this application filed Apr. 7, 1923. Serial No. 630,616. 8 Claims. (Cl. 257—129.)



1. A radiator comprising a plurality of tubes, and a plurality of spaced plates extending transversely thereto, said plates formed in a series of curves between the front and rear edges thereof and provided with corrugations on said curves, these corrugations extending from side to side of the plates between said tubes to cause an agitation of the air passing through the radiator.

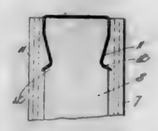
1,557,468. PHOTOGRAPHIC-PRINTING-FRAME EASEL. ALBERT MONTIGNY, Brussels, Belgium. Filed May 3, 1924. Serial No. 710,873. 4 Claims. (Cl. 88—24.)

1. In a photographic printing frame easel of the class described, a box-like base open at one side, a cover pivotally mounted on the base, means urging said cover towards its open position, a window or opening in said cover of the size of the sensitive sheet of paper, and a flat frame carried by said cover so as to project beyond the inner periphery thereof, of a plate suitably attached to the underside of said cover and adapted to press the sensitive sheet of paper against the projecting rims of said frame, means for yieldingly pressing said plate



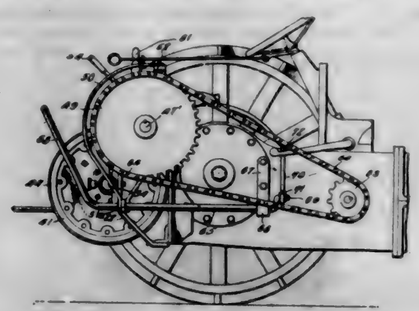
against said frame, means for locking the plate in its operative position, and means for adjusting the easel on the working table, substantially as set forth.

1,557,469. DEVICE ESPECIALLY APPLICABLE TO AGRICULTURAL MACHINERY. LEONARD MURRAY, Footscray, near Melbourne, Victoria, Australia. Filed Nov. 17, 1922. Serial No. 601,610. 8 Claims. (Cl. 198—199.)



1. An improved elevator, comprising, an apron, pockets on the apron, slats fitted in the pockets, and means for holding the slats rigidly in position in the pockets, each said means comprising depressions formed in the ends of a slat, and a flat armed spring, the arms being received in the depressions.

1,557,470. HOIST ATTACHMENT FOR TRACTORS. HARRY S. MYERS, Van, Pa. Filed Nov. 30, 1921. Serial No. 518,980. 15 Claims. (Cl. 254—166.)

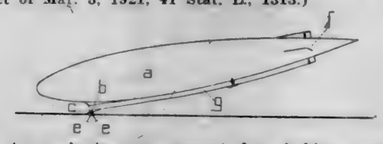


1. In a tractor of the farm type having an automotive organization which includes a motor, propelling wheels, transmission gearing, also a differential gear

transmitting power from said motor to said wheels, a winding drum carried by the housing of the differential gear of said gearing, and gearing other than said transmission gearing, arranged to transmit power from the motor to said drum.

---

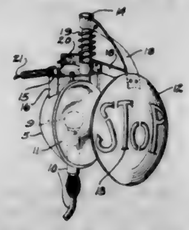
1,557,471. ANCHORING ARRANGEMENT FOR AIRSHIPS. NIKOLAUS BASENACH, Potsdam, Germany. Filed Aug. 29, 1921. Serial No. 496,699. 2 Claims. (Cl. 244—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



2. An anchoring arrangement for airships, comprising, in combination, a downward projecting structure at the front part of the ship, said structure being rigidly secured to said ship and of such a length that its termination forms the lowest point of the front part of the ship, a part of a universal joint rigidly connected to the lower termination of said structure, an anchoring device constructed and secured so as to form a rigid anchor at the anchoring place, and a supplementary part of the universal joint rigidly connected to said rigid anchor at the anchoring place.

---

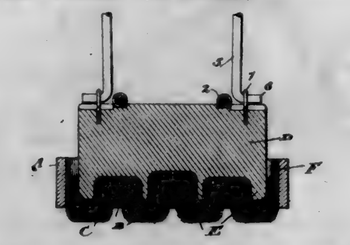
1,557,472. SIGNALING DEVICE. WILLIAM BURTENSHAW, Brooklyn, N. Y. Filed Jan. 18, 1922. Serial No. 530,091. 5 Claims. (Cl. 116—45.)



1. A signaling device comprising, a movably mounted shutter adapted to be supported in such relation to a lamp that it can be bodily moved in an edgewise direction to occupy a position across the front of the lamp or to a position in which the edge of the shutter is presented to the eye of an observer facing the front of the lamp and to one side thereof.

---

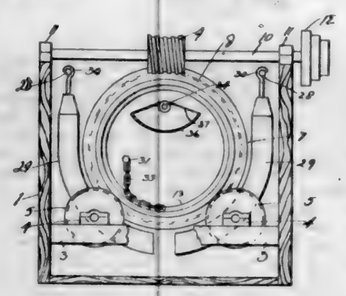
1,557,473. SURFACE WORKING OR FINISHING DEVICE. HENRY JAMES STEWART CROSS, Toronto, Ontario, Canada. Filed May 19, 1924. Serial No. 714,228. 3 Claims. (Cl. 15—209.)



1. A device of the class described comprising a ring-like member; a plurality of longitudinally disposed spaced members associated with the lower side thereof, and extending thereacross; a clamp adapted to extend into said member and provided on its underside with a plurality of spaced ribs located in alignment with the spaces separating said spaced members, thus forming grooves of ample width and depth to hold a supply of suitable flexible material said ribs adapted to exert pressure on portions of said material to force the same in the form of flexible ribs between and below the said spaced members, and means associated with said ring-like member and said clamp to maintain pressure of said clamp upon said flexible material, so that a supply thereof will be passed out of each of said grooves at each side of the said spaced members to replenish said flexible ribs.

---

1,557,474. CONTINUOUS ROTARY ELECTROPLATING MACHINE. HARRY B. FARRAND, Philadelphia, Pa. Filed June 27, 1923. Serial No. 647,983. 3 Claims. (Cl. 204—11.)



1. In an apparatus of the character described a vat, a series of rolls mounted within said vat, a perforated barrel supported by said rolls, a rib spirally disposed within the barrel, a worm wheel mounted upon the barrel, a worm meshing with said worm wheel for revolving the latter, a hopper adapted to receive the articles to be plated, a conveyer for elevating said articles from the hopper; a shoot for conveying the articles from the conveyer to the interior of the barrel; a pocket for receiving the articles from the barrel, a conveyer for elevating the articles from said pocket; a series of anodes disposed adjacent to the barrel upon the outside thereof; a second series of anodes supported within the barrel and out of contact with the latter; and a series of flexible cathodes suspended within the barrel and arranged to lie against the interior surfaces of said barrel; for use in a plating system an internal anode consisting of an arcuate section of plating metal and suspending wires attached to said barrel.

---

1,557,475. ROTARY KILN. MIKAEL VOGEL-JÖRGENSEN, Frederiksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Sept. 5, 1924. Serial No. 736,046. 3 Claims. (Cl. 34—6.)

3. A rotary kiln having four longitudinal partitions extended toward the axis of the kiln, secured to the wall of the kiln at their outer edges only, and flanged at their inner edges for mutual support.

1,557,476. INSTRUMENT PLECTRUM. WILLIAM F. KIMBALL and BESSIE N. KIMBALL, New Milford, Conn. Filed Mar. 29, 1923. Serial No. 628,422. 2 Claims. (Cl. 84—322.)

1. An instrument plectrum comprising a flat flexible picking blade having a picking point and sides, the lower portions of which are arcuate and diverge from the picking point, the upper portions of the sides being parallel, and the blade having a straight transverse upper edge and a holder for said blade, said holder comprising a flat portion abutting against a face of said blade and having a flange overlying the upper edge of said blade, said holder having turned-in lugs abutting against a face of said blade and a finger-engaging loop extending from the lower edge of said flat portion of the holder, the longitudinal bore of said loop being parallel with the straight transversely upper edge.

---

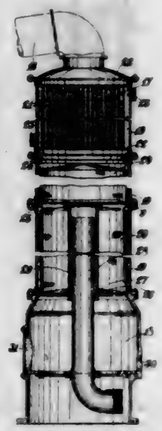
1,557,477. EXTENSION HANDLE FOR GARDEN HOSE. PETER KLINKHAMMER, Los Angeles, Calif. Filed June 9, 1924. Serial No. 718,783. 2 Claims. (Cl. 299—112.)

1. An extension handle for hose, comprising in combination a pole, a prong secured to the end thereof having a curved hook end and a straight section in alinement with the pole, a hose nozzle having a socket head with a curved aperture therethrough adapted to have a loose fit with the curved hook and being of such size that the ends of the concave side of the aperture and the center portion of the convex side bind on the straight part of the prong.

---

1,557,478. APPARATUS FOR TREATMENT OF HYDROCARBON-OIL VAPORS. FREDERICK LAMPLOUGH, Highfield, Feltham, England, assignor to F. Lamplough & Company, Limited, London, England, a British Company. Filed Nov. 22, 1923. Serial No. 676,269. 7 Claims. (Cl. 196—139.)

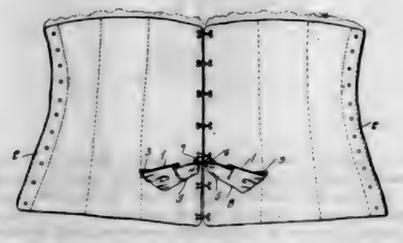
1. Apparatus for treating hydrocarbon vapors for the purpose specified, comprising in combination a cooling tower having a vapor inlet at the bottom and a vapor outlet at the top, means to direct the entering vapors laterally in a plurality of jets against an interior side wall of the tower, and means to constrain the condensate



to gravitate down the tower on the aforesaid interior wall against which the uncondensed vapor is forced to impinge.

---

1,557,479. ABDOMINAL SUPPORTER. NORA A. MYERS, Forsyth, Mont. Filed Apr. 19, 1924. Serial No. 707,750. 2 Claims. (Cl. 2—27.)



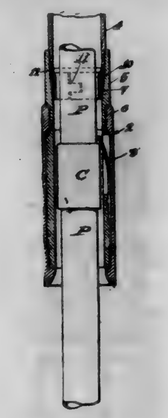
1. A garment adapted to be secured about the body and provided upon the inner side of its front below the waistline with a pocket adapted to receive the abdomen, said pocket comprising strips which are attached along their ends and substantially horizontally to the garment and which are adapted to fold upon diagonal lines so that they may be disposed laterally and have their inner edges attached to the garment and which are provided at their loose ends with fastening means whereby to connect the strips and form the pocket.

---

1,557,480. COUPLING AND PIPE PACKER. JOSEPH A. PLANTE, San Pedro, Calif. Filed June 15, 1923. Serial No. 645,578. 2 Claims. (Cl. 285—22.)

1. A coupling and pipe packer including a member having an interior packing seat, an expansible split ring packer mounted upon the packing seat, and spring latches

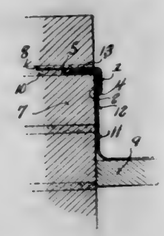
below the packing seat, the packing ring being adapted to encircle a part of a fish in a well and to expand to



allow couplings to pass and the latches serving to locate a coupling in the seat so as to form a tight joint between the coupling and the packing.

---

1,557,481. FLASHING. MICHAEL J. N. SCHNEIDER, Milwaukee, Wis. Filed Apr. 28, 1924. Serial No. 709,581. 2 Claims. (Cl. 108—26.)



1. A flashing comprising sheet metal members having successive folds to provide an outwardly opening groove and an inwardly opening groove and having an outer marginal flange, aligning plates adapted to fit within the inner grooves of successive members, and counter flashing having an apron portion and a marginal flange adapted to fit in the outwardly opening groove.

---

1,557,482. SMOKER'S-PIPE WINDSHIELD. AKE E. SCHOXING, Woodhaven, N. Y. Filed Mar. 25, 1924. Serial No. 701,700. 1 Claim. (Cl. 131—12.)

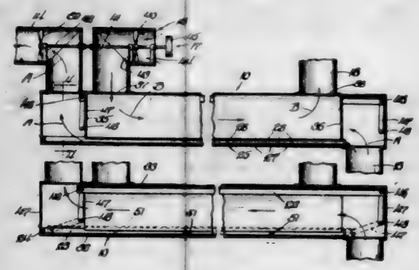
A pipe shield comprising an arcuate member adapted to envelope a pipe bowl and including a pair of corresponding curved leaves hinged together and provided with a spring to close said leaves upon said bowl.

1,557,483. UPHOLSTERY EDGE. HARRY SISKIN, Los Angeles, Calif. Filed Jan. 15, 1924. Serial No. 686,248. 3 Claims. (Cl. 155—181.)

1. In an article of furniture, a core, a sheet of felt folded over the core, a cover having a refolded edge fitting under the felt, the cover extending from the refolded edge around the felt, a lining under the refolded edge, stitching through the felt, refolded edge and lining, and stitching connecting the opposite edge of the cover from the refolded edge to the lining.

---

1,557,484. HEATING DEVICE. JOHN K. TOMLINSON, Chicago, Ill. Filed Apr. 9, 1923. Serial No. 630,737. 3 Claims. (Cl. 257—166.)



2. A heating device having passages for the flow in one direction of the products of combustion and passages for the flow in the opposite direction of the air to be heated, comprising a straight elongated tube, a partition member between the hot gases and the air to be heated, said partition comprising a plurality of flat vertical walls, longitudinal scraper members for scraping said walls, and means for mounting said scrapers for parallel movement comprising a pair of rock members pivotally mounted adjacent the ends of said partition respectively and pivotally connected with the respective ends of said scraper members.

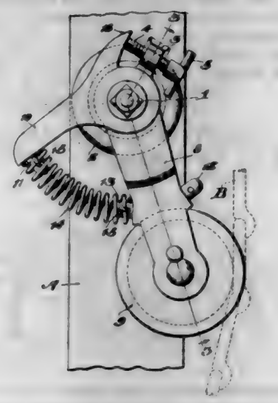
---

1,557,485. PROCESS OF MAKING GLASS CLOTH AND ARTICLE MANUFACTURED THEREBY. ALFRED S. TURNER, Bladen, Nebr. Filed Sept. 5, 1924. Serial No. 736,189. 5 Claims. (Cl. 91—68.)

1. The process of making fabrics durable, transparent, water- and weather-proof, which consists in sizing the fabric with a sodium silicate, drying the same, coating it with a fusible weather-resisting petroleum distillate, adding carnauba wax for raising the melting point of said material, and finally smoothening and cooling the material.

4. As an article of manufacture a glass-cloth comprising a bleached muslin base and a coating of paraffine and carnauba wax.

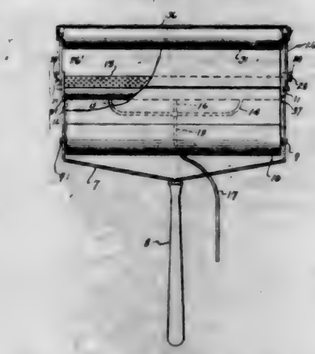
1,557,486. BELT TIGHTENER. JAMES E. VALENTINE, Ezan, S. Dak. Filed Nov. 28, 1924. Serial No. 752,615. 4 Claims. (Cl. 64—5.)



1. In a belt tightener, a collar having stepped bearings on its outer end and having an axial rib formed with a threaded perforation, an arm mounted on the inner bearing and having a belt-engaging pulley thereon, oppositely disposed bosses on said arm, a second arm mounted on the other bearing and having a boss confronting the first arm, a lug on the second arm disposed opposite to the rib perforation, a screw threaded through the rib perforation and engaged with the lug, a coil spring, and means to removably connect the spring ends to the boss of the second arm and to the adjacent boss of the first arm.

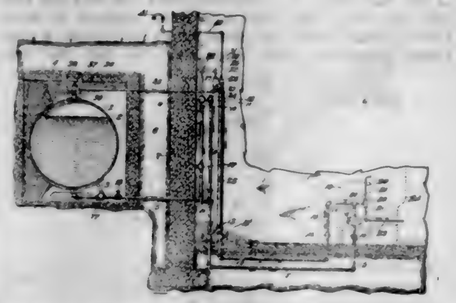
---

1,557,487. PAPER HANGER. HARRY VALLOS, Detroit, Mich. Filed Mar. 26, 1923. Serial No. 627,775. 3 Claims. (Cl. 216—6.)



1. A paper hanging machine comprising a paste container having an open top; a spring positioned in said container and adapted for engaging, at one end, the inner surface of the base of said container; a disk mounted in said container and adapted for engaging at its under surface, the opposite end of said spring; a cover for said container; a stem mounted on said disk and projecting outwardly from said cover, said container being adapted for containing paste between said disk and said cover; a tube connected to said cover and communicating with the interior of said container; a frame, a paste distributor mounted in said frame and communicating with said tube; a presser roller mounted on said frame; and a paper roller mounted on said frame.

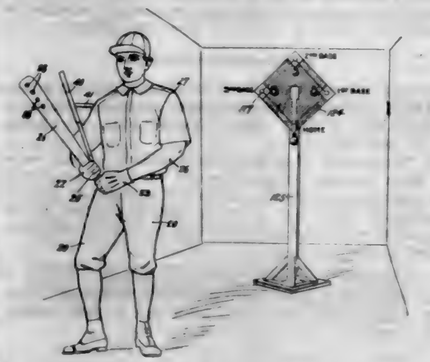
1,557,488. METHOD AND APPARATUS FOR CONTROLLING THE SIPHON IN LIQUID-FUEL-BURNING SYSTEMS. LEPORT R. VAN SANT, Peoria, Ill. Filed Dec. 11, 1924. Serial No. 755,176. 12 Claims. (Cl. 158—36.3.)



2. In a liquid fuel burning system including a fuel containing reservoir, a burner, a pump and fuel lines between the reservoir and burner, of a controlling means connected with the fuel line between the pump and reservoir and in communication with an air supply, said controlling means being arranged to automatically drain itself of fuel on the cessation of the pump and to replace the fuel with air from the air supply, and adapted to receive fuel on the operation of the pump to displace the air and create a siphonic action in the fuel lines.

---

1,557,489. AMUSEMENT GAME. MARTIN VERBEYST, Park Ridge, N. J. Filed Oct. 26, 1923. Serial No. 670,968. 34 Claims. (Cl. 273—88.)



1. An amusement device comprising a human figure provided with means against which articles may be pitched, means to indicate the accuracy with which the said articles have been pitched against the said first mentioned means, said last mentioned means comprising an electric circuit, an indicating device disposed adjacent to the said human figure, a sliding element closing said circuit when hit by the said pitched article or articles, and spring means for holding the said sliding elements to hold the same against accidental movement.

---

1,557,490. FOLDING LADDER. JOHN VIDETTA, Weehawken, N. J. Filed June 13, 1924. Serial No. 719,794. 1 Claim. (Cl. 228—36.)

In a ladder of the type described, side rails formed of hinged sections, cross rungs pivoted at their ends to the side rails, the side rails being longitudinally grooved

for their entire length to accommodate the rungs when the ladder is folded, lateral extensions on the opposed faces of the rails located at the hinged ends of the sections of one rail and at the outer ends of the sections of the other rail to provide for the complete housing of the rungs when the ladder is folded and with the side rails engaging, said side rails being adapted to have their sections swung on their hinges to provide a step ladder formation, links connecting the side rail sec-

tions to hold the structure in its step ladder formation, an intermediate rung at the hinged ends of the side rails, and oppositely extending brace arms carried by and arranged in parallelism with the extensions located at the hinged ends of one side rail with said brace arms being adapted to hook over the rungs located next above and below the said intermediate rung for holding the sections against folding movement while in extended position or while in the form of a step ladder.

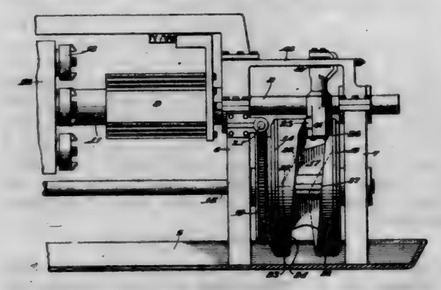
---

1,557,491. PRODUCTION OF ALKALI-SILICATE SOLUTION. LAURENCE WILLIAM CODD, Northwich, England. Filed May 5, 1923. Serial No. 637,021. 15 Claims. (Cl. 204—9.)

1. The process of making alkali silicates of high ratio of silica to soda solutions which comprises subjecting an alkali silicate solution to limited electrolysis without substantial separation of silica until a solution is obtained in which the ratio of silica to soda is less than fifteen to one.

---

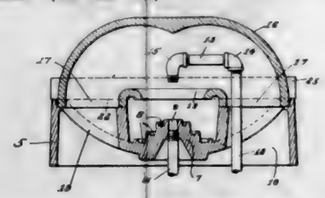
1,557,492. CAM AND ROLLER CONSTRUCTION. LEE G. DANIELS, Rockford, Ill. Filed Apr. 9, 1921. Serial No. 460,045. 24 Claims. (Cl. 74—14.)



1. A cam roller construction of the character described comprising a rotary cam-carrier having axially spaced cam surfaces, a cam roller disposed in the camway between said cam surfaces, a member mounted for reciprocation in a rectilinear path parallel with the axis of rotation of the cam-carrier, and means revolubly supporting said cam roller on said member including a bearing for the cam roller at the inner and outer ends thereof and a supporting member reaching inwardly through said camway supporting the inner bearing, whereby to provide a rigid support for the cam roller and to maintain its face in parallel relation to the faces of the cam surfaces.

---

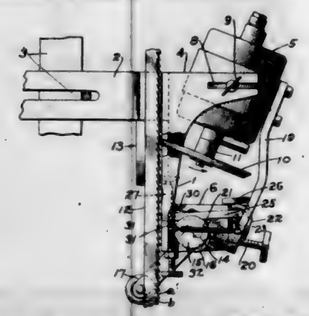
1,557,493. LIQUID-FUEL BURNER. LEE G. DANIELS, Rockford, Ill. Filed Apr. 7, 1924. Serial No. 704,550. 1 Claim. (Cl. 158—91.)



In combination, a liquid fuel burner of the character described comprising a burner bowl having downwardly converging sides and a burner cone interposed centrally therebetween, an air supply casing disposed above and extending diametrically across the burner for delivering air down onto the latter, the casing having comparatively flat parallel lower sides, the burner bowl and casing defining a combustion chamber from which the flames issue through the open top outlet of the burner bowl at each side of the casing, and means supplemental to the casing for restricting and varying the area of said open top at each side of the combustion chamber comprising a bar adapted to rest at its ends on the top of the burner bowl and to extend across the same at the side of the casing, each bar having a flat underside providing a deflecting wall contiguous to the casing and coplanar with the adjacent open top outlet.

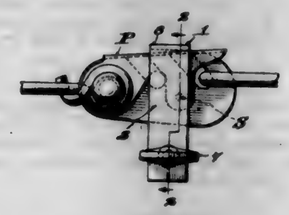
---

1,557,494. SAW-FILING DEVICE. JOHN GLANG, San Francisco, Calif., assignor of one-half to George Ostertag, San Francisco, Calif. Filed Oct. 21, 1924. Serial No. 744,898. 5 Claims. (Cl. 76—40.)



1. A saw sharpening device comprising the combination of a frame having means thereon for supporting the same on a saw carrying support adjacent the saw, an electric motor pivoted on the frame, a saw sharpening wheel on the motor shaft, resilient means normally holding the motor and wheel in saw sharpening position, saw feeding means comprising saw teeth engaging means carried by the frame, a shaft on the frame, a pair of eccentrics on the shaft, and means cooperating therewith and respectively adapted to pivot the motor to shift the wheel out of engagement with the saw and to thereafter operate the saw feeding means.

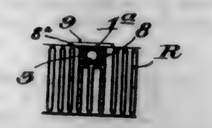
1,557,495. TIRE-CHAIN-FASTENER CLAMP. ALBERT D. GRIFFIN, Plankinton, S. Dak. Filed Jan. 30, 1925. Serial No. 5,820. 1 Claim. (Cl. 24—241.)



A clamp for tire chain fasteners having a pivoted latch member, composed of a U-shaped integral clamp formed to have its closed end seat on the pivoted member and having registering apertures in the free ends of its arms, one of the apertures being threaded, and a winged screw extending through the other aperture and having its outer end threaded through the threaded aperture and extending transversely across the bottom of the fastener, whereby to draw the free ends of the arms together inclined points beyond the bottom of the fastener upon tightening of the screw, said arms engaging over the latches of the fastener so as to clamp same in operative position.

---

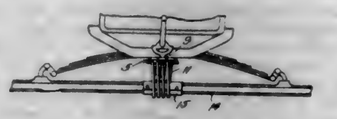
1,557,496. AUTOMOBILE RADIATOR-THAWING DEVICE. ROY S. INNES, Madison, S. Dak. Filed Apr. 26, 1923, Serial No. 634,694. Renewed Mar. 14, 1925. 4 Claims. (Cl. 137—72.)



1. In combination with an automobile radiator, an overflow pipe disposed vertically and centrally of the width of the radiator and having a closed upper end and an inlet arranged in the filling neck of the radiator, said pipe extending to a point adjacent the lower end of the radiator and formed with a series of outlets, the said outlets being so disposed as to cause steam entering the pipe at the inlet thereof to egress through the outlets and be impinged against the adjacent cells of the radiator on opposite sides of the pipe to effect thawing of the latter and means to connect the pipe to the radiator.

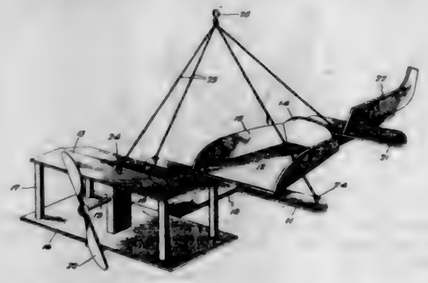
---

1,557,497. SHOCK ABSORBER. MYRON ABNER CAMERON JOHNSON and HENRY COLEMAN FISHER, Asheville, N. C. Filed Dec. 11, 1924. Serial No. 755,280. 4 Claims. (Cl. 267—30.)



1. A shock absorber including a fastening member formed with a plurality of openings, an elastic member adapted to be extended through the openings of the fastening member and adapted to be looped around an axle of a vehicle supported thereunder, and means for securing the ends of the elastic member to the fastening member.

1,557,498. SWING. MARCUS S. LOONEY, Amarillo, Tex. Filed Nov. 29, 1921. Serial No. 518,597. 1 Claim. (Cl. 155—58.)



A toy airplane of the character described comprising a horizontally arranged longitudinally extending member, a cross bar secured to the longitudinal member substantially central of the underside thereof, a seat secured upon the longitudinal member above the cross bar and including converging side pieces and a back, superimposed wings supported upon the longitudinally extending member in advance of the seat, a standard connecting the wings, a propeller associated with said standard, a horizontally arranged transversely disposed member secured to said longitudinally extending member at the rear of the seat, a vertically arranged longitudinally disposed member extending rearwardly and upwardly from the transverse member, a pair of supporting cables, fastening means secured to the upper wing and adjacent the rear end of the longitudinally extending member respectively for receiving the ends of one cable, fastening means secured adjacent the ends of the cross bar and receiving the ends of the other cable, and a support for receiving the cables as and for the purpose specified.

---

1,557,499. APPARATUS FOR SEPARATING FINE METAL PARTICLES FROM SAND AND ORE PULPS. FRANK S. MORGAN, Berkeley, Calif. Filed June 9, 1924. Serial No. 718,881. 2 Claims. (Cl. 83—89.)

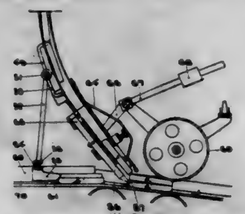
1. A separating device comprising a conduit having an imperforate wall with a concentrating surface of a readily yieldable sponge-like material of a thickness involving a plurality of cells lying on said wall.

---

1,557,500. MACHINE FOR AUTOMATICALLY APPLYING COVERS ON BOXES OR SIMILAR PACKINGS. PER NORDENFELT and EDVARD FRISK, Stockholm, Sweden, assignors to Aktiebolaget Formator, Stockholm, Sweden, a Corporation. Filed Oct. 20, 1923. Serial No. 669,802. 26 Claims. (Cl. 93—55.)

1. In a machine for applying covers on boxes, the combination with a device, called the separating device, for separating the covers and feeding them one after the other from a receptacle to a conveyer device for moving the covers to a channel leading to the cover applying place, of a device which performs that the covers when coming to the place where they are applied

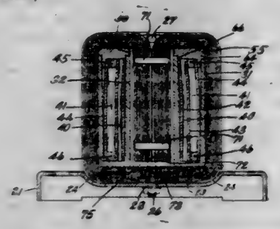
to the boxes turn all the same side up, and which consists of conveying members which order the covers during the conveying so that all covers turn the same



side up, and a device for applying the covers to the boxes moved forward below the delivery end of the cover channel.

---

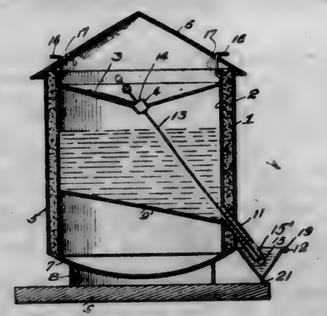
1,557,501. IGNITION COIL. IRVING J. REUTER, Anderson, Ind., assignor to General Motors Corporation, Anderson, Ind., a Corporation of Delaware. Filed July 17, 1923. Serial No. 652,151. 12 Claims. (Cl. 175—356.)



1. In an ignition coil, the combination with a cup formed of insulating material provided with a centrally disposed coaxial aperture; of ignition windings within said cup; a cover for said cup having a complementary aperture; a mounting base provided with a depression; a laminated core including a base portion adapted to fit within said depression and having a depending stem portion passing through said apertures; and means passing through said apertures, engaging said core and connected with said base, for clamping said core against the base and for holding said cup and cover in position with respect to the base.

---

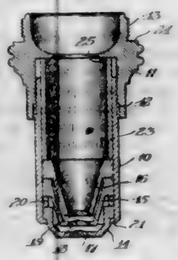
1,557,502. POULTRY FOUNTAIN. ROBERT W. RYON, deceased, by Bertha J. Ryon, administratrix, Manchester, Kans. Filed Jan. 22, 1925. Serial No. 4,070. 6 Claims. (Cl. 119—77.)



1. In an apparatus of the class described, the combination of an inner drum with a hopper like partition, a cylindrical valve seat in said partition, an outer drum around said inner drum, a discharge pipe in alignment with said valve seat and extending from said inner drum through said outer drum, a rod extending through said pipe and said valve seat, valve plugs on said rod for closing said valve seat and said discharge pipe, one of said valve plugs being in closed position while the other plug is in an open position, means for receiving water from said discharge pipe, and a cover over said drums.

---

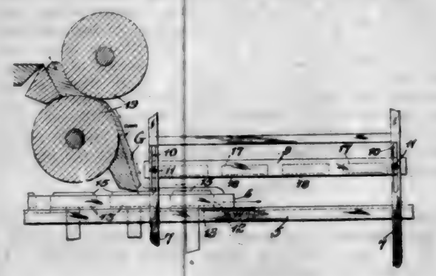
1,557,503. OPTICAL INSTRUMENT. JOHN CHARLES SABEL, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 5, 1924. Serial No. 754,037. 6 Claims. (Cl. 88—39.)



1. In optical instruments, an objective including a plurality of mounts adapted for longitudinal adjustment one upon another, a lens system carried by one of the mounts and a detachable member for limiting the movement of one mount toward another, the length of said member being such as to effect parfocalizing of the objective when assembling the parts thereof.

---

1,557,504. APPARATUS FOR MOLDING GLASS. ALFRED P. VOLLMAR, Forest Hills, N. Y., assignor to The Paul Wissmach Glass Co., Inc., Long Island City, N. Y., a Corporation of West Virginia. Filed Aug. 27, 1921. Serial No. 496,025. 1 Claim. (Cl. 49—1.)



A machine for molding glass comprising a table mounted for horizontal rectilinear movement adapted to receive a layer of soft or plastic glass as it is moved horizontally, said table having a plurality of spaced apertures, a vertically movable die mounted in each of said apertures, a vertically movable table carrying die members adapted to move downwardly into engagement with the upper surface of the layer of glass on the horizontal table when said horizontal table is positioned under said vertically movable table with the dies in the upper and lower tables in cooperating relationship and means for withdrawing the upper tables and dies and lowering the lower set of dies and permit the molded glass to rest on said horizontally movable table free from the die members.

1,557,505. SORTING MACHINE. DWIGHT W. WADSWORTH, Fennville, Mich. Filed Mar. 12, 1924. Serial No. 698,809. 6 Claims. (Cl. 130—32.)

1. In a structure of the class described, the combination of a supporting frame, outer and intermediate conveyors disposed side by side and comprising conveyor belts, the intermediate conveyor being shorter than the outer, front, rear and intermediate shafts disposed transversely of said belts, said rear and intermediate shafts being extended to one side and being provided with sprockets, the front shaft being adjustably supported, pulleys for said outer belts fixed to said front and rear shafts, pulleys for the intermediate belt, the rear pulley being fixed to said intermediate shaft and the front pulley being rotatable on said front shaft, a connecting chain for said sprockets, said sprockets being of such relative size that the intermediate belt travels faster than the outer belts, and a driving pulley for said intermediate belt.

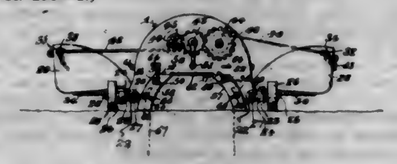
---

1,557,506. BOUQUET STAY. ROBERT LEWIS WALTHERS, Tomahawk, Wis. Filed July 21, 1924. Serial No. 727,392. 2 Claims. (Cl. 47—41.)

1. A bouquet stay, comprising a portable length of wire, said wire bent into sinuous form intermediate its ends, and at one end having a loop constituting a handle.

---

1,557,507. APPARATUS FOR FILLING AND MOUNDING GRAVES. NEILL A. WATSON, Raeford, N. C. Filed Oct. 23, 1924. Serial No. 745,465. 9 Claims. (Cl. 298—1.)



1. An apparatus for the purpose set forth comprising a pair of portable housings, means for connecting said housings together, a pair of oppositely shiftable dirt collecting and dumping receptacles carried by said means, and means mounted in each housing and connected with said receptacles for shifting them simultaneously to dumping position one in advance of the other.

1,557,508. ELECTRICALLY-HEATED FUNNEL. EMIL WEISS and FRANK HNILO, Chicago, Ill. Filed July 20, 1923. Serial No. 652,814. 2 Claims. (Cl. 219—19.)
